When I note expressions of opposition from the South, the Middle West, the Mountain States, or any area outside of those named, I recognize the manifestations of economic controls from the eastern financial centers to the outlying regions of the country. Policies made by financial and economic interests in these centers of control, find expression in the South, the Prairie States, the Southwest, or the Northwest because many of the economic enterprises in those areas are controlled from the East. The opposition in those areas therefore, does not express local opposition but merely derivative opposition from the east coast.

I bring this matter to the attention of the members of the Public Works Committee and the Congress because they must judge accurately the incidence and effect of the seaway on each part of the country; and they must assess the significance of the opposition they hear from sources not directly involved in this controversy.

The real issue before the Committee on Public Works is whether the St. Lawrence seaway will hurt or benefit the eastern trunk lines and the New York power companies. If the answer is "No," the opponents have no case; if the answer is "Yes," that possibly the seaway may be detrimental to these interests, then the committee must judge whether the national interest is superior to the particular individual interests involved. It is my contention that the eastern railroads and power companies are mistaken in their opposition, because without the seaway industry is likely to drift away from the places where these utilities derive their greatest revenues. It is not the first time in our history that the eastern railroad and utility managements have been wrong about their own and their country's interest.

Mr. Chairman, I thank you for the kindness you have shown me and for the manner in which you have conducted the hearings, and I hope that your committee will consider the issues I have presented.

Tariff on Rubber and Canvas Footwear

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1950

Mrs. ROGERS of Massachusets. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letters:

RUBBER WORKERS UNION,
FEDERAL LOCAL 21914, A. F. OF L.,
Watertown, Mass., May 19, 1950.

Hon. EDITH NOURSE ROGERS,
House of Representatives Office Building, Washington, D. C.

DEAR REPRESENTATIVE ROGERS: Enclosed is a picture of a very few of the more than 20,000 men and women employed in the rubber- and canvas-footwear industry. The picture also shows cases containing more than 56,000 cards sent to President Truman protesting changing the method of assessing tariffs on rubber and canvas footwear from the American selling price to that of foreign value.

The enclosed copy of letter to President Truman is explanatory and we hope that we can depend on your support to help us keep our jobs and to maintain the American standard of living.

Sincerely yours,

S. A. PERCOCO,
Business Agent.

RUBBER WORKERS UNION,
FEDERAL LOCAL 21914, A. F. OF L.,
Watertown, Mass., May 9, 1950.

DEAR MR. PRESIDENT: Bill H. R. 8304 is pending in Congress entitled "Customs Simplification Act of 1950" which would eliminate what is known as the American selling price principle that is now used to compute costs in order to arrive at an equitable basis of applying tariffs on imports of canvass and waterproof rubber footwear.

We are opposed to the abrogation of the American selling price principle because we are convinced that it will lead to drastic reductions of import duties on competitive footwear produced in low-labor-cost countries of Japan and Czechoslovakia.

We are satisfied that no workable system can be designed to give the same protection as we have under the American selling price. We have been advised by experts in these matters that any such scheme would be impracticable. We fear that the only results that can be expected from the abolition of the American selling price are further reductions in the duties on imports.

As you know, the process for applying duty on imported rubber footwear is simple under the American selling price policy. The imported shoe is compared with its American equivalent for which the manufacturer's price is easily determined, and the duty is assessed on that price. It is obvious that any other scheme intending to reach the same result would lead to impossible complications.

We see nothing wrong with the American selling price method and see no reason to change it. This method of assessing import duties is a sound way toward equalizing low labor costs abroad with the higher labor costs in American industry. Labor constitutes 47 percent of our factory cost. This is the labor of American workmen, and wages paid in our industry in this country are far higher than those in any other country.

The materials used by American manufacturers of rubber and canvas footwear are with the exception of crude rubber, American made, and here again we are at a disadvantage. Materials produced in foreign low labor cost countries are much lower in price than the materials we use.

The manufacture of rubber footwear is an essential part of our national economy. It is vital to our national defense. During the last war our industry furnished our armed forces with more than 45,000,000 pairs of rubber footwear. We also made life rafts, fuel cells, raincoats, and life vests. Without a going rubber footwear industry our National Defense Program would be seriously impaired.

Thirteen companies are engaged in the manufacture of rubber and canvas footwear and employ more than 20,000 men and women, with sales of approximately $100,000,000.

Foreign manufacturers have copied our styles and methods. Their low labor rates and cheap materials combined with lower tariffs would mean the loss of jobs to thousands, not only in our own industry but in the factories of our suppliers, and in the stores and shops in our communities which serve our workers.

The more than 56,000 protests sent to you today is indicative of the fears of our citizens about the loss of their jobs and standards of living, if through any means, tariff protection on canvas and waterproof rubber footwear is changed to permit imports that will destroy our industry.

The rubber and canvas footwear industry is worth saving. Your help in seeing to it that the tariffs we now have are not lowered will certainly be appreciated by thousands of loyal American men and women workers.

Respectfully yours,

S. A. PERCOCO,
Business Agent.

Arab Rearmament

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following resolution that I have received from the Lawrence Chapter, Senior Hadassah, Lawrence, Mass.:

LAWRENCE, MASS., *May 20, 1950.*

Hon. THOMAS J. LANE,
House of Representatives,
Washington, D.C.

DEAR MR. LANE:

Whereas it is known from reliable sources that arms of a quality and quantity indicating intended use beyond the purpose of internal security are being supplied to the Arab states in the Middle East, most particularly to Egypt, by Great Britain, and

Whereas this Arab rearmament by Great Britain has the acknowledged approval of the United States Government, and

Whereas at the same time, Great Britain has denied Israel arms for its defense, and

Whereas the Arab League has proclaimed its intention to organize a united economic

and military front of all Arab states against the struggling State of Israel, and

Whereas we are convinced of the genuine concern of the United States for the peace and security of the Middle East: Therefore be it

Resolved, That we, Lawrence Chapter, Senior Hadassah, in meeting in the Jewish Community Center, May 16, 1950, do call upon the United States to implement its proclaimed concern and desire for peace in the Middle East by providing Israel with arms to defend itself, thus lending its strong influence to the maintenance of peace in the Middle East.

Respectfully yours,

CHARLOTTE R. ROSENTHAL,
Secretary, Lawrence Chapter,
Senior Hadassah.

Thomas Jefferson Still Survives

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, May 5, 1950

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article by Henry Steele Commager that appeared in the New York Times of Sunday, May 21, 1950:

THOMAS JEFFERSON STILL SURVIVES

(By Henry Steele Commager)

Jefferson is the central figure in American history and—if freedom and democracy survive in our generation—he may yet prove to be the central figure in modern history. He was not only one of the founding fathers, the source and inspiration of much of American democracy and of American nationalism; he was, too, a world figure. Certainly no other public man contributed so richly to so many chapters in modern history.

He was, of all the founding fathers, indeed of all the men of the eighteenth century, the most contemporary. Both in his public and his private life he addressed himself continuously to problems of permanent and universal interest. What he wrote and what he did—about the nature of society and of government, the relations of man to government, the meaning of republicanism and democracy, the significance of education and of toleration and of experimentation to democracy—is as relevant today as it was in the eighteenth century. It is, notwithstanding profound changes in politics and economy, as relevant for France and Germany and Italy as it was for the young United States.

Nor has any other American revealed himself or illuminated the history of his age more fully in his writings. Even his public writings constitute a record of incomparable importance: imagine our history without the Declaration of Independence, the Virginia Statute of Religious Freedom, the Ordinance of 1784, the Bill for the Diffusion of Knowledge, the Kentucky Resolutions, the First Inaugural Address, the Louisiana Treaty.

These, however, represent only a small part of Jefferson's total contribution to our history. His writings are essential, too, for an understanding of many things which he did not himself create or sponsor. Thus, for example, the Northwest Ordinance, the Bill of Rights, the Virginia Constitution, the Monroe Doctrine; thus, too, such institutions or movements as the political party, the attack on slavery, the role of the judiciary in our constitutional system, and a variety of humanitarian and reform movements.

When to all this are added private writings on almost every aspect of American society and culture, and correspondence (a correspondence singularly elevated and felicitous, with hundreds of public men at home and abroad), we can see that Jefferson furnished both the soil and the seed from which many of our national institutions grew.

No one has yet exhausted the richness of that mind, a mind in many respects the most interesting of modern times. Jefferson's versatility is by now a familiar, almost a hackneyed, subject. He was a scientist and an inventor; he was the greatest American architect of his day; he was a farmer, experimenting endlessly with crops and stock; he was a man of letters; he was a bibliophile, collecting not one but two of the greatest private libraries in the country; he was something of a philologist; he was a student of the classics—as who was not in that age—and of the Bible, compiling his own for good measure; he was a lawyer and a collector of law reports.

Also, he was something of a musician, playing the fiddle and collecting music and musicians; he was the first great educational statesman, not only the founder of the University of Virginia, but the sponsor of far-reaching educational reforms; he was a horticulturist, and his garden book has permanent value. What was he not? Even in an age of versatility his catholic interests are a matter of perpetual astonishment.

Fortunately he was, too, an indefatigable letter writer. His famous epistolary record runs to over 600 closely written pages. Nor were his letters merely the hasty scrawls of a hurried man; many of them were minor treatises on politics or law or religion or education or philosophy.

How he found time for it all, even in a life of 83 years, is one of the mysteries of history; perhaps it was that he was untroubled by modern labor-saving devices and innocent of those squads of secretaries with which every modern statesman and businessman surrounds himself.

Nor were all these interests, so richly revealed in his writings, the expression of dilettantism. It was said of one of the Lord Chancelors of England that if only he knew a little law he would know a little of everything. That could not be said of Thomas Jefferson. He was curious about almost everything, but his curiosity was rarely irrelevant.

Whatever he learned, whatever he knew, fitted into and enriched his philosophy. For of all American statesmen, Jefferson was the most philosophical. One abiding purpose runs through his whole life, one pervasive philosophy dominates it.

He insisted that man should be free, and he was persuaded that, once free, mankind would progress toward happiness and virtue. He was enraptured with the vision of mankind free from political tyranny, from the bondage of superstition and of ignorance, from the sins of the past, from poverty, from war. He had an eighteenth-century faith in the perfectibility of man, but it was not merely a visionary faith; it was faith rooted in the reality of New World experience.

For here in the New World mankind had been given a new chance—mankind free from the tyrannies and oppressions, the poverty and ignorance of the Old World. Here men could live close to nature, cultivate the soil, raise large families, keep what they earned, benefit from learning and from science, escape war, advance—as was aid in the great First Inaugural Address—"rapidly to destinies beyond the reach of mortal eye."

And as America was to be a model for the world, to prove what man was capable of when free, Jefferson devoted himself passionately to strengthening this Nation, expanding its territory, building up its resources, maintaining its security, fostering its culture and its virtue. The first strokes of his mature pen were a call for freedom; his last written words recalled that earlier faith.

It is eminently fitting that The Papers of Thomas Jefferson should be launched as a national enterprise. All who cherish American traditions, all who are zealous for the maintenance of freedom and democracy in the world, all who retain their faith in reason and morality, will rejoice at this reaffirmation of devotion to the principles to which Jefferson dedicated his life. "Thomas Jefferson still survives," said John Adams on his deathbed; it was a prophecy which each generation must justify anew.

P. O. Davis on Heart Disease and Cancer

EXTENSION OF REMARKS
OF
HON. CARL ELLIOTT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1950

Mr. ELLIOTT. Mr. Speaker, the Honorable P. O. Davis, able director of the Alabama Extension Service, devoted his column Along the Way in the May 1950 issue of This Month in Rural Alabama to the dread diseases of the heart and to cancer.

He points out that nearly half the deaths of persons over 45 years of age are caused by heart disease. When we add to this figure the deaths caused by cancer, we reach the alarming result that most deaths of persons over 45 years of age in this country are caused by heart disease or cancer.

If these scourges of mankind could be eliminated, undoubtedly we could lengthen the life span of our people in this generation.

Though a balanced budget is much to be desired, I do not believe that the American people want us to stop the research presently being carried on by this Government in an effort to conquer these death dealers, heart disease and cancer. Rather, our support for research in these fields should be expanded so as to hasten the day when these dreaded diseases, and others, may lay as dead corpses at the feet of American medical ingenuity.

I include the article of Director P. O. Davis as follows:

ALONG THE WAY

(By P. O. Davis, Director, API Extension Service)

One inevitable fact is that each person must die sometime, somewhere. There is, of course, nothing new in saying this; but there are new facts as to causes of death.

And there are new and important facts as to how to avoid illness and how to live longer with better health. These facts are of vital concern to each of us.

The United States Public Health Service has statistics on diseases and other things that end the lives of people. Three years ago (1947) diseases of the heart and blood vessels ended the lives of 626,000 people, or nearly 2,000 people daily in the United States. This group topped the list of human killers.

No less than 21 distinct types of heart diseases are known, but three of them caused 90 percent of all damaged hearts. Cancer was next with 190,000 deaths in 1 year. Alabama had 2,800. Broken down, this means

three deaths per day in Alabama, or one for every 8 hours, for cancer alone.

Accidents killed about half as many as cancer, the total in this group being 100,000. Nephritis (kidney disease) killed 80,000, pneumonia 62,000, tuberculosis 48,000.

Nearly one of each two deaths, after the age of 45, is caused by heart diseases. Add to these those caused by cancer, and we find that most people after middle age and older die of one of these two diseases—heart and cancer.

This raises a question as to what we individually can do to prevent any illness but especially heart disease and cancer. Specifics are not available but certain things are essential to healthy bodies and minds. They are:

1. Enough but not too much good food, containing all of the elements essential to a strong and healthy body.
2. Moderation in all that we do. Intemperance in anything is bad and harmful.
3. Sanitary conditions for living and working.
4. Plenty of outdoor exercise without excesses.
5. Regular attention to all body needs.
6. Regular contact with a family physician for advice and service.

I like to emphasize food. It is easy for anyone to get basic facts as to what foods to eat and amounts needed to supply the daily needs of a child or a grown person, either man or woman. (See your home demonstration agent.)

People who do heavy physical work require, of course, more food than those who don't. Information is available as to food needs for people living and working under different conditions.

A quart of milk a day, for example, is needed by each child or young person. Older people don't need as much. Eggs are an excellent food. A combination of milk, eggs, meat, cereals, and vegetables are, of course, big essentials.

People who eat improperly endanger themselves by inviting diseases and illness. This applies to too much, too little, or the wrong kind.

A check-up by a physician as often as advised by him is a mighty good practice. Often in this way trouble is found before it goes too far and is corrected before great damage is done.

Cancer is a notable example of this sort of disease. It is not fatal, as many people believe, if it is discovered in its early stages and treated properly. If it is not discovered until it goes too far it is fatal.

I Am An American Day

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1950

Mr. RODINO. Mr. Speaker, citizenship is not a task to be taken lightly. We have many privileges and freedoms in our country; we also have duties and responsibilities. "I Am an American Day" serves to identify and clarify just what our country does expect of us. It is a day set aside to welcome the new citizens of our country.

Our new citizens each year come from two vibrant sources: The youth of America who have reached the age of legal maturity and the people who come to our country from foreign shores. Both groups bring great offerings to our country; we are, indeed, proud to honor them on "I Am an American Day."

Under leave to extend my remarks in the RECORD, I wish to include the following editorial which appeared in the Independent Press of Bloomfield, N. J., under date of May 19, 1950, expressing its sentiments on what this day means to all of us in this great country of ours:

I AM AN AMERICAN

On Sunday, by virtue of a proclamation of the President of the United States, we celebrate I Am an American Day.

To those young men and women who for the first time take on the full obligations of citizenship in a democracy it is a day of solemn implication. For those mature men and women who have foresworn their allegiance to the old, to give their full measure of loyalty to our own democracy, it is a day of prayerful thanksgiving. And for those of us who have long been able to proudly proclaim "I am an American" it is an opportunity for a rededication to the ideals and principles upon which this country was founded and which through travail and trouble it has tried to learn to express.

There are many scoffers who say that our democracy is a mockery—because it is not complete—because in spite of its high boasts of life and liberty for all, it has discriminated in many instances against groups of its citizenry—and because it has not given equal opportunity to all. Certainly our democracy is not perfect, but a democracy, being composed of individuals, is a living, growing thing, and it has progressed and is still progressing steadily. Despite any defects, the American form of democracy still offers to everyone a greater measure of freedom and opportunity than any other country on earth.

But I Am an American Day is not a day on which to discuss what democracy has or has not done for its citizens. Democracy is composed of its citizens, and it is up to them as individuals to live up to the ideals of their country and so to raise the standard of the country as a whole.

When we say "I am an American" we make it an individual matter. It becomes an individual right and an individual obligation. And for the duties involved in such a proclamation we can do no better thing than to turn back for our instructions to the epistle of Paul to the Romans, when he counseled them:

"Abhor that which is evil; cleave to that which is good. Be kindly affectioned one to another with brotherly love; in honor preferring one another; * * * rejoicing in hope; patient in tribulation; continuing instant in prayer; * * * Be of the same mind one toward another. Mind not the high things, but condescend to men of low estate. Be not wise in your own conceits. Recompense to no man evil for evil. Provide things honest in the sight of all men. * * * Be not overcome of evil, but overcome evil with good."

Upholsterers International Endorses Fogarty Resolution

EXTENSION OF REMARKS
OF
HON. JOHN E. FOGARTY
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1950

Mr. FOGARTY. Mr. Speaker, on Friday, May 5, the Upholsterers International Union of North America held their convention in the city of Philadelphia. Among the various resolutions which were adopted on this occasion was one which placed the union on record in favor of House Resolution 270, which I introduced and on which hearings were held before the House Committee on Foreign Affairs recently.

In speaking, I wish to express my appreciation to my distinguished colleague, the Honorable JOHN KEE, of West Virginia, the chairman of the committee, for his splendid courtesy in making the recent hearings possible. For 5 hours a succession of witnesses presented statements and gave testimony in favor of the Congress taking action in behalf of a united Ireland. It is, therefore, most gratifying to me to find that continued endorsement and approval is being given to my resolution by various societies and organizations throughout the country, especially by labor organizations, which are ever vigilant of the needs of the oppressed and are eager to support the cause of freedom and independence throughout the world.

It is not surprising then to find labor organizations protesting against the unjust partition of Ireland and the continued maintenance of a dictatorial type of government in the northeastern six counties of Ireland. For the benefit of my colleagues I take pleasure in having the resolution of the Upholsterers International included in these remarks. The text of their resolution is as follows:

Whereas the restoration of freedom and nationhood to subjugated peoples and the protection of minority groups wherever they exist are ideals to which our people have pledged themselves and to which our Government is officially dedicated: and

Whereas our Nation is currently engaged in an intense struggle throughout the world to effectuate this policy: and

Whereas our own security and way of life will benefit in proportion to the degree to which our foreign policy succeeds; and

Whereas the Irish people are unwilling victims of a policy of imperialism by which their country is partitioned, and by which the democratic rights and privileges of the partitioned populace are denied them; and

Whereas the situation was condemned by the American Federation of Labor at their recent national conventions; and

Whereas our continued indifference toward this matter gives the lie to our protestations of sincerity and weakens our own security by making it impossible for the Irish Nation to join in the common defense of western civilization: be it therefore

Resolved, That we petition the House Foreign Affairs Committee at Washington to take favorable action on the Fogarty Resolution, House Resolution 270, which seeks to extend to the people of Ireland the right to decide how their country shall be governed; be it also

Resolved, That we petition Chairman TOM CONNALLY of the Senate Foreign Relations Committee to call open public hearings on a similar resolution by Senator LEHMAN, which has been referred to his committee; in addition be it further

Resolved, That copies of this resolution be sent to the President of the United States, the Secretary of State and the State Department, and to the metropolitan press and the press agencies.

London Talks Add to Prestige of United States

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1950

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article taken from the New York Times of May 21, 1950:

LONDON TALKS ADD TO PRESTIGE OF UNITED STATES—EUROPEANS SAID TO HAVE MORE CONFIDENCE IN ACHESON AS RESULT OF PARLEYS

(By Raymond Daniell)

LONDON, May 20—The series of diplomatic conferences just ended in London has produced new confidence in United States policy in the chancelleries of western Europe. It also has brought about a new respect for United States diplomacy, which throughout the meetings was conducted with skill and finesse by Secretary of State Dean Acheson and his delegation.

The program that was adopted with more unanimity and wholehearted support than had marked most post-war meetings of foreign ministers was essentially a United States program. Mr. Acheson may not be taking home with all that he sought when he came here but he has gained a good deal more than many observers thought he would before the meetings.

Western Europe has accepted the United States thesis that security must have equal priority with economic recovery. It has acknowledged that all must bear a fair share of the burden of rearming. And the western nations have accepted the principle that they can become strong most economically and efficiently by building their forces with the view to their being used jointly against a common enemy.

Before the conferences there was a feeling in Europe that there was no concerted United States policy in foreign affairs. That illusion has been dispelled.

Briefly stated, the policy that has emerged from these series of meetings is that the United States wants to bring Germany into a permanent and profitable association with western Europe.

In the Far East the United States seeks to assist in the development of the new democratic native states, while recognizing legitimate European colonial interests.

In the Near East the United States seeks to preserve the status quo by encouraging the national governments there to improve the standards of living of their people and at the same time give them a tacit guaranty of security.

The idea long held in Washington that the security of western Europe could be guaranteed only by linking western Germany irrevocably with the West has been endorsed and steps have been taken to treat Germany less and less as a conquered former enemy and more as a cobelligerent in the cold war. The United States on its part has weakened the position of the advocates of a policy of neutrality in the struggle between the east and the west by declaring its continued interest in Europe after the Marshall plan expires.

What may prove to have been the most important piece of unfinished business of the conference was the French plan for the integration of the coal and steel industries of France and Germany under an international authority. This was not even on the agenda but it has provoked a good deal of discussion and almost certainly it will come up for discussion and perhaps decision at subsequent meetings of the western Foreign Ministers.

Although there is no reason to doubt that the announcement of the plan by Robert Schuman, French Foreign Minister, was as great a surprise to Mr. Acheson as it was to Ernest Bevin, British Foreign Secretary, the fact remains that similar ideas had been expressed by United States officials as long ago as 1947, long before the French were willing to consider any kind of partnership with the Germans.

At any rate the picture has changed from that of a France fearful of a renascent Germany and reluctant to form any association with her to one in which the British Foreign Secretary is under pressure from both Paris and Washington to "make good his famous pronouncement of January 1948, in favor of European unity," to use the words of the New Statesman and Nation.

Perhaps that is putting it too bluntly but it is certainly true that the Schuman idea has received warmer and less qualified support from Mr. Acheson than from any British source.

To Britain's Labor Government it raises grave problems in connection with its controls and full-employment policies in the event of joining in the plan and of ruinous competition if Britain remains outside.

There is no doubt that the Labor Government would feel easier about the proposal if there were some assurance that the German iron and steel industries were to be nationalized under a popular mandate and that trade-unions received assurance of their right to participate in the projected international authority. That may be one reason behind the calling of the International Socialist Conference in London to discuss the plan.

Both the United States and Britain will want to be assured that the proposed international control is not a mere camouflage for a new cartel to restrict markets and hold up prices. This is the main economic issue involved, and M. Schuman has given his assurance that the concept aims not at the restriction of production but to increase efficiency, lower costs, and expand export markets.

In support of this, the sponsors of the plan say that the original concept proposes absolutely free trade in the products of heavy industry and that the participating countries would agree to forego customs tariffs or import quotas on coal, iron, and steel.

There is a political question that may have to be weighed more carefully in Washington than in London, however. That is the effect of laying the foundations of a separate European bloc that agitators for "neutrality," especially in France and western Germany, might use as a means of trying to withdraw Europe from the cold war. There is strong public opinion in both countries for dissociation with the United States in its struggle with the Soviet Union, however unrealistic it may seem and far as it may be from an understanding of the Soviet tactics of expansion.

One of the decisions reached at the conference was that the west should do more to mobilize public opinion on its side. Edward W. Barrett, Assistant Secretary of State in Charge of Public Affairs, arrived today and consulted with Christopher Warner, head of the British Foreign Office information department, on plans for countering misrepresentations by Communist sources of the objects of the North Atlantic Treaty.

Displaced Persons and the Problem of Europe's Uprooted Millions

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1950

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by the Honorable Edward M. O'Connor, Commissioner, Displaced Persons Commission, before the civic dinner, Marianist centennial celebration, University of Dayton, Dayton, Ohio, on May 16, 1950:

It is my privilege to present to you this evening an analysis of one of the largest and most humane of the postwar problems confronting the nations of the western world. It is a problem marked by considerable misunderstanding due to misinformation generated for the most part by selfish prejudice. It is also a problem which goes right to the core of the desperate struggle we now engage in, with the cooperation of other freedom-loving nations, for the preservation of western civilization. This is the problem of displaced persons—those unfortunate people who have been torn from or forced to flee from their homelands by one or another form of totalitarian aggression. These people cannot now return to their homelands for fear of their lives and liberties because of race, religion, or political belief.

For an objective understanding of the problem of Europe's uprooted millions we must turn back the pages of history to 1934. The scene is Germany, where an evil tyrant has come to power. The false theory of a superior race is being put into practice. The equally false theory of an inferior race is also being put into practice, and the Jew is made the scapegoat. These practices caused thousands of Jews to flee Germany and to seek haven in other countries of good will. The passing of a few years found hundreds of thousands of Jews incarcerated in concentration camps and those who survived became displaced persons at the end of hostilities. Before the fall of the Hitler regime thousands of Christians were also put into concentration camps because of their active opposition to the Nazi regime.

The second stage of development was 1939, the year Poland was invaded by prearranged plan and agreement between Nazi Germany and Soviet Russia. Poland was invaded simultaneously from the west and the east. Here we find a small nation caught between the powerful pincers of two totalitarian states. After several weeks of valiant but hopeless resistance, the Republic of Poland was conquered. Hundreds of thousands of Polish people fled eastward seeking to escape the invading Germans only to be greeted by the invading forces of the Soviet Union. It is estimated that well over 500,000 Poles entered territory under military occupation by the Soviets. Due to the intervention of General Sikorsky, supported by representations from the Government of the United States, these Polish refugees were allowed to make their way as best they could across the vast expanse of Russia until they eventually reached the hospitable border of Iran. It is a well-established fact that thousands upon thousands of those refugees died along the way due to lack of food, clothing, and adequate shelter. Those refugees who did reach Iran were given temporary haven in that

country as well as in Egypt, Palestine, and the territories all along the eastern coast of Africa. A good many of the survivors of this tragic journey eventually were able to take up arms in the cause of the Allies by joining the Polish Army reorganized under the command of General Anders.

In the meantime, with the German occupation of western Poland, there began the mass deportation of people to Germany for slave labor purposes. No able-bodied person between the ages of 14 and 60 was considered exempt and thus lived in constant fear of being seized in the middle of the night and deported to Germany.

By mutual agreement between Nazi Germany and Soviet Russia and Baltic States of Estonia, Latvia, and Lithuania were occupied by the Soviet military forces. This military invasion was done under the guise of giving protection to these Baltic states. This action brought about additional thousands of refugees who were forced to flee their homelands.

The third phase developed when Nazi Germany invaded and conquered France, Belgium, Holland, Denmark, and Luxemburg. The occupation of these countries was also characterized by the mass deportation of natives of those countries to Nazi Germany for slave labor purposes. The political dissidents were also rounded up and taken to concentration camps.

The fourth stage came when the alliance between Nazi Germany and Soviet Russia broke down and the Soviet Union was invaded. As the German military forces advanced eastward hundreds of thousands of Ukrainians and White Russians were deported westward for slave-labor purposes. The superior-race theory held that only those of German blood were worthy to be part of the conquering armies and all other people were to be treated as inferiors but required to labor for the war machine.

The fifth stage developed when the tide was turned against Nazi Germany. The rapid and unrelenting military advances of the western allies made possible, in turn, the advance westward of the Soviet military forces. As the Soviet military forces advanced toward the Baltic states, Poland, Hungary, and Rumania, large segments of the civilian population still remaining in those countries fled westward. Being aware of what it meant to be under Soviet rule and domination they took to the roads in an effort to reach the territories liberated by the western allies. Those who reached the western parts of Germany and Austria were afforded haven by the military forces of the United States, the United Kingdom, and France and were put in the displaced-persons camps with millions of other unfortunates like themselves.

As a result of these events the western allies were faced with the problem of caring for approximately 8,000,000 persons immediately after the surrender of Germany. These 8,000,000 people were made up of those liberated from concentration camps, forced laborers brought into Germany, refugees who fled westward before the Russian armies, and prisoners of war. The first requirement was that of providing immediate care and maintenance to sustain life. This task was accomplished in a most commendable manner.

The next requirement was to arrange for the repatriation of these uprooted people to their native lands. Some were returned under plans established by the allied armies, while still others, impatient to rejoin their families and relatives, took to the roads in a seemingly unending stream of people with their few remaining earthly possessions strapped to their backs or carted in small wagons and baby carriages. This impatient movement of humans was for the most part headed westward toward France, the low countries, and Italy. The natural impatience to return home which characterized the western Europeans was not found in those whose homes were to the east.

After long months of tedious efforts to bring about the voluntary repatriation of all the displaced persons to their native lands in June 1946, there still remained approximately 1,200,000 who refused to repatriate. It is interesting to note that those who refused came from Poland, Czechoslovakia, Estonia, Latvia, Lithuania, the Ukraine, Hungary, Rumania, and Yugoslavia. They gave as their reasons for not returning, fear of their lives and liberties because of race, religion, or political beliefs.

A solution to the problem of the displaced persons had to be found. The following alternatives were offered:

1. Forced repatriation. This would have required the western allies to use physical force in bringing about their repatriation. This was rejected as thoroughly alien to the basic tenets of western civilization.

2. To remove them from the camps and assembly centers and throw them upon the economies of Germany, Austria, and Italy. This was rejected because those countries could not take care of their own natives who were faced with near starvation diets and with industry and commerce at a complete standstill.

3. They could be maintained indefinitely in the camps and assembly centers. This was rejected because the cost was prohibitive and it offered a most unnatural solution.

4. New homelands could be found for these people in countries willing and able to accept them.

The fourth alternative was recognized as the only practical solution to this vast human problem. Consequently the International Refugee Organization, to which the United States gave real leadership in its formation, was established within the United Nations. It is significant to note that the International Refugee Organization has since its inception been supported only by the countries of the western world which have found it necessary to bind themselves together for common security against the latest world aggressor. Neither the Soviet Union nor any of her satellites have played an active part in the operations of this organization. On the contrary, they opposed its establishment and continue to oppose its humanitarian and charitable function.

The United States has to date offered haven to 174,862 displaced persons. Other cooperating nations of the world have taken in a total of 548,963.

The solution to the problem of displaced persons is in sight. The Congress of the United States has extended and liberalized the original Displaced Persons Act. This legislation is at present in conference and is expected to be brought before both Houses of Congress for final action in the immediate future. The provisions of this new legislation together with the continuing cooperation of the other nations of good will gives high hope that this problem will, for the most part, be resolved by June of 1951.

The story of the displaced persons does not complete the analysis of Europe's uprooted millions. There remains two important phases of this problem which merit the serious attention and concern of the American people.

Shortly after the surrender of Germany, the Soviet Union began the forced deportation of all persons of German ethnic origin from the countries their military forces occupied. All persons of German ethnic origin were thus expelled from Estonia, Latvia, Lithuania, the Ukraine, Czechoslovakia, Hungary, Rumania, and Yugoslavia. The forebears of a great number of these people settled in those countries as long as 400 years ago. Nevertheless their land and all their possessions were expropriated and they were expelled to Germany and Austria as paupers.

A special subcommittee of the Committee on the Judiciary of the House of Representatives made an extensive study during 1949 of the problem of expellees and refugees of German ethnic origin. This encompassed approximately 2 months' field study in Germany and Austria together with the examination of all available official documents and the taking of extensive expert testimony. The outstanding conclusions reached by this bipartisan committee are:

1. That indisputable facts clearly show the fallacy of the theory of American co-responsibility for the uprooting of millions of German expellees and refugees. The Soviet Union without consultation or advance notice began the mass expulsion of these people long before the Potsdam Conference.

2. That the United States delegation to the Potsdam Conference, led by the President of the United States, was faced with what amounted to a fait accompli in this matter. The efforts of the United States delegation, therefore, were directed toward doing everything possible to make more orderly and humane the inevitable expulsion of these people and to open occupied Germany to those who would otherwise be faced by deportation to remote sub-Arctic territories of Soviet Russia, an equivalent to annihilation.

3. That it is highly improbable under existing conditions that the German expellees and refugees may be peacefully returned to their former residence.

4. That efforts must be made to establish an economy in Germany which will absorb approximately 7,000,000 of the expellees and refugees.

5. That it will be necessary to develop immigration opportunities for over 1,000,000 of these expellees and refugees.

In the amended displaced-persons law passed by the Senate on April 5, 1950, two special provisions were added which relate to the problem of expellees and refugees of German ethnic origin. The first amendment calls for the admission into the United States of 54,744 expellees for whom home and job assurance are to be provided by American citizens. The second amendment authorizes the participation of representatives of the Government of the United States in an international conference, the purpose of which is to study this problem and to develop practical means for its solution.

Some idea of the importance and relation of this problem to the establishment of an economically sound western Europe may be gathered from the fact that it was given special recognition at the meeting of the foreign ministers of the United States, Great Britain, and France, held in London last week. The communiqué issued by this conference indicated that the respective Governments were appointing representatives who were to immediately begin a study of the problem with a view to its solution.

The last phase of the refugee problem arises from the events which have taken place in the so-called satellite countries since the end of active hostilities. Despite agreement solemnly entered into by the Soviet Union that the governments of these countries would be truly representative of the freely expressed wishes of their people, we find the opposite to be the case today. The leaders of parliamentary government in each of those countries together with their active supporters have been forced to flee and to take haven in the western zones of Germany, Austria, and in Italy. In each of those countries parliamentary government was eliminated by a coup backed by the ever-present military might of the Soviet Union. These people have been forced to flee their homelands because of religious and political persecution. They are as homeless and dispossessed as the

original displaced persons and the expellees and refugees of German ethnic origin. They have little left but their faith in western civilization and the hope that one day in the not-too-distant future the basic freedoms for which the last war was fought will be enjoyed by all people in every country of the world.

In summarizing these events which had led to the brutal uprooting of more than 25,000,000 people, I believe several valid conclusions can be made. The first is that the creation of this tremendous problem must be placed fairly and squarely at the hands of the dictators, those who brought about World War II, and those who now stand in the way of peace with justice and freedom for all. It was a ruthless dictator who initiated this problem just as it is a ruthless dictator who enlarged it and today continues its existence.

The second is that the problem of Europe's uprooted millions is an integral part of the desperate struggle which we are now engaged in to strengthen and preserve western civilization. If we are to win the struggle, we must guard against the development of any malignant growth or development within western civilization itself. We must see to it that all persons regardless of their race, religion, or ethnic origin are afforded the opportunity to a decent and self-respecting way of life. The attainment of this goal will give concrete expression to our belief in the worth and dignity of man. Only by establishing this essential dignity for all mankind may we attain a peaceful world.

In commemorating the Tricentennial of the Marinist Order we can learn many fundamental lessons from the 100 years of service which have been completed. There is, I feel, one especially noteworthy event in this glorious history.

Father Meyer, accompanied by Brother Schultz, arrived in Cincinnati on July 16, 1849. Upon arrival they found an epidemic of cholera raging in Cincinnati and in the surrounding towns as far as Dayton. At the request of Bishop Purcell, Father Meyer and Brother Schultz journeyed to Dayton to administer to the victims of this epidemic. There they met a Mr. Stuart, a descendent of the Stuarts of Scotland. It so happened that Mr. Stuart owned 125 acres of land known then as Duberry Farm, which he was offering for sale. Father Meyer considered this tract of land ideal for the purpose of establishing a headquarters for the Marinist Fathers in the New World. A sum of $12,000 was being asked for the property which, while reasonable, was far beyond the resources of Father Meyer, who had arrived here with but a few dollars left in his pocket.

On March 19, 1850, the Feast of St. Joseph, Father Meyer had a most important conversation with his newly acquired friend, Mr. Stuart. He told him of his great dream of acquiring the 125 acres of land and of his confidence that St. Joseph and the Blessed Mother would bless and prosper the work of the Marinist Fathers in the New World. When Mr. Stuart asked Father Meyer what collateral or other security he had to offer for the purchase of this land, Father Meyer offered a medal of St. Joseph. Mr. Stuart accepted the medal of St. Joseph as security and immediately turned over the deed to the property to Father Meyer.

In this little story we find the lesson of faith, that virtue which is basic to the establishment of mutual trust and confidence. There can be no lasting or peaceful relations between men without mutual trust and confidence. It is equally true that there can be no lasting or peaceful relations between nations without mutual trust and confidence. Let us hope and pray that soon all nations will return to the faith in God-given principles so that peace with justice for all may prevail in the world.

Contribution of My Generation to Democracy

EXTENSION OF REMARKS
OF
HON. JAMES E. NOLAND
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1950

Mr. NOLAND. Mr. Speaker, the following essay was written by Sara Sue Phegley, 16-year-old junior in the Carlisle-Hadden School. As winner of this essay contest which I sponsored in the Seventh Congressional District of Indiana, Miss Phegley showed real insight into the background of the democratic processes. With the youth of this Nation rededicated to the maintenance of democracy, we need not fear for the future of America.

I am very proud of the response of Seventh District high schools in participating in this essay contest on the Contribution of My Generation to Democracy. Sara Sue Phegley is to be highly congratulated for her fine essay.

THE CONTRIBUTION OF MY GENERATION TO DEMOCRACY

The future of democracy and the happiness of the world depend upon the contribution of my generation to democracy.

Our parents have given us first-hand information of a depression and its demolalizing effects. They have lived in a period when some communities were dominated by intolerant groups. We know the cost of war in life and money and the fallacy of believing any good can be derived from the use of force. We have seen people unfit for office elected and dominated by undemocratic groups.

All these problems are to fall upon my generation. We must conscientiously and intelligently understand these issues of our times to preserve the freedom without which there can be no security in any nation.

I believe my generaiton will profit by the mistakes of our predecessors. We bring with us confidence and intelligence. Our many youth organizations—Scouts, 4-H Clubs, Hi-Y, Y-Teens, and others—train in citizenship and leadership. We are not afraid to stand and express our convictions without being swayed by the opinions of others. We know that the primary principles of freedom are self-development and self-expression. I believe we are intelligent enough to recognize the fact that no group, no individual, or branch of government should dictate our lives.

It behooves us to secure a good government by carefully exercising the rights of the ballot. We must see that only those who put personal and political gains second to our best national interests and the welfare of their fellow men may gain office. We must maintain an active interest in government and support our leaders, yet at the same time make them aware of our opinions on public issues. We should not hesitate to fill public offices if we are qualified; moreover, none of us must shrink from such public duties as serving as witnesses or on juries.

Many of the trying questions now facing this Nation such as the atomic and hydrogen bomb, mercy killing, and the prevention of crime, will confront my generation. We must not let the many communistic leaders of our time weaken the democratic ideals our forefathers have handed down to us.

We will bring with us deep religious convictions. Only God-loving, God-fearing people can deal justly with their fellow men. We must have a known code of morals. God forbid that we trade the freedom of opportunity, freedom of speech, freedom of press, and freedom of religion for false security, force, and dictatorship. May God help us to preserve the democratic government our ancestors have fought for and are now putting into our hands for safe keeping.

All Pretense Lost

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Monday, May 22 (legislative day of Wednesday, March 29), 1950

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "All Pretense Lost," published in the Wall Street Journal of May 17, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ALL PRETENSE LOST

If candor is a commendable quality, Mr. Leon Keyserling merits a medal for some of his comments the other day on the administration's spending policy.

He does not countenance the wishful thinking that present deficits are just to meet emergencies. He says quite frankly that the administration plans to keep spending for spending's sake and will diligently search out all opportunities for so doing. He puts at rest any fears that the administration might return to any such old-fashioned thing as economy in government.

Since Mr. Keyserling is the chairman of the council that advises the President on economic policy, and has lately demonstrated that he has Mr. Truman's confidence, what he says is worth listening to.

For instance, we have heard it said—by the President himself, among others—that the reason the budget cannot now be balanced is that there are extraordinary demands for foreign aid and the cold war. We have been told that as soon as these temporary demands are ended there can be a return to economy.

Foolish promising, says Mr. Keyserling. When the costs of the cold war and foreign aid can be safely reduced there will be no cuts in spending. The administration will just take this saving and use it to expand its domestic programs. Anyone who hopes for economy then is simply deluded.

Indeed, Mr. Keyserling is honest enough to prophesy that the administration is never going to cut its spending and frank enough to argue it ought not to even dream of it.

The liberal spending of the Roosevelt and Truman administrations is basically right, in his opinion. Armament spending is not an undesirable burden undertaken out of necessity and with prayers that it may someday be reduced; it is economically essential and saves the trouble of thinking up some other spending outlet. The same is true, he argues, of the Government's spending for veterans, for farmers or for other groups.

Mr. Keyserling also explains quite plainly that if the administration ever does balance the budget it will be done only by increasing tax revenues. The formula he offers is to spend our way to economy.

A few people have long felt that this administration had no intention whatever of cutting the Government's spending, that spending itself was the goal and the particular projects merely excuses. But it was difficult to combat the protestations that all would be well tomorrow.

Now the thing is plainly spoken. Spending is good; economy is bad. The administration will work industriously at the first and avoid the last like the plague.

Mr. Keyserling's candor, at any rate, ought to be welcome. The meritorious thing about it is that it strips pretense from the administration's intentions and leaves no room for illusion.

Louis Budenz

EXTENSION OF REMARKS
OF
HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, May 19, 1950

Mr. MASON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include George Sokolsky's column, These Days, which appeared in the Washington Times-Herald. It is an excellent defense of Louis Budenz and a complete answer to Senator CHAVEZ' criticism of Budenz:

THESE DAYS
(By George Sokolsky)

Senator DENNIS CHAVEZ,
United States Senate,
Washington, D. C.

MY DEAR SENATOR CHAVEZ: I have for several days pondered your speech in the Senate concerning Louis Budenz. From a psychological standpoint, it was interesting because you involved yourself not in politics but in canon law.

I have never met Louis Budenz. When he was editor of the Daily Worker, he used to write excoriating articles about me, calling me a reactionary, a Fascist, and a tool of the National Association of Manufacturers.

I did not mind the name-calling, because, Senator, the record always shows what the facts are. Of course, I could have called names back, as you have done, but that strikes me as childish.

You and I and Louis Budenz and Joe McCarthy will soon enough go our way to eternity, but the struggle between Marxism and Christianity will continue as the struggle between good and evil, between God and the devil will continue. I refer you to the Book of Job on the subject—it was written long before anyone thought of us.

However, when Louis Budenz was reconverted to the Roman Catholic church, I sat back and waited. I wanted to be sure that that conversion was not false. As a Communist is, by definition, an atheist, his oath can never be accepted per se. I felt that I had to be sure of the sincerity of Louis Budenz.

His conversion was effected by Monsignor Sheen, a cherished friend, but I have never once spoken to Monsignor Sheen about it. For a year, Louis Budenz was at Notre Dame struggling with his soul. I am an alumnus of Notre Dame (by the back door of an honorary degree), but I have never spoken to President Cavanaugh about it.

I wanted to see what practical application Louis Budenz made of his conversion. I wanted to see a test made of his sincerity.

You say that you are a Roman Catholic and that for the first time in 19 years, you arose in Congress to speak as a Catholic. I take it that that was a rhetorical expression. A man of God is a man of God all the time, not once in 19 years.

Furthermore, yours is a hierarchical church, and therefore you could not speak as a Catholic, ex cathedra. Only the Pope can do that in a matter of faith and morals. Yet you do try to give the impression that you also have a right to do that. You impugn the confessional; you deny repentance and penitence; you deprive a man of absolution. You go too far, if you go as a Catholic.

If you had said that, man to man, you would never believe Budenz, that is your right. When, however, you said that you, as a Catholic, rejected his conversion, you invaded a realm which, as a Catholic, you know is not yours. Your church denies that there are gods on earth, even in the United States Senate.

Now, by what yardstick do I conclude that Louis Budenz is sincere—utterly, completely, totally sincere? By his acts since his conversion, Senator CHAVEZ.

Budenz was the first man to name Gerhart Eisler as the No. 1 Communist agent in America. His exposure of Eisler was justified by the course of events. Eisler is today the top Communist in east Germany and our greatest enemy in Europe, next to Stalin.

Budenz identified J. Santo and J. Peters as Communist agents. Both voluntarily left the United States, which they should not have been permitted to do.

Budenz testified in the two trials of Harold Christoffel. Both trials resulted in conviction.

Budenz was a witness before the House Committee on Un-American Activities in the Alger Hiss case.

Budenz was the Government's chief witness for 10 days in the trial of the 11 Communists before Judge Medina. They were all convicted.

Budenz was the witness before the House Labor Committee five times concerning the United Electrical Workers, which was expelled from the C. I. O., confirming Budenz' testimony.

Budenz has spent more than 100 hours in giving data to the F. B. I., which they have used advantageously.

He could have been silent, teaching economics at Fordham University. Instead he risks just such attacks as yours. By his deeds you shall know him.

Sincerely yours,

GEORGE E. SOKOLSKY.

The Railroad Strike

EXTENSION OF REMARKS
OF
HON. FORREST C. DONNELL
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Monday, May 22 (legislative day of Wednesday, March 29), 1950

Mr. DONNELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "That's That," written by Bruce Gustin and published in the Denver Post of April 27, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THAT'S THAT
(By Bruce Gustin)

Union leaders acted wisely and with regard for the public interest in postponing the railroad and telephone strikes which had been called for Wednesday. Such interference with transportation and communications as was threatened by these strikes should not be tolerated. Walk-outs of this nature should be outlawed. The fact that the Brotherhood of Locomotive Firemen and Enginemen agreed to a 2-weeks' truce, postponing the railroad strike, and the CIO Communications Workers postponed indefinitely the telephone strike should not deter Congress from taking action to protect the public interest.

Senator DONNELL, of Missouri, has introduced an amendment to the Railway Labor Act to outlaw any strike, slow-down or other concerted interruption of operations by employees, or any lock-out by a carrier, resulting from any dispute falling within the purview of the Railway Labor Act. This amendment is based upon the sound theory announced by the late Calvin Coolidge, former President of the United States, that "there is no right to strike against the public safety by anybody, any time, anywhere."

The amendment proposed by Senator DONNELL is fine, as far as it goes. But it doesn't go far enough. Any strike or lock-out which seriously interferes with either transportation or communications should be banned. Those are two services which vitally affect the whole Nation. It is Senator DONNELL'S contention that there is no absolute right to strike. And in support of that he quotes from the United States Supreme Court decision in the case of *Dorchy* v. *Kansas* (272 U. S. 306), that "neither the common law, nor the fourteenth amendment, confers the absolute right to strike."

Old Man of the Sea?

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1950

Mr. WOODRUFF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Times-Herald of April 29, 1950:

OLD MAN OF THE SEA?

Are we never going to stop playing sucker to European come-on schemes? At first, right after the war, our yearly multibillion foreign-aid program was sold to the country on the plea that other nations needed our help to rebuild their production.

This they proceeded to do.

Now, according to administration figures, Europe's industrial production is 20 percent higher than before the war, her food production is back to prewar levels, and her export trade is greater than before 1939. So what about more Marshall-plan aid? Can it be cut off?

PRODUCTION IS AT PEAK

Certainly not, administration masterminds now tell us. Because in the course of supplying other countries we have built up our own production so much that if Marshall plan operations were cut off, we would be stranded with huge stockpiles of farm produce—our markets would be glutted—there would be unemployment, depression, collapse.

So, say they, the ECA program must have another $3,400,000,000 for next year.

They are right, of course, in saying that so many surpluses exist—as every sad taxpayer who has read of our production of surplus potatoes knows.

But they are as wrong as wrong, these masterminds, in their bland assumption that this situation is necessary and must be continued.

CUT THE CLOTH TO FIT THE PATTERN

We don't have to keep producing surpluses to give away. We can, and should, cut farm supports to fit our own needs only. If we did this, then the weird business of dodging a depression by depending on other people to accept our charity would very soon cease.

And everybody, including those charity patients, would be better off. For our farmers could then turn to growing more of the things we want—and as for Europe, "poor sick Europe," without our everlasting crutch that wobbly old lady would learn to walk a sight faster, we're thinking.

SINBAD WAS A PIKER

The whole thing reminds us of the story of Sinbad and the Old Man of the Sea. You remember how that old man asked Sinbad to take him piggy-back across a river—and then nearly strangled Sinbad and rode around on his neck for years.

Well, they saddled us with the Marshall plan on the plea that it was needed to get Europe over the immediate war-caused economic crisis. And now that we've toted it across, will it get off? Ha, move over, Sinbad—you were only a piker. We not only have to carry our old man around, we have to feed him and listen to his blather.

Budget for Germany

EXTENSION OF REMARKS
OF
HON. HERMAN P. EBERHARTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1950

Mr. EBERHARTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following from the New York Times of April 23, 1950:

BUDGET FOR GERMANY—SUPPORT URGED FOR FUND REQUEST TO CONTINUE EDUCATION PROGRAM

(Of the signatories to the following letter, Mr. Taylor was formerly Chief of Counsel for War Crimes at Nuremberg; Mr. Brett, consultant to General Clay, Germany, 1948; Mr. Greenstein, former adviser to General Clay on Jewish Affairs; Mr. Mayer, former Chief of the Motion Picture Branch of Military Government in Germany; Mr. Padover, author of Experiment in Germany.)

TO THE EDITOR OF THE NEW YORK TIMES:

The recent testimony of John J. McCloy (United States High Commissioner for Germany) before the House Appropriations Committee lays commendable emphasis on the vital significance of our occupational "program of education designed to assist, advise and persuade the German Government and people to take the democratic road." This official recognition of the reeducation program's overriding importance, which received all too little attention in press accounts of Mr. McCloy's statement, will be welcomed by many who have served in the occupation and who have been dismayed at the relegation of educational activities to a back seat.

For, as Mr. McCloy declared, "everything depends, the whole concept of Western Europe depends, upon" the establishment of stable democracy in Germany:

PURPOSE OF PROGRAM

"If we have a free Europe the German people themselves must individually accept the way of life that is the solid basis of western Germany. A Germany whose citizens have not demonstrated their acceptance of these values can never be a strong link in the association of western nations. A Germany whose citizens have learned to understand and accept these democratic values will be a bulwark of peace and strength against the Communist menace from the east. It is therefore of great importance to help the Germans come to such an understanding and acceptance. It is not something which can be imposed or something which can be compelled, but it is something which can be nurtured by helpful exposure and example. This is the purpose of our public affairs, of our education and information programs.

"I wish to emphasize that we cannot put over this program by fiat or decree. We are seeking to develop it in a spirit of friendship and understanding. We are giving our advice and assistance wherever it is sought. We are providing materials and opportunities.

"We are helping the German schools and universities, the German church and community groups, to regain the best in the German tradition, and to learn the new and the good in American, British, and French civilization."

These words, buried in a 600-page volume of testimony, penetrate to the core of the "German problem." Their far-reaching implications, and the magnitude of the educational undertaking, are most inadequately reflected in the occupational budget for 1951 which Mr. McCoy himself presented.

ACTIVITIES COVERED

Less than $2,500,000 for all press, radio, and motion-picture activities; about the same amount for information centers such as the "Amerika Hauser." A few millions for the student and "leader" exchange program. Less than $1,500,000 for direct aid to German schools and universities; this is about 50 cents for each of the 3,000,000 school children in the American zone, excluding the universities entirely. The entire proposed appropriation for educational, cultural and informational activities is just under $12,650,000.

Even with a generous additional allowance for administration and other overhead expenses, this is less than $1 per capita in the American zone. By way of comparison, the same volume of hearings contained the testimony of Paul Hoffman in support of an ERP subsidy to Germany of $552,900,000.

Disappointingly inadequate as Mr. McCloy's educational budget for 1951 is, it represents an increase over that for the current year. Nor can Mr. McCloy be justly saddled with much of the blame for its shortcomings. At least he has officially and publicly established the primacy of the educational program, and no doubt his estimate took into account the probability of unfavorable congressional reaction to a larger request, as appears between the lines of his later testimony that "it is quite possible that the money we seek may not be enough. * * * I am sure that I could effectively spend more."

RELUCTANCE TOWARD APPROVAL

In the light of the prevailing congressional temper, his caution is understandable. The reaction of the Congressmen before whom he appeared was at times perfunctory, at other times suspicious or hostile, but never enthusiastic. Rumor hath it that Mr. McCloy's presentation encountered even rougher going before the Senate Appropriations Committee, under the far from benign aegis of Senator MCKELLAR.

In short, unless Mr. McCloy's budget receives timely and effective support, there is no assurance that even this sadly circumscribed program will be approved. This is not the stuff of which sensational headlines are made, but it is the cornerstone of our German policy. It is a crucial phase of the campaign to win the peace. We urge prompt and vigorous representations to all Congressmen and Senators in aid of the McCloy budget for Germany.

TELFORD TAYLOR,
GEORGE P. BRETT, Jr.,
HARRY GREENSTEIN,
ARTHUR L. MAYER,
SAUL K. PADOVER.

NEW YORK, *April 21, 1950.*

Misleading Publicity From the Defense Department

EXTENSION OF REMARKS
OF
HON. JOHN F. SHELLEY
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1950

Mr. SHELLEY. Mr. Speaker, I wish to call the attention of the House to an editorial printed in the American Aeronaut under the date of April 18, 1950. The American Aeronaut is the official union paper of Aeronautical Industrial District Lodge, No. 727, International Association of Machinists, at North Hollywood, Calif.

This editorial very properly criticizes a recent announcement to the press indicating that new orders for several millions of dollars' worth of airframes had been placed with California aircraft factories. Investigation following this announcement disclosed that the orders had actually been placed several months previously, and that there was in reality no new work involved. The editorial, which I include in the RECORD accompanying these remarks, points out the harmful effects to labor and the aircraft industry of such misleading publicity. I suggest that those responsible give serious consideration to timing and content of future releases in order that the confusion resulting from the false hopes aroused be avoided.

The editorial follows:

WHO'S KIDDING WHOM?

We have stated before, and we repeat, "You can't fool all of the people all of the time, but you can try." The most recent glaring attempt to pull the wool over the eyes of the aircraft workers and the public, generally in the vicinity of the airframe factories on the west coast, is the announcement relative to the placing of orders by the Navy for planes with Lockheed, Douglas, and other factories in California.

When some 10 days or 2 weeks ago, the daily press all carried the news that Lockheed had received orders for some $25,000,000 and Douglas something over $30,0000,000 for aircraft, the workers employed in the industry and those who have been laid off during the last few months all were enthused as they foresaw continued work and employment.

When union officials began to inquire about these so-called new orders they learned that they do not exist, that they are merely repeat announcements of orders for planes that they have been working on since last fall. It is our understanding that much of the work on these planes has been completed and some of them may already be in the air. That the orders for these planes were included in the backlogs of work reported in the first of the year statements by the various companies.

We ask, "Who is kidding whom?" We note that none of the airframe companies have

taken it upon themselves to correct the erroneous idea that the plants would be busy with work, but we find them making out surplus lists, preparing for large lay-offs. And when we hear the claim that the announcements were not made for security reasons, we again ask, "Who's kidding whom?" Any potential enemy of the United States (and we have only one) no doubt knows more about the number and type of planes being manufactured in our factories than do many of the workers in the plants.

When we consider the subject from all angles, we are inclined to look upon the incident as a further attempt on the part of the forces who are back of the plant dispersal and work removal programs, to sabotage the fight that is being made to keep our California aircraft plants busy and the economy of our craftsmen and the district on a stable basis. The public, having read the misleading reports in the papers, have seen no contradiction and assume a rather indifferent attitude to the campaign of the Council of Aircraft Unions to keep the west coast aircraft industry intact and functioning rather than its removal to Government-owned plants in the Midwest, which is looked upon by many as the first step toward the nationalization of the industry.

Another evil of such untrue publicity is the fact that the reports of the contracts, or plane orders, that do not exist are read by the unemployed in other sections of the country and these workers rush in here seeking employment only to be met with lay-offs where they expected jobs. Many are without funds and become subjects of charity and the many other circumstances brought about by widespread unemployment.

One man who was dealing for a house had the price raised 10 percent. When he asked about the raise he was told that it was due to the fact that Lockheed had received all those new plane orders. Merchants believing what they have read are inclined to overstock and make investments they would not have made had they known the truth.

We ask, "Who's kidding whom?" Is it the procurement agencies of the Armed Forces? Is it the airframe factories, who apparently seem wishy-washy in their opposition to plant dispersal? We cannot blame the newspapers as these releases were furnished them. However, when the union called a press conference to give them the real facts none sent representatives and it may be they have had their orders of hands off.

Consolidated Vultee at San Diego received an order for some work that it is claimed will put about 3,000 men to work but it is the only aircraft concern on the west coast that has been given anything that could be construed as a worth-while order.

We repeat, "Who's kidding whom?" and why?

As we go to press, the Daily News announces that the Army has given orders for $120,000,000 for F-94 night fighters and $26,900,000 for T-33 jet trainers.

We ask, "Are these not orders for the same ships upon which we have been working since last fall?"

The Railway Strike

EXTENSION OF REMARKS
OF
HON. FORREST C. DONNELL
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Monday, May 22 (legislative day of Wednesday, March 29), 1950

Mr. DONNELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Railway Strike," published in the Albuquerque Journal of May 11, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

RAILWAY STRIKE

Five great railway systems, including the Santa Fe, are paralyzed by the strike of locomotive firemen and enginemen.

This strike can but have an immediate and disastrous effect on the public interest.

Mediation has failed. The dispute is a long one. For years now the controversy has raged over the demand of the brotherhood for an additional fireman on multiple unit Diesel engines; also demand that a fireman be placed on switch engines and electrically operated locomotives.

The railroads charge the demand comes wholly under the heading of feather bedding, the practice of creating jobs where there is no necessary work to be done. Or in others words, job padding.

The fact-finding boards have held that the extra fireman is not needed as a safety measure.

The rail strike, if it continues for any length of time, will still almost every train in America. Thousands and thousands of railway workers and other thousands and thousands of workers in related industries will be idle.

The loss to property and production will be enormous.

A great many people, including Congressmen, believe that strikes and lockouts in such vital industries as the railroads should be outlawed.

It is certain that the strike will see demands for legislation in Congress that calls for compulsory arbitration as a last resort in rail disputes. Such legislation would be approved by a large segment of the public. It is clear that this Nation in such cold war and perilous times as these cannot tolerate for long strikes that affect the Nation's very existence.

Defense of Western Europe

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1950

Mr. WOODRUFF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Arthur Sears Henning from the Washington Times-Herald of May 22, 1950:

ACHESON PLAN TO ARM EUROPE FACES BIG FIGHT IN CONGRESS—INTEGRATION OF MILITARY FORCES, HIGH COSTS OF SCHEME BRING OPPOSITION

(By Arthur Sears Henning)

The undertaking to defend and pension western Europe indefinitely, to which Secretary of State Acheson committed the United States at the London Conference last week, will meet with tremendous opposition in Congress, it was learned yesterday.

Many Democrats, as well as Republicans, are aroused over the plan to integrate the American Army, Navy, and Air Force with European forces in an international army entailing a surrender of American sovereignty.

The creation of a governing council, headed by an outstanding American, to direct the military and economic arrangements, which has been hailed by the internationalists as the nucleus of a world state, will come under the fire of the nationalists as a step toward the extinction of the United States as an independent nation.

COST WOULD BE COLOSSAL

Even stronger and more widespread opposition will be evoked by the colossal cost of the undertaking to American taxpayers. Acheson committed the country to a continuation of economic aid to Britain, France, and other nations of western Europe after the termination of the Marshall plan in 1952. This presumably would cost the United States about $3,000,000,000 a year.

Acheson also committed Uncle Sam to pick up the check for the cost of rearming and defending western Europe against possible aggression by Russia. American surplus aircraft, ships, tanks, artillery, and other arms are now being furnished to Britain, France, and other Atlantic pact nations under an initial $1,750,000,000 program of military aid.

It was estimated at the London Conference that it would be necessary for America to step this outlay up to three or four billions a year if western Europe is to be adequately prepared for war.

Altogether, therefore, the Acheson commitment means six or seven billions a year indefinitely in the American budget, which is now in the red to the extent of about 14 billions for 1950 and 1951.

TAX INCREASE NECESSARY

Military authorities estimate that it would cost the United States not less than $50,000,000,000 to make western Europe invulnerable to attack. This would be exclusive of foreign economic aid on which the United States already has poured out 35 billions since the end of the war.

Any notion of reducing taxes to stimulate business has gone glimmering under this colossal foreign aid program. It will be necessary to increase taxes, unless President Truman intends to continue deficit financing.

"The whole program that has come out of the London Conference is utterly fantastic," said Representative WOODRUFF, Republican of Michigan, a member of the House Ways and Means Committee now framing the tax bill. "It merely will hasten the day when the United States will go on the financial rocks. We'll go down into the depths and I doubt that we will ever straighten out our affairs until that event takes place."

Indications are not wanting that the Nationalists in their opposition to the London program will receive the support of numerous internationalists who are no longer a unit on the Truman doctrine of American protection of every nation from Russian aggression.

The hostilities will begin when Acheson arrives home and makes his report on the London Conference to the President and, presumably, a radio broadcast to the public. He is now aboard ship writing his report.

Fate of Railroad Labor Act Hangs in Balance

EXTENSION OF REMARKS
OF
HON. FORREST C. DONNELL
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Monday, May 22 (legislative day of Wednesday, March 29), 1950

Mr. DONNELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Fate of Railroad Labor Act

Hangs in Balance," published in the Salamanca (N. Y.) Republican-Press of May 9, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FATE OF RAILROAD LABOR ACT HANGS IN BALANCE

The heart of the problem of assuring the American public of uninterrupted service on the great transportation lines—a service which cannot be stopped without national disaster—was exposed in testimony Monday before a Senate labor subcommittee. The committee is holding hearings on a bill by Senator DONNELL, of Missouri, to make strikes and lockouts illegal in railway labor disputes.

When the Railway Labor Act was passed many years ago, and for some years after its enactment, belief was widespread that the danger of great railroad strikes had been eliminated. This act often was cited as furnishing a pattern that well could be followed in the case of other industries. When the Taft-Hartley law was proposed and being debated in Congress, one of the arguments against it was that there was no need for such legislation—that all that was required to prevent disastrous strikes in industry was to provide for all industrial disputes a procedure like that set up for the railroads and their employees in the Railway Labor Act.

The Railway Labor Act provides that if and when other efforts to settle disputes between the carriers and their employees fail, the President shall appoint a fact-finding board, and that pending the report of this board railroad service shall not be interrupted. The public's faith in this law was based on belief that neither the railroads on the one hand nor their employees on the other would refuse to abide by the report of such a fact-finding board. Both railroad management and labor leaders must realize, the argument ran, that in the last analysis public opinion would be the decisive factor in a labor dispute involving the transportation lines. Hence, it was argued, neither would dare risk the defeat that would surely follow for the side that refused to accept the decision of a fact-finding board.

For several years nothing occurred to change this belief on the part of the American public in the efficacy of the Railway Labor Act. Railroad employees shared in this confidence that there never would be another great rail strike. The public, the railroads, and the workers all believed that a great transportation tie-up was unthinkable.

This confidence, however, has been completely shattered by events of the past few years. Three times, rail-labor unions have refused to abide by the decisions of fact-finding boards, and after such refusal the threat of a tie-up has been used as a club to win concessions denied by the fact-finding boards. The imminence of such a tie-up on the most recent occasion led President Truman to threaten to draft railroad workers into the Army.

In the current dispute the basic issue once again is whether the decision of a Presidential fact-finding board shall be accepted by both sides. The railroads have always accepted the findings of these boards. A walkout has been called against several major roads by the Brotherhood of Firemen and Enginemen over the question of forced employment of a third man on Diesel locomotives. The unions demanded that a third man be employed. Two Presidential fact-finding boards have held that there is no need for a third man. The brotherhood has refused to abide by the report of the board in the present case and has called a strike, scheduled for tomorrow, on several lines. The presidents of these railroads, pointing to firemen's action, told the Senate committee that railroad labor organizations no longer accept the recommendations of fact-finding boards, but threaten walk-outs in the expectation of winning greater benefits. Hence, they argue, there is need for legislation to make strikes and lock-outs illegal. The brotherhoods have given the railroads their strongest argument for such a law.

Mr. Truman, Just Who Are the Isolationists?

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, May 22 (legislative day of Wednesday, March 29), 1950

Mr. MUNDT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement prepared by me on the foreign policy, together with an editorial from the Daily Plainsman, published in Huron, S. Dak.

There being no objection, the statement and editorial were ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR MUNDT

Mr. President, under leave granted me by the Senate, I am submitting for printing in the CONGRESSIONAL RECORD at this point a thought-provoking and realistic editorial from the Daily Plainsman, published in Huron, S. Dak. It is an editorial every American should read.

In his recent stump-speaking tour of the United States, President Truman occasionally—in Fargo, N. Dak., for example—attempted to discuss foreign affairs. As this editorial suggests, he really should leave such a discussion to more talented and successful spokesmen. Since a good foreign policy is one which preserves the peace, protects the strength and security of a nation, creates international good will and unity, and aids a country to stay solvent and contented, it would seem that the foreign policies of the Roosevelt-Truman era have failed dismally and woefully on every count. Whatever else historians may say about the Roosevelt-Truman era, it appears clear they must record it as an era of backing and twisting, of appeasing and reacting, of much war and little peace, insofar as leadership in foreign policy is concerned.

Even waiving all consideration of such sordid incidents as the case of Alger Hiss, of Henry Julian Wadleigh, of Carl Aldo Marzani, of Yalta, and of Potsdam, the fact that American foreign policy since 1932 has failed to keep us out of either a hot war or a cold war and has failed to procure even an official peace up to this late date, indicates that in foreign affairs Presidents Roosevelt and Truman have most completely failed.

For Truman now to try to cover his current miscalculations and misplaced confidences by attacking those who expose or criticize him, is consequently scarcely likely to delude any but the most gullible or to silence more than the most timid. As the Daily Plainsman so effectively points out, the time has come for straight talking on matters of foreign affairs if the ghastly blunders in our foreign policy are not again going to plunge us into the blood bath of another global war. Certainly there is nothing in the record of our current administrative spokesmen on foreign policy to give Americans assurance that their judgments are infallible or their programs so sound that they dare not be questioned or examined.

[From the Daily Plainsman, Huron, S. Dak.]

JUST WHO ARE THE ISOLATIONISTS?

In Fargo, N. Dak., on May 12, President Truman said that persons criticizing and opposing the administration's foreign policies and other policies were "isolationists" who would "let the Communists take over other nations and run the world."

To anyone who has compared maps of the world as of 1944 and then as of 1950, who has seen the steady march of communism abroad helped by the treaties of Yalta and Potsdam and seen the court proof as in the Hiss case of Communist influence working in the State Department, the Fargo speech of the President is completely baffling.

For the President is the man who was the United States representative at Potsdam, where the United States was put behind the eight ball in Berlin, where agreements were made which resulted eventually in all of Europe east of Germany coming under Communist control. He is the man who said the Hiss case was simply a red herring, and the Chief Executive of an administration which refused to prosecute the Hiss case until the House un-American Activities Committee dug up microfilmed evidence, evidence which the administration already knew about but which it had not acted upon because no one else knew about it at first.

He is the man who accepted the recommendations of State Department emissaries that the United States let China fall unsupported, and who rejected the recommendation of Gen. Albert Wedemeyer that the United States take the same action in China—at a time when it was possible—that it actually did take in Greece.

He is the same man who has headed the Government of the United States which in the past 5 years has found itself crowded, shoved, and forcibly ejected from country after country; which has found its embassies closed in iron-curtain countries; which has found the world of its activity constantly growing smaller and smaller and that of communism larger and larger.

His administration has fashioned the foreign policy which has shrunk the sphere of United States activity to a point where the United States is almost brought to the point of making itself a garrison state for continental defense and that surely is nothing more nor less than isolationism. It is an isolationism, however brought close only because of the Truman administration's foreign policy.

So when the same old man who has been responsible for bringing a once invincible America to that point says in Fargo that isolationists are endangering his program and that his opponents would let communism take over other nations and run the world only one of two conclusions is possible.

Either he and his advisers do not or will not face what has happened because of United States foreign policy; or

He is trying to pull one of the most magnificent switcheroos and hoaxes in political history by blaming his opponents for the very evils his administration has created.

The Railroad Strike

EXTENSION OF REMARKS
OF
HON. FORREST C. DONNELL
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Monday, May 22 (legislative day of Wednesday, March 29), 1950

Mr. DONNELL. Mr. President, I ask unanimous consent to have printed in

the Appendix of the RECORD an editorial entitled "The Railroad Strike," published in the Lancaster (Pa.) Intelligencer-Journal of May 11, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE RAILROAD STRIKE

The railroad strike is on.

Firemen, disgruntled because the railroads refuse to put another fireman on Diesel engines, have walked off the job on four major systems.

The entire national economy is affected, and the situation will become critical in a short time.

It is nothing short of a crime.

But it is the old, old story.

So long as strikes against the public welfare are permitted, situations such as we are now experiencing will continue.

There will always be those who will go to any extreme to try to win their point.

There is only one way to handle the matter and that is to outlaw strikes against the public welfare.

It can be done.

It must be done.

And what is more, it must be done on the national, State and local level, if it is to be 100 percent effective.

The Lady With the Lamp

EXTENSION OF REMARKS

OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, May 22 (legislative day of Wednesday, March 29), 1950

Mr. LEHMAN. Mr. President, last Thursday, May 11, was National Hospital Day, which is the anniversary of the birth of Florence Nightingale. My good friend, Harry Schlacht, made Hospital Day the occasion for an interesting column in the New York Journal-American. I ask unanimous consent to insert this column celebrating Hospital Day in the Appendix of the RECORD.

There being no objection, the poem was ordered to be printed in the RECORD, as follows:

"THE LADY WITH THE LAMP"

(By Harry H. Schlacht)

"Lo! in that house of misery
A lady with a lamp I see
Pass through the glimmering gloom,
And flit from room to room.

"And slow, as in a dream of bliss,
The speechless sufferer turns to kiss
Her shadow, as it falls
Upon the darkening walls."

—*Longfellow's Tribute to Florence Nightingale.*

Today is National Hospital Day. Today is the anniversary of the birth of Florence Nightingale.

She was born 130 years ago in Florence, Italy. She was educated in the nursing standards of her time. She was hailed as the ministering angel during the Crimean War when she afforded comfort to wounded soldiers.

Florence Nightingale has been portrayed in history and poetry, in art and literature, as "The Lady with the Lamp."

The lamp became a symbol for the light which she shed.

Her life became the ideal and the inspiration to the profession of nursing and to hospital services everywhere.

She gave of her heart, she gave of her soul, she gave of her life to this cause.

Well may the speechless sufferer turn "to kiss her shadow as it falls upon the darkening walls."

Her work illuminates the path of the voluntary hospitals. It glows on the records of these great institutions.

History will record no finer accomplishment than that of the voluntary hospital services during the last half century.

They serve humanity without regard to race, color or creed. They recognize no religious sect. They recognize no economic position.

White man and colored man, millionaire and pauper, all find refuge and health within their portals.

The American people are the owners of the voluntary hospitals.

It is not a product of Government subsidies. It is the product of magnificent philanthropies. It is the product of free American citizens. It is the product of free American enterprise.

The voluntary hospitals have been outstanding in maintaining our democratic spirit.

The strength of the American system stems from the character of the American people.

It is a character born in freedom, nurtured by American initiative, developed by American incentive, which blossomed into full fruition under an American system which assures the dignity of the individual.

The Greater New York Hospital Association today in tribute to Florence Nightingale's birthday seeks to arouse public attention in the work of the hospitals and similar institutions.

May the life of that God-loving soul be an inspiration in quickening within us a fixed determination that voluntary hospitals shall prosper and hold out the green branch to every despairing heart.

Let us all aid the voluntary hospitals.

They need our support. They need our help.

With the memories of yesterday fresh in our minds, with tomorrow challenging us at every turn, we can look forward to a day for health in which voluntary hospitals will enjoy the full recognition commensurate with the need for their great services.

The hospital is everybody's business. The problem belongs to you and me.

A strong America is a healthy America.

The Railroad Strike Hits National Defense

EXTENSION OF REMARKS

OF

HON. FORREST C. DONNELL

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Monday, May 22 (legislative day of Wednesday, March 29), 1950

Mr. DONNELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, an article entitled "Strike Hits Defense, Says Munitions Chief," published in the New York Times of May 13, 1950.

There being no objection the article was ordered to be printed in the RECORD, as follows:

STRIKE HITS DEFENSE, SAYS MUNITIONS CHIEF

PITTSBURGH, May 12.—The railroad strike was cited as a blow to national defense by Hubert E. Howard, chairman of the United States Munitions Board, in a speech today before 300 industrial executives of the Pittsburgh area in the Duquesne Club. It was the first major utterance of Mr. Howard's 5-month tenure in office as head of the munitions board.

"Russia has foretold a world conflict but she has also taught that capitalism will fall of its own weight and own sins," he said. "She cares not how she accomplishes world domination and our economic collapse would be a safer and far less dangerous course for her.

"From this point, therefore, as far as we can see, we walk an economic tightrope faced with the fateful decision of spending sufficient moneys on armament to deter an attack and yet not spend so much that we make our economic collapse inevitable."

Mr. Howard then went on to mention the railroad strike. Elaborating a point he had made at an earlier press conference, he said:

"Two dangers loom. First we must scrutinize more closely than ever before all Government expenditures to see that we do not waste our substance on nonessentials and second, capital and labor must place loyalty to their country above selfish interest by avoiding all costly strikes and interruptions to production."

"We can no longer afford the economic waste and loss resulting from strikes," Mr. Howard added, "nor can we risk the possible misunderstanding of unwarranted conclusions therefrom."

American Bowlers Discard Segregation

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 22, 1950

Mr. MULTER. Mr. Speaker, I was greatly heartened to read in the press the other day that the American Bowling Congress had decided to discard its policy of segregation and will no longer restrict its membership to "white males" only. This is another important step in the direction of attaining equal rights for American citizens of all races and creeds. The next, and one of our major steps, should be the enactment of FEPC legislation to eliminate all forms of discrimination in employment and keep this country the finest democracy on the face of the earth—one for the whole world to emulate. I am placing in the RECORD a brief editorial from the New York Herald Tribune of May 14, 1950, regarding the action taken by the bowling congress:

THE BOWLERS CATCH UP

It took considerable shoving, but the American Bowling Congress finally stepped in line. The restriction of membership to "white males," dating back to 1916, has been dropped. The action was taken voluntarily by the ABC convention at Columbus, but the bowlers were under heavy pressure. Public opinion was against them; the ideal of fair play in all sports, generated by the Negro example in baseball, has taken root. Legal actions in New York, Illinois, Ohio, and Wisconsin were breathing hard on the ABC's neck, and it was clearly only a matter of brief time before the national organization actually would have been pushed out of business. The heat was on, and the bowling congress had to relent with the best possible grace.

The underlying force was social pressure, but it took an organized kick in the pants to accomplish reform. Here we have an example of what can be done by compulsion. Education prepared the ground for acceptance, but the final push came by force. When the law stepped in, and prosecutors and judges ruled that public policy was violated by this callous infringement on fair play, the battle was at last won. In bowing to the inevitable, the ABC lawyer, Michael J. Dunn, commented that in the years before 1916 "there was no 'white male' in our rule book, and we got along fine." From now on the American Bowling Congress will get along even better. Every time that another bar is knocked down in the senseless division of Americans and refusal to grant equal rights to all races the whole country can feel that it is stepping forward.

Full Employment

EXTENSION OF REMARKS
OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, May 22 (legislative day of Wednesday, March 29), 1950

Mr. LEHMAN. Mr. President, on Thursday, May 18, I was privileged to speak before the annual convention of the Amalgamated Clothing Workers Union, in Cleveland, Ohio. My subject was full employment, and the dangers we faced from creeping unemployment. I also outlined a program of action to avert this danger. I ask unanimous consent to insert my speech in the Appendix of the RECORD.

This morning the New York Times published on page 1 an article reporting, from official sources, on the trends in unemployment. I ask unanimous consent that this article be printed in the Appendix of the RECORD, at the conclusion of the speech to which I have just referred.

There being no objection, the address and the newspaper article were ordered to be printed in the RECORD, as follows:

ADDRESS BY SENATOR HERBERT H. LEHMAN

In standing on this platform with the officers and leaders of the Amalgamated Clothing Workers Union, and facing the delegates and guests of that union, I recognize that I am among old and true friends. I have been associated in one capacity or another with the leaders of the Amalgamated, and with your union, itself, for more years than I need to count. We have fought many good fights side by side, and have won our share of them. On occasion, we have had our defeats. But you and I have always been on the same side.

At this convention, you have already heard speeches by many distinguished Americans. This afternoon you will have the privilege of listening to my good friend and yours, and my presiding officer, Vice President ALBEN W. BARKLEY. I can scarcely hope to compete with him in the speech-making field. So this morning, my remarks will be more in the nature of a talk with old friends and coworkers. We will talk about a few of our mutual problems and define a few of our mutual goals.

Speaking of goals, it sometimes seems strange that the further we proceed on the road of progress, the wider the horizons grow, and the greater the number of new goals which stretch out before us. The explanation of this paradox is simple. We—you and I—subscribe to a dynamic faith and to a dynamic concept of society. We believe that in a swiftly changing world, we, the human beings who inhabit that world, must adapt ourselves to those changes instead of trying to restrain them.

We do not seek to achieve the millennium in a day. We do not seek to uproot established institutions. But neither do we cling to every custom, mode, and tradition which may have been sufficient for a previous generation but is clearly outdated for this. We try to adapt our institutions, through the methods provided by our Constitution, to modern-day conditions and circumstances. And, thus, moving steadily forward, we keep pace with the times.

This is the way of progress. This is the way of evolution to meet the challenge of revolution. This is the way of the Amalgamated Clothing Workers Union and it is also my way. It is the philosophy of the Democratic Party, both under President Franklin D. Roosevelt and under President Harry S. Truman.

One of the goals toward which we have been working for many years is the achievement of what we have called full employment. The opposite side of this coin is the abolition of general unemployment. To this goal you and I are firmly committed.

You and I were thrilled when, in 1944, one of the greatest Americans who ever lived sent to Congress an economic bill of rights which began with the declaration that "Every American has the right to a useful and remunerative job in the industries or shops or farms or mines of the Nation." For this, if for no other reason, the people of America will never forget the name of Franklin Delano Roosevelt.

You and I were delighted when one of the great legislators of American history took the leadership, as chairman of the Senate Committee on Banking and Currency, in the fight for full employment legislation. For this, if for no other reason, the working men and women of our country will never forget the name of Robert F. Wagner.

You and I know that it was an important step forward when the President signed the Employment Act of 1946, which committed the Federal Government to coordinate and utilize all its plans, functions, and resources for the purpose of creating and maintaining useful employment opportunities for those able, willing, and seeking to work. We had hoped that the legislation would have been more comprehensive. But we knew that the real strength of the Employment Act of 1946 would depend on the courage and vision of those responsible for its administration. And we have seen in recent years how, under this act, there has developed an historic and unprecedented program of legislative proposals designed to promote an expanding economy that would provide jobs for all. This program will go down in history to the credit of our great leader and President, Harry S. Truman.

But there are those in this country—happily no longer great in number—who do not believe in jobs for all. They prefer jobs for some.

They think that the women of America should go back to the kitchen.

They would consign our elder citizens to the poorhouse.

They like the prospect of a floating pool of unemployed, so that they can frighten the workers into working harder for less wages and hold the threat of lay-offs as a club over the heads of the unions and their leaders.

I am afraid that this prospect is slowly becoming a reality. I am afraid that we are seeing today the gradual formation of a floating pool of unemployed.

It is not coming dramatically. If it were, it would be easier to deal with. It is coming slowly, creeping upon us stealthily, a little at a time.

It is not even coming steadily. One month there is more unemployment, another month a little less. But a general trend is nonetheless there—a slow and dangerous trend toward increased unemployment.

Judging by all the standards of the past, the state of the American economy today is good.

The latest estimates of the Council of Economic Advisers indicate that for the first 3 months of 1950 the market value of the Nation's output of goods and services reached the annual rate of more than $262,000,000,000. This represented a substantial increase over the rate of economic activity during the last 9 months of 1949 and a full return—plus a little more—to the high levels of activity of the first quarter of 1949.

Employment, too, has reached high levels. The figures for April of this year showed 58,700,000 people at work. This contrasts with only 57,800,000 at work in April of last year.

But while employment has risen, unemployment has also risen. In April 1949, with a million less people employed, there were only 3,000,000 people unemployed. In April of this year, there were 3,500,000 unemployed.

I have seen many learned experts shake their heads in wonder at this seeming paradox. But you men and women from the shops know why it is happening.

You and I both know that the reason for this creeping danger is the fact that our entire economy has not quite kept pace with either the growing productivity of our workers or with the addition to the Nation's labor force of new workers who are coming out of the schools and into the labor market.

In the first quarter of this year total output of goods and services should have run at a rate of $270,000,000,000 rather than $260,000,000,000. In April of this year we should have had not merely 58,700,000 jobs but 60,000,000 jobs. This is the number of jobs which should be available today. Next year the number needed will be even greater. And unless we take steps, unless we act with all the vigor and all the resources at our command, this small shadow of unemployment which now overcasts our prosperity may grow to critical and even disastrous proportions.

During recent weeks in the same period when unemployment was crawling up past the 4,000,000 mark, the press carried reports showing record-making profits by our great corporations engaged in many different industries.

To cite one instance, Senator JOSEPH C. O'MAHONEY, chairman of the Joint Congressional Committee on the Economic Report recently disclosed that in the steel industry, profits have continued to increase despite increased wages and that employment costs in that industry actually constituted in 1949 a smaller fraction of the sales dollar than at any time in the past 30 years. All these factors clearly indicate that the national economy is running in high gear at its productive end and at its profit end. Our economy is producing more than ever, and providing higher profits than ever. Yet unemployment hangs on.

I know of several areas in my own home State of New York, and I know of areas in Connecticut and Rhode Island, where unemployment is of critical proportions. I cannot reassure these people and their representatives who come asking for assistance from the Federal Government, by citing the fact that there are 58,700,000 people already

employed in America. I cannot tell these unemployed that they should not feel badly about being unemployed in New York or Connecticut because things are booming in Oregon or Oklahoma.

No, for those who are unemployed, for those who live in areas of critical unemployment, the personal effects are almost as serious and as demoralizing as if unemployment were a general instead of an isolated situation. There are the same effects on the individual, on the family, and on the community—effects like ripples from a stone thrown into a pond.

We cannot afford this wastage in human resources. We cannot afford the consequent decrease in purchasing power and in consumer demand.

I have seen figures showing that in several States of the Union, including my own, the amount of money that is being paid out for unemployment benefits is considerably greater than the amount of money coming into these funds in the form of payroll contributions. In New York in 1949, $2.13 was paid out for every dollar received. In Rhode Island the ratio was $3.79 paid out in unemployment benefits for every dollar received. In very few States of the Union, in 1949, was more money collected than was paid out. The situation was exactly the reverse in 1948. We need not take fright from these figures, but we should be concerned.

I do not think that this country can afford any avoidable unemployment. The hallmark of a dynamic economy is labor shortage and not labor surplus. We must move constantly in the direction of more jobs. In an expanding economy, there should be more jobs than people to fill them and not vice versa.

While you and I recognize this fact, there are many who do not. There are many who feel that unemployment is a natural phenomenon which, while unfortunate for the individuals concerned, should not call for government action. Of course, this is the same point of view which was prevalent in 1929. Even a depression is a natural development, according to these people. They consider a depression as an essential adjustment in the cycle of boom and bust, and hence to be accepted like the weather.

Years ago the Mississippi used to overflow its banks almost every year, causing damage to farms and homes throughout a great part of our country. Many of you will remember the annual pictures in the newsreels, as regular as the seasons themselves, showing houses and barns floating down the raging rivers. But today we have learned to control these floods. Along all the rivers where the Federal Government has established great reclamation and flood control works, floods no longer menace the lives of people. Only along those rivers where such projects have not been undertaken do these floods persist. The inference is obvious.

If we can build successful defenses against the forces of nature, we can certainly build defense against economic forces. We can and must provide precautions against the overflow of our economic system. To wait until the flood tide of depression hits us is both stupid and wasteful. We cannot afford it.

When I say we cannot afford it, I am thinking not only in terms of our domestic economy but also in terms of the world situation. The totalitarians are telling the underprivileged peoples of the world that the free-enterprise system is a system for the benefit of the few and the exploitation of the many, that this system carries within itself the seeds of its own disintegration, and that unemployment is as essential a part of that system as profits. You and I are determined to prove that these reactionaries of the left are as wrong as the reactionaries of the right. We must and can prove that we can retain the individual-enterprise system without tolerating unemployment. All this, I believe, can be achieved through the participation of Government in the planned cooperation of all sectors of our economy.

One country in Europe today which typifies the extremes of what we wish to avoid is Germany. In the Soviet zone of eastern Germany there is no unemployment, but forced labor exists. We do not wish full employment of that kind. In western Germany, under the so-called free-enterprise system, unemployment is widespread. We in America must show that full employment may be achieved without the incredible evil of forced labor and that free enterprise may be preserved without the tragic incidence of unemployment.

I have described, from its most important aspects, the problem we face. It is necessary to know the problem in order to understand the importance of doing something about it now—today—before it is too late.

But what are we to do, and why have we done so little to date? The answer is simple. We have actually done a great deal. But many proposals for essential action still lie dormant in congressional committees.

What we have done—what the Roosevelt administration accomplished in rectifying our economic system before the war, and what the Truman administration has achieved since the war—has been largely effective in preventing the disastrous postwar depression which so many people prophesied.

But what has been left undone is responsible for the great dangers which we face today. There are many undefended and vulnerable areas in our economy today. We are today spending a vast amount of money on the cold war. But, of course, we must continue to do so until the threat to our security ceases—any other course would be disastrous. Should the necessity for that spending suddenly stop, as I hope with all my heart it will, we would face a real economic crisis unless we were prepared—as we must be prepared—for concerted economic action to meet this or any other emergency.

I should like to refer briefly to some of the programs which the administration has proposed in the recent past for meeting the problem of economic expansion and unemployment—programs which are still awaiting congressional action and approval. And then I shall refer to steps which must be taken, even beyond these administration proposals, if we are to meet the challenge of this dangerous period.

The administration has long been proposing the development of our great river valleys—the Columbia and the Missouri, to name only two. These developments would be similar to the TVA. If these proposals had been written into law, the effect would have been to stimulate economic activity throughout the country, and to give new strength, balance, and resourcefulness to our national economy.

President Truman proposed a program of cooperative housing for persons of middle income. If this had been acted upon favorably, a new stimulus would have been provided for the entire construction industry.

President Truman has urged—as you and I have, too—the repeal of the Taft-Hartley Act. One of the effects of this act has been to slow down the organization of the unorganized, particularly in the South, and to hamper the process of collective bargaining throughout the country. In economic terms this has meant a smaller share of the national income for working men and women and a lower level of purchasing power for the Nation's chief consumers.

I repeat a pledge I have frequently made, to do my best, along with you, to secure the total repeal of the Taft-Hartley Act.

There are, of course, many other pending administration proposals which have not been acted upon or are still under consideration by the Congress. But there is no point or purpose in reviewing what might have been done or what should have been done. We who are gathered here today must take counsel on what must be done.

I

We must study and review very carefully our entire tax structure. During the Eightieth Congress, an ill-timed and ill-advised change was made in our tax laws. That change was a windfall for the rich and a mere sop to those of small and medium income. The result was a great saving for a few, but provided very little added buying power for the many. I am not criticizing corporate profits. What does alarm me is the fact that take-home pay of American farmers and workers has not kept pace. Today we must correct that situation.

We must eliminate or drastically reduce excise taxes which are a burden on the lower-income groups.

We must enact into law a reasonable excess-profits tax, which will yield compensatory revenues but which will not be injurious to business incentive.

II

We must expand our social-security program and increase old-age benefits. With adequate old-age pensions, the aged group in our population will continue to be customers for the products of farm and factory instead of living wretched and minimum existences on public relief or charity.

III

We must launch a vigorous program of encouraging and supporting small business along the lines recently recommended by the President.

IV

We must develop a large reserve shelf of public-works projects which will allow us to do better long-range public-works planning and permit us to meet emergency situations in special local areas where unemployment develops.

V

We must promote and expand our program of water-power development so that cheap power in increasing quantities will be available to lower the production costs of industry and provide higher wages for workers and lower prices for consumers.

VI

We must continue to search for an improved formula for agriculture, so that the prosperity of our farmers will be preserved and increased, maintaining their purchasing power but finding some way to link increased farm production with lower costs to the consumers.

VII

We must expand our public housing program, and must promote through cooperatives and other measures, the provision of adequate housing at reasonable rentals for the vast middle-income sector of our population. We must eliminate slums, wherever they are found.

VIII

We must adopt a scientific approach to our budgetary problems. We must economize wherever possible on wasteful and inefficient operations of Government, but we must be strictly selective in our economies. We must avoid reckless and indiscriminate slashes in our budget, with consequent repercussions in the entire national economy. We are not in a normal economic period.

The advocates of indiscriminate slashing cite the fact that World War II has been over for 5 years and that the budget must get back to normal. But $3.60 out of every $5 that our Government spends today is devoted either to paying for previous wars or for preparing against future ones. In such a situation, we dare not economize at the expense of either our national security or our national economy. To do either would lead to disaster both at home and abroad.

IX

On the international front we must take all necessary measures to draw the entire world—or as great a part of it as possible—into a cooperative effort to raise the general level of production everywhere. In this endeavor, more than in any other, our economic skills and capacities can find an outlet. In this endeavor, we can give a dynamic cast to our economy and provide an almost unlimited horizon for its expansion.

The immediate program which has been recommended by the President to achieve this latter purpose is popularly called the point 4 program. It is included in the Foreign Assistance Act which is expected to be finally approved by the Congress and signed by the President in the course of the next 2 weeks.

This program, for which only $35,000,000 is authorized in the pending legislation—considerably less than it should be in my opinion—provides for technological assistance to other countries, especially to undeveloped areas, for the stimulation of their economic and productive efforts.

I am wholeheartedly in favor of this program. I think that from the productive development of the undeveloped areas of the earth will come a vastly increased and mutually profitable trade which may, I hope, pave the way for that peace which the diplomats have thus far failed to win, but which the ordinary men and women of the world may yet secure.

X

Finally, we must develop all our undeveloped resources, but conserve the expendable ones. Our greatest resource and our least expendable must be considered our human resources—the lives, energies, and happiness of our people. And although I have not referred to it in detail, or as a separate program, this means carrying through a full and undiluted civil-rights and human-rights program.

This is my program not only for full employment and for the control of unemployment, but for a dynamic future for America. It is the same philosophy which President Truman, in a speech at Butte, Mont., last week described as "the way to the highest level of well-being for all the peoples of the earth." It is the way to that freedom from fear and want of which President Roosevelt spoke so eloquently 10 years ago.

As I stand here on this platform, in the good company of friends, and as I define this program and this philosophy, which I know you share, I can almost hear the approving voice of my old friends and your great leader, whose living monument is this mighty union of 400,000 working men and women. But Sidney Hillman's monument is much more than just the Amalgamated Clothing Workers Union—as noble a monument as it is. Sidney Hillman's true memorial is in the impetus he gave to liberal causes and principles in this entire Nation of ours. He stands in that Valhalla of mighty men who enabled our country to emerge from a chaos of despair into a new era of strength and vigor. That strength and vigor brought us victory in war. The greatest monument that waits still to be erected to Sidney Hillman is the use of that strength and vigor to bring peace and justice and well-being to all mankind.

[From the New York Times of May 22, 1950]

JOB OPENINGS TRAIL RISE IN LABOR FORCE—ANNUAL INCREASE OF 800,000 TO 1,100,000 WORKERS POSES PROBLEM, SAYS RESERVE BODY

WASHINGTON, May 21.—Important questions of economic policy are posed by the failure of employment opportunities to keep pace with the 800,000 to 1,100,000 persons added to the Nation's labor force each year, the Federal Reserve Board said today.

The Reserve Board's monthly bulletin said an increase of 1,000,000 was expected in the labor force this year.

At current high levels of activity, the problem of reducing unemployment is difficult partly because the programs appropriate for treating large-scale cyclical unemployment appear to be largely inappropriate for dealing with the present situation, it was added.

The unemployment problem so far has not been sufficiently acute to require broad Federal action, but it has been serious for some areas and, of course, for the workers affected, the bulletin said.

Unemployment increased in the first quarter of this year to the highest levels since before the war. The high point was reached in February when the total unemployed was 4,700,000 persons. By last month the total had declined to 3,500,000, partly as a result of seasonal factors.

Rising productivity due to the record amounts of money spent by industry in recent years on "new machinery and equipment of highly efficient design" accounts largely for the fact that production has increased more than employment since last summer, the Board said.

The recession early last year intensified competitive pressure on management to reduce costs, partly by curtailing employment and by utilizing those employees more efficiently.

The Nation had a total labor force last year of 63,600,000, or 58 percent of the population 14 years of age and over. This was 7,600,000 more than in 1940 when 56 percent of the population of working age was in the labor force.

The bulletin reported that although employment generally was below the 1948 peak there was one outstanding group in which it was higher—Government workers. The number of Federal civilian employees has declined somewhat since mid-1949 but State and local government employment, after rising until the end of 1949, has shown little further change. Two other categories also showed slight increases—employment in finance and in domestic service.

More than 7,000,000 workers received unemployment compensation benefits last year. About 2,000,000 exhausted their benefit rights (averaging 12 weeks' duration), compared with 1,000,000 in 1948.

AVERAGE WEEKLY BENEFIT $21

The average weekly benefit for those receiving unemployment compensation was $21 a week, or about one-third the average weekly wage in covered employment, it was added. Because earnings have risen more rapidly than benefits allotted, however, the percentage of wage loss covered by unemployment was held to be smaller than in prewar days.

Payments out of the unemployment trust fund since early last year have exceeded receipts. For the year 1949 more than $1,700,000,000 were paid out in unemployment benefits under State programs, while tax receipts and interest earned totaled only $1,000,000,000, with the result that the balance in State accounts in the trust fund was reduced from the high level of $7,600,000,000 at the end of 1948 to $6,900,000,000 at the close of 1949.

In the first quarter of this year unemployment benefits averaged $2,200,000,000 at an annual rate and were about double the receipts. The disparity between receipts and claims has compelled a number of States to increase tax rates on employers.

Railway Strike Ban

EXTENSION OF REMARKS
OF
HON. FORREST C. DONNELL
OF MISSOURI
IN THE SENATE OF THE UNITED STATES

Monday, May 22 (legislative day of Wednesday, March 29), 1950

Mr. DONNELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Railway Strike Ban," published in the Los Angeles Times of May 10, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

RAILWAY STRIKE BAN

Let us hope that common sense leads the Senate Labor subcommittee to approve the bill of Senator DONNELL, of Missouri, which will outlaw railroad strikes once and for all. DONNELL'S measure would make strikes and lockouts in railway disputes illegal and force the contending parties to compulsory arbitration.

The Donnell bill follows general acceptance that the Railway Labor Act, once regarded as a model measure for labor disputes, has failed adequately to protect the public interest. As testimony before the committee showed, the unions have refused to accept decisions of fact-finding boards, using these decisions as a line of departure from which to pursue their demands.

Obviously, new legislation must replace the Railway Labor Act.

Because railroads operate in the public interest and the movement of their trains is absolutely necessary for the protection of the public health and safety, very rigid control was established over them years ago by governmental agencies. Railroad presidents may not arbitrarily close down their lines as a shopkeeper may roll up his shutters.

Therefore it seems logical that railway labor may not flout its obligations to the public and arbitrarily strand trains. But such is the present case in the matter of four major systems where the firemen demanded an extra fireman on Diesel locomotives to help the regular fireman look out the window—or else.

This line of reasoning applies equally to public utilities on which the Nation relies for its transportation, communication, light, heat, and power.

Prepare, America!

EXTENSION OF REMARKS
OF
HON. CHARLES E. BENNETT
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 22, 1950

Mr. BENNETT of Florida. Mr. Speaker, on my recent trip to Florida a number of people asked that I submit for publication in the CONGRESSIONAL

RECORD the following able speech by Hon. John F. Selle, of Gainesville, Fla. I think that its contents will be valuable to the readers of the RECORD:

PREPARE, AMERICA!

(By Lt. John F. Selle, United States Naval Reserve)

The people of the United States have added a new day to their list of national observances. The President has designated Saturday, May 20, as Armed Forces Day, and for the first time in history the Nation has been called to pay tribute to all its armed forces on the same day. This concept of unification is further symbolized by the slogan for the first Armed Forces Day—Teamed for Defense.

By the recent unification of our land, sea, and air forces into one integrated defense organization we have done much to strengthen the teamwork and cooperation so vital to the protection of our national security. But the team which must accept this tremendous responsibility cannot be composed of only our Army, our Navy, and our Air Force. You and I and every other loyal and responsible citizen of these United States must, of necessity, be members of that team.

In a sense, even though we are civilians, we are the most important element in our defense mechanism because we call the signals for the Military Establishment. By our election of public officials, by our expressed attitudes and through the actions of those officials, we determine the extent of the military program. Whether our Armed Forces are to consist of a half million, a million, or five million men is for us to say. Whether they will be properly equipped with the latest developments of modern warfare, or armed with obsolete and ineffective equipment depends upon our decisions. And since we hold the responsibility for making these extremely important decisions it is absolutely essential that we make them after careful and intelligent consideration of many diverse factors.

In the past we have been prone to confuse our potential capacity for waging a war with our current military strength. We felt that we were strong simply because we knew that we could become strong. It might be argued that we were right in this confusion because we won our wars. This is true. But it is equally true that we could have avoided those wars completely and won them without fighting had we been a little stronger all the time.

In 1914 Kaiser Wilhelm took the calculated risk that the United States shockingly unprepared, could not muster her potential military might quickly enough to interfere with his program of conquest. It should be small comfort to us that we proved him wrong. By being a little stronger in 1914 ourselves, he would not have been tempted by what seemed to be such favorable odds.

If we had had an army of 3,000,000 men in 1939 efficiently trained and properly equipped, would Adolf Hitler have taken his calculated risk? It is a shameful thing to have to admit that we placed such a temptation before him. At a time when manpower, and the industrial plant necessary to equip that manpower were rotting in idleness we watched the war clouds gather in Europe and did almost nothing about it until we were caught in the deluge ourselves.

True, we proved that Hitler was not infallible when it came to predicting the skill with which we could convert potential strength into strength in being. But we had to fight a terrible war to prove it.

Today, in 1950, history is repeating itself. A powerful aggressor, having repeatedly expressed its intention to destroy our democratic way of life, is arming itself at a fantastic rate. For what purpose—national defense? Are the Russians seriously afraid that the United States with its mothball fleet, its pitifully few modern planes, and its half-million-man army is planning a war of aggression against such a well insulated enemy? There is only one conclusion which can be reached by any man willing to face up to unpleasant facts. Russia is preparing for war. War against whom? Regardless of where and against whom the first shot is fired or the first bomb dropped, the war will be directed against us. Without our active assistance no single nation or group of nations could resist the Russian onslaught. And since we cannot tolerate the loss of any of our few allies, we would have to fight at their side and win or lose together.

If history were to repeat its full cycle we would hold our defense program to a minimum; sacrifice our allies while arming ourselves, and after a bloody struggle emerge once more victorious to face the task of once more rebuilding a shattered world. It would cost us many millions of human lives, untold suffering, and countless billions of dollars. And at best we would have proved that the Russian high command had again, like Kaiser Wilhelm and Adolf Hitler, underestimated our capacity for converting our economy and manpower to a war basis. But can we dare assume that the whole cycle will repeat itself in toto? It is not impossible that just this one time our enemy might have calculated his risks a littler more accurately than we did our own.

Today we have peace, an uncertain and tenuous peace, but nonetheless peace. If war comes to snatch peace away from us we will fight desperately to regain it. We will sacrifice our wealth, our natural resources, our very lives to restablish peace. And the peace we have today is infinitely more desireable than the best peace that could possibly result from another war even if we won our victory—and can we be so sure of that victory? Why not fight for that peace while we have it so that we can keep it, instead of waiting until we lose it.

Our fight to keep our peace cannot be won by negative measures, by too little, too late. It must be an aggressive and mighty effort. Its first step must be military preparedness on such a scale that an aggressor will not dare take the calculated risk of effectively winning a war before we can muster our latent strength. Admitting that such a military program is wasteful and costly, it is still less wasteful and less costly than war. And it costs nothing in lives and bloody agony. Whatever it costs, if Russia can afford her scale of military might we can afford to come near enough in matching it to prevent an armed test. We must rebuild our moral strength and become real Americans who are willing to pay the cost of peace and freedom. The whole free world depends on us today. If we cut the odds too fine in our calculated risk the free people of the world suffer defeat with us.

We must prepare our defenses on such a scale that we will not only be able to win any war forced on us, but will be able to make our strength so apparent that no one, no matter how optimistic, no matter how blind, can mistake it for anything else than an invincible force. There is no such thing as too much preparedness. The better prepared the better we have won our war for peace. Military preparedness is costly, and the more effective it is the more wasteful it is because we will never have to use it. The costs are high but the stakes are higher. What is it worth to you, as you listen to this radio program, to know that the United States is safe against war? So strong that war is unlikely to occur, and so strong that victory is assured if a foolhardly aggressor chooses to test that strength.

During this fiscal year we are spending about 7 percent of our national income on our defense program. It is reported that Russia is devoting about 25 percent of her national effort to military programs. Can we afford to match such a schedule? Let's ask ourselves instead—can we afford not to match it?

In 1942 we did not say how much war can we afford. We asked ourselves, what must we do to win the war—and then did it. We are at war today, fighting to keep something we value highly and we must ask ourselves the same question. The natural odds are with an aggressor nation which can choose the time and place for the beginning of a shooting war. It is not enough therefore that we match our military potential. In every field we must be superior, on land, on sea, and in the air. There are those who say that such an effort would bankrupt us. Is it bankrupting Russia? If it is, it would seem wise to force her to even greater efforts and thus hasten the process. And if it is not, we can afford more than Russia. We must use care and judgment in our defense program, of course, so that we do not waste our irreplaceable natural resources, but we must not begrudge our labor, our time, and our manpower. Our reserve progams should be encouraged and expanded. Last night as a Naval Reserve officer I spent an evening with nearly two hundred other young men of Gainesville in our new training center.

The young men of this Nation can perform no better national service than participation in such programs as conducted by each of the three services. But it is up to us as taxpayers and citizens to see that they have the equipment and facilities they need. When war comes, if it does come, and as it surely will if we gamble with our national defenses, it will come swiftly. We owe it to the young men who must fight it, that we prepare them for the risks they must then take.

Let history never record that the United States of America, once the greatest among the nations of the earth, risked an atomic war and lost it, or even risked it and won it because it was soft and loved its pleasures, its leisure, and its comfortable way of life so much that it failed to prepare for a conflict which was inevitable in the face of such failure to prepare. As I close, ask yourself this question: Am I confident in my own own mind that the United States has taken adequate measures to prevent war, or to win it if all means of prevention fail? Am I certain of victory in the war for peace, either to keep it or to restore it? and if you cannot answer with a confidently "Yes"—do something about it. Exercise your prerogatives as a citizen. Let your legislators know how you feel.

We call the plays. Let's back up our Armed Forces, effectively and unstintingly. Let's show them—and for that matter the whole world—our friends to encourage them, our enemies to discourage them—that we, the people of the United States are teamed for defense.

Amendment of Railway Labor Act

EXTENSION OF REMARKS

OF

HON. FORREST C. DONNELL

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Monday, May 22 (legislative day of Wednesday, March 29), 1950

Mr. DONNELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "To Amend Railway Labor Act," published in the Beaumont (Tex.) Enterprise of May 3, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TO AMEND RAILWAY LABOR ACT

For years the Railway Labor Act was pointed to as a model piece of legislation, effective in preventing strikes in the rail transportation industry. This is true no longer.

The Railway Age, which speaks for the Nation's railroads, says: "The only practicable solution of the present dangerous drift in industrial relations on the railroads lies in substantial amendment of the Railway Labor Act."

To accomplish this purpose, Senator DONNELL of Missouri has introduced a bill in the Senate which would outlaw railroad strikes or lock-outs called in defiance of the awards made by Presidential boards.

When the device of appointing Presidential boards was incorporated in the Railway Labor Act it was assumed that the Board's findings would be respected by the railroad industry. Here of late the American people have learned that the Railway Labor Act, with its provisions to delay strikes until a settlement can be reached, no longer protects them from disruptions in transportation which in turn affect large segments of the Nation's industry and business.

Whether or not it is true, as charged, that the railroad workers are no longer afraid a strike will jeopardize their jobs or their seniority, it is a fact that the "mobilization of public opinion" by the President and the authority of the President himself no longer can prevent strikes.

The Railway Labor Act was satisfactory up to about 9 years ago. It is rather significant that since a threatened walk-out in 1941 caused Mr. Roosevelt to ask his "Emergency Board" to favor the railroad workers, the railroad unions have shown unwillingness to abide by the provisions of the Railway Labor Act.

In 1946 there was a Nation-wide strike of enginemen and trainmen. Another strike of these workers is threatened over the issue of three men on a Diesel locomotive, probably one of the most unreasonable demands railroad workers have ever made on railroad management and pronounced by two impartial Presidential boards as without merit.

The railroads have established a good record for accepting decisions of the boards in major disputes. This the railroad unions have not done. As a result legislative action is now threatened which will, if enacted, deprive union leaders of the power they have misused.

Ninety-sixth Birthday Anniversary of Andrew Furuseth, March 12, 1950

EXTENSION OF REMARKS

OF

HON. EDWARD J. HART

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, May 22, 1950

Mr. HART. Mr. Speaker, under leave to extend my remarks, I submit herewith the address delivered on Radio Station WNYC, New York, N. Y., on the occasion of the celebration of the ninety-sixth anniversary of Andrew Furuseth, March 12, 1950, and certain excerpts from an article appearing in the National Association of Claimants' Compensation Attorneys Law Journal, by Silas B. Axtell, one of its editors:

ANNOUNCER. The first speaker is Mr. Willy Dorchain, seasoned labor leader and the representative in the United States of America of the International Transport Workers Federation of the World, with which the maritime unions of the United States are affiliated. Mr. Dorchain himself has been a seaman. Aside from his duties as representative of the International Transport Workers Federation he is manager of the seafarer's section of the Belgian Transport Workers.

Mr. DORCHAIN. I feel honored by this opportunity to pay tribute to the memory of a great man and union leader, Andrew Furuseth. He devoted the greatest part of his life to the emancipation of the seafarers with tenacity and great courage. His only happiness and pleasures were the successes he achieved. The disappointments and failures were only greater incentives for further striving to attain his goal, the freeing from bondage of the seamen from all over the world.

Many fantastic stories have been written about the men of the sea but what actually happened to many of them in the so-called good old days of iron men and wooden ships surpasses the imagination of the most inspired of writers. Ordinary slavery ashore was sometimes a paradise compared to the treatment received by the sailors at the hands of some inhuman and brutal ship masters of the old days. It is because of men like Furuseth and the seafarers' trade unions that those inhuman conditions have been swept away and that seafarers now find comparatively easy living and working conditions on board of most ships.

National and international laws have been changed and adopted to protect the rights and freedoms of the seafarers obtained at such a high cost and much sacrifice. In the achievement of these laws a number of able and inspired attorneys of several maritime countries have devoted themselves to the cause of seamen by assisting the trade-union leaders in legal matters and new legislation. The late Andrew Furuseth, with his logical mind, saw the necessity of advantage of such assistance and found an able and faithful collaborator and stanch friend in the person of the then youthful Mr. Silas Axtell, who still now spares no effort to keep the memory of his lifelong friend in the honored place it deserves.

The seafarers of today, although much better off than in the old days of bondage should not forget the lessons of the past and those that are taught us from day to day. Our freedom that we all cherish so much, if not closely and constantly watched and protected, is much easier lost than regained. If, in one section of this world, be it large or small, freedom and economic well-being for the workers is being suppressed or is nonexistent, the people of the rest of the world are in constant danger of losing theirs. In this advanced mechanical and scientific age this danger is more real than ever before. The seafarers, through the nature of their trade, are perhaps more vulnerable than workers ashore, they feel the effects of change in other parts of the world sooner. They are not yet fully protected internationally. A large number of adopted international conventions have not yet been ratified by a sufficient number of governments of maritime nations to make them effective.

National and international laws are being flouted and evaded by certain shipowners in search of easy wealth, disregarding thereby the responsibilities and duties that entail such a privileged position in the society of man in democratic countries where free enterprise still exists. Many countries still lag behind in their maritime laws or the enforcement of the existing ones. A number of shipowners from different countries take advantage of this sorry situation to register their ships under the flag of these countries, in order to exploit the seafarers' labor at inferior conditions, and are gradually trying to swing back the time to 50 years ago, against the interest of their own countries and against the interest of democracy and freedom. At great expense, they transport complete crews from countries where they can hire seamen cheaply while unemployment of seafarers continues to increase in the very harbors where those ships are manned. Crews are especially sought from those countries where dictators have suppressed the free trade-unions for many years, or where trade-unions are still in their infancy. Many of these seamen have never, or only for a very short time, known real democratic freedom and the kind of free trade-unions that Andrew Furuseth fought so hard to maintain.

We cannot permit the great sacrifices and struggles of Andrew Furuseth and thousands of true men of the seas to be fruitless. Seafarers from all over the world organized in their free national trade-unions, united internationally through their affiliation with the International Transport Workers Federation, will back their representatives to the limit to continue the fight until the fulfillment of their aims on a world-wide scale. Unfair competition carried out on the backs of the seafarers, slave labor, bad food, and accommodations will not be allowed to take root again on the high seas. Be it by independent international shipowners or groups of shipowners, be it by dictator government or feudal lords, it will be fought wherever it is found. Freedom and economic well-being is a powerful incentive for any human being to join in this struggle. Support for changes and additions in the maritime laws of countries where such laws are outmoded or lacking, strict vigilance in the application of existing international laws and the ratification of new international conventions, denunciation of evaders and, if necessary, joint economic action for the protection of seafarers' right will be our main strength for achievement. Organizing the unorganized, helping the laymen and the weak, should be our motto. The hard lessons of the past shall not be forgotten and we should profit from them. The examples set by Andrew Furuseth should be our inspiration, the International Transport Workers Federation our appropriate tool, and, if necessary, our effective weapon.

I thank you.

ANNOUNCER. The next speaker is Mr. Homer H. Bishop, president of the National Association of Claimant's Compensation Attorneys, of Seminole, Okla.

Mr. BISHOP. The personal sacrifice of Andrew Furuseth, with its resultant service to the seaman, the individual, the Nation and the world is at once an inspiration and a challenge. The testimony of Silas Blake Axtell and others who worked with him, strikes with terrific impact against all forms of oppression. It is well for us today to pay tribute to him, who on March 12, 1854, was born in Norway. When the future historian comes to write the story of Andrew Furuseth he will find his character rising like a huge mountain above the level of average humanity; and he will be compelled to look upward toward the stars to catch its summit.

For 14 years, as a sailor under the flags of 6 nations, he personally suffered the appalling mental and physical brutalities meted out to those who sailed the ships of the seas. Motivated by love for mankind and hatred of tyranny he resolved to strike the shackles of slavery from the sailors of the world. His resolution was transformed into action. We see him as he goes forward into this battle. A crusader of righteousness he entered the arena. Arrayed against him were the crimps, the organized ship owners and the minions of wealth and power. For 19 years, with unfailing courage, he presented the cause of the enslaved sailor to the Congress of the United States. Victory, freedom and reward were attained when on March 4, 1915, Woodrow Wilson, President of the

United States, signed the bill of emancipation.

Thus it is evident that equality before the law did not follow the surrender at Yorktown. To this day man has not yet fully secured economic freedom from the industrial master. True, in some portions of the world, political freedom and equality of religion exist. Only at the price of death in Nero's gardens were such victories obtained. Along the centuries thousands died that others yet unborn might live.

Today the third and last battle in the execution of the marching order of democracy is approaching its climax. The economic freedom of all the world must be secured in order that the equality of man be achieved. The feudal lords and kings have been swept away by the political revolution. Yet in this age great corporations control more employee subjects in the production of goods than the feudal lords of the medieval ages. At the machines of industry each year millions of workers are the victims of occupational disease and industrial accidents. These wrecked bodies are the byproducts of industry.

Lawyers have always been the champions and legal advocates of the oppressed and injured. The Magna Carta, the Declaration of Independence, and the four freedoms were the product of legal minds motivated by the spirit of equality and justice. In order to defend the penniless, the sick, and the injured, the attorneys of the United States are permitted to do so upon a contingent-fee contract. It is impossible for the injured worker whose savings, if any, are exhausted by medical and hospital bills and in payment for the bare necessities of life, to pay retainer fees to attorneys. It is tragic that in any part of this world, legal barriers, regulations, and codes of ethics prohibit the attorney from extending his service to those who need it; to those unable to pay for it. Such a condition leaves the injured worker solely at the mercy of the claim agent, skilled attorneys for the corporations, the casualty-insurance companies, and the lords of industry. This is just another barrier which bars the way against the equality of man.

These barriers must be swept away. Such appalling injustice is a challenge to the lawyers of the world, dedicated to the principle of freedom. Let us as lawyers answer the cry of the oppressed. Let us unite to strike down this instrument of economic slavery. The contingent-fee contract must be put into world-wide practice. In unity, under this contract, the lawyer and the client work together in close personal harmony and friendship. It is a contract of partnership. United they battle in the courts. Together they secure compensation for the injured worker and his family. The contongent-fee contract in the United States has secured for the orphans of industry fair compensation. It has relieved the widow of industry from the fear of poverty. It has been the instrument by which the education of orphan children has been secured.

An enlightened civilization cannot permit the industrial master to employ attorneys by advanced retainers and at the same time deny to these byproducts of industry, his orphan and widow, the right of counsel. In no other way can these helpless ones secure legal protection. This kind of contract is a stepping stone toward victory in the struggle for the economic equality of man.

Inspired by the example of Andrew Furuseth let us carry on the work by him so nobly performed, for the way, the truth, and the life are in this service, written.

ANNOUNCER. Mr. Samuel B. Horovitz, noted attorney of Boston and editor in chief of the NACCA Law Journal, has requested us to announce that in addition to the Gleason lectures on workmen's compensation, this organization has arranged for the delivery of Furuseth lectures on admiralty law by a professor of one of our leading law schools.

NOTE.—Since both speakers refer to the importance of the contingent fee attorney in the enforcement of seaman's rights, we quote from pages, 245, 246, 247, 248, and 249 of an article by one of the editors of the NACCA Law Journal, Mr. Silas Blake Axtell, 15 Moore Street, New York City:

"The framers of the Bill of Rights contemplated equal law enforcement, based on truth that justice be accorded to all citizens, seamen included.

"The contingent fee made it possible for the pauper, the penniless seaman, as he usually was, then, to obtain a fair trial and usually justice. You know, in the beginning, our Federal courts were not open to seamen without the prepayment of fees and costs, as they are today. No, indeed, the seaman who entered the Federal court had to take a pauper's oath, and his lawyer also had to swear that he was to receive no compensation at all for his services.

"Until the Seaman's Act was passed, the Legal Aid Society lawyer had a monopoly of seaman's cases. The doctors and surgeons who do a certain amount of clinical surgery and diagnosis, work without any compensation, and make up for it, I suppose, by charging their well-to-do patients higher fees. The lawyers, or some of them, paid dues to the Legal Aid Society, and thus made some contribution to the ideal of our Bill of Rights—'Equality of all men before the law.' The decision, *Abdu* v. *Nigretia*, (247 U. S. 27), led to the opening of our Federal courts to seamen without the prepayment of fees and costs. Justices Brandeis and Clark dissented, and that decision helped us to get the words 'appellate courts' added by Congress on July 1, 1918 (ch. 11e, sec. 1, 40 Stat. 683), so that section 837 United States Code Annotated, now reads:

" 'Courts of the United States, including appellate courts hereafter shall be open to seamen without furnishing bonds, or prepayment of, or making deposit to secure fees or costs, for the purpose of entering and prosecuting suits in their own name, and for their own benefit, for wages or salvage, and to enforce laws made for their health and safety.' (June 12, 1917, ch. 27, sec. 1, 40 Stat. 157; July 1, 1918, ch. 113, sec. 1, 40 Stat. 683).

"Our seamen, including delegates and union officials of those days, had been trained in foreign vessels where they had been subject to arrest and imprisonment for desertion. They were and really had been wage slaves, and they were glad to recommend counsel who had helped to make the Seamen's Act effective. Since the last war, with the upsurge in shipping, and the terrific increases in wages of merchant seamen and officers, the law is taken for granted, and the new seamen have experienced little of the hardship of the old days.

"The trend here and abroad is for the union to hire lawyers to do their bidding as to law enforcement. Of course, no fighting lawyer can or does divide his fees with a layman—much less employ runners or touts to steer cases, and thousands of seamen in our hospitals can be brought as witnesses to prove that they are not advised or interfered with by anyone, in the choice of counsel. They can and do write to any lawyer they desire to see. Adjusters of insurance companies are not permitted to contact the injured or sick seamen while they are in hospitals. All orderlies and hospital attendants, and ambulance drivers and nurses are strictly forbidden to advise seamen to retain any particular lawyer. The fact that the insurance carriers have for years maintained a secret service, and have been able to control the demands of attorneys who might transgress, has resulted in more and larger verdicts. All this is due, I think, to the contingent fee, and the opening of the Federal courts to seamen without prepayment of fees.

"Due to the Seamen's Act, the seaman not only has rights and remedies and a jury trial, but he has the means of effective enforcement.

"The United Nations already have a bill of rights—these rights are of course, the rights of individuals. I have already directed the attention of those leaders of world government in the free countries—England, France, Benelux, and Scandinavia (who will lead no doubt in the building of Western Union)—of the need of modifying the ban on the contingent fee, prevalent in British and continental jurisdictions. Most American lawyers of this era accept the contingent fee as a matter of course, but an English solicitor is forbidden to make any such contract.

"A client who retains a lawyer on a contingent basis reposes great and complete confidence in his lawyer. I rejoice that the instances are very rare indeed, where there has been an occasion for complaint by a client or regret by the lawyer.

"Andrew Furuseth believed that the public interest would be served by the enactment of the Jones Act, which made the Railway Safety Act applicable to seamen by reference. Only by this means, he contended, under the profit system, could safe conditions be created in hazardous industries. He said: 'Make negligence expensive, and care will pay dividends. The burden of the taxpayer will be lighter because there will be fewer cripples to be supported at public expense, fewer widows on pensions, and fewer children left as public charges.'

"Considering that the rights of men, or individuals for their equality of opportunity before the law, must depend upon the existence of independent lawyers, considering the tendency of collective groups of employers and of employees to want to control lawyers by annual retainers, would it not be a good ideas to give workingmen in all industries in all our States the right to elect and pursue remedies under 'Jones Acts,' or elect to take compensation under the State compensation act, if it was to their interest to do so?

"If the reports of the National Safety Council are accurate, this is the best way to discourage negligence under our free enterprise system. The mere fact that this would increase the insurance premiums need not be a bar. One advantage would be to create and maintain a group of independent lawyers, who would by their very freedom and independence, be a tremendous influence for better government in town, the city, the State, in Washington, and in the seat of world government when that place is located. Only by law can we abolish war; only by lawyers can that law be made effective.

"The crying need today is leadership in public affairs by lawyers who can be economically independent. Lawyers to be independent must have work to do. The right of workers to sue for damages—the common law defenses being removed—would with the use of juries help to keep Government in the hands of the people."

Railroad Strike Peril

EXTENSION OF REMARKS
OF
HON. FORREST C. DONNELL
OF MISSOURI
IN THE SENATE OF THE UNITED STATES

Monday, May 22 (legislative day of Wednesday, March 29), 1950

Mr. DONNELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial

entitled "Railroad Strike Peril," published in the Oregonian of April 21, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Portland Oregonian of April 21, 1950]

RAILROAD STRIKE PERIL

Railroad firemen and enginemen might win the strike they have called for next Wednesday by paralyzing rail transportation and causing unemployment and business recession throughout the Nation. But it might prove to be a costly victory for the union. Congressional response probably would be to tighten the National Railway Labor Act, forbidding strikes, making arbitration binding on both parties, and providing penalties for flagrant violations which could bankrupt and destroy stubborn unions.

The railroads are public utilities. If the extreme step of nationalization is to be avoided, it is necessary that these lifelines of the economy be kept operating at all times by regulatory means.

Under the present act, the union has the right to strike since it went through all the preliminary stages of negotiation and arbitration. The main issue is the demand of the firemen and of the engineers' union that an extra man be employed on multiple-unit Diesel locomotives. Two fact-finding boards appointed by the President under the act have ruled with the railroads that an extra man is not needed, and would constitute union make-work or feather-bedding.

Since the unions failed to prove their case before impartial boards, there will be no public sympathy for the strike. Rather, there will be a demand that Congress enact legislation to prevent such interruptions over issues which can be settled by arbitration.

[From the Denver (Colo.) Post of April 22, 1950]

THAT'S THAT, SAYS BRUCE GUSTIN

It is very much to the credit of the Brotherhood of Locomotive Engineers that their President Johnston has announced they "will continue to work, and can cross picket lines, if set up," in the event the Brotherhood of Locomotive Firemen and Enginemen carry out the threat to strike four major railroads next Wednesday. That should make it possible to keep trains running. If the firemen strike in an attempt to force the railroads to put an extra fireman on big Diesel locomotives, they may learn that these locomotives can be operated without any fireman.

Report About President Truman's May 8, 1950, Speech at Grand Island, Nebr., as Related by the Grand Island Daily Independent

---

EXTENSION OF REMARKS

OF

HON. EUGENE D. O'SULLIVAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 22, 1950

Mr. O'SULLIVAN. Mr. Speaker, I received today through the courtesy of Editor Arch W. Jarrell, two newspaper accounts and an editorial which appeared respectively in the May 9 and May 10, 1950, issues of the Grand Island Daily Independent, which newspaper serves not only the city of Grand Island, Nebr., but also a large part of surrounding territory.

The news accounts are as follows:

SPURS STILL RECALLED BY TRUMAN—PRESIDENT SPEAKS DURING 10-MINUTE STOP IN CITY

President Truman still remembers that he was given a pair of spurs in Grand Island 2 years ago.

"I promised," he said last night during a 10-minute stop at the Burlington station, "to make good use of them. And I did. I rode the Eightieth Congress to a second term in the Presidency of the United States. I will keep them as long as I live."

Estimates of the crowd that greeted the Chief Executive of the Nation last night varied from one guess of about 8,000 downward to as low as 3,000. Anyhow, it was a large crowd to whom he spoke and to whom, afterward, he introduced Mrs. Truman and Miss Margaret Truman.

RAIN LET UP

A heavy rain, which totaled .70 inch during the afternoon and early evening, stopped only a short time before the special Presidential train arrived. There was an occasional light sprinkle, but nothing like the downpour in Lincoln, of which the President said "I got as wet as a drowned rat."

A welcoming committee, wearing large "Welcome Mr. Truman" badges, was at the trainside when it arrived. Stanley Long, Democratic county chairman, introduced the President, and Mrs. Charles G. Ryan, for many years Democratic national committeewoman, presented Mrs. Truman and Miss Truman with bouquets.

Just before the train left, at 8 o'clock, the welcoming committee boarded the rear platform and shook hands with the Trumans. The municipal band was on hand to provide a musical welcome. The youngest welcomer was 2-year-old Gregory Long, son of Mr. and Mrs. Jack Long and grandson of the county chairman.

Yesterday was Mr. Truman's sixty-sixth birthday, and several shouts of "Happy birthday!" were heard. No one, however, gave him a birthday cake, which probably pleased him as he had been given birthday cakes all along the line.

The 10-car train was filled with secret-service men, newspaper reporters, radiomen, and members of the President's personal entourage. It pulled into the station at 7:45, about 5 minutes ahead of schedule.

Fifth National Guard men, commanded by Capt. John F. Cleary, as well as members of the city police force, were on duty.

Mr. Truman called attention to his Lincoln speech about the Brannan farm plan, and said that the administration's program had four principles: To maintain farm income, to expand farm markets, to conserve and improve soil and water resources, and to preserve the American tradition of the family-size farm.

"One of the objects of the program," he said, "is to give the consumer more food at lower prices." Production payments must be used to give the farmer an incentive to raise more of what the country needs and less of what we do not need.

SPEAKS OF OPPOSITION

The President did not mention the Republican party by name, but spoke of the opposition. The trip is ostensibly "nonpolitical."

"Regimentation and socialism are words always used by the opposition," he declared, "on every piece of legislation for the benefit of the people. But whatever scare words the opposition uses, we intend to move forward with a progressive program.

"I am trying to obtain world peace, keep the farmers prosperous, keep labor on a fair basis, and business going as it should. I think I have been successful over the last 5 years.

"Two years ago I came out to Grand Island seeking your votes. This year I am making my report. There is no change in me since you saw me in 1948. I am still working for you and the welfare of the country."

TRUMAN SAYS HE WILL PUSH DEVELOPMENT OF WEST DESPITE FOES—TEAPOT DOME DEAL AIRED BY TRUMAN—PRESIDENT COMES OUT AGAIN IN FAVOR OF BRANNAN PLAN

(By Ernest B. Vaccaro)

ABOARD TRUMAN TRAIN, May 9.—President Truman declared today his administration will push the development of the West over the opposition of reactionary forces of privilege and greed with their philosophy of Teapot Dome.

The President carried his day and night cross-country stumping tour into Wyoming after telling an agricultural crowd at Nebraska enactment of the controversial Brannan farm plan would help assure peace and prosperity for ourselves and the world.

In a speech prepared for an audience today as Casper, Wyo., the Chief Executive described the new Kortes Dam, 50 miles away, as a source of wealth and strength for the people of the world.

And he scoffed at those who cry socialism, regimentation, or boondoggle at Government water and land resource development.

As the day proceeded he continued to talk to large and apparently happy crowds who jammed the tracks around his private car in the chatty, neighborly fashion that was his vote appeal in 1948.

Like at Pacific Junction, Iowa, yesterday where he told them he wanted them to look at their hired man to see if he is the same fellow who came out looking for votes 2 years ago. He added he was 66 even if they thought he didn't look it.

Mr. Truman revived the old Teapot Dome oil scandal at Casper, contrasting the philosophy of Teapot Dome with that behind the construction of the Kortes Dam.

The solemn note he sounded in speeches yesterday in Illinois and Iowa, where he warned the Midwest that a return to isolationism could bring on a third world war, crept into his Casper talk.

"We are engaged in a world-wide struggle to bring lasting peace to the world," he said. "In that struggle we are being opposed by a cynical imperialism which asserts that freedom and democracy are soft and incapable of strong action."

By developing projects like the Kortes Dam, Mr. Truman continued, this country "can prove how false, how hollow, are the claims of communism."

In the Democratic tradition, he added, "we shall move forward on the path of freedom and peace."

In the same vein, Mr. Truman told his farm audience at Lincoln last night that the production payment plan sponsored by Secretary of Agriculture Brannan "is the best plan yet proposed for getting an abundant production of perishable crops consumed without knocking the bottom out of the farmer's income.

Under it the Government would pay the farmers the difference between what they receive at the market for perishable crops and a predetermined fair return.

In Washington, Senator WHERRY, Republican of Nebraska, denounced the Brannan plan as "that economic monstrosity carrying fines and jail sentences for farmers who refuse to goose-step upon command of Washington bureaucrats.

"The President is obviously playing politics with the farmers' problems," WHERRY said, "trying to please CIO bosses and Americans for Democratic Action with dirt cheap prices for food and win the farmers' vote with offers of bribery from the Public Treasury."

Mr. Truman assured the Casper audience today that the Eighty-first Democratic-controlled Congress has been moving forward—not backward.

"The contrast between the enlightened, Democratic approach to the use of our natural resources, and the selfish, anti-Democratic approach, is plain here in Wyoming," he said. "About 50 miles north of Casper lies Teapot Dome. About 50 miles southwest is the new Kortes Dam.

"The name Teapot Dome stands as an everlasting symbol of the greed and privilege that underplay one philosophy about the West."

He said under his own philosophy the Kortes Dam will add 36,000 kilowatts of electricity to our national store of energy when its three turbines go into operation.

Mr. Truman said that soil and forest conservation, flood control, and the development of power, navigation, and irrigation in the Missouri Valley "must all be tackled and solved together."

He did not say whether this should be done by a Missouri Valley Authority or under what set-up, but he added:

"We have learned that a great river valley cannot be developed in piecemeal fashion."

Speaking of the serious aspects of the water problem, he referred to the huge reserves of oil shale in Colorado.

"In the years to come, we may well need to obtain oil from that shale." Mr. Truman warned. "It will take a lot of water to do so, however. And there is a real question whether there is enough water for that purpose."

He said that is one of the problems being looked into by the Water Resources Commission he appointed earlier in the year.

He said the United States must forge ahead with water and land development.

"There are still reactionary forces that oppose every forward-looking proposal to develop the resources and increase the prosperity of the West," the President went on. "The philosophy that produced Teapot Dome is not dead."

The editorial is as follows:

THE PRESIDENT'S VISIT

A 10-minute speech, such as Harry Truman delivered at the Burlington station Monday night, isn't intended to set the world on fire or start a controversy. He hasn't time to develop a serious theme.

So we shouldn't be critical of the talk given here by the President. He came out firmly for prosperity, soil conservation, and peace. Because his trip is nonpolitical, he didn't mention the hated Republicans by name. He only called them the opposition. And he said he would work for the welfare of the people, a promise with which no one can quarrel.

Mr. Truman appeared healthy and rugged. He looks as if the Presidency agreed with him, and as if he liked the job which at first he accepted so hesitantly. The surprise election of 1948 had a definite effect upon his personality. He has developed the "I did it" philosophy which success in winning political elections so often gives a man. No longer does he question his capacity to be the President. Mr. Truman knows he's good, and admits it.

Dr. Clanton W. Williams Proposes a Possible Way of Avoiding World War III

EXTENSION OF REMARKS

OF

HON. CARL ELLIOTT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 19, 1950

Mr. ELLIOTT. Mr. Speaker, we all realize that the heart of America yearns for a peaceful world. We want a world in which our children can grow up with an opportunity to reasonably reach the fulfillment of their dreams.

The bravery and ability of our armed forces, backed by the great resources and industrial ingenuity of our people enabled us to win two great World Wars.

Five year after the close of World War II we have seen many of the fruits of victory slip as sand through our fingers. Time is running out.

Dr. Clanton W. Williams, professor of history at the University of Alabama, in a bold and thought-provoking approach has outlined a possible way of avoiding world war III.

Dr. Williams is widely recognized as an outstanding historian and philosopher. He is a thorough scholar and a great teacher.

I include a recent address of his entitled "A Possible Way of Avoiding World War III":

A POSSIBLE WAY OF AVOIDING WORLD WAR III

(By Clanton W. Williams, professor of history, University of Alabama)

Mr. President, fellow Kiwanians, ladies and gentlemen of the radio audience, your program committee has asked a historian to talk to you at this time—to offer some thoughts on the possibilities of avoiding war with Russia.

No historian should engage in predicting. Our business has to do with the past. But I dare say that most students of man's affairs would hold that constantly recurring warfare is part of the pattern of all animal life and that it is a decree of nature that the human species shall continue to fight more or less devastating wars. That wars are becoming increasingly devastating is incidental. It is but a part of the general upward curve of everything in this particular era. Having reached a high point of destructiveness, the curve of destructiveness will likely then descend until man has recuperated sufficiently to start once more the increase in devastation.

That thesis, it seems to this historian, is subject to debate. But I admit that I see only one area of refutation to that fatalistic pessimism. It lies in this fact: While the curve of destructiveness of warfare is ascending, so too there is an increasing determination among human beings to put an end to this vicious recurrence. The general rise in the curve of democracy now approaching international democracy offers great possibility, it seems to me, that the so-called decree of nature just mentioned may be countered, may be proved to have been only ostensible. Man has triumphed over nature in other fields. Why should he not find the means of doing so here?

The chances of permanent peace, I admit, are not great. The odds are greatly in favor of the continued recurrence of war. But it so happens that the good Lord has allowed to emerge in this pin point of time a Nation which in physical prowess completely overshadows all others—a Nation with a generally high moral code, a Nation whose economic influence is far out of proportion to its numerical strength, a Nation with a political philosophy of high order. Whether or not this Nation can muster the requisite intelligence and crusading spirit to perform its wonted mission remains to be seen.

I am speaking to an intelligent patriotic segment of our people. The very fact that they are leaders in this community throws upon them a heavy responsibility to keep themselves informed and to develop among themselves and their fellows the crusading spirit required. Toward that end the following facts are presented:

World War I cost $100,000,000,000, not counting interest and veterans' care. World War II saw expended about $1,500,000,000,000, or about 50 times as much money as the total gold reserves of all the nations on earth. Florida's share of this was $7,183,609,404. Bay County's portion was $79,506,000. This is some four times the assessed value of all your real estate. This still does not include interest on the debt nor expenditures for veterans.

In fiscal 1950, a year of peace, the Federal, State, and local governments expect to collect about $55,000,000,000. This is about $1,447 per family. Eight hundred and thirty dollars of that will go for wars, past and prospective, or possibly avoidable.

To this point I have talked only in terms of money—money which itself actually did not disappear, did not even leave this country—money which is registered, nevertheless, as the major portion of our national debt.

There were only 27 nations engaged in World War I and only 8,500,000 people were killed. Seventy nations fought in World War II and some 22 millions were killed. World War I saw the development of machine guns, long-range cannon, poison gas, light tanks, and submarines. World War II saw these weapons become many times more effective, while on the sea this latter war saw the coming of aircraft carriers. Moreover, in the air, long-range bombers and other aircraft grew in awesome numbers as the hell they rained on earth grew proportionately.

World War I came to a close with the airplane's just beginning to be recognized as a weapon of offense. So World War II came to a close just as jet propulsion and guided missiles and electronics began to astound laymen with their potentialities. World War II came to a screeching conclusion as the scientists of the victorious side suddenly presented to human beings a new gift—the atomic bomb.

Although the expression "push-button warfare" was already being bandied about in military and scientific circles before World War II had ended, there had not then been developed the science of combining the principles of guided missiles and atomic fission and biologicals. But by the middle of the twentieth century God's little bugs on earth are making nice progress toward this end.

Is it trite here to interject the thought that the physical sciences are outstripping the social sciences and that the social sciences dictate the use of the products of the physical sciences? Here, parenthetically, I must mention again the figure $830 per family in 1950 for war. I should like to mention also the proposed figure, $7.50 for Federal aid to education. Of course, there are State and local funds for education, all pathetically inadequate, but I am speaking here specifically of national responsibilities. That $7.50 will probably not even be appropriated at this session of Congress. This is incidental; but it is an indication of where we are putting our national emphases. Eight hundred and thirty dollars to $7.50 in America—in gold-rich America—the Nation whose public opinion reflected in Washington controls the destiny of mankind!

The cost of World War II to the peoples of Europe and Asia was nearly two times the $530,000,000,000 we spent on war from 1940 to 1946. That's the cash cost—not the cost in sorrow over their twenty-one and a half million dead loved ones, nor the cost in destruction of buildings, homes, churches, and schools, and of business establishments, nor the cost in the attendant warping of mind and body and spirit of those who lived. The decrease in culture and mental development was matched only by the increase in immorality and in inability to judge values—values in everyday associations, values in political philosophies and propaganda.

It may seem superfluous here to review these facts—the cost of war in money and blood and sorrow and in general degeneration. Yet it seems to be in order to note the historical tendency wherein wars are becoming greater, more all-embracing, increasingly menacing to all higher values. It needs to be noted again and again, especially by parents and teachers, that new generations are coming along continuously—young people who lack this historical perspective, who did not know 1861–65, 1870–71, 1898, 1914–18, 1939–45. It needs to be noted again and again, too, that the wartime good resolutions: "to make the world safe for democracy"; "to institute the four freedoms"; "to win the peace"—these great resolutions fade as we move each year a bit further from the periods in which we held them most intently. Man's forgetfulness, indeed, his fickleness here, is in effect tragic. The educator's responsibility here is apparent.

It is good to note, I repeat, that with each successive war in recent decades the accompanying determination to end warfare has grown in proportion approaching the intensity of war itself. International organization for preservation of peace is no new concept. Its roots go back to Pax Romana. The medieval Roman Catholic Church with its peace of God and its truce of God; the nebulous Holy Roman Empire; the 15-nation Christian republic of France's Henry IV and his Minister Sully in 1610; the law of nations for a society of states as written by the great Dutch lawyer, Grotius, during and after the tragic Thirty Years' War; Alexander of Russia's Holy Alliance and Castlereagh of England's European concert and his conference of ambassador with its permanent secretariat, all following the convulsions of 1789 to 1815—these are manifestations of a basic knowledge among men that wars must be prevented. Toward the end of the nineteenth century came the Hague Conference and the Permanent Court of Arbitration. Here it is to be observed that arbitration in the nineteenth and early twentieth centuries prevented the outbreak of war some 200 times. Then came the explosion of 1914–18. It was followed by creation of the League of Nations. But the League died, struck by three mighty blows: (1) It had no police power, (2) American irresponsibility, and (3) the general unwillingness to apply the economic boycott during the great depression.

It is difficult to think of Franklin D. Roosevelt as a timid man. Yet his audacity left him at a crucial moment of history. Fearful of a repetition of Wilsonian defeat at the hands of isolationist Senators, he failed to advocate the surrender of a large portion of American national sovereignty to the prospective United Nations. Doubtless Britain, too, and surely the U. S. S. R. would not have surrendered the requisite amount of national sovereignty to make of the United Nations an effective world government. Perhaps Roosevelt knew this and decided to try to make the most of what he could get. At any rate, the UN was born crippled, crippled by the rule of unanimity among the permanent Big Five of the Security Council. There would be no international police power now; there would be continuous sabotage by that power which had vowed death to bourgeois democracy; if there were to be internationalism it would not be democracy international.

Internationalism in general is no new concept. Alexander set out to conquer and to Hellenize the world. Rome conquered and Romanized the western and near eastern world. The term Caesar was in time imitated in the titles of Tsar and Czar of all the Russias. It is still alive in Shar of Iran. Then there were the Kaisers of the Germans who sang songs about "Deutschland uber alles." Even Haile Salassie's title includes "King of Kings." There have been others besides royalty who entertained ambitions to unify the world under their personal dictatorship and interestingly enough each had some ideological urge. Napoleon rode the wave of "Liberte, Fraternite, Egalite." Mussolini talked of reestablishment of the Roman Empire as an all embracing "corporate state." Hitler and his "Herrenfolk," "master race," still sang "Deutschland uber alles" as they talked of a "new order in Europe." The Russians today have a stirring anthem which they sing with deep reverent fervor:

" 'Tis the final conflict
Let each stand in his place.
The International Party
Shall be the human race."

The fact that no king or dictator since the Romans has brought internationalism to fruition does not gainsay the possibility of some such temporary success.

I say temporary because men cannot be held in bondage indefinitely. Individualism, freedom, and justice are age old. Indeed, they are coexistent with the laws of nature. It follows that if permanent internationalism is to be realized it will not be brought about by conquest or intimidation or coercion, nor through wholesale violation of the natural laws inherent in the terms individualism, freedom, and justice, and certainly not when there is applied the unmoral principle that the end justifies the means and other materialistic dogmas. Russian communism hasn't a chance of more than temporary success, but it does have that chance, and temporary could mean several centuries.

But international democracy does have a chance of permanent success. Indeed, the realization of world republicanism appears to be fairly close at hand. I think I might say flatly that if this great Nation had by now developed a crusading spirit for such, that it could be realized in our own day—and quite likely without world war III.

Unfortunately, there is no great leadership at our helm, and, equally unfortunate, there is a timidity among strategically placed persons who do understand the gigantic problem. When I say strategically placed persons, I mean not only the State Department and the Congress but also all molders of public opinion and creators of public enlightenment. It was painful for me last year, as I took part in a Washington conference on the "zeal for democracy" program, to note that the atmosphere was permeated by a defensive attitude. Mind you, these conferees were educators from all levels of education brought together by the Commissioner of Education. They agreed that the school should fight communism and by contrasting it with democracy. But there was hesitancy about showing it up as the loathesome thing it is. This might lead to the accusation of a lack of objectivity. This, to me, is asinine. There was zeal for democracy, to be sure, but only for democracy at home. Practically nothing was said about international democracy. Oh, there should be taught the structure and functions of the United Nations, but its weaknesses were to be ignored or excused as shortcomings of its youth. There was nothing said about its deformity at birth. In short, there is no purposeful advocacy of an educational program whereby our children may be taught the stark facts, and our adults made more conscious of the yawning gulf in the United Nations between its ideals and the practical constitutional progresses whereby the realization of those ideals might be pursued. Our educators, like our politicians, are grossly guilty of ostrich-like evasion of the greatest issue of our age, while the rest of humanity waits for American leadership. And apparently few of our ministers know their responsibility here. But if there is no grass-roots program aimed toward revamping the United Nations, to make it what it is wont to be—a powerful world government—and international democracy, the greater shame lies in Washington. Mr. Marshall, we remember, turned down as premature the idea of elimination of the veto. To be sure, he realized that Russia would veto any move to remove the veto and he was afraid that if he should push such a move Russia and her satellites and at that time maybe also the Arab states would withdraw from the UN. Then, too, there was no assurance that the United States Senate would approve such a surrender of our national sovereignty, and so we drift along the familiar road, so well known to historians—simple rearmament.

Trygve Lie was irked last April when the signing of the North Atlantic Pact stole the headlines from the opening of the spring session of the UN General Assembly. Why? Because it was all too evident that though the pact was within the letter of the UN Charter it was an instrument completely outside the functions of that organization which was supposedly designed to win the peace. But the United Nations as now constituted cannot preserve the peace, and we know it, and therefore ratified the Atlantic Pact. We based our whole national and foreign policy on the principle that the Politburo could not be deferred in their program except by their fear of the atom bomb.

And so we approve of huge appropriations for war or for the prevention of war, we don't know which. In effect we have fallen back upon the first law of nature, self-preservation, and its corollary, survival of the fittest, and I for one must concur. I approve of the fact that we have told the Russians in effect that we will blast their cities with atom bombs should their armies invade any of the signatory powers to the North Atlantic Pact. What our attitude will be when we know that the Russians, too, have the atom bomb remains to be seen. Meantime, I suppose we may say that we are creating world understanding of a sort, a sort which the Kaiser lacked when he believed the statement of his advisers that he need not fear American participation in World War I, because at the moment the United States should declare war, then Texas would secede and go back to Mexico. It is a sort of world understanding which Hitler lacked, though Ambassador William E. Dodd did tell him in 1938 that he had better study some history. He had studied one phase of history; Frederick II was his idol, Frederick with his philosophy that that whatever succeeds is right, a materialistic philosophy, incidentally, which Frederick's fellow Prussian Karl Marx shared. It needs to be added that the Jap militarist did understand that we would fight when we had our face slapped. But it is hard to believe that they understood the war potential of an aroused America. It is now difficult to believe that the Russians with all their spies in our midst do not understand that potential.

Shall we tell them, too, that we will fight if they invade Greece or Turkey or any of the Middle East? Shall we have also a Pacific alliance?

What I am trying to say here is that while I approve of this policy of firm containment, it is in the long run only a stop gap program. It can only defer war.

But look, having stopped Russian armies by threat of war, this shall not have stopped the indirect conquest. Witness the demise of Nationalist China now transpiring. It is painful indeed to see 450,000,000 Chinese people added to the 300,000,000 already brought under the control, as far as concerns international affairs, of those 12 or 13 Bolsheviks, several of whom started out just 32 years ago with but 30,000 followers—but a well indoctrinated and coordinated 30,000. It is painful to note the inconsistency in our policy of firm containment. We are containing the expansion of Russo-communism in Europe and the Mediterranean through the Truman doctrine, the Marshall plan, and the North Atlantic Pact. Not so elsewhere. Not

in China. Not in Indochina or Burma or Malaya or Indonesia or Siam (where the subcapital of the Communist International is the Russian Embassy at Bangkok). Communists today are working nicely in the Philippines, in the Middle East (the subcapital is the Russian Embassy at Beirut, Syria), in the heart of Africa, and far up the Amazon. The recent pronouncements of Communists everywhere, including Paul Robeson, that they would fight for Russia in event of war between their own nations and the citadel of the International were not made unadvisedly, nor as a result of any frustration. It has long been a policy of the revolutionists to purge their ranks, to keep their organization stern and sinewy, and with raised fist to let the world know that sooner or later they were going to win. Just when is not important. Marx's pronouncements about "economic" and "historical determinism," whereby it was foreordained that bourgeois democracy should fall before his dictatorship of the proletariat, was not idle chatter. He sincerely believed it, and so do his followers today. Lenin's law of ebb and flow has been reiterated by word and action of Joseph Stalin and by his minions.

They expect to meet temporary defeats, even to make strategic retreats here and there. But there is no doubt in their minds that sooner or later "the international party shall be the human race." This shall come to pass even if Russia as a nation should suffer military defeat. I am afraid that most of our people do not even know the simple fact that the self-perpetuating Politburo is not a part of the Government of Russia, that it is the "central authority," as Marx put it, of the International, the policy-making body of all Communist groups, the Russian being only one of them. And so the Kremlin is a dual capital—and perhaps a temporary one. Since the First International was formed in 1864 there have been five capitals: London, The Hague, New York, Philadelphia, Paris, and now Moscow. It may very well be moved back to Paris before the century is done. It could eventually be moved to the new United Nations Building in New York.

Right now, though, it is in Moscow and the poor Russian people are being made its immediate tools. Russian nationalism, plus American repugnance for war, plus our ignorance of the fundamentals, plus the awful fact that we have already garnered 73.4 percent of the world's gold reserve and don't know that the poker game has almost been broken up, plus the deformity of the United Nations—those five things have given Marxism-Leninism-Stalinism a series of breaks such as to make old Karl grin through his rotting beard and hiss, "I told you so. See, it's inevitable." And we wonder why some half-baked intellectuals are jumping on the bandwagon.

I submit, my fellow Americans, my fellow bourgeois Democrats, that it is not a question simply of stopping Russia. That is but the first of a series of steps long overdue. Sure, we are meeting the U. S. S. R. as a nation head-on and stopping her military expansion to the west. We are not meeting the International "ipse" save where the stop-gap Marshall plan has been instituted.

And how long do we intend to continue this stop-gap ERP, just giving people dollars so that we can prolong the one-sided poker game—a desperate game for them and for us? There must be an answer somewhere. But the failure to find that answer is certainly one primary reason we refused to let China stay in the game, only we used another analogy about pouring money down a rat hole.

Eight hundred and thirty dollars per family per year indefinitely. That's an ugly thought. But still uglier is the thought of what that bill may be when Canada and the Australians and the Latin Americans and 400,000,000 Indians have run completely out of chips. Some say the trouble is that Englishmen are living beyond their means, that they have got to lower their standard of living. These people should be consistent and say that this is true also of Frenchmen and all western Europeans and Canadians and Mexicans and also those 400,000,000 half-starved Indians. What sweet music to those old Bolsheviks sitting in their temporary Kremlin citadel.

Eight hundred and thirty dollars per family, this year, we should say. That's bad enough. Mind you, I am not considering the rest of our tax bill, just that part having to do with foreign affairs and this year. Did I say "per family"? What families? Need I say what we all know, that the vast load here is being borne by people who might otherwise invest this money in bourgeois enterprises which would produce for the masses in greater abundance and at even lower cost per man-hour worked the good things all men want and would buy if they had purchasing power? Here I could quote directly from Marx' Address of the Central Authority to the Communist League, April 1850, or from writings of his apostle Lenin on how to force democratic nations to tax capitalism to death. I will quote Marx here. This is fundamental. It was written from London 100 years ago:

"We have seen how in the coming movement the democrats will come to power (that's not a capital "D"). * * * if the democrats themselves move for a moderated progressive taxation (Communists), must insist upon a tax whose rates are so steeply graduated as to bring ruin to big capital."

Need I say, my fellow Americans, that with the failure of this Nation to face squarely the issues, to examine honestly its tremendous role in international economics, to note frankly wherein its own selfishness, its tariff policy, its refusal to allow even an equal balance of trade, its asinine gold-purchase policy, its refusal to surrender an iota of its national sovereignty to the United Nations—that all these things are to be taken into equal account along with the dynamic crusading drive of Communists bent on destruction of our system.

Need I add that many an athletic contest, many a war has been lost because one side was intellectually inferior, or was conscience stricken, or lacked a dynamic spirit of its own? May I add that the United States today not only has no crusading spirit for its own ideology but apparently even lacks a grand strategy? Are we sauntering nonchalantly along in blissful overconfidence because we have the atom bomb and $23,000,000,000 in gold when the economic and political world stands on the verge of crashing about our ears? If we are going to think this thing through, if we are going to develop any grand strategy and crusading spirit before it is too late, here are some fundamental things which must be considered—deep underlying things:

1. This bourgeois democratic system with its emphasis on the individual and his freedoms and its mass production industry gushing forth its good things, this bourgeois system, with all its faults, is by far the finest politico-economic system so far achieved. It is worthy of preservation and perfection and expansion.

2. It is in danger of destruction—not by Russia, even with the atom bomb—but primarily because our people do not understand the great issues, do not understand the nature of the opposing ideology, do not understand our awful responsibility in the realm of international economics, do not understand that when the purchasing power of the other 93 percent of the human race has been wrenched from them by our economic electromagnet that the others will inevitably turn on this irresponsible creature—Marxism or no Marxism, Lenin-Stalinism or no Lenin-Stalinism. But Marxism-Leninism-Stalinism will be ready. The Kremlin is already offering itself as a rallying point, an enthusiastic leader bent upon achieving its avowed end—an end already being avidly pursued.

3. This great Nation has already reached the sight of the end of the road it is traveling. With all its wealth, the prospective taxation of its investing element to ward off economic stagnation throughout the world, plus more taxation to carry its own and others' huge military burden (past, present, and prospective), is an ever-widening malignant cancer bent upon death not just to free enterprise but to all that democracy involves.

4. World war III would have to be financed almost entirely by that nation which has the capital, and its capitalists as such would be doomed whether or not we won it.

My subject was how to avoid world war III. Obviously avoidance of that war is but one of the problems before us. The little recession from which we are apparently now emergeing may well have been a red beacon flashing—flashing. Should this rich Nation have a real depression what do you think the others would have? What do you think they are already having? They are grateful that we are making it possible for them to stay in the game, but they know who has garnered all their chips. Some of them are proud people and resent very much the position they are in, but they dread the arrival of the moment when Uncle Sam himself should become critically ill and say, "That's all, boys." Need I add that Uncle Sam might share that dread, for that moment may not be far removed? Have you read what Stalin has been writing since 1925 about the spread of the International through "a series of ebbings and flowings," "a wave-like rhythm" after each war and after each financial panic? Well, read it, translated for you in the January, 1949, issue of Foreign Affairs.

It is presumptous for me, a historian, to offer a program of action at this late hour. I do so with the hope that you will carry on from here in your thinking—in your molding of public opinon—public opinion in the gigantic democracy which at this hour controls the destiny of mankind.

How to avoid world war III? Yes, that and much more. I offer a seven-point program, part of which is already in operation, part of which our State Department and the President apparently are contemplating but to this moment have done little or nothing about, because they fear Congress:

1. Continue to keep ourselves militarily strong while letting the Kremlin masters know through a chain of defense alliances that any further military aggression on the part of Russia or any of her satellites will mean war in which the United States would participate and would not hesitate to use the atom bomb and other horrible weapons at our command. This is a stop-gap measure.

2. A vigorous and proud launching of a bold new program to encourage investment of private capital and to bring to the underdeveloped areas of the world, as Mr. Truman put it in his inaugural address, the capitalistic technology which to this point has made of us the most powerful, prosperous people in history. Mr. Truman's puny request for $40,000,000 ($1 per family) hardly falls in the category of relative boldness. This would be no stop-gap measure. This should be our long-awaited answer to the challenge of communism. This is where our $830 should be going.

4. A complete revision of the Charter of the United Nations—such revision to be based upon the tried and proved principles of democracy—a bicameral system and majority or large majority rule. Should Russia veto this move to make the UN a real "Democracy International," and she would,

then call a new world constitutional assembly, draw a new constitution, and upon ratification by the United States Senate, then secede from the United Nations with invitation to others to follow us in the establishment of an effective world republic. Membership would be restricted to those nations whose local governments are operating under the principles of democracy as defined in the English Bill of Rights, or in the French Declaration of the Rights of Man, or in the Universal Declaration of Human Rights.

5. There must repose in that World Republic real powers which all governments must have—legislative power, even including a limited power of taxation; judiciary power; and executive power, including full investigative and police powers.

6. In that World Republic there would be not only the present World Bank with capital vastly expanded, but a strong treasury department—the depository of gold reserves. Let it buy gold and issue currency, and more and more of it as it acquired gold. This, I think, is essential. There can never be any circulation of an International currency nor may we logically hope for economic stability without some such drastic move. Then, in that World Republic, there must be a world department of commerce with powers to act. The socio-economic aim of this World Republic would be a repudiation of totalitarianism in all forms and a substitution therefore of a dynamic bourgeois capitalism to bring about an increasing mass consumption of the good things all men want purposefully being mass produced in regulated quantity. There is no end to potential markets. Distribution of purchasing power can be stimulated. Sure, this cannot be done except through planned economy—planned as any grand strategy must be planned, as any board of directors must plan. Let those who despise centralized planning think of the alternatives and of the red beacon right down the road flashing—flashing.

7. Meantime, a revolution must be produced in the minds of men. In Europe, in Asia, in America. Truth and morality must become paramount or democracy will die as it died in Germany, as it has died in eastern and now is dying in central Europe, as it is dying elsewhere. Two world wars and a spreading economic cancer have dominated this century. The cutthroat practices, the flood of falsehoods, the scheming and plotting of Fascists, Nazis, Communists, and others has left a deep imprint upon our age. Men must understand that tyranny and war and depression can be eliminated. They and their children can be taught the fundamentals of political science and economics. We must reverse the trend wherein the physical sciences are outstripping the social sciences. American children must be well taught for they will control man's destiny. But before that may be approached, American fathers must somehow get it through their thick skulls that good teaching cannot be bought in bargain basements. Eight hundred and thirty dollars for wars—and Congress fails between stools over the proposition that $7.50 ought to be spent to assist in educating the Nation's youth.

It is quite possible to teach the propaganda-ridden people of the earth that bourgeois democracy is not the evil thing it appears to many to be. But it means a drastic departure from our present course, and time is running out. The poker game is already artificial, and we have moved into the atomic age.

Does this seven-point program shock you? Does it shock you to know that 3 out of every 4 dollars of Federal appropriation this year is being spent for war purposes and that the chances are that this amount must be increased until Marx's predictions come true? Does it shock you to realize that with the Communist conquest of China that the self-perpetuating Politburo within 32 years shall have established its system over one-third of mankind, whereas with all the progress of the centuries, since long before Magna Carta, only one-fifth of humanity today lives under the rules of democracy, and that most of these democratic peoples plus the other 45 percent, now vacillating, are being bled white by their leaders—a leader which even neglects the education of its children?

It is shocking, isn't it, my fellow Kiwanians, my fellow Americans?

Rail Labor Law Failure

EXTENSION OF REMARKS
OF
HON. FORREST C. DONNELL
OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Monday, May 22 (legislative day of Wednesday, March 29), 1950

Mr. DONNELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Rail Labor Law Failure," published in the Los Angeles (Calif.) Times of April 21, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

RAIL LABOR LAW FAILURE

Every time the railway labor law has been amended it has been hailed as the model labor law, setting a pattern for all management-labor relationships.

SANTA FE IS LISTED

That it is not this perfect model is again being demonstrated by the strike call of the Brotherhood of Locomotive Firemen and Enginemen against a list of selected railroads. Though the Santa Fe is the only one in the list which serves this territory, either the UP or the SP or both may be involved later.

First, it should be said that this is a pure featherbedding strike; it is not for any legitimate end. What the union demands is that a third fireman be employed on Diesel-electric multiple-unit driving systems, which actually use no firemen at all.

Diesel-electric drives have been successfully operated with only one man in the cab. That engine crews should have two men, though nothing is required of the second but that he be ready to take over in an emergency, is reasonable enough. The public safety calls for such a precaution, so that the lives of passengers may be protected if one man becomes disabled. The second man should be provided for the same reason that a passenger airplane has a copilot.

UNION CASE IS WEAK

But there is no good reason for having three men; and a Presidential fact-finding board has so declared, after a careful examination. Since 1933, all such fact-finding boards have been loaded in favor of labor organizations, so that when one rejects a union's contentions the union must have a weak case indeed.

But the second consideration in connection with this strike deals with a really basic matter; this is a strike against a public utility, and a strike against a public utility is intolerable.

It is at this point that the law is weakest. The law will continue to be fatally at fault until it is amended to provide for some form of compulsory arbitration. Men working for a public utility cannot be permitted to strike, though they must, of course, have the advantage of proper machinery for the redress of grievances.

To argue that compulsory arbitration sets up a form of "forced labor" or "involuntary servitude" is to argue nonsense. No man has to take a job in a public utility; nor, having taken such a job, does he have to keep on working. He can quit. But the members of the BLFE do not wish to quit; they want to hold their jobs and they would object strenuously if anybody was put to work in their place.

EVADING SEIZURE

Is it too much to ask that if they, as public utility employees, do not want to quit, they submit their disputes with management to impartial judgment so that the public will no be put to great loss and inconvenience?

In this particular case, the impartial judgment has already been given, and it is against the union. The fact-finding board says there is no merit in the union contention that a third man should be hired, to help a second man do nothing nine-tenths or more of the time.

The union is attacking a few railroads at a time so it can avoid, if possible, government seizure on the plea of national emergency. But the threat is to all railroads and to the public.

The Railway Labor Law has fallen down before. Its object is to provide a rule of reason and avoidance of strikes in rail transportation. But instead of a rule of reason it has proved to the unions in the past that, no matter how unreasonable they are, the Government will force a settlement in their favor rather than permit a strike. It's time it was changed.

Concerning President Truman's Speech at Lincoln, Nebr., May 8, 1950

EXTENSION OF REMARKS
OF
HON. EUGENE D. O'SULLIVAN
OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 22, 1950

Mr. O'SULLIVAN. Mr. Speaker, I wish to call attention to an article which appeared in the May 12, 1950, issue of the Unionist, a weekly newspaper which has been in existence for over 26 years, and which is the only official newspaper of the Nebraska Federation of Labor, and the only official American Federation of Labor newspaper in either Omaha or Lincoln, Nebr.

This article is indeed a splendid one, and is as follows:

THOUSANDS HAIL TRUMAN'S SPEECH—DRIVING RAIN FAILS TO DAMPEN ENTHUSIASM OF CHEERING THRONG IN LINCOLN

(By Kenneth Lewis)

All in all it was quite an occasion when the President came to town. For several hours before his train pulled in the Lincoln Hotel was a scene of great activity. The FBI had long before checked those who were to be admitted beyond the guard rope.

Democratic big-wigs were everywhere. It was fun to meet people who had been only names in the papers up to that time. A lot of the labor boys were on hand. John Frahm had been running errands and working for the good of the cause since about noon. Bill Noble came in about 3:30 and

had no difficulty getting one of those exclusive badges pinned on him. Al Witzling came later, and there were several from railroad (including Fred Chapelle, Anton Munch, Ed Lafferty, and others) and other organizations. Lots of old friends.

WANT EXCLUSIVE BADGES

I guess Democrats are just like others, in some ways. Some of the gentlemen about the hotel were moaning long and loud because they didn't have one of the exclusive badges, denoting a member of the Presidential reception party. But eventually most of them were satisfied, or at least quieted.

This preliminary part was much like a convention—you just met people, and introduced those you knew to others. It was a pleasure to introduce Al to Mayor Miles, but they soon discovered they had been on the same program in opposing the repeal of rent controls. Judge Quigley wasn't at all like I had imagined—but don't know what I really had in mind.

Then came the call for the parade—and "exclusive" badge wearers were loaded into cars according to prearranged schedule. Then to the platform to await the President. Bill had left his raincoat in the car. Didn't think he'd need it. How wrong he was. After we'd met a lot more people, and just before the President came, it started to rain. The bands came marching in, their various colored uniforms adding color to the occasion. Their music lifting those spirits that may have sagged because of the rain.

THRILL TO SEE PRESIDENT

The band played the national anthem, and made you tingle a bit with the pride of the thing.

It was quite a thrill to see the President coming from the railroad yards, just below us, then up into the stand. He wasn't just a name in the papers, or an actor in a newsreel—he was a real live man. Somehow it's hard to make real people out of some of the names we read. But there he was—just like the rest of us—getting rained on. There was Mrs. Truman, and Margaret. They were real, too. Here was the Truman family—a family just like yours and mine. Funny, isn't it—some things you know are true, are a little different after you see proof.

Then the introduction by mayor of the town shielding his manuscript from the rain. The thunder interfered. The noise of the rain interrupted. But out in the rain, with no protection, about four thousand stayed of the many thousands who came and went—just to see the President—then get out of the rain.

"REALLY HAS SOMETHING"

I tried to listen carefully to his speech. It dealt with the farm program of the administration. He plugged for the so-called Brannan plan. To me it sounded logical. He sounded honest. I liked what I heard. But I don't know much about farming programs. So I asked an expert—Stan Matzke farm editor of the Journal—what he thought of the speech. "Excellent," said Stan. "The old boy really has something. I would like to see such a program tried. If eggs dropped to 5 or 10 cents a dozen, I think a lot more people would eat eggs. Then the price would naturally come back up to a level to make them equal with other commodities. Meanwhile food would be cheaper, and the farmer would still be getting a fair price. I'd like to see a program based on production payments tried out." Stan rates pretty high in my book in the matter of judgment. So this reaction from a Republican farm editor confirms my uninformed opinion that it was a good speech.

After he finished speaking, the President and his family were hurried to the train to get them out of the rain, and give them a chance to get into dry things.

One of the most interesting features of the afternoon was the steps taken to safeguard the President. From where we sat on the stand, you could see police or secret service men all around. In the railroad yards, on every building for two blocks, on fire escapes two blocks away, and closer, in strategic windows. They overlooked no bets.

BAND PLAYS IN RAIN

Then uptown to catch a bus. Crowded with people soaked, but glad to have seen the President. Most of them glad about being part of the crowd that listened while the University band, in a driving rain, played, paraphrased and sang, "We knew you were coming, so we baked a cake." Then the whole crowd joined them in singing "Happy Birthday." The fellow next to me, hanging on to the streetcar rail, was the engineer who had brought in the President's train. He told about things that happened along the way, and the people who were out to get a glimpse of the President.

All in all, it was a great occasion, when the President came to Lincoln.

Public a Third Party in Any Rail Dispute

EXTENSION OF REMARKS
OF
HON. FORREST C. DONNELL
OF MISSOURI
IN THE SENATE OF THE UNITED STATES

Monday, May 22 (legislative day of Wednesday, March 29), 1950

Mr. DONNELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Public's a Third Party in Any Rail Dispute," published in the Louisville Times of May 9, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE PUBLIC'S A THIRD PARTY IN ANY RAIL DISPUTE

A bill to ban railroad strikes has made a timely appearance in Congress, coming as it does in the face of a threatened walk-out by firemen on four major lines. Offered by Senator DONNELL, of Missouri, as an amendment to the Railway Labor Act, it would substitute compulsory arbitration as a final means of settlement if collective bargaining and mediation failed to end a dispute. How it fares before the lawmakers may be determined to a large extent by what course the firemen's dispute takes during the next 2 weeks.

By then the last-minute truce agreement, postponing a strike originally set for today, will have expired. If the firemen's long-pending demand for an extra man on multiple-unit Diesel engines is settled amicably in the meantime, Senator DONNELL'S bill probably will lie forgotten in a committee pigeonhole. On the other hand, if a strike is called, the measure may become a matter of immediate concern to lawmakers, much as some of them would like to avoid such a political hot potato in an election year. (Senator DONNELL, incidentally, is among those up for reelection this fall.)

The idea of compulsory arbitration as a preventer of strikes and lock-outs in vital industries is not new. It was proposed for railroad workers when the 1920 transportation bill, forerunner of the present railway labor law, was before Congress. The Senate was for writing a strike ban into the 1920 law, but the House objected. As finally passed, the measure required that deadlocked disputes be submitted to a railroad labor board, but the board was given no means of enforcing its decisions.

The present law was enacted in 1926. As amended in 1934, it provides machinery for arbitrating disputes over interpretations of existing labor contracts. Within this restricted field, arbitration is compulsory to the extent that either party to a dispute may invoke its provisions with the understanding that, even if the other party does not agree, the awards of the arbitration board become binding on both parties and enforceable by court orders.

For disputes involving issues other than contract interpretation, settlement is sought by mediation. If these efforts fail, the National Mediation Board attempts to induce the two sides to submit their differences to voluntary arbitration. If this offer is rejected by either or both, the President names an emergency board to investigate and make recommendations for settlement. This has the effect of delaying any strike action at least 60 days, with the Board required to report within the first 30 days of the waiting period.

This 1926 act was long regarded as model labor legislation. In the first 15 years of its operation no serious threat of a rail strike developed. Since 1941, however, there have been three such threats, not counting the present one, and one actual tie-up. Plainly the law leaves something to be desired. Never was this more evident than in 1946 when a walk-out by engineers and trainmen created such an emergency that President Truman was moved to ask Congress for the power to draft railroad workers. A draft bill was rushed through the House, 306 to 13, but the Senate, after a week end to think things over, displayed calmer judgment and killed the measure.

The incident is illustrative of Congress' sensitiveness to current happenings in the matter of labor legislation. When no storm is brewing it isn't interested in putting a roof on the house. When a storm breaks it is likely to rush to any extreme to get in out of the rain.

If the threatened firemen's strike, now set for May 10, comes off, we wouldn't want to see lawmakers rush to any extreme. We would, strike or no strike, like to see them give serious thought to the problem which the strike threat poses. The Donnell bill affords an opportunity for discussion. If it is not the best answer, at least it is a starting point toward finding a proper solution—if not for this dispute, for future ones.

To be sure, the President has the authority under still existing wartime emergency powers to seize the railroads if that becomes necessary to protect the public interest. But this is not an ideal solution, nor is it one that can be counted upon to last unless we are to assume that the emergency will go on indefinitely.

Moreover, a rail strike can be injurious to a large segment of the population without actually creating a national emergency—or what the President might readily recognize as a national emergency. Remember how long it took Mr. Truman to recognize the recent coal strike as an emergency deserving his official action?

The strategy in the threatened strike is to limit it to selected lines, instead of making it general, in the hope of avoiding Government seizure. That does not mean, however, that it would not injure a large number of innocent bystanders who have a right to expect protection.

Five Hundred Companies Charged With Illegal Price Fixing and Violating the Antitrust Laws

EXTENSION OF REMARKS
OF
HON. EUGENE D. O'SULLIVAN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1950

Mr. O'SULLIVAN. Mr. Speaker, in the April 13, 1950, issue of the Machinist, a weekly newspaper published in Washington, D. C., by the National Association of Machinists, the following article was published, which discloses an appalling situation. It is very disheartening, indeed, to find so many business institutions throughout the Republic accused of failing to respect and obey the law of the land. It is little wonder that crime is on the increase at gangland levels when talented men so generally ignore the law.

When I was a young man my mother taught me to respect respectable men and women because she thought that they had achieved greatness because of personal goodness, and a willingness to obey instead of to thwart or circumvent the law.

The article is as follows:

Illegal price fixing has become virtually a standard operating procedure for American business corporations, analysis of Justice Department files disclosed this week.

An exclusive survey by The Machinist showed that the Government brought to court more than 500 different business firms and 13 trade associations in the past 2 years. Last year alone, 263 corporations were charged with attempting to eliminate competition in violation of the antitrust laws. Price fixing, to prevent price cutting, is charged by the Justice Department in a majority of these cases. Other illegal transactions included boycotts, price discrimination against independent retailers, industry-wide cartel agreements under which corporations pledge themselves not to compete in one another's territory.

The complete list of corporations and trade associations charged with antitrust violations during 1949 appears on pages 4 and 5 of this issue of The Machinist.

Actually, authorities agree that the Justice Department is able to prosecute only a fraction of the violations. Some authorities report that the Department's appropriation permits it to investigate only about 10 percent of the complaints received.

Herbert A. Bergson, chief of the Department's antitrust division, compares enforcement of the antitrust laws to an iceberg, at least two-thirds of it is below water, where it isn't seen. The Justice Department's antitrust division has an annual budget of about $3,750,000—less than most cities spend on their police departments.

Illegal price fixing and other attempts to throttle business competition have reached such proportions that Attorney General J. Howard McGrath has labeled antitrust violations "the most pressing domestic problem of our time next to unemployment."

Here are some specific examples of the illegal business methods used to keep prices high as exposed in criminal and civil suits brought by the Justice Department last year:

Department stores: Five Philadelphia department stores (Gimbels, Lit Bros., Snellenburg, Strawbridge & Clothier, and Wanamakers), were charged with participating in an illegal agreement to refrain from selling any merchandise at prices between 90 and 97 cents. If 89 cents isn't enough, the stores agreed to jack up the price to 98 cents or more, the suit charged. The stores were charged with having a similar agreement not to price merchandise in the $1 to $10 price bracket in fractions of a dollar between 86 and 97 cents; and on merchandise selling for more than $10, not to use fractions of a dollar between 50 and 94 cents. That means if an item is worth $22.55, it would automatically be priced at $22.95. This agreement acted to raise prices from 11 to 45 cents on all articles in these price ranges, the Justice Department said.

Gasoline, oil, and auto supplies: The Sun Oil Co. of Pennsylvania has been charged with forcing 10,000 independent filling station operators to handle only Sun Oil products. Under their contracts, these dealers were prohibited from shopping around for products of other companies that they might sell to their customers at lower prices. The Justice Department charges that the Sun Oil enforced this agreement by threatening to cancel operators' leases and supply contracts on 24 hours notice and threatened to raise service station rentals or shut off their supply of gasoline if they handled any other competing products.

Small loans: A multimillion dollar network of high-interest small-loan outfits operating in 23 Southern and Western States has been charged with keeping interest rates high by dividing up territory among themselves to prevent competition, by agreeing to pad their rates with brokerage fees even where no broker is involved, and by contributing to a fund to influence city councils and State legislatures seeking to regulate interest rates on small loans.

Eyeglasses: Bausch & Lomb Optical Co., a group of its affiliates and a long list of doctors from many States have been charged with participating in a kick-back arrangement through which the doctor receives a kick-back of $10.95 from the optician selling the glasses recommended by the doctor. In some cases, the kick-back going to the doctor was more than the actual retail price of the glasses. For example, a pair of glasses for which a patient paid $18.25 should have cost only $7.30. The other $10.95 went to the doctor who had already charged the patient a fee for examining his eyes and for prescribing the glasses. Some doctors, the Justice Department says, make as much as $20,000 a year in illegal kick-backs.

Now turn to pages 4 and 5 for the complete list of companies charged with antitrust violations last year.

WHAT'S BEHIND THE HIGH PRICES YOU PAY?

Here are the 263 corporations and 13 trade associations who were hailed into court last year on charges of violating the Nation's antitrust laws. All these charges were brought by the United States Department of Justice.

In the civil actions the Government is seeking court orders to force corporations to cease their alleged illegal activity—to require them to dissolve a price-fixing agreement, or to free a subsidiary company if that is necessary to break up a monopoly.

In the criminal actions the Government is seeking punitive damages—fines, and in some cases prison sentences for corporation officials who have been responsible for the illegal activity.

Under the law the maximum fine that can be levied in criminal antitrust cases is $5,000 on each count. Prison sentences are also authorized under the law, but in all of the 50 years' history of antitrust prosecution, not a single businessman has ever been sent to jail on antitrust charges.

The Department of Justice has asked Congress to increase the fines to a maximum of $50,000 for criminal antitrust violations, and to strengthen the law to prevent corporations from forming monopolies through the purchase of the assets of another corporation.

So far these requests have been ignored, but the Department of Justice hopes that through vigorous action against illegal price fixing agreements, it can help cut prices.

Criminal cases

Cleaning and dyeing: Twenty-three cleaning and dyeing companies and one association pleaded no defense to criminal charges of price fixing in the wholesale dry cleaning business. They paid fines totaling $23,375; Philadelphia Wholesale Cleaners & Dyers Association; A–C Cleaners & Dyers; Ararat Dye Works, Inc.; Atlas Cleaners and Dyers Co., Inc.; Bell Cleaners & Dyers; Centennial Cleaners & Dyers, Inc.; Eagle Cleaners & Dyers, Inc.; Levont Cleaners and Dyers, Inc.; Master Cleaners & Dyers, Inc.; North Cleaners & Dyers, Inc.; Norway Service Cleaners, Inc.; New West-Park Cleaners, Inc.; Philadelphia Dry Cleaners, Inc.; Philadelphia Cleaners & Dyers; Quality Cleaners & Dyers, Inc.; Queen Cleaners & Dyers, Inc.; Regal Cleaners & Dyers, Inc.; Star Cleaning & Dyeing Co.; Tri-State Service, Inc.

Cold storage: Four corporations were charged with criminal conspiracy to fix prices in the sale of cold storage doors: Jamison Cold Storage Door Co.; National Refrigerators Co.; Streator Products Corp.; York Corp.

Department stores: Five department stores pleaded no defense to charges of criminal conspiracy to fix prices and paid fines totaling $12,500; Gimbel Brothers, Inc.; Lit Bros.; N. Snellenburg & Co., Inc.; Strawbridge & Clothier; John Wanamaker, Philadelphia.

Fish: The Stern Fish Co. was charged with criminal conspiracy to eliminate competition in the sale of wholesale fish.

Ice: Seven corporations were named in criminal charges of monopolizing the ice industry: Atlantic Co.; Chattanooga Ice Delivery Co.; City Ice Co.; City Ice Delivery Co.; Ice Service Co.; Orlando Ice Delivery Co.; Southern United Ice Co.

Fire Extinguishers: Four corporations have been charged with criminal conspiracy to fix the prices of fire extinguishers: American-La-France Foamite Corp.; C-L-Two Fire Equipment Co.; The General Pacific Corp.; Walter Kidde & Co., Inc.

Gas refrigerators: Two corporations were charged with criminal conspiracy to eliminate competition and fix prices in the sale of gas refrigerators: Motor Parts Co.; Philadelphia Gas Works Co.

Glass lenses: The Univis Lens Co. has been charged with contempt of court in violating a consent decree entered into in 1942 prohibiting price fixing.

Grape juice: Four corporations were charged with criminal conspiracy to maintain noncompetitive uniform prices in the purchase of grapes: Church Grape Juice Co.; Hyland-Stanford Corp.; Tea Garden Products Co.; True-Ade, Inc.

Iron foundries: Eight foundries and one association have been charged with criminal violation of the antitrust laws through price fixing on gray iron and castings: Acme Foundry Co.; Apex Foundry, Inc.; Atlas Foundry Co.; Central Iron Foundry Co.; Detroit Gray Iron Foundry Co.; Eureka Foundry Co.; Motor and Machinery Castings Co.; Stuart Foundry Co.

Kitchen equipment: Four corporations pleaded no defense to criminal charges of illegal price fixing in the kitchen equipment industry and paid fines totaling $30,000: Victor V. Clad Co.; W. F. Dougherty & Sons, Inc.; Nathan Straus-Duparquet, Inc.

Linen supply: Thirteen corporations and one trade association pleaded no defense to criminal charges of price fixing in the linen supply industry: Apex Coat, Apron, Towel & Linen Supply Co., Inc.; Central-Victory Coat and Apron Supply Co., Inc.; Commercial Towel Service, Inc.; Crown Coat, Apron & Towel Service Co.; Davis Coat & Apron Supply Co., Inc.; Globe Coat & Apron Supply Co., Inc.; Gordon-Nick Linen Supply Co.; The Initial Towel Supply and Laundry Co.; Jenkins Linen Service, Inc.; Lehigh Valley Coat and Apron Supply; National Coat and Apron Supply, Inc.; Pennsylvania Coat and Apron Supply Co.; Penn Coat & Apron Supply Co.

Plumbing supplies: Fifteen corporations and one trade association have been charged with criminal conspiracy to fix the prices of plumbing supplies: Northern California Plumbing and Heating Wholesalers Association; Coast Pipe & Supply Co.; Crane Co.; Dallman Co.; Dalziel Plumbing Supplies; Deltz Pipe & Supply Co.; Grinnell Co. of the Pacific; Heieck & Moran (Oakland); Heieck & Moran (Sacramento); Heieck & Moran (San Francisco); P. E. O'Hair & Co.; Pacific Can Co.; Slakey Bros., Inc.; Thomas F. Smith, Inc.; Tay-Holbrook, Inc.; Western Plumbing Supply Co., Ltd.

Phonograph records: Four corporations and one trade association pleaded no defense to criminal charges of price fixing and boycotting in the sale of phonograph records. The association was ordered dissolved and fines totaling $11,600 were imposed: Tri-State Retail Record Dealers Association; Burton Radio & Appliance Co.; Ludwig Hommel & Co.; McAllister's, Inc; Record & Gift Center, Inc.

Storage batteries: Twenty-two corporations and one trade association were indicted on charges of seeking to eliminate competition in the sale and distribution of storage batteries: The Association of American Battery Manufacturers; the Electric Auto-Lite Co.; the Firestone Tire & Rubber Co.; Gamble-Skogmo, Inc.; Globe-Union, Inc.; the B. F. Goodrich Co.; the Goodyear Tire & Rubber Co., Inc.; J & R Motor Supply Co.; Kansas Hide and Wool Co., Inc.; Morris P. Kirk & Son, Inc.; Lead Disposal Co.; Jacob I. Malschick, Inc.; Maw Metal Co.; Montgomery Ward & Co., Inc.; National Battery Co.; National Disposal, Inc.; National Lead Co.; Sears, Roebuck & Co.; Southeast Lead Co.; West Side Battery Lead Co. (Mass.); West Side Battery Lead Co. (N. J.); Western Auto Supply Co.; Willard Storage Battery Co.

Turbines: Twelve corporations and two associations were charged with price fixing on vertical turbines: National Association of Vertical Turbine Pump Manufacturers; Turbine Pump Manufacturers Association; the American Well Works; Aurora Pump Co.; A. D. Cooke, Inc.; the Deming Co.; Fairbanks, Morse & Co.; Food Machinery & Chemical Corp.; Byron Jackson Co.; Johnston Pump Co.; Layne & Bowler, Inc., (Memphis); Layne & Bowler Corp. (Los Angeles); Winthroath Pumps, Inc.; Worthington Pump & Machinery Corp.

Wall paper: Ten corporations and one trade association pleaded no defense to criminal charges of price fixing in the industry and paid fines totaling $50,000: Asam Wallpapers, Inc.; B. & D. Wallpaper Co.; Cook Paint & Varnish Co.; D. Schultz & Co., Inc.; Fisher Wallpaper & Paint Co.; Isgo Wall Paper Corp.; James Davis, Inc.; Richard E. Thibaut, Inc.; the Globe Mills (Inc.); the H. Blonder Co.

X-ray film: Six corporations pleaded no defense to criminal charges of price fixing of medical X-ray film and paid fines totaling $22,000; General Electric X-Ray Corp.; Keleket X-Ray Sales Co., of Los Angeles; Kelley-Koett Manufacturing Co.; R. L. Scherer Co.; Western Surgical Supply Co.; Westinghouse Electric Corp.

Civil cases

Abrasives: Six corporations have been charged with illegal price fixing and patent pooling in the coated abrasives field: Armour & Co.; Behr-Manning Corp.; Durex Abrasives Corp.; Minnesota Mining & Manufacturing Co.; the Carborundum Co.; the Durex Corp.

Artificial eyes: Two companies have been charged with illegal price fixing in the manufacture and sale of plastic artificial eyes: Paul Gougelman Co.; Mager & Gougelman, Inc.

Building products: Thirteen corporations have been charged with illegal price fixing in the sale of hard building products by the use of uniform price lists and uniform discounts: City Material & Coal, Inc.; Clifton Coal & Supply Co.; Collinwood Shale Brick & Supply Co.; Cayahoga-Dunham Supply Co.; Geist Coal & Supply Co.; Goff-Kirby Co.; Ideal Builders Supply & Fuel Co.; Mayfield Builders Supply Co.; Pacific Builders Supply Co.; Queisser Builders Supply Co.; St. Clair Coal & Supply Co.; South Euclid Concrete Co.; Zone Coal & Supply Co.

Canning industry: Four companies have been charged with illegally suppressing competition in the canning industry by refusing competitors use as a peach-pitting machine which is essential in the canning of peaches commercially: California Packing Corp.; Food Machinery & Chemical Corp.; Libby, McNeill & Libby; Pacific Machinery Co.

Cast-iron pipe: Four corporations found guilty of conspiring to monopolize the cast-iron-pipe market through the illegal use of patent license agreements. The court ordered dissolution of the Sand Spun Patents Corp., and that 19 patents held by this firm be made available free of charge to anyone who wants to use them: American Cast Iron Pipe Co.; Florence Pipe Foundry & Machine Co.; Sand Spun Patents Corp.; Warren Foundry & Pipe Corp.

Cellophane: Five corporations have been charged with conspiring to monopolize the cellophane industry: Christiana Securities Co.; Delaware Realty & Investment Corp.; E. I. du Pont de Nemours & Co.; General Motors Corp.; United States Rubber Co.

Concrete blocks: Two corporations were charged with conspiring to monopolize the concrete-block industry: Besser Manufacturing Co.; Stearns Manufacturing Co.

Dentures: Austenal Laboratories, Inc., has been charged with price fixing in dentures and dental alloys used in filling teeth through an illegal patent license agreement.

Drugs: Two corporations have been charged with conspiring illegally to restrain trade and monopolize the market in hard gelatin capsules: Eli Lilly & Co.; Parke, Davis & Co.

Fish: Stern Fish Co. has been charged with illegally buying off competitors in order to establish a monopoly of the wholesale fish industry.

Gasoline: Sun Oil Co. has been charged with illegal exclusive marketing practices in the marketing of gasoline, motor oils, and automotive accessories.

Glassware: Holophane Co., Inc., has been charged with engaging in world-wide illegal cartel agreements to monopolize the prismatic glassware and illuminating appliances field.

Groceries: The New York Great Atlantic & Pacific Tea Co., Inc., and nine of its subsidiaries have been charged with monopoly in the grocery field. The Justice Department is seeking to divorce A. & P.'s manufacturing and processing business from its buying and selling business, and the separation of its seven retail divisions into independently owned retail food chains: The Great Atlantic & Pacific Tea Co. of America; The Great Atlantic & Pacific Tea Co. (New Jersey); The Great Atlantic & Pacific Tea Co. (Arizona); The Great Atlantic & Pacific Tea Co. (Nevada); The New York Great Atlantic & Pacific Tea Co., Inc.; Quaker Maid Co., Inc.; American Coffee Corp.; Nakat Packing Corp.; White House Milk Co., Inc.; Atlantic Commission Co., Inc.

Hosiery: Four corporations have been charged with monopolizing the hosiery industry through control of hosiery machinery: Davis Co.; Interwoven Stocking Co.; Scott & Williams, Inc.; W. B. Davis & Son, Inc.

Ice: Seven corporations have been charged with unlawfully combining to monopolize the ice industry: Atlantic Co., Chattanooga Ice Delivery Co., City Ice Co., City Ice Delivery Co., Ice Service Co., Orlando Ice Delivery Co., Southern United Ice Co.

Milk: Two corporations have been charged with limiting production and price fixing in the goat milk industry: Meyenberg Milk Products Co.; Special Milk Products, Inc.

Newspapers: The Lorain Journal Co. has been charged with illegally seeking to monopolize the dissemination of news, advertising, and other information.

Plumbing and heating: Fifteen corporations have been charged with illegal practices to eliminate competition among wholesalers of plumbing supplies in northern California: Coast Pipe & Supply Co.; Crane Co.; Dallman Co.; Dalziel Plumbing Supplies; Delta Pipe & Supply Co.; Grinnell Company of the Pacific; Heick & Moran (Oakland); Heick & Moran (Sacramento); Heick & Moran (San Francisco); P. E. O'Hair & Co.; Pacific Can Co.; Slakey Bros., Inc.; Tay-Holbrook Inc.; Thomas F. Smith, Inc.; Western Plumbing Supply Co., Ltd.

Rayon: Celanese Corp. of America has been charged with trying to monopolize the industry by acquiring the stock and assets of its chief competitor.

Storage batteries: Twenty-two corporations and one trade association have been charged with combining illegally to eliminate competition in the sale and distribution of storage batteries: Electric Auto-Lite Co.; Firestone Tire & Rubber Co.; Gamble-Skogmo, Inc.; Glove-Union, Inc.; B. F. Goodrich Co.; Goodyear Tire & Rubber Co., Inc.; J. & R. Motor Supply Co.; Kansas Hide and Wool, Co., Inc.; Morris P. Kirk & Sons, Inc.; Lead Disposal Co.; Jacob I. Malschick, Inc.; Maw Metal Co.; Montgomery Ward & Co.; Inc., National Battery Co.; National Disposal, Inc.; National Lead Co.; Sears Roebuck and Co.; Southeast Lead Co.; West Side Battery Lead Co. (Mass.); West Side Battery Lead Co. (N. J.); Western Auto Supply Co.; Willard Storage Battery Co.; Association of American Battery Manufacturers.

Telephone equipment: Two companies have been charged with a monopoly of telephone equipment, telephones, and material: American Telephone and Telegraph Co.; Western Electric Co., Inc.

Transportation: Two corporations were charged with violation of the Sherman anti-trust law by illegally requiring certain shippers to use only the facilities of these companies; Northern Pacific Railway Co.; Northwestern Improvement Co.

Turbine pumps: Twelve corporations and two trade associations have been charged with price fixing to suppress competition in the manufacture of vertical turbine pumps: American Well Works; Aurora Pump Co.; A. D. Cook, Inc.; Deming Co.; Fairbanks, Morse & Co.; Food Machinery & Chemical Corp.; Byron Jackson Co.; Johnston Pump Co.; Layne & Bowler, Inc., (Memphis); Layne & Bowler, Corp. (Los Angeles); Wintroath Pumps, Inc.; Worthington Pump & Machine Corp.; National Association of Vertical Turbine Pump Manufacturers; Turbine Pump Manufacturers Association.

Welding equipment: Morton Gregory Corp. has been charged with illegally allocating world markets for stud welding equipment through patent and trade-mark license agreements.

Rail Strike Threat

EXTENSION OF REMARKS
OF
HON. FORREST C. DONNELL
OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Monday, May 22 (legislative day of Wednesday, March 29), 1950

Mr. DONNELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Rail Strike Threat," published in the Greenville (S. C.) News, of April 22, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

RAIL STRIKE THREAT

The country is again threatened with a strike on four big railroad systems which could easily lead on to a general paralysis of railroad transportation service.

And since it appears that the entire process of the Railway Labor Act has now been worked through on this particular dispute without a settlement, there seems no further means in this law of preventing the strike.

This section of the country would be seriously affected if this strike materializes, since the Southern Railway is one of the four systems affected.

The prospect of such a grave interference with railroad transportation services seems to emphasize once again the need for a more definite public policy eliminating the right to strike in public utility services indispensable to public welfare.

In this instance, the demand is for the employment of a second fireman on Diesel locomotives. A Presidential fact-finding board has held that this demand is not justified.

The railroad men evidently feel that their demand is meritorious, despite this finding. This newspaper is not undertaking to pass on the merits of this particular issue. But the vital public interest in the maintenance of essential public services like railroad transportation should be paramount, and public policy with respect to labor disputes in such industries should be such, we think, as to demand that employment in them be conditioned upon the settlement of such disputes in some other way than by penalizing the public through strikes.

The railroad unions, apparently, are determined to paralyze the entire railroad transportation system of the country in an attempt to enforce this demand. For the president of the Brotherhood of Locomotive Fireman and Enginemen is quoted in a New York Times dispatch as describing the prospective walk-out as the beginning of a strike against all railroads in the United States. This, of course, would be an intolerable situation, but our present laws acknowledge the right of the unions to stop all railroad transportation if the Railway Act's processes fail to bring a settlement.

This law was formulated in the assumption that the processes it provided would eliminate any likelihood of a railroad strike. But it has become apparent that this was a false assumption. If we really mean to establish a legal barrier to such strikes it is time we were saying so plainly in the law.

The New Political Hysteria or Delirium

EXTENSION OF REMARKS
OF
HON. EUGENE D. O'SULLIVAN
OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 22, 1950

Mr. O'SULLIVAN. Mr. Speaker, there never was a time during the history of our country when the political opposition was so lacking in decency and common bay-horse sense as it is at the present moment.

The press of other nations stands aghast at what is going on in the United States of America and what is really wrong with the keepers of the boiling witchpot of reactionary Republican statecraft.

Today, reactionary republicanism could be called, very properly, political delerium. Whether they are aware of the fact, or not, they are doing a superlative disservice at this time to the Republic. From my own careful study and observation of the faces and doings of the mentally bereft I recognize that there is now in existence in the Nation not dementia Americana, the "conjured up for the defense" type of mental irresponsibility, pulled out of the legal trick sack in New York City years ago by California's Delmas in the case of the People against Harry K. Thaw, but a new type of mental derangement which should be called rodentia dementia republica, the general symptoms of which are manifested by a shortness of vision and a running of the mouth.

The hoof beats of the frenzied four horsemen, the Smearies, Loopies, Piffle Faces, and Daubem Reds are fairly making the peaceful welkins ring with their nonsense and gibberish. Their antics should suggest to the writers of amusing fiction four new comic strip characters. Isn't it a laugh to expect that sane people would line up behind such nauseating leadership?

In passing, we should not forget the antics of Vickey the Nutty, who hovered like a bird of ill omen over the Presidential train full of curiosity like the bear which went over the mountain to see what he could see.

I have been told by a great authority on birdlore that there is only one bird, the ravèn, which is possessed of sufficient I don't care a whit attitude as to sit in and deliberately foul its own nest. It seems, however, that some human "birds" have been overlooked. They come crazier and nastier by the hour, sans all political home hygiene.

On my last trip to Omaha I met an old gentleman who expressed the thought that he would much prefer to be a maggot in the carcass of an ownerless dead mule than be any one of the foregoing totally irresponsible groups, and I agree that he is right.

If they are looking for leadership in the mentally decayed roistering reactionary Republican Party they should have sense enough to know that it cannot be secured by the kind of individuals presently in the Republican saddle as the Pennsylvania and Oregon primaries reflect so clearly.

The issue is not the improperly created slogan, Liberty versus Socialism, but is much simpler than that. It is Democratic sanity against reactionary Republican political hysteria and prolonged 20-year political delerium.

The following instructive article which appeared in the May 12, 1950, issue of the Unionist, published in Omaha, Nebr., is well worth reading and pondering over:

THE DEVIL IN WASHINGTON

(By Edward A. Harris)

WASHINGTON.—Pathological fear gripped the townsmen of Salem Village late in the seventeenth century when a little group of neurotic teen-age girls fell into hysterical fits as if possessed of the devil. Breaking the bonds of strict Puritan discipline, the girls talked blasphemously during their fits and cried out against those in league with the devil who were afflicting them.

Few escaped the spiteful vengeance of the girls, who suddenly found all the attention they had ever craved. A pious pure-hearted old grandmother, Rebecca Nurse, was cried out against by the girls as a witch, and carried from her sickbed to be hanged. An old man, sound in body and mind despite his age, was pressed to death because he remained mute, refusing to confess his witchery. The constables righteously piled rocks upon his chest as he lay prostrate until the mounting weight crushed him. Children as young as 5 years of age were carted to dank and foul prisons as bedeviled.

The madness and panic were contagious. As soon as one villager was named as a witch, corroborating witnesses marched to court to detail acts of witchery of the accused. These witnesses were not malicious liars; they fervently believed their own tales, as embellished by sick imaginations, and their hearsay gossip was accepted as evidence in the sick atmosphere of the day.

The Salem court, however, convicted the witches mostly on spectral evidence. What good was it for accused witches to swear to their innocence when even at that moment the teen-age girls rolled on the courtroom floor and shrieked wildly that the spectral shapes of the defendants were then afflicting them?

To some observers there appears a striking parallel between the Salem pathology and the current spy hysteria in Washington. A new book, The Devil in Massachusetts, by Marion L. Starkey comes as a fresh shock in its vivid portrayal of the depths of cruelty and irresponsibility to which human beings can sink in the spell of fear and ignorance.

Then, as now, the accusers were the exalted, including exwitches who recanted and pointed their cleansed fingers at former conspirators. It was safe, even noble, to be an accuser; there was no risk to it, but there was fame and glory. Spectral evidence was accepted then, even as hearsay evidence is today spread across the Nation's press.

Those who dared criticize the teen-age neurotic girls were promptly—within seconds—themselves branded by the girls as witches and hanged. Anyone who dared to defend the good name of the accused was at once cried out against by this little feminine band of life-and-death givers.

There is no gallows as yet in the Washington manhunt, but character assassination serves as effectively. Here, too, it is safe to be an accuser, and perilous to back the good name of the accused. As to the accused himself, how can he ever prove he is not a witch? How can Professor Owen J. Lattimore, of Johns Hopkins University, or Secretary of State Dean Acheson, for that matter,

prove beyond a shadow of doubt that they are not Communists? It cannot be done.

The accusers must be well aware of this. But lest the trap be not tight enough, ex-Communist Louis Budenz has conveniently made it escape proof. The truly dangerous Communists, he avers, do not carry party cards and may never join the party. They even remain aloof from the fringes of the party and in order to conceal their true identity may pose as anti-Communists or supporters of the Marshall plan.

If Lattimore's writings show a party line, he stands condemned; if they show anti-Communist sentiment, the clever scoundrel is doubly damned. The trap is sufficiently elastic to apply to anyone.

In 5 years of constant communion with the FBI, Budenz would have the public believe that he did not have time to mention the name of Lattimore. Only after it was charged that Lattimore was the top Red espionage agent did Budenz find his memory refreshed and his time ample for long public dissertations on Lattimore.

The corroborating witnesses may continue to parade to the side of frenzy as the accusations are hurled. But more and more observers are wondering why the word of admitted ex-Communists is sanctified over the word of other citizens. Would not the same character markings that first led them into communism carry over to an intemperate opposite extreme? Here is the admission of one noted ex-Communist, Author Koestler, in this respect:

"Those who were caught by the great illusion of our time, and have lived through its moral and intellectual debauch, either give themselves up to a new addiction of the opposite type or are condemned to pay with a lifelong hang-over."

Secretary Acheson, in a stirring speech before editors and publishers in Washington, described the crusade as mad and vicious. In Salem Village many long years ago the madness was ended only when intelligent men and cool heads emerged from their neutral retreats to speak their minds, aware at last that no one was safe from such pathology. Until such an awakening takes place on a large scale, the Washington bedlam will go unchecked. Acheson has shown the way, but many more as courageous as he must speak up if common sense is to prevail over the devil in Washington.

The Rail Strike

EXTENSION OF REMARKS
OF
HON. FORREST C. DONNELL
OF MISSOURI
IN THE SENATE OF THE UNITED STATES

Monday, May 22 (legislative day of Wednesday, March 29), 1950

Mr. DONNELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Rail Strike," published in the Youngstown (Ohio) Vindicator-Telegram of May 10, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE RAIL STRIKE

How indefensible the railroad firemen's strike is may be seen in a glance at railroad history since Diesel locomotives were first used on the Burlington system in 1934.

The strike is intended to force the employment of a third man in the cab of a Diesel locomotive. Three times this demand has been turned down by a Railway Labor Act fact-finding board. Actually, the locomotives were operated at first by a single man. Ever since then the unions have tried to force the roads to pack the Diesel crew with additional and totally unneeded men.

In 1943 a Presidential board found that there was no need for either an extra fireman or extra engineer. In 1947 the President named another board which declared flatly that the union demand was devoid of merit.

After union pressure forced the roads to hire two men, the engineers and firemen joined to campaign for a third or even a fourth man. They argued that the power units demanded such frequent inspection visits from the cab that the one fireman had to be absent much of the time. The fact-finding boards denied this. The fireman, they said, has little or no need of going back to the power units.

When the present strike was threatened, still another emergency board reported that the firemen's brotherhood "actually seeks to break what it considers the traditional combined fireman (helper) job into two jobs with one fireman assigned to each." The board pointed out that on every other type of locomotive the fireman regularly performs a combined job made up of the two general functions.

Another board reported that the Diesels had already increased the number of railroad jobs by producing more business for the roads. The Government, through the Interstate Commerce Commission, has constantly encouraged the railroads to expand their Diesel operations in order to cut operating costs and so effect economies which are urgently needed if the carriers are to hold their share of the Nation's freight and passenger business.

It has been said that the strike, with its crippling effect on the lives, welfare, and safety of millions of Americans, is not a railroad strike at all, but a railroad hold-up. It is more—it is a hold-up of a large part of the Nation. It is another argument for the proposed bill to outlaw rail strikes and require compulsory arbitration as a last resort in railroad disputes. Such a measure, with its curtailment of freedom, ordinarily is undesirable, but the rail unions have shown such irresponsibility in recent years that they may make it unavoidable.

"We Are a Prosperous People—We Attribute Our Material Success Not Only to the Spirit of Free Enterprise That Is So Characteristic of Our American System but to the Bounteous Gift of a Divine Power That Has Given Us Such a Rich Country in Such a Healthy Environment in Which To Grow"

EXTENSION OF REMARKS
OF
HON. DONALD L. O'TOOLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 23, 1950

Mr. O'TOOLE. Mr. Speaker, I know I express the sentiments of a great cross section of my colleagues in saying that a single Armed Forces Day such as was participated in by all three of our armed services last Saturday shall henceforth become an annual event.

There was and is real cause for celebration. At long last, all of our military services are united in one team, and certainly that unity could not be realized at a better time.

As the strategy of all defense agencies have been unified, so have their fiscal affairs. On every front Secretary of Defense Louis Johnson has succeeded in meshing every gear concerned with national security into one business-administered, efficiently and effectively operated national defense program.

I have just come upon a copy of a speech delivered by the Honorable Louis Johnson in New York City on Saturday last. Secretary Johnson may well be proud of the job which he perfected in the field of administration, a job only in small part reflected in the defense budget for this year.

Truly Johnsoneque, the address made by the Secretary carried no one boast of the tremendous task accomplished in these last 14 months. Rather, it pictorialized the moral, the spiritual, and the military might of our people and our armed services in securing the peace of our own country and the well-being of the world.

Mr. Speaker, it was a great talk. It was a talk made straight from the shoulder by a great administrator. There was no "viewing with alarm," rather, there was a soul searching of values by Secretary Johnson that reached into every phase of American life. In his talk he chose to emphasize, not the disturbing factors that even now tend to keep our own people apart, but rather to stress the common interests that cement us into one mighty and the greatest nation on the face of the earth.

It is because of these observations made with respect to Secretary Johnson's Armed Forces Day talk that I am asking the unanimous consent of this House to extend my remarks and include therein the address made last Saturday by the Honorable Louis Johnson.

I sincerely commend the reading of this talk to every Member of the House:

REMARKS BY LOUIS JOHNSON, SECRETARY OF DEFENSE, ON ARMED FORCES DAY, NEW YORK CITY, SATURDAY, MAY 20, 1950

On the streets and sidewalks of New York, in the skies overhead, and close to the shores of Manhattan, we beheld today a striking demonstration of unification in action—the Army, the Navy, the Marine Corps, and the Air Force "teamed for defense" and the American people stanchly behind them in full support. It was a heart-warming sight that we shall always remember, and one that those who would trespass against us would do well never to forget.

There were ships, and planes, and guns—arms and equipment of all sorts for people to see—and one piece of protective indestructible armor whose inner strength had to be felt. It is a force that always has been and still is our strongest weapon, and it is so much a part of our American life that some of us may not realize its full value and significance as a weapon of national defense. I refer to our national unity.

In the crowds here today, there were men and women of diverse origins, of separate races, and of different religions, but a spirit of unity seemed to permeate their souls and send thrills through their bodies as one sample after another of the might of America passed before them in review. Their strong, happy, healthy faces eloquently bespoke

their pride in our country, their love for our institutions, and their faith in our American code of reason.

Those who do not understand America, and those who would plot our destruction, see only the diversity of American life and expect to find in it a weak spot, the Achilles heel of our body politic. They have tried to exploit it before to make us suspicious of each other but they failed disastrously. They failed because they were too blind to see that our inner strength was found not in a hidden cache of secret weapons but in an open and fully revealed attitude of mind and way of life, a spirit of unity and fair play.

We are a happy people, and we find our greatest joy in sharing our happiness with others. We are a peaceful people and we strongly support any genuine effort to eradicate the evils that cause war. We are a generous people and we give with our hearts. We have shared freely of our worldly goods with less fortunate peoples and we have not done it in a patronizing way. Nor have we done it merely to save ourselves, as some sinister propaganda would have our European friends believe. We are a prosperous people, too, and we attribute our material success not only to the spirit of free enterprise that is so characteristic of our American system, but to the bounteous gift of a divine power that has given us such a rich country in such a healthy environment in which to grow.

We are a spiritual people. We are a religious people. We are not ashamed to live by the Golden Rule, and our friends overseas and even the people behind the iron curtain deep down in their hearts are aware of our sincerity of purpose. They know and the world knows that it is not our aspiration to live under conditions where in self-protection "every man hath his sword upon his thigh because of fear in the night." But we are not afraid to do something about it. We already have set up the standard upon the walls. And we propose to make the watch strong.

Nor do we prepare alone. Lined up beside us in a solemn pact are 11 other North Atlantic nations which have a similar stake to ours in the preservation of peace. They may be smaller in territory. They may have less of worldly goods but they, as we, have the same thing to lose and the same thing to protect—freedom. It is freedom that all of us seek—freedom from the boring of Communist termites into the foundations of our institutions and freedom from the threat of Russian imperialistic aggression against the ramparts of our territorial integrity.

Our friends overseas are closer to the catastrophic danger of Soviet Russian policy than we are. They have seen free and independent states crumble from Communist infiltrations. They have near them the examples of Poland, Czechoslovakia, Hungary, and Rumania. They have noted Russian arms take over Latvia, Estonia, Lithuania, and other countries and incorporate them into their Soviet orbit. They behold the fate of far-off China. They have seen millions of people betrayed by the blandishment of economic and political equality only to find themselves trapped—hungry, naked, and disillusioned.

Our treaty partners know just what they may expect in the wake of a Communist victory whether by force, the threat of force, or as a result of boring from within. They know, too, that if aggression should come they would be the first to feel its impact. For 5 years they have fought off the Communist menace, and with our help have grown stronger in their capabilities to resist. You can be sure that they are not going to default to communism now. More than ever before they realize that their future physical safety and the security of the ideals they live by, depend on their ability to discourage aggression and to hold communism at bay.

I have every faith in our partners. I believe they are ready and willing to carry their proportionate share of the armament burden that is so necessary to deter aggression and to maintain the peace. They have a right to expect a great deal of us and they are getting it. We have a right to expect their fair share of contribution to their common defense and that, too, I am confident, will be forthcoming. We are working together. We are planning together. We are sacrificing together, and if it ever becomes necessary, we will be fighting together.

Gen. Omar Bradley, our Chairman of the Joint Chiefs of Staff, who presides over the Military Committee under the North Atlantic Treaty organization has already reported that defense planning has reached a new peak of international cooperation. Such an evaluation coming from a man of General Bradley's integrity and his experience in combat with armed forces of many nations, augurs well for the potential effectiveness of the pact as deterrent and a defense to aggression.

Hubert Howard, the Chairman of our Munitions Board, who presides over the military production and supply board of the North Atlantic Treaty organization, has reported to me to similar effect. Mr. Howard is an outstanding executive from Chicago with a reputation for forthright integrity. He reported that the major deficiencies in military equipment among our North Atlantic partners for the support of the defense plan have now been ascertained. Transfers of equipment surplus to each country's needs have been started. The survey of production capacity in Europe has been completed. The machine tools and matériel given by the United States for additional military production have been put to use. Mr. Howard indicated that a definite increase in the tempo of military production has been attained. Plans, he said, have been made, and in some cases production has already been started to supply spare parts for American equipment. The Board is now engaged in working out means of standardization of equipment, wherever possible, for interchange among the 12 partners under the treaty.

When it comes to arms and equipment in quality and in the vast quantities demanded by modern conditions, the pool of skill, ingenuity, and experience possessed by the North Atlantic Treaty nations should weigh heavily in our favor. We are exploiting the scientific and industrial capabilities of America in our intensive search for more effective weapons of defense and offense.

Mr. William Webster, who was recently appointed Chairman of the Research and Development Board, reports a full and energetic program of weapons research in progress. We are making every reasonable effort to maintain a margin of technological superiority. We shall need it to offset the probably numerical superiority of an aggressor. Devices and techniques are being developed in our laboratories to neutralize the effectiveness of mass weapons. In recent months encouraging gains have been made along lines that offer promise of solutions for some problems of high priority.

In the final analysis, however, it is the ability of troops to exploit fully the strategic, tactical, and technical advantages afforded by these superior weapons that will make the difference between victory and defeat. Training, therefore, becomes the keystone of our defense.

Our armed forces have always taken considerable pride in the quality of their training. They have prepared their individual fighting men to face the supreme test of battle with full confidence in themselves, their leaders, and their weapons, and have gone into action determined to outfight, outsmart, and outlast their adversaries. How well they succeeded is chronicled in the record of two World Wars.

We did not win every skirmish, nor every battle, nor even every campaign. In fact, we took a few very bad lickings, especially in the early days of World War II. Even now these defeats are hard to explain to the satisfaction of the American people; and they are even more difficult to condone.

War, however, as any other human effort, has its defeats as well as its victories, and we must reconcile ourselves to the likelihood of an occasional set-back. What we cannot and must not reconcile ourselves to is a failure to profit from error. In that respect our armed forces proved themselves apt pupils. They learned considerably from each of their defeats. They corrected their mistakes, and then ran up a string of victories that drove their opponents to their cellars and their forests, frantically seeking shelter. On the ground, at sea, and in the air our Army, Navy, and Air Force completely defeated the military forces that were pitted against them, and thoroughly destroyed the enemy's will to continue the fight.

The most important lesson of war which we learned and which is just as significant today as it was the morning after December 7, 1941, is the need for teamwork in combat. The lesson was not lost upon us during World War II, and toward the end we had reached a degree of interservice teamwork, mutual understanding, and confidence never before attained in our own history and perhaps in the history of the world; for basic rivalries among armed forces to the detriment of teamwork are nothing new. They have been proverbial and are as old as the services themselves.

Quite recently there came to my office a letter from Bermuda which illustrates the effect of this traditional service rivalry upon military efficiency during colonial days. It appears that when the English ship *Sea Venture*, en route to Virginia, was wrecked upon the shores of Bermuda in 1609 all hands were saved. Among them were Sir Thomas Gates, a lieutenant general of the army, and Admiral Sir George Somers, in charge of the fleet. There were eight other vessels, but they safely reached Virginia without serious mishap.

According to William Strackey, secretary for the Virginias, Gates, of the army, forthwith set one Frobisher, an experienced shipwright, to building a pinnace to replace the wrecked *Sea Venture*. Somers, of the navy, decided that the lines of the pinnace were not just right, so he built another bark of his own design on one of the other islands. Strackey was evidently having a hard time explaining this apparently wasteful duplication of time and effort and finally came up with this entry in his log in the Elizabethan style of the period:

"There was, however, a secret explanation: The sea and land commanders, being alienated one from the other—a quality over common to the English—and fallen into jealousies, thought it better to direct their efforts from different places."

There will, however, be no direction of efforts from different places in our Armed Forces; and our training program today is to make sure that they will not become alienated from each other and fall into any more jealousies but work together wholeheartedly for the common defense.

With that objective in mind we conduct as often as practicable joint exercises to train our forces to work together. They vary in magnitude from "Camid," a project designed to help the cadets of West Point and the midshipmen of Annapolis get better acquainted with each other and learn how to get along together during the early stages of their careers, to the major joint exercise such

as "Swarmer" which called upon sixty thousand from the Army and the Air Force, and the grand joint exercise such as "Portrex" including 80,000 men of all services.

The planning for these exercises is a tremendous job in itself. Representatives of the Army, Navy, including the Marines, and the Air Force work for months at a time to develop situations that will test the combat capabilities of the participants, their organization, their strategy, their tactics, their weapons, and their equipment, and above all, their capacity for teamwork. These exercises are tough. Their aim is not to see how well performance can be expected under normal conditions, but how far we can go, what limits there are for humans and machines beyond which one dare not venture without serious consequences. What is the breaking point—that is the basic test.

Because these joint maneuvers are in a sense contests between forces representing an aggressor and a defender, there is a temptation in a sports-conscious country like ours to look for winners and losers. But the only losers that interest us in this matter are our potential enemies, whom we hope to be in a better position to defeat because we have had such exercises, and have profited by the experience we have gained through them.

While these are realistic exercises, conducted for military purposes, we have nothing to hide and, on the contrary appreciate the great public interest in our activities and in the American men and women who make up our Armed Forces. Representatives of the press and other information media are welcome to witness these maneuvers. But these joint exercises are not intended to present mere spectacles for visitors, the Secretary of Defense included. And where I have noticed any evidence of such a tendency, I have issued instructions to the services to adhere only to realistic presentations and to omit all frills and thrills and entertainment that are not germane to the problem and to the test.

These exercises are designed to point up weaknesses. Our umpires understand this. They know it is not their function at the end of a joint exercise to show up with a rosy report that all is well. What we want to know is—what is wrong? The reports, I am pleased to note, have been constructively critical and the three services and the Joint Chiefs of Staff have learned lessons from them which in time will be implemented into sounder battle doctrine, more effective organization, improved weapons and equipment and above all more efficient fighting men with a higher morale and better discipline with which to face whatever may lie ahead.

We are fortunate in the quality of our fighting man today. He approaches the best we had in wartime. He is far superior to what we ever had in peacetime. More than half of our soldiers, sailors, marines and airmen are less than 24 years old with that enthusiasm and energy that goes with youth and makes for the most efficient type of fighting man. Our men are relatively a highly stable group. Thirty-five percent of them are married. Twenty-five percent of them have families with children. They are experienced in military skills and responsibilities. More than one-half of them have been in the service 3 years or more. They enjoy an educational level far above the national average. Forty-three percent of our sailors and marines, 42 percent of our airmen and 26 percent of our soldiers are high school graduates. But why go on with more statistics? Look at the men yourselves. See them on furlough. Talk to them. Occasionally, of course, you may find an exception, as in every other walk of life, but usually you will have a man you would certainly be proud to meet as a fellow American.

I wish we could have more of them. I wish we could afford to acquire every young American to serve in the ranks for a time, under a universal military training program.

The least we can do at this time is to give every enccouragement for the training of those who do volunteer to serve—not only the regulars but also the reserves.

It is important to know that under our present program the volunteer civilian components of our armed forces are an essential element in our national defense team and that these reserve forces must be maintained in the most efficient state of trained readiness. To achieve the maximum proficiency to enable them to take their places beside the regular forces in time of national emergency, they must be properly trained; and that means leaving their normal jobs for a time for active duty with the colors.

Last June I appealed to the employers of the United States to adopt liberal policies in the granting of special leaves of absence, to allow members of the civilian components of our armed forces to participate in short annual periods of training duty. I was pleased to note that a large number of employers cooperated fully and I take this opportunity to thank them and the veterans organizations, Chambers of Commerce, and other clubs and groups for their splendid support of this patriotic endeavor.

This year I again requested and strongly urge that every employer accept his duty and responsibility to our common defense by granting similar special leaves of absence.

In conclusion, I wish to reiterate that the ideal of unification that this Armed Forces Day so inspiringly symbolizes for us extends far beyond the regulars and reserves, far beyond the Army, the Navy, the Marine Corps and the Air Force. It reaches into every phase of American life. Real unification means national unity—let us hope that in time it will also become the basis for global unity.

For in our aspiration for the unification of man we are not discouraged by the disturbing factors that still keep peoples apart. We are encouraged by the wholesome interests that bring them together. There is no more diversified people in the world than those who live here in metropolitan New York, yet they work together, play together, and strive together for a stronger and happier America. Our political, social and economic climate here and throughout America lends itself readily to the free association of free men and women. But the salubrious qualities of our environment in the United States can also be enjoyed world-wide. What we are accomplishing in New York, what we are accomplishing for all of America, can also be accomplished throughout the world as a whole. The unity of our people on Armed Forces Day is therefore not only a demonstration of our determination to achieve peace through strength—it is a mark of our dedication to the ultimate goal of man—of peace on earth and good will to all.

Grass-Roots Comment

EXTENSION OF REMARKS
OF
HON. WALT HORAN
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 23, 1950

Mr. HORAN. Mr. Speaker, under leave to extend my own remarks in the Appendix of the RECORD, I am pleased to include two letters commenting on farm policy in general and the Brannan plan in particular.

The letters follow:

YAKIMA VALLEY TRAFFIC ASSOCIATION,
Yakima, Wash., May 4, 1950.

Congressman WALT HORAN,
House Office Building,
Washington, D. C.

DEAR WALT: In reply to your request for comments on the proposed Brannan plan, a copy of which you sent to me, I find that in its objectives and procedures it is much like the farm program of Rome of many centuries ago. You will recall the fall of Rome after this once great nation had spread law and order throughout the then civilized world, built up one of the greatest civilized economies the world had ever seen, developed its domestic and export trade, built up an efficient transportation system, and through individual initiative and responsibility gained for themselves many comforts never before enjoyed by any previous people.

In their forward progress, according to history, the Roman people had gained their material and spiritual abundances by preservation of their individual initiative and responsibility. And so long as the Romans took upon themselves their obligations to themselves and to the state, Rome prospered and was strong.

Then history records that the citizenry relaxed, became complacent, and gradually shifted their responsibility to the state. Thus, in its ideology the Brannan plan is not a recent idea. For example, the Roman Government—just as the Brannan plan proposes to do—bought wheat at a high price from the farmer and sold at a low price to the city worker. And history records that in due time the Romans, who were concentrated in the cities, came to expect that they would be fed by the government, educated by the government, sustained by the government, and entertained by the government.

Under the welfare state of that day the Romans lived so easily they eventually allowed the government to assume all the responsibilities of its citizenry, and it came to pass that they lost their representative form of government, not suddenly but gradually, the Roman republic slipped into statism and then into totalitarianism.

In concept, political and economic, there is but little, if any, difference between the Brannan plan and the Roman farm program. The methods and procedures are identical. Moreover, it is my opinion that the Brannan plan will, if enacted into law, lead this country down the same road that led to the downfall of Rome because such a plan cannot function without taking authority away from the individual and concentrating it under a central government.

The founders of this country knew the history of the rise and fall of nations that preceded them. And from this knowledge of the past they established a form of government under which this country progressed and prospered because the form was predicated on centering responsibilities in the citizenry rather than government.

While I do not approve, I am not particularly concerned about the transition now taking place in our form of government insofar as it relates to my own welfare. I'm well into the last lap of my allotted "three score and ten," and therefore the "welfare state," if it comes, can never affect me to any great extent. My concern, a very real one, is, however, What does this trend portend for the future of this country? What does it hold in store for those who will follow?

The Brannan plan is only one threat, only one straw in the wind of totalitarianism. For instance, growing demands by special group interests for Government-sponsored

slum clearance, public housing, hospitalization and medical care, farm-crop price supports, surplus commodity purchases, to name a few, are other impressive signs of the trend away from the American way of life.

As our minds adjust to one step toward the welfare state, it puts us in shape to adjust ourselves to the next, and after that it still is another, which yesterday would have seemed impossible, yet which tomorrow will be done. It is not today but day after tomorrow that we should keep in mind unless we're hell-bent on trading off our American heritage for a mess of Roman (meal) pottage.

Should the Brannan plan be enacted into the law of the land it will fail just as miserably as did the Roman farm plan of many centuries ago. Under total Government direction and operation, and there is no other way the plan can function, it will inevitably break down.

Whenever the Government takes over the direction and operation of the Nation's food supply, the program will bog down just as sure as day follows night. When this happens, men, for their own self-preservation, will commence to take from others what they need. And that is when the Government comes into the picture armed with police power. One does not need to be a prophet to make such a dire prophecy. The fulfillment thereof is found not once but many times in the recorded history of men and nations.

But to be more specific, more to the point—here is why the economics of the Brannan plan will inevitably fail. Let's be realistic and accept the proposal for what it is—political in concept rather than economic in objective. It must, therefore, first serve its political ends—win votes by the process of satisfying the needs and desires of a majority of farmers and consumers. It must succeed in doing this or else it will become a political liability. Perish the thought.

To be realistic in this analysis, we must also accept the fact that there are more inefficient than there are efficient farmers. And there are more low-income than high-income consumers. In consequence of these facts, the two principal beneficiary groups under the Brannan plan—the inefficient farmers on the one hand, and the low-income consumers on the other—will become the common denominators of prices on the farm and in the food store.

In consequence of this, the prices guaranteed or paid to farmers must satisfy the needs, not to mention the desires, of the inefficient group of farmers. And in the food store the price of farm products must be cheap enough to satisfy the low-income group of consumers, even down to the worker who spent his last week's wages in a beer parlor. There is no other method whereby the Government can satisfy a majority of both groups, and satisfy them the Government must if it is to win friends and hold votes.

In its operation, the Brannan plan would practically guarantee the efficient farmer a fabulous profit, the rich man cheap food (food prices would be fixed to fit the poor man's pocketbook), and the taxpayer would be left, to put it mildly, with the check. Once economic compulsion for people to earn a living is out the window, the taxpayer's costs of providing a field day for farmers and consumers would progressively grow more expensive. This is axiomatic. As the economic incentive to work to live lessens, the beneficiaries of the Brannan plan will not be long in finding out the value of the wail. And once wailing becomes par with work, we will have arrived at the destination of the Brannan plan—the police state. In all history this has been the grand finale of all similar programs.

I agree with the proponents of the Brannan plan that the primary concern of this country is to continue to raise the standard of living provided it is not in a manner which will destroy the moral fiber of our people. If my thinking is sound, the basic answer to our social and economic progress is greater productivity.

All this clamor and pressure for the Brannan plan and other phases of the welfare state, to my mind, is the real cold war. It is right here within our borders, if you please.

We can accept the Brannan plan along with other welfare proposals and thereby exchange our responsibilities for so-called security and easy living. If so we will be headed down the road toward paternalism and regimentation, for sure. Or we can retain our responsibilities and thereby preserve what we term our American way of life. If we do this, it will bring us advances in production, in wages, and in standard of living. The choice is ours.

I want no part of the Brannan plan. My choice is freedom and prosperity based on productivity because this country can't compromise with basic economic principles and win.

I trust I have not bored you too much by going around Robin Hood's barn to answer your simple request for comment on the Brannan plan. But the very thought of the potential impact of this plan, should it become the law of the land, sends my blood pressure above the boiling point.

With best regards, I am,

Cordially yours,

F. W. SHIELDS,
Secretary-Manager.

LAKESIDE, WASH., *May 18, 1950.*

HON. WALT HORAN,
House of Representatives,
Washington, D. C.

DEAR MR. HORAN: I am pleased that you have asked for my comment on bill, S. 1971. On the surface the Brannan plan appears very rosy. But I firmly believe it is not what the people want. In promising the farmer a strong price for his produce, it will attract his vote, and likewise the vote of the consumer by promising him lower prices. But, it is quite evident that we cannot have both high prices for the farmer and low prices for the consumer unless the farmer and consumer pay by an exorbitant increase in taxes. The bureaucracy set up to regulate the plan would cost millions, to say nothing of the billions necessary to pay subsidies. If crops were to be controlled to where there would be no surplus, there would be a grave danger of a shortage which is a far greater ill than a surplus. This could easily happen because as yet the Government cannot control the weather, and as we are all aware, floods, droughts, and even insects can wipe out a total area in a very short time.

There is at present a danger of a wheat shortage due to acreage allotments and drought in the Plains States.

Such a plan would be detrimental to our true American way of life. I am opposed to having controls set up for the farmers. The main reason for my choosing farming as my vocation was the opportunity of freedom and independence. The plan puts too much power into the hands of one man, the Secretary of Agriculture. I don't believe the Brannan plan will work satisfactorily, as it will completely upset the functioning of the law of supply and demand. If there were no present support on wheat it would undoubtedly be cheaper, thus creating a wider market demand. The present price of wheat makes it prohibitive for cattlemen to use it as a grain for fattening cattle. Likewise, the poultrymen are having a hard time due to high support price on wheat.

The country will be a lot better off if we stay away from controls and expensive bureaucracies to control them. After all, freedom has been the No. 1 issue of the American people and the basis for the founding of this Nation and as for me, I'd like to see it stay that way.

Sincerely yours,

ROGER HALE,
Master, 25 Mile Creek Grange, 1096.

Third Man Show-Down

EXTENSION OF REMARKS
OF
HON. FORREST C. DONNELL
OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Tuesday, May 23 (legislative day of Wednesday, March 29), 1950

Mr. DONNELL. Mr. President, I desire to ask unanimous consent, and do, for the insertion in the Appendix of the RECORD of quite a number of editorials. I shall call them one by one. The first is an editorial entitled "Third Man Show-Down," from the St. Louis (Mo.) Star-Times of May 10, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THIRD-MAN SHOW-DOWN

A 13-year-old dispute between railroads and the Brotherhood of Locomotive Enginemen and Firemen came to a head today with a strike on four major systems. The railroads began placing embargoes on freight and passenger traffic yesterday in preparation for the 6 a. m. deadline. If the strike continues, it will be only a matter of days until there will be wholesale lay-offs along all of the affected lines.

At issue is the seemingly simple question of whether an extra fireman is needed on multiple-unit Diesel locomotives. The firemen contend that the third man in the cab is essential to maximum safety of operation. The railroads say there is less need for a third man now than in the days when the fireman spent most of his time shoveling coal. Two Presidential fact-finding boards have ruled against the firemen, but the union has kept up its demand.

The strike has been carefully planned. It affects the entire systems of the Southern and Santa Fe and the western divisions of the New York Central and Pennsylvania. By avoiding a tie-up of all railroads at one time the union hopes to hedge against the possibility of Government seizure and nullification of its effort. But if the strike can hurt the railroads, it can hurt the public. A line that serves a vast area cannot be crippled without crippling that area. The fact that paralysis hits only one region of a nation is no consolation to that region. And a blow to only one part of the country can nevertheless damage the whole Nation. The Santa Fe, for example, is responsible for movement of a big portion of the wheat harvest, and certainly the orderly handling of that crop is vital to the Nation.

If the strike continues and is effective, the Government will be forced to take action one way or another; it should do so sooner rather than later.

Meanwhile, Senator DONNELL can point to the situation in support of his bill to outlaw all railroad strikes. The union apparently has weighed that risk. But railway labor should not risk the loss of its right to strike over as debatable an issue as the need for a third man in a locomotive cab.

Seventh Architect of the Capitol

EXTENSION OF REMARKS
OF
HON. WALT HORAN
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 23, 1950

Mr. HORAN. Mr. Speaker, under leave to extend my own remarks in the Appendix of the RECORD, I am pleased to include an article from the Washington Sunday Star pictorial magazine. Everyone—and everyone does—who knows Dave Lynn and Gus Cook will enjoy this.

The article follows:

SEVENTH ARCHITECT OF THE CAPITOL
(By Lucy McClenon)

Two men in a basement room of the Capitol study a drawing board. The taller of the two comprehends the plan quickly, comments concisely and moves to the telephone to take a call on a different matter. He is David Lynn, whose multifarious duties make his title, Architect of the Capitol, somewhat misleading.

The telephone caller, it turns out, wants to discuss arrangements for exercises to be held in the rotunda of the Capitol on June 1 for the unveiling of a statue of Brigham Young, contributed by the State of Utah to Statuary Hall. Mr. Lynn, as architect, "acting as an agent of the Congress, has charge of the structural and mechanical care of the Capitol, together with arrangements, in cooperation with the proper authorities, for ceremonies and ceremonials held in the building and on the grounds." These events range from the type under discussion to such others as summer concerts by service bands or the landing of a helicopter to present tree seedlings on Arbor Day. (Mr. Lynn's latest annual report to Congress includes, incidentally, an accounting of all trees and shrubs on the Capitol Grounds.)

On completion of the telephone conversation, Mr. Lynn speaks briefly with an associate about cabinets recently constructed for a congressional committee room by the carpenter shop under his direction. A magazine writer wants to know who occupied the rooms just above the Architect's office before Senator MCMAHON moved into them. Mr. Lynn obtains a three-page history of the rooms' occupancy from his staff. Two men in the office discuss with him a newly arrived art work. (The Joint Committee on the Library has supervision of all works of art in the Capitol, but arrangements for their erection, placement, and unveiling are handled through the Architect's office.)

So far Mr. Lynn's day has dealt only with Capitol matters, but he is also charged with the structural and mechanical care of the following: Senate Office Building, Old and New House Office Buildings, Capitol power plant (which supplies heat, light, power, and air-conditioning refrigeration for the preceding and the Capitol; heat, light, and power for the Library of Congress Buildings, Botanic Garden, Supreme Court Building and the legislative garage, and steam heat for the Government Printing Office and City Post Office); legislative garage, Library of Congress Buildings and grounds, Supreme Court Building and grounds, Court of Claims Building, District Courthouse, Court of Appeals Building and Columbia Hospital for Women. He is also charged with the operation of the House restaurant and is acting director of the Botanic Garden. In some of these duties he is subject to various congressional committees and authorities on matters of policy. Much of his time is spent at, or in preparation for, committee meetings.

Mr. Lynn is a member of the three-man Capitol Police Board, the District Zoning Commission and the Commission for Enlarging of the Capitol Grounds. In addition he is charged with the planning and construction of such buildings and other improvements as may be committed to his care by Congress from time to time. Since Mr. Lynn became Architect in 1923 the New House Office Building, the Supreme Court Building, and the Library of Congress Annex have been completed under his direction, and other large-scale projects—such as the recent remodeling of the House and Senate Chambers of the Capitol—have been carried out. The latter project is now complete down to the gallery seat levels. Plans call for extensive additional work, including new seats for the House, to be undertaken during the next congressional recess.

Mr. Lynn is the seventh Architect of the Capitol. Like his three immediate predecessors he would like to see the east front of the Capitol extended to the line of the Senate and House wings and this old, central portion of the building rebuilt of marble to replace the gradually disintegrating sandstone of which it is made. The project was first suggested by Thomas U. Walter, who served as Architect from 1851 to 1865 and who designed the present wings and dome. His successor, Edward Clark, held the office when Mr. Lynn first came to the Capitol in 1901. Mr. Clark was followed by Elliott Woods, under whom Mr. Lynn served in a supervisory capacity until Mr. Woods' death and his own appointment to the post.

The Functions and Problems of Higher Education Today

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 23, 1950

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include a very interesting and instructive address entitled "The Functions and Problems of Higher Education Today" delivered on May 5, 1950, to the delegates attending the New England Conference on Graduate Education by the Very Reverend Father William L. Keleher, S. J., president of Boston College.

The address follows:

THE FUNCTIONS AND PROBLEMS OF HIGHER EDUCATION TODAY

(By the Very Reverend William L. Keleher, S. J., president of Boston College)

This year of 1950 has flooded your desks and mine with all sorts of midcentury surveys and reports, most of them pointing to the tremendous successes achieved by our American enterprises. Almost daily, we are reminded that we have attained to the highest material standards of life ever known to mankind. At least every week we read that our mills and factories are geared to the greatest peacetime production level. And with constant regularity we learn again and again that we have reached the broadest coverage in the matters of social and economic security. Truly a happy picture, when we read the proper journals. Of more significant importance to us, another set of reports points out that our generation witnesses the most far-reaching and most substantial program of educational opportunities for the youth of our land, and that, at every level. In a word, if we screen the journals we read, we might be tempted to relax into a smug complaisance, quite satisfied that we have been privileged to have been part of this outstanding movement. Could it be that some of us might think the world fortunate that we were in charge when the opportunities for such advances presented themselves?

At the same time, even a casual reader cannot fail to note the emphasis in these same surveys on the ever increasing complexity of the problems of our times, problems that are political, social, and economic and with it an increasing awareness of the acute need of greater knowledge, of broader understanding, of a more courageous and more intelligent leadership in our approach to the solution of the problems confronting us. Too often, we must admit, solutions are arrived at and policies fixed, not from reasons of principle, but from the pressure of immediate expediency; decisions so reached cannot stand the test of time or the scrutiny of history. We must admit, too, that in our own work, changes in curricula, alterations in programs, are at times brought about for reasons that might not stand a careful scrutiny a few years from now.

Our country is unique in the fields of freedom and prosperity. No nation in history has known so much over-all happiness and success. But today, and let us be very frank about it, our people are worried, restless, upset in heart and mind. Anxious about loyalties and security, uncertain about our role in the family of nations, we seem to be losing confidence in ourselves. When the rest of the free world looks to us for guidance, for courage, for leadership, because of our unique prosperity and freedom, they find that we are not at peace with ourselves in heart and mind.

There has been among us a growing awareness of the crucial importance of human resources, and with it a frequent recognition of the fact that our human resources and qualifications are, as they have always been, slow and difficult to provide. Today these resources have been vastly expanded and with that expansion has come the increased demand on us to see that they are kept at the proper high level, just one more toll of the modern complex society in which we move.

So great a challenge has been put to us as educators, to maintain and even increase the fields of knowledge; to provide the skills and methods to handle the ever increasing problems; to develop the minds as well as the manpower of our country; that government and the community in a constantly increasing measure have undertaken to sponsor, to finance, to regulate and to control this truly strategic and critical source of supply, including the field we call higher education. There is no point to express regret or show resentment at the efforts of government to participate in higher education. For there is magnitude as well as depth in the problem, and it is a matter that concerns the welfare and the security of the land. It would seem almost an obligation of the Government to interest itself in the efforts of those who are vitally interested in a problem that concerns all so deeply.

But it is of major importance for us to consider and to clarify for ourselves, and for the community, the function and the contribution of private and voluntary institutions in the total program of higher education at this time. For what we do, and what we

represent, is linked in the highest degree with a public interest. Voluntary associations though we be, working in this free society, we have inherited a public trust. Ours is a serious obligation, and one we have met courageously. In our New England association, out of 34 member colleges and universities, only 6 are supported in their efforts by public funds. The rest of us, and I think we can be satisfied that we have done a good piece of work, must carry on our efforts on our own. We draw no comparisons, but I think you will agree with me that the products of our private colleges, as men and women of the country, have proven themselves as loyal, as true and as American, as the graduates of any school.

It is the continuing function, and obligation, of our institutions of higher learning to maintain our status of freedom and independence so necessary for the exercise and preservation of freedom in a free society. It is our task to develop the free men and women who are the genuine strength and life of our community. Nor is this an easy task when our institutional independence can be made to seem a luxury, or when proffered aid and assistance would lift a real financial burden. I doubt that there is a single college or university across the country which would not be better prepared to do its work had it just a little more financial backing. For this reason we would like to see the Government support our endeavors. But there has seldom been a time when Government aid did not mean Government control, at least to the extent of limitations in the area of independence. At a time when the magnitude of the costs and the diversity of efforts would call for help and assistance, we have an obligation to maintain our independence. As the pressure of dependence grows, so will grow our responsibility to be free. God grant that the spirit which moved our founders to establish the colleges in a spirit of freedom will give us the courage to keep them so.

All will agree that we must provide our youth with an education that will build a better and stronger citizenry. And that we do. No one will deny that we must equip our youth with a knowledge of their responsibilities in the matter of community living. And that we do. But an education that stops there, making our youth aware of their privileges and obligations to the state and the community is not fulfilling its duty, for we have not brought out the final goal of man. Just as a better citizenry is not the goal of mankind, so a preparation for that end cannot be the goal of higher education. Man was not created nor is he destined just for the state and his fellowman. His own salvation, and the honor and glory of His Creator are ends that must be faced by the individual, ends that we must have in mind when we are preparing these youths for life and eternity. A system of education which would ban all sorts of religion from the classroom, a system which forgets the supernatural end of man, a system which neglects the concept of God as Creator and Ruler of the universe, is false to the ideas of our country. Yet such a system coul deasily develop were our educational aims and goals to be turned over to a group of men or agencies which would be thinking in terms of expediency only.

It is only too obvious today that government adds to its political power an increasing control over the physical resources of the people and the community, and this to a degree that makes it increasingly urgent that government be kept subservient to free men. I think most of us would be content to see the general supervision and direction of the physical resources go on, provided it will be done for the best interests of all, but we cannot allow such a control that will bring about the control of mind and heart. All too vivid in our memories are the pictures of what happened elsewhere in the not-so-distant past. Human nature is the same the world over and what happened once can happen again. We, who will shape the minds and develop the thoughts and ideas of generations to come, must protect our freedoms and assure the generations yet unborn that they too may enjoy the life, liberty, and pursuit of happiness we have known.

It appears that the policy of the Government is to continue to demand of our institutions an ever-increasing role of positive participation in the programs of the Government. To this we take no exception. In fact we are happy and prepared to cooperate in all such roles. But in this cooperative role, we must be certain that our total function in the field of higher education is protected and preserved by our freedom and independence. Doesn't it strike you as a bit inconsistent, when we follow a highly specialized type of program, developing authorities in special fields, only to find that our own products are not measuring up to the ideals we held out for them? We send to the people of this country and the lands abroad men who are missionaries for a special type of work or study, but men who do not bring to these same strangers the picture on which our own land was founded. In the first writings of the fathers of our land, in the Constitution, we find reference after reference to the place and need of religion, the freedom to worship, and today, too many of us have relegated such thinking to the dim past. "Render to Caesar the things that are Caesar's, and to God the things that are God's" was once an accepted truism. Today we think only of Caesar—of various Caesars. Ours is the sacred duty to instill in our students the whole truth, so that when they take their place in the world, they may work for Government, for public or private enterprise, and always remember this, that they will render to Caesar the things that are Caesars but to God the things that are God's. Their own peace of mind, their eternal welfare and salvation, cannot be lost sight of, in their efforts to serve well their immediate aims. Free to follow our traditional course of education we can prepare our students to face such a life. But if we are to sacrifice our independence and freedom for temporary aid or assistance which means control, then our own cause is lost and the results of our efforts cannot but add to the chaos and indecision surrounding us.

Historically it can be established that the freedom of our land, the greatest blessing we cherish, is the product of the self-respect, the confidence, and the strength of our men and women. And it is equally true that this self-respect, confidence, and strength are qualities of the mind and of the soul. The underlying font of our true greatness is the dignity of mankind, a dignity we can appreciate and enjoy. It is a quality found only in free men and women, who, responsible under God, know and cherish their freedom, who face their responsibilities and obligations; who know too, that this precious freedom is something that can be lost, and with it goes beauty, goodness, and truth. Ours then is a sacred trust, to maintain that quality of mind and heart, to foster and spread that spirit, to preserve the dignity of man as the greatest heritage we can have. This is the everlasting function of the schools of higher education; through it we make our greatest contribution to the strength and welfare of the community. God grant that in our rush to develop specialists, we do not overlook the more important and more lasting work—the development of the whole man.

To the Firemen

EXTENSION OF REMARKS
OF
HON. FORREST C. DONNELL
OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Tuesday, May 23 (legislative day of Wednesday, March 29), 1950

Mr. DONNELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "To the Firemen," published in the Toledo (Ohio) Times of May 15, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TO THE FIREMEN

There is plenty of evidence that many of the Nation's railway firemen are personally opposed to the crippling strike which their union officials have forced upon them. They are worried by much more than the loss of pay, for they realize that the union can present no sound case which will justify the strike in the minds of the American people, who now are fretting greatly because of the inconvenience caused them.

Our own mail shows this. We do, of course, receive some bitterly critical letters, the theme of which is that the truth is not in us. But we have received a number of letters, signed by firemen, who say we are right in maintaining that the strike is indefensible.

These men know something about the economic and financial problems the railroad companies confront. They also know that an aroused public is likely to force enactment of legislation prohibiting strikes against the railroads.

As a matter of fact, there is a considerable movement under way for precisely such a law. Indeed, Senator DONNELL, of Missouri, has introduced a bill banning strikes on railroads or airlines, and he is pressing hard for consideration of it. A number of railroad officials are asking Congress to pass it.

Certainly, the strike emphasizes the need for such action, since a crippled transportation system adversely affects all business and industry. Coming so soon as it does after the Chrysler strike, it also emphasizes the need for some restrictions upon unions in the matter of strikes.

In recent years, the union leaders have abused the right to strike. John L. Lewis, Philip Murray and Walter Reuther have been particularly conspicuous in their arrogant disregard of the public.

They always glorify the right to strike, and manage to wangle superfervid support for it from most of the columnists and pundits of the country. They better not misprize the public, however, for there are growing signs that it is becoming tired of having its credulousness debauched.

Lest the picket line mistake these words, we hasten to say that this does not mean the people would destroy the right to strike. Neither would we advocate such a thing. Not at all. But there are other rights, and labor must respect them. If it insists upon public respect for its exercise of the right to strike, then its exercise must be limited by respect for other rights.

After all, the blessings of the Constitution are ecumenical, and it is time that the administration and political leaders were clear in their minds about that. Time the labor leaders were, too.

The Armed Forces: A Sound National Investment

EXTENSION OF REMARKS

OF

HON. ZALES N. ECTON

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 23 (legislative day of Wednesday, March 29), 1950

Mr. ECTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me on May 20, 1950, Armed Forces Day, at the United States Naval Powder Factory, Indian Head, Md.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE ARMED FORCES: A SOUND NATIONAL INVESTMENT

Fellow Americans, it is indeed a pleasure to be present here today and to participate in this first observance of a Unified Armed Forces Day. It is a double pleasure for me to be introduced by your genial Commanding Officer, Captain Voegeli. He and I attended the same public school and high school in Montana. We played baseball together when we were considerably younger than we are now. Ladies and gentlemen, today we are all playing on the same ball team of National Defense and are concerned with adequate protection for the United States of America.

The Navy is performing a most commendable service in operating the powder factory here at Indian Head. In viewing the extensive operations of production machines this morning, manned by efficient and competent civilians, I am convinced that the cooperation and coordination evidenced here is a practical demonstration of what is being accomplished by a Unified Armed Force. I congratulate the Navy and the officers and civilians working on this tremendous enterprise for the benefit of all.

It is particularly fitting that this first observance of our unified defense forces take place at Indian Head, where for half a century there has been genuine coordination of effort in production of the principal item of defense for all of our armed services.

It was here at the Naval Powder Factory that this service was inaugurated 50 years ago, a service that has been vital, progressive and in keeping with the scientific development that has made our Nation the leader and hope of world freedom.

I know every one of you feel as I do, that it is an honor and a privilege to be known as an American. We are not perfect, of course, Neither are we all-wise. Perhaps if we considered ourselves such we would be on the other side of the barrier where every problem is approached with the answer already determined, where facts are spurned if they do not conform to the doctrine of totalitarianism.

We have come to pay tribute—not just to the Army, the Navy, the Marines and the Air Force, but to the sum total of ideas and ideals of American industry, tolerance and justice that today constitutes the world's only barrier between barbarism and civilization as we know it—between Pagan practices and Christian principles—between serfdom and freedom.

Next month marks the one hundred and seventy-fifth anniversary of America's first Armed Services on a national scope. But our first investment in our way of life was made 155 years before that fateful spring of 1775.

Since that day in the spring of 1620 when a small group of men and women invested their all in a bid for human dignity and individuality and set sail for America, man has been obliged to wage a constant battle for the right to live in peace and freedom.

From Plymouth Rock to Rheims and Tokyo Bay there are many milestones in the age of modern man, although they may be brief ripples in the sands of time. Nevertheless, they constitute historic steps in the march of progress in the New World.

The investment those hardy people made 330 years ago in behalf of a new way of life has paid dividends far in excess of anything they ever anticipated.

Generations before us have renewed that investment from time to time and the legacy is ours—ours with which to build for succeeding generations as our fathers built for us. It is to their credit that our forefathers did not invest on a marginal basis. They paid in full although their means were meager.

Time and time again we have been called upon to renew that investment and sometimes we have been content to do little more than put up the necessary margin to bind the bargain and leave to succeeding generations the task of redeeming our pledges.

On occasion we have listened to the siren song of a false pacifism, and endangered the independence so dearly bought for us by those who passed this way to heroic rest.

On such occasions, when our investment in freedom was permitted to fall below the level of security, we paid harsh penalties—the lives of our finest manhood, the "expendables" as they have since been recorded in history.

Those "expendables" volunteered as road blocks and gave up precious time in which to consolidate our forces and begin the march that stopped only when the tyrant's fire ceased.

Pearl Harbor! Bataan! Corregidor! With them will ever be associated four words that are seared in the memory of all who listened, read, wept, hoped, and prayed. Yes, those four words, "Too little, too late," hold a meaning for us that Americans never must forget.

They must remain with us as a reminder of an investment we neglected—an investment made for us more than 300 years ago from which we have drawn continual dividends until our liberty, our system of free enterprise and the freedoms that go with them became a wealth and a privilege too many of us take for granted.

The tyrants of a mere decade ago concluded America had grown too rich and indifferent, too soft and lethargic to defend even ourselves, let alone give aid to the defenseless.

They had reason to believe that.

An adequate armed force equal to our responsibility in the association of nations might have averted that European debacle. But, then as today, we had many who indulged in wishful thinking, idle boasting, and selfish action. "They wouldn't dare" to strike at us. We have never lost a war. It is a crime to waste money preparing for a war that will never happen.

You and I heard that kind of talk. We heard it from the uninformed; we heard it from the boastful; we heard it from those who wanted only to enjoy the temporary security others had paid for. And, unfortunately, we heard from pressure groups of those who served foreign doctrines in this cosmopolitan land.

Too many were unmindful of the fact that the tyrant and the bully strike viciously when the innocent drop their guard. We had dropped our guard. Seeking no gains from war, we had begun to believe that a token army was sufficient—that an adequate armed force was an expense, not an investment in security.

That belief cost us $400,000,000,000 and the lives of half a million of our sons. It cost us more than that. It put upon the shoulders of present and unborn generations a terrible debt—a debt that will never be paid if ever again we permit our defenses to become as vulnerable as they were when either of the last two wars began.

The mere absence of a shooting war does not necessarily mean peace. It does provide an opportunity for reasoning and discussion on how best to prevent a shooting war.

Unfortunately we have not always won the peace. Circumstances intervened over which our armed forces and the people did not have control. The physical and moral engagements won by the military and the people have been, speaking charitably, omitted from the picture on the council table of nations. And now we must gird ourselves to even maintain the status quo.

In order to maintain the peace which all Americans desire today, we must have that which the aggressor respects most—strength, supplemented by the implements of science and the means to use them promptly and effectively.

Our first line of defense is the character and integrity of our own people—all else is predicated on that.

Today the right to live as men should live, is again challenged, this time by a force even more sinister than that which ruthlessly put the torch to Europe 11 years ago. Whether or not the cold war will suddenly erupt in the form of vicious assault with the deadliest weapons known to man, no one can say.

The world knows that tyrants attack only when they believe they can conquer. Smaller nations have their eyes on America—the one bulwark of freedom on God's earth. When and if we must bear the impact of might from behind the iron curtain, our armed forces must be strong enough to take the first blow and then carry the attack to the enemy.

Too little then may prove too late for the last time. Life as we know it in America could be lost to the world.

It can happen if we neglect the responsibilities we automatically assume as a fortress of freedom.

It can happen if we fail in the duty we owe to mankind.

It can happen to an America that takes its freedom for granted.

In a world of atomic energy, radar fences, guided missiles, jet propulsion, supersonic speeds, breathing submarines, chemical turbines, rocket power and robot devices, the stakes are high. When the show-down comes it is bound to be cataclysmic.

We simply must hold the winning hand or lose all. We are a contestant, whether or not we so choose. There can be no turning back. Obviously we hope to settle all differences around the table of international understanding. But we have learned that not all nations can be trusted to respect agreements. That leaves no alternative other than to put our house in order for the future.

For years the broad oceans afforded us defense in space. No longer does space afford the time it did in wars of the past. We must be able to meet the most sudden attack with greater speed and greater force.

We must possess the courage to face the facts of today, the courage to sacrifice a share of our labor and fortune in support of the services which have preserved our freedom in the past. We must never again willfully depend upon expendables.

Our vigilance, resourcefulness, ingenuity, productivity, and courage must be united as an indestructible force.

Too often the investment in freedom is confined with the term "expense" in the minds of many people.

There is no investment under the sun that can assure to us dividends in safety and our concept of liberty other than an adequate investment in trained personnel implemented with the scientific brains, resourcefulness and

productivity of our American people as a whole.

As we invest in the implements necessary to our vocations, in the homes we build for our families, in the institutions of education in this Republic, we must be continually mindful of the over-all fact that none of these blessings may be lasting if we fail to invest in that with which to defend them.

We do not build costly structures and then neglect to protect them against fire and the elements.

We do not plan orderly government and neglect to invest in law-enforcement units for its protection.

Neither can we expect to perpetuate a way of life that is the envy of all other peoples unless we set up defenses against those who would destroy it.

There should be no doubt in the mind of any American as to the purpose of an American armed service second to none.

No American worthy of the name harbors the thought that this Nation of ours plans a war of aggression. Our tolerance toward the blatant Marxists within our own boundaries should furnish sufficient proof of our desire to live peaceably with men of all nations and people of all political and economic ideologies.

But we must not let that tolerance deteriorate into complacency and weakness.

Twenty million American men and women in two World Wars risked more than dollars. They were not warmongers. They made an investment for national and individual freedom in order that we might work at our chosen vocations, to worship as we please, to think and write and speak as our own conscience dictates.

Countless thousands sacrificed their lives as an investment in human life and the dignity of man.

Never again must this Nation hear the echo of those four words "Too little, too late."

May we have the wisdom to maintain our Nation's armed forces, which we honor today, commensurate with our abilities and opportunities. An adequate unified armed service on land, sea, and in the air is a sound investment in freedom for tomorrow, an investment in the way of life our forebears planned for us, an investment in love for our fellow man, and in the peace of the world.

Address of the Most Reverend Richard J. Cushing, D. D., Archbishop of Boston

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 23, 1950

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include an address made by his excellency, the Most Reverend Richard J. Cushing, D. D., archbishop of Boston, at the annual dinner meeting of the Eire Society, at Boston, Saturday, May 13, 1950:

I must begin by expressing my gratitude to the Eire Society of Boston for this latest mark of their friendly esteem and devout fidelity. It is an honor indeed to be honored by men and women of the high ideals and lofty purposes of the Eire Society. I want our new Ambassador from Ireland, Mr. Hearne, to know that Ireland has no more exemplary representatives in America than the members of our Eire Society and that the truest interests of Ireland are nowhere better served than they are by this society.

Next, I would like, if I may, to pay a word of tribute to his excellency, the Ambassador from Ireland, for the magnificent impression created by his talk to the National Press Club Wednesday of this week. I have no doubt that many on every side have congratulated him on his statesmanlike declaration concerning both the determination of the Irish people to achieve their national unity and their determination to achieve it without violence.

The Ambassador told his audience at the Press Club that never in their history were the Irish people so united on the policy which he summed up in one single, superb sentence: "We want unity, but we also want peace; we are determined to achieve unity without a civil war."

We were all delighted to read in the general press the reactions to the Ambassador's remarks. We are persuaded that the rounds of applause given him by his immediate audience last Wednesday will be echoed in that favorable public opinion which, as the Ambassador pointed out, must in the long run be the determining factor in the solution of Ireland's national problem.

Two paragraphs from the Ambassador's talk sum up both the wisdom of the case for national unity in Ireland and the folly of the arguments against it. The Ambassador said:

"National unity is the chief aim of the Irish people. The whole soil of Ireland is the property and domain of the whole Irish people of today.

"Those who will tell you it is a complicated problem and plead for a division are as false as the woman who wanted to solve the problem of ownership of a little child in King Solomon's day by cutting it into two pieces."

That is statesmanlike talk. What is more important, it is also sensible talk. We wish the Ambassador every blessing in his effort to fulfill the legitimate aspirations of his nation within the framework of a policy inspired by a love for peace and a determination to preserve it.

Such a policy, I am persuaded, would commend itself to the great saints of Ireland, the saints of whom our people are so intensely proud. One holy man in particular would welcome with pious applause the statement and the spirit of Ireland's new Ambassador.

I propose to speak to you briefly about that man tonight. He is Blessed Oliver Plunket.

Last fall we went to Ireland on a great come-back-to-Erin pilgrimage. We visited many beloved spots in the isle of saints and scholars, but none more profoundly moved me than did the modest shrine in great St. Peter's Church, Drogheda, where the head of Blessed Oliver Plunket is preserved for veneration.

I visited this shrine in the Oliver Plunket Memorial Church under singularly favorable circumstances. We were accompanied by the present successor of Blessed Oliver as archbishop of Armagh, the gracious, scholarly and warmly loved Dr. D'Alton. A great throng of the honorable people of Drogheda turned out to meet our pilgrimage party and thousands overflowed their imposing church as we knelt in prayer before a human head so literally lost for love of Christ.

I must confess that I had known relatively little of the detailed, dramatic story of Blessed Oliver Plunket. I knew, of course, that he had died a martyr. I knew the injustices of which he had been the victim. I had some knowledge of his place in the history of Ireland's sorrows and struggles, and I naturally shared the hope that his beatification, so long in coming and so enthusiastically received when finally it took place May 23, 1920, would soon be followed by the canonical evidence required for his ardently desired canonization.

These things I knew. But it is surprising to reflect on how little people outside Ireland appear to appreciate the tremendous stature and historic significance of this great archbishop, patriot, and personality. It would, I think, be most appropriate if the Eire Society would interest itself in the cause of blessed Plunket and perhaps arrange for a lecture or some other occasion on which to do proper homage to the memory of this saintly hero of the Irish people.

My purpose in suggesting such a reawakened interest is not to recall the injustices of the past nor otherwise to inflame partisan or political sentiments in the present. Quite the contrary. It is no longer necessary to rehearse the travesty of justice which was his trial nor the incredible barbarities which accompanied his execution.

My purpose would rather be to present Blessed Oliver Plunket as an outstanding example of what the true Christian should be at all times and as a symbol of the spirit in which the true Irishman seeks the interests of his nation. It is the spirit set forth in the policy enunciated by Ambassador Hearne last week.

As a Christian, Blessed Plunket was kindly and considerate. He was humble in his great learning. He was assiduous in the fulfillment of duties of his state in life. He was filled with a holy peace, and he saw all events of life in a completely spiritual perspective. Few men in history have accepted injustice and even a brutally unjust death with such magnificent dignity and devout resignation.

The manner of his so-called trial, the prejudiced charge to the jury, the evil temper of the times, all these made the verdict against him inevitable. But he waited serenely for the cruel sentence which only a miracle could avert. The president of the court charged the jury: "Gentlemen of the jury, look you here, Mr. Plunket here is indicted for high treason; and it is for conspiring the King's death, and endeavoring to bring the French Army into Ireland to invade that Kingdom and establish therein the Roman religion. If you believe these witnesses that have attested these things against him, you must find him guilty. It is pretty strong evidence, and the prisoner does not say anything against it but that his witnesses are not yet come over."

From the dock, the grave voice of the prisoner replied, "I can say nothing to it but give my protestation that there is not one word of this said against me true, but all plain romance. I never had any communication with any French minister, cardinal or other."

The jury took a quarter of an hour to bring in their verdict. It was "Guilty." A week later the prisoner was brought to the bar to receive sentence. He knew the savage formula by heart and was calm. The world knows it, and shudders—hanged, drawn, disemboweled, quartered. "Deo gratias" was the exultant cry. It was the martyr's crown for which he had long prayed.

He was a martyr for his faith. So far as we may use the word, he was also a martyr for Ireland. But his love for Ireland, it must be noted, did not make him the enemy of any other land. On the contrary, Blessed Plunket exemplifies the truly Catholic spirit in which differences between nations must always be resolved no matter what the previous history of injustice or of bitterness on either side.

Blessed Plunket was put to death by the English. He must have been painfully aware, however, that imperfection was by no means limited to members of the nation which had persecuted his people and which had sentenced him to death. He had also been sorely vexed by disloyalties within his own flock and he had tasted, as every leader must, the sour wine of perfidy and intrigue among his own. For all that, they were his own and he loved them passionately and served

them without cease. In his will he could boast, in homely, touching language: "I stuck to my care and my districts until death"

Ireland was much in his thoughts in the harassed last hours of his life, even those in Ireland who had kept silent when he needed defense and who seemed to fail him in his hour of need.

And by the same token, he was preserved by his personal sanctity from falling victim to any intemperance in his attitude toward the enemy nation. The English Catholics, at least, had stood by him through all his difficulties, giving him friendship, money, and sympathy. He could not entirely hate a nation which included so many devout and generous personal friends. His last will and testament includes a touching tribute to these good people. It is worth remembering, because it reflects again the spirit in which we must all approach partisan differences. He wrote: "The English Catholics here were most charitable to me. They spared neither money nor gold to relieve me, and in my trial did all for me that my brother would do."

One of these Catholic English, a convert to the faith, a Benedictine monk and a fellow-prisoner, became the special friend of Blessed Oliver. They were separated by the walls of their prison cells, but they corresponded in the last days of Plunket's life. In one of his letters Blessed Oliver wrote to Dom Croker: "Being the first of my countrymen to suffer here, I desire to lead the way to others; and it is right I should strengthen by my example those in Ireland whom I have so often exhorted by word of mouth."

Dead now almost 300 years, he still exhorts us by his example and by every circumstance of his life and death.

Ireland was sustained by the example of his heroic fortitude through all the slow anguish of the penal laws. Imitating his heroism, Ireland accomplished 1782, 1892, 1932. He had said: "The most faithful nation must not die." Ireland understood—and persevered.

But Blessed Plunket taught another lesson beside that of fortitude and heroic resistance. He taught the lesson of clemency, of Christian forebearance, and flaming charity. Father Croker watched from the prison windows for the last sight of him as he was executed. With Croker were other priests and laymen, all English, sentenced to death by the same spirit of injustice which had doomed Blessed Plunket. Croker described the end as follows: "I neither can nor dare undertake to describe the signal virtues of the blessed martyr." There appeared in him something beyond expression, something more than human. The most savage hearts were mollified at the sight of him. Even the most timorous were in love with him. When he was carried out the priests' yard for execution, he turned toward our chamber windows, and with pleasant aspect and elevated hand, he gave us his benediction."

Oliver Plunket teaches us this same lesson of peace and Catholic spirit even by the circumstances of the disposition of his mangled body after his death. His blessed head is prized by the people of Drogheda and is preserved in the great shrine which I visited in Ireland last fall. But he is no less venerated in England and particularly at the Benedictine Abbey at Downside. Foremost among those who pray constantly for his canonization are the English monks at Downside, a curious, consoling, and entirely Catholic circumstance.

Were Blessed Oliver Plunket among us today, I know he would hail the wise words in which, as we have already said, Ambassador Hearne has summed up the attitude of Ireland on the thorny, highly emotional question of partition.

May the spirit of Blessed Plunket, firm but fair, courageous but most kind, indomitable but understanding, prevail among those who must solve in this century the problems of Ireland and her neighbors. May the high-minded policy enunciated by the ambassador have its echo among the statesman on every side.

Blessed Oliver Plunket, pray for Ireland—and pray for us all.

Donnell's Rail Bill

EXTENSION OF REMARKS
OF
HON. FORREST C. DONNELL
OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Tuesday, May 23 (legislative day of Wednesday, March 29), 1950

Mr. DONNELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Donnell's Rail Bill," published in the Bristol (Va.) Herald-Courier of May 13, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DONNELL'S RAIL BILL

Senator DONNELL, of Missouri, has introduced a bill to outlaw railroad strikes and a Senate labor subcommittee has started hearings on the measure. It would outlaw railroad walkouts by providing for compulsory arbitration. A Presidential board would decide the issue in a major dispute and both sides would have to abide by the decision.

It is unfortunate that the present Railroad Labor Act is not sufficient to maintain our railroad commerce at all times. We repeat a former statement that compulsory arbitration seems the best answer, and the present strike justifies Senator DONNELL's bill.

Invalidation of California Land Act Under United Nations Charter

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, May 23 (legislative day of Wednesday, March 29), 1950

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the RECORD an article which relates to the recent decision of the court in California invalidating the California Land Act because of a provision in the United Nations Charter. The article, which is written by Mr. Arthur Krock, is entitled "More on Treaty Supremacy Over Existing Laws," and appeared in the New York Times of today.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IN THE NATION—MORE ON TREATY SUPREMACY OVER EXISTING LAWS

(By Arthur Krock)

WASHINGTON, May 22.—In this space there was published on May 16 an analysis of the decision of the California Court of Appeal that invoked a general pledge in a treaty signed by the United States to invalidate a specific California statute. It was noted that, when this court held that the State law which restricts Japanese from owning land was nullified by our promise in the Charter of the United Nations to promote nondiscrimination and take * * * action to eliminate it, to that end it opened the way to the contention that all discriminatory laws and practices in this country were automatically made illegal when the Charter was ratified.

But it was pointed out that the California decision, which the attorney general of the State has asked the court to rehear, was confronted with two great obstacles to affirmation by the Supreme Court if the issue ever gets there. One is Chief Justice Marshall's ruling in 1829 that only self-executing treaty provisions supersede existing statutes as the supreme law of the land. (Arts. 55 and 56 of the Charter, the basis of the California decision, are not such.) The other was that by its pledge to promote antidiscrimination in all forms and to take * * * action the United States made it clear that legislation by Congress will be required to materialize the promise, and this has not been done.

But if the Supreme Court should repudiate Marshall or hold that articles 55 and 56 are self-executing, then it could be impressively argued that the President's civil-rights program requires no legislation to put it into effect except that creating machinery for enforcement. For example, all forms of local segregation would instantly be illegal and the Federal Government would be obliged to penalize them. And, automatically, no employer or labor union could exclude (from employment and membership respectively) any applicant who could attribute the exclusion to racial, religious, sex, or color discrimination, etc.

This would be carrying the decision of the California Court of Appeals to its logical destination because it was founded on these specific articles in the Charter to which the United States has subscribed. Hence the importance of that decision, and the necessity of final judgment on the issue it raised, are obvious.

The dispatch in which this was pointed out produced the information from a reader that the Supreme Court of Ontario, in November 1945, took a position almost like the California court did and that this has not yet been appealed. In a past issue of the American Scholar Prof. Malcolm Moos of the Johns Hopkins University Department of Political Science reviewed this ruling.

He called it a remarkable prelude to the 1948 decision written for the Supreme Court of the United States by Chief Justice Vinson in the Covenant cases. (In these the court held that, while restrictive housing covenants may be made and voluntarily abided by without breaking any law, they are legally unenforceable.)

The Ontario case, In re Wren, arose out of the fact that a Canadian citizen by that name, who owned land under a deed that bound him, his heirs and assigns, not to sell to Jews or persons of objectionable nationality, was permitted to bring an action to void it in the Supreme Court of Ontario. Mr. Justice McKay not only held it void, but against public policy "which [wrote Professor Moos] rested squarely on a tripod composed of the United Nations Charter, the Atlantic Charter, and two provincial statutes. [But] the court looked first to the United Nations Charter * * *. Thus * * * the learned Justice is * * * breaking new ground." The Court was obliged to move to that because the two provincial statutes cited merely make it illegal to publish or display anything discriminatory or for an insurance company to discriminate in risks on a racial or religious basis.

Professor Moos, writing before the California decision, shrewdly foresaw the McKay

ruling as one which may well serve as a road marker for subsequent and perhaps more important decisions that seek to internationalize human rights. But late in 1948 another justice of the supreme court of Ontario took a different view on the precise issue raised by In re Wren and shunned the dictum of Justice McKay with respect to the application of multiple treaties, including the Charter. Justice Schroeder held valid a restrictive covenant at a summer resort forbidding the sale of land to Jews. This has been appealed, and doubtless the high court of Canada will one day pass on the dispute below as the American high tribunal will pass on the California court decision if the attorney general of the State fails to have it modified.

Members of Congress, not confined to those from the South, are beginning to take uneasy notice of the California ruling and its momentous implications because of its central thesis—which the Senate anxiously discussed last Friday—and because of its threat to Marshall's distinction between self-executing treaties and those which are not. The lawyers among them know, as Prof. Henry Reiff of St. Lawrence University wrote 10 years ago, that "theoretically," these "should be readily distinguishable but in practice they are not; John Marshall found it so, and the courts since then have often had similar experiences."

If the California ruling were adopted and broadly applied by the Supreme Court our part in the delicate treaty structure of the United Nations would be under heavy and immediate fire at the Capitol.

Chicago Cool to Fair Deal

EXTENSION OF REMARKS
OF
HON. CHRISTIAN A. HERTER
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 23, 1950

Mr. HERTER. Mr. Speaker, the following article by Bill Cunningham which appeared in the Boston Herald of May 16, 1950, is an estimate by a very shrewd observer:

CHICAGO COOL TO FAIR DEAL—NEWSMEN REVEAL BLASTS AT PRESS IN WHISTLE STOPS

(By Bill Cunningham)

CHICAGO, May 15.—Maybe this is only an impression, but it seems to this reporter he's seen second-rate prize fights draw more enthusiastic crowds into this battered old godown than the one enticed here tonight by the personal appearance of the President of the United States, plus all the colorful bait set out by the sponsoring committee. There was bait. There was a parade, featuring 7,000 members of the Illinois National Guard, their weapons, and mechanized equipment for one thing.

There were bands, floats, drum and bugle corps complete with shivering, but strutting drum majorettes. There were 3,000 bearers of torch lights, mostly out of step, and terrific fire works displays at certain points along the line of march. Toy balloons, to an announced number of 35,000, were turned loose into the chilling wind at various locations.

GIVES APPEARANCE OF OVERFLOW

The reason was they were trying to get as many people around this building as possible in order to make it look as if there were a tremendous demand to get in, and a vast and frustrated congregation to constitute a teeming overflow. That would be for the sake of the news reels and photographers. To make certain, they tried to deliberate an utterly synthetic subterfuge. Borrowing the give-away idea from radio, they advertised extensively that a certain number of these balloons—one announcement said 2,000—would carry tickets entitling the lucky recoverer to $2 in cash.

This all came under the head of drumming up an audience for the President, and, since yesterday's vast collapse of the public meeting of the Cabinet, they were drumming harder than the heathens of darkest Africa trying to get a message across the intervening hills. To be fair about that really historical Cabinet meeting—the first ever held outside Washington—the combination of the lovely day, and television probably explains why the 3,600-seat opera house was only one-third filled, and why the army of police assembled to handle the expected overflow stood around outside looking silly.

They did get their crowd here tonight. Much of it was partisan and professionally enthusiastic, but most of it seemed to respond more eagerly to the Hollywood stars and the reasonably well-done pageant devoted to the life and times of Thomas Jefferson. The climax came with the Presidential address, which you heard, or can read, but, as above, I saw a bigger crowd, heard more noise and was actually frightened by more excitement in this same hall the night the late Ernie Schaaf fought a local hope named Tuffy Griffin with Al Capone at the ringside.

This is nothing like that, but such as it is, it's the first sign of life this general hoedown has shown. The various delegates probably have got something out of it, but the public has generally ignored it, the local papers have treated it with no more respect than they accord a visiting baseball team, and the entire conclave has been so flat journalistically that the reporters have stood around trying to interview each other. There hasn't been a quote in a carload.

REASON FOR TRIP CALLED PHONY

The general reason for what, without too much exaggeration, could be called the contempt of the community, and the press, for this entire performance, seems to rest in its insincerity and its extremely light regard for the truth. To begin with, nobody here, and probably nobody in the country, considers the Presidential speech-making trip, ending in this hall tonight, "nonpolitical." They consider the gentleman as having deliberately resorted to subterfuge, and the reaction here is that of any public that considers its intelligence challenged, its gullibility taken for granted.

They consider the reasons officially stated for holding this jamboree at this particular time as phony as the Presidential explanation of his vote fishing trip. The Democratic sponsors call this the Jefferson Jubilee, "held in honor of the one hundred and fiftieth anniversary of Jefferson's accession to the Presidency" the actual anniversary of that doesn't come until next March.

Loud doubts are being raised editorially and vocally as to whether Jefferson would even recognize the Truman Party.

Straight at the Truman junket, and even granting it "nonpolitical" was an editorial in one paper today, quoting the reply of President Jefferson to the invitation of his excellency, James Sullivan, Governor of the Commonwealth of Massachusetts, when Governor Sullivan invited Mr. Jefferson to visit New England in 1807.

"I confess," wrote Mr. Jefferson, in a letter dated June 19, 1807, "that I am not reconciled to the idea of a chief magistrate parading himself through the several States, as an object of public gaze, and, in quest of an applause which, to be valuable, should be purely voluntary. I had rather acquire silent good will by a faithful discharge of my duties than owe expressions of it to my putting myself in the way of receiving them."

Added to this now is a general burning of most of the press over the theme consistently followed by Mr. Truman in his off-the-cuff speeches farther back out toward the cactus. The correspondents unloading here from the train are beginning to unload on what was said from that train. At stop after stop, the President told the assembled multitudes he was forced to come out and give them their news straight, and first hand, because they couldn't believe what they read in the newspapers—in short that the press was lying to them about what was happening in Washington and the rest of the world. He didn't use the fighting word, but that was exactly his meaning.

REPORTERS QUOTING SPEECHES VERBATIM

The correspondents, many of them versed in shorthand, took him down verbatim, and now they're quoting exactly what he said, and where he said it. He professed repeatedly to his listeners to be a wonderful man, running a wonderful Government, but with the true facts distorted and kept from the people by an iron curtain of the press. That's exactly the line Henry Wallace used when he was campaigning in 1948.

Probably the most striking rebuke to the entire performance was given here yesterday from the pulpit of a fashionable church, the Fourth Presbyterian. The speaker was the pastor, the Reverend Dr. Harrison Ray Anderson. He was the Democratic convention chaplain, when Mr. Truman was nominated for the vice presidency in this same auditorium in 1944.

"As the man who prayed for him—President Truman—years ago," Dr. Anderson said to his congregation in his regular Sunday sermon, "I counsel the President to quit playing with truth. The earnest people of America have too great a respect for the office of President. President Truman would be welcome in any city or town in a political or nonpolitical trip. But why call this last journey and this Chicago weekend anything other than what it is?"

He spoke of the humility of Mr. Truman in 1944, and then went on without naming him further to assail the lust for power, and what it does to men who run the state, causing people to see humble, finite men become masters. "When the state becomes God," he said, "morals seem to go."

That's the way it's been going, and but for this whoopla tonight, which is as synthetic as all the rest, it's been about as productive of general cheers as a canners' convention. Maybe they fell for the Fair Deal farther west, but this part of the West seems to have fallen on it.

Withholding on Dividends

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article from the Boston Herald, Boston, Mass., of recent date:

THE INVESTOR

(By Edson B. Smith)

WITHHOLDING SNARL ON DIVIDENDS CERTAIN

The House Ways and Means Committee has tentatively approved a 10 percent withholding tax on dividends. It is estimated that this tax will bring in $100,000,000 to

$150,000,000 additional revenue through closing the loophole of people who overlook reporting some of their dividends in their income tax returns.

No one can object to the proposal in principle. Just how it is to be worked out in administrative detail is far from clear. Presumably the distributing corporation will deduct 10 percent from the dividend due each stockholder and send the money to the collector of internal revenue. The corporation would, of course, also have to send to the Collector a certificate showing the amount held back from each stockholder on each dividend date. Also, obviously, the corporation would have to send a similar memorandum to the stockholder to aid him in preparing his own income-tax return.

When it comes to a company like American Telephone with 900,000 stockholders this runs into quite a bit of additional clerical work. If an individual happened to have 73 shares of Potomac Electric Power, which pays a dividend of 22½ cents every 3 months, his present quarterly dividend would be $16.42. Under the corporate withholding tax he would get $16.42 minus $1.64, or $14.78. When he came to figure his income tax he would have to multiply this $14.78 by tenninths to find out what the dividend actually was so that he would be able to report the $16.42 actually declared in his favor and then he would take a credit on the return for the $1.64 which the corporation had paid for him.

Well, this is one dividend on one stock. If a man had 50 different stocks paying quarterly he would have 200 of these computations to carry out. If the work time of the income taxpayer were figured at anything, we venture to say that the total cost of administrating the tax to individuals and corporations would be vastly in excess of the amount the Government would obtain.

It may be that the bright boys in Washington can figure some way of simplifying the practical aspects of the tax, but on the basis of the way it looks to us the Bureau of Internal Revenue better start hiring a lot of new clerks because practically everybody's income tax is going to be hopelessly snarled up.

Taconite Development

EXTENSION OF REMARKS

OF

HON. JOHN A. BLATNIK

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 23, 1950

Mr. BLATNIK. Mr. Speaker, on May 15 I introduced H. R. 8512, a bill to provide RFC loans of 30 years' maturity for the development of taconite and other strategic minerals. This proposed development of taconite brings up the question of the adequacy of existing iron-ore supply and the cost of production of taconite as a new source of iron. In this connection I have received a most informative letter from Mr. Arnold Hoffman, a mining geologist, whose business address is 452 Fifth Avenue, New York, N. Y. Under leave to extend my remarks in the Appendix of the RECORD, I include this letter of April 24, 1950, written by Mr. Hoffman:

APRIL 24, 1950.

Hon. JOHN A. BLATNIK,
House of Representatives,
Washington, D. C.

DEAR SIR: I read with great interest in yesterday's New York Times that you are shortly introducing a bill to the House which would liberalize the present RFC law, namely, to increase period of loans from 10 to 30 or 40 years in order to provide necessary funds and time to permit the immediate construction of plants to mine the magnetic taconites in Minnesota. I wish to congratulate you on your foresight, for such an act is one of the most vital requirements to safeguard the future of this country.

No doubt you are in possession of full data on the taconite situation. As one who has studied the situation for the past 10 years, however, I am taking the liberty of summarizing the situation on the chance that one or two points may be of use to you.

As you know, the approaching iron-ore crisis has resolved itself into a study of the relative merits of foreign high-grade ores as against the development of lower-grade domestic ores, called taconites. Much has been written and said about foreign ores, the latest being the suddenly publicized Cerro Bolivar mine in Venezuela.

It is now obvious that the steel industry must immediately decide whether to place dependence upon foreign ores or turn to the taconites of the eastern Mesabi Range. The best opinion seems to favor a combination of both to take up the slack of approaching exhaustion of the direct shipping ores of the range, but in most discussions there is a strong accent on the high cost of taconites. I believe this conclusion as to costliness is more of an opinion than a fact. Further, close examination of the situation gives strong evidence that the taconites can be mined at a cost competitive with the underground mines of the Lake Superior region. The added cost of beneficiation will be amply compensated by the many advantages accruing from the production of a final hard, high-grade product made in a form especially adapted to more efficient blast and open-hearth furnace use.

By this time, most of us are familiar with the arguments against the total use of foreign ores for our domestic steel needs: Vulnerability of sea lanes in wartime, instability of foreign governments, the enormous capital investment required, the varying constituents of foreign ores which would require modifications in our furnace techniques, the impossibility of moving our steel plant to the east coast to accommodate water-borne ores, the immense difficulties and expense of building a St. Lawrence waterway to provide transportation for Canadian ores which are still of questionable economic value, the great capital outlay in building fleets of large ocean-going ore boats, the dearth of trained personnel abroad accompanied by the insistence of many foreign governments that native engineers be employed, the constantly changing policies of taxation and confiscation, usually for the worse, etc. Such considerations have led most iron and steel men to the admission that the taconites point to the logical solution of the iron and steel dilemma. But most of these people caution that this would be an expensive alternative, resulting in costlier iron and, consequently, steel, though they all seem to agree that the taconites alone can supply our great and growing iron-ore needs for more than 100 years.

You are no doubt aware that the Mesabi Iron Co. mined taconites at Babbit, Minn., in the early twenties. The ore in crude form ran from 25 to 35 percent iron, but the beneficiated product was close to 65 percent, far greater than the 51 percent direct shipping ores of the range. While the superiority of the product was universally admitted by the iron industry, the cost was high in relation to the then price of iron ore and operations were suspended in 1924.

Today, the situation is vastly different. The direct shipping iron-ore reserves are approaching measured exhaustion, the price of iron ore is higher, and the scarcity of lump ore and scrap makes the mining of taconites a national necessity. Above all, the magnetite taconites can be mined profitably at present schedules of iron-ore prices and prevailing costs. As an indication of this, the Picklands-Mather Co., which has been mining magnetitic taconites experimentally the past year or more, is about to launch a full scale 25,000- to 50,000-ton daily operation. The United States Steel Co. is now engaged in building a taconite beneficiation plant in Virginia City, Minn., capable of producing 1,000,000 tons of sinter and/or agglomerates annually. The Reserve Mining Co. which has leased the lands of Mesabi Iron Co. is, I believe, in the process of obtaining the funds necessary for a minimum 50,000-ton daily production of taconites, and its vast reserves, containing more than 2,000,000,000 tons of ore, no doubt give impetus to the bill for liberalizing the terms of RFC loans.

It is now apparent that Mesabi Iron Co. was ahead of time in mining taconites. Today, however, it stands ready to save our iron situation, along with Pickands-Mather and other companies which have farsightedly been working on taconites. In the old days the high cost of mining, due to the hard, flinty character of the ore, was a deterrent to the mining of taconites. Thanks to the Linde Air Products Co., jet piercing can now literally burn holes in the taconites at a speed of more than 25 feet per hour as compared to 18 feet daily cut by the conventional churn drills, resulting in a drastic decrease in mining costs.

In the beneficiation process, the hard taconites must be crushed and ground to required fineness before the magnetite can be effectively recovered. While this is costly, the iron is cheaply and effectively recovered by magnetic rolls. No expensive flotation installations are required. Also, giant electric shovels can now open pit the ores at a very low cost.

The taconites are ready to go. The only element in the situation which is still fluid is the experimental work now going on to determine the best form of final product, pellets, agglomerates, sinter or briquettes. However, herein rests one of the great advantages of mining taconites; there is a flexibility in the beneficiated product which can be adapted for the special requirements of the furnaces.

What price taconites? On the following page, I am submitting a schedule of costs and profits, based on a concentrating ratio of 2.75 tons crude ore to 1 ton of pellets or sinter. In the case of the Reserve Mining Co., up to 35 percent of the gangue, or waste will be eliminated at the mine in Babbit before the ore is shipped to the treatment plant at Beaver Bay. Costs have been determined from presently available data and comparative figures of various open-pit operations in the United States. The final profit figure is an operating one, that is, after all charges but before income tax. It indicates that the taconites, once equipped, can stand on their own feet.

Mining and milling per ton concentrate, 2.75 x 65 cents	$1.79
Pelletizing per ton concentrate	1.00
Local and State taxes per ton concentrate	.15
Royalties at 8 cents per ton crude ore, 2.75 x 8 cents	.22
Haulage, Babbit to Beaver Bay, 2 tons at 1 cent per ton-mile, 55 miles	1.10
Haulage, Beaver Bay to Ohio port	1.16
Amortization at 18 cents per ton crude ore, 2.75 x 18 cents	.50
Total cost per ton pellets	5.92
Value ton 51 percent iron ore at Ohio port	7.70

Value ton 65 percent iron ore at Ohio port at 15.1 cents per unit above 51 percent	$9.81
Operating profit per ton pellets	3.89
Operating profit per ton crude ore	1.40

This $1.40 makes no provision for a possible premium on pellets, but this is a possibility, since pellets or sinter are preferable to direct shipping ores in the furnaces. A hard and high-grade form of ore in the blast furnaces results in greater unit production of pig iron in the charge with consequent reduction in costs. The introduction of pellets in the open-hearth furnace can reduce scrap requirements to a level where "home" scrap from fabricating plants should meet such needs. Pellets make an ideal substitute for scarce and expensive scrap, also lump ore. With such advantages the beneficiated taconites can well command a premium.

There is, also, an important saving in the cost of transporting pellets containing up to 65 percent iron as against the direct shipping ores which are only one-half iron.

The taconites can be operated commercially on almost any desired scale. Capital investment in plant is admittedly large, $15 to $20 per ton pellets, but this would be considerably less than the cost of building a fleet of ore boats capable of handling the equivalent amount of production abroad. United States Steel, for example, must build a considerable fleet of large, ocean-going ore boats to transport 10,000,000 tons of iron ore from Venezuela each year. This would cost upwards of $200,000,000, more than the capital outlay required to obtain the same tonnage of pellets from the taconites. Need I point out how much more feasible it would be to make this investment in Minnesota? Ideally located with respect to transportation and nearness to the central steel plants of the country, the taconites could serve and continue to serve the furnaces of the valley area for many generations to come.

Very truly yours,

ARNOLD HOFFMAN.

Asking for Trouble

EXTENSION OF REMARKS
OF
HON. FORREST C. DONNELL
OF MISSOURI
IN THE SENATE OF THE UNITED STATES

Tuesday, May 23 (legislative day of Wednesday, March 29), 1950

Mr. DONNELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Asking for Trouble," published in the Akron (Ohio) Beacon-Journal, of May 13, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ASKING FOR TROUBLE

Because the railroads have long been recognized as the arteries which carry the lifeblood of the Nation's economy, particular efforts were made years ago to avoid stoppages of service by reason of labor disputes.

The Railway Labor Act carefully protected the rights of employees to engage in collective bargaining while at the same time providing certain final steps designed to prevent disagreements over wages and working conditions from finally reaching the strike stage.

For years this law was pointed to as a model, both by the railroads and the unions. But now it is headed for the discard, and something less favorable to labor is likely to be enacted simply because organized firemen have persisted in inflicting their wishes on their employers and the public—regardless.

Their short-sighted attempt to create jobs where there is no work to be done is paralyzing a large part of the Nation's economy.

A strike in one or a dozen retail stores can go on indefinitely without hurting anyone but the immediate participants and their employers. The public can go elsewhere to buy.

A strike in a manufacturing plant, such as Chrysler, has wider ramifications because it hurts suppliers at one end of the production cycle and dealers at the other, in addition to the firm's employees, managers, and stockholders. But such a strike can be tolerated by the public, because they can buy new cars elsewhere or run their old ones a while longer.

A railroad strike is different. The individuals directly involved are only a small fraction of the thousands of suppliers, producers, and consumers who are harmed in one way or another.

The public has a stake in the crippling of the Nation's transportation system. And the public won't tolerate such a strike very long without demanding that laws be passed which will keep railroaders from striking.

Such laws will inevitably restrict and hamper many more working people than just the recalcitrant firemen who are at fault in this dispute.

What a foolish strike.

The Glove Industry Is in Peril

EXTENSION OF REMARKS
OF
HON. DEAN P. TAYLOR
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 23, 1950

Mr. TAYLOR. Mr. Speaker, under leave to extend my remarks, I wish to include a resolution of the Glove Cutters' Union, of Fulton County, N. Y., which indicates concern on the part of glove workers who have already felt the pinch of foreign competition in the glove-making industry. The effect of this competition has been felt by the glove makers for the past several years, as evidenced by the fact that in one area alone—Fulton County, N. Y.—there were, as of May 1, 1950, 5,000 glove workers drawing unemployment benefits, and more than 1,600, in addition to the 5,000, who have exhausted their benefits.

The making of gloves is a highly specialized trade. This industry employs thousands and thousands of persons within the United States. Only disaster and chaos will follow if the State Department and the Tariff Commission continue to permit foreign countries employing unskilled, low-paid labor, to compete with the domestic manufacturers of gloves.

The employees and the manufacturers of leather gloves are not the only ones affected by the attitude of the State Department and the Tariff Commission. For the past several months we have witnessed the keen competition of the Japanese with the American producers of woolen gloves. Now comes the threat of Communist-controlled China where embroidered, knitted wool gloves and mittens are being manufactured to compete with our own production in that field. Under the provisions of article XIX all of the concessions in the General Agreement are intended to be included in the "escape clause" and the United States has the absolute right, and it was the intention of the Congress, that it should withdraw or modify any concession in Schedule 20 of the Agreement if an increased import of a product resulting from unforeseen developments and from the concession granted on it would cause or threaten to cause, injury to the domestic industry producing like or similar articles. There is a threat to the domestic industry and there is absolutely no reason, therefore, why the rate should not be put back to 90 percent.

Insofar as leather gloves are concerned, the Members of Congress would aid in the preservation of that industry if each individual Member would express to the State Department, his desire to have leather gloves deleted from the list of commodities on which tariff rate cuts are to be negotiated. It is time the President of the United States, the State Department, and the Tariff Commission is brought to the realization that the glove industry in America is in danger of extinction and only by an immediate and forceful and sensible approach to this problem can the industry be saved.

The resolution follows:

RESOLUTION ADOPTED BY THE CONSOLIDATED GLOVE CUTTERS AND SHAVERS UNION OF FULTON COUNTY, NEW YORK STATE

The following resolution was offered by Mr. Hallenbeck, who moved for its adoption:

"Whereas the Committee for Reciprocity Information notified the 1,500 glove cutters and shavers in the union that further tariff cuts were to be considered by this committee and recommended to the President for adoption, our organization, after giving full consideration to the facts involved, submits this resolution to the President of the United States, the Secretary of State, and to the Committee for Reciprocity Information; and

"Whereas during the past two and a half years, the leather-glove industry located in the area of Fulton County, New York State, has suffered a serious injury caused by general economic conditions beyond its control, to such an extent that, as of May 1, 1950, the entire glove industry had in excess of 5,000 workers drawing unemployment benefits and better than 1,600, in addition to the above 5,000, who have exhausted their benefits; and

"Whereas a large portion of this group are cutters who have devoted their lives to the leather-glove industry, and who face extinction should any further tariff cuts be imposed that will aggravate the actual existing acute situation: Now, therefore, be it

"*Resolved*, That the Consolidated Glove Cutters and Shavers Union of Fulton County are unanimously opposed to any further reduction in the tariff; and the membership votes that a group composed of officers and directors do everything in their power to prevent such cuts from being enacted; and be it further

"*Resolved*, That the glove cutters recommend that, in view of the serious situation already existing, leather gloves be removed from the bargaining list; and, finally, be it

"*Resolved*, That a certified copy of this resolution be forwarded to the following: The President of the United States, the Secretary of State, the Committee for Reciprocity Information, United States Senators Irving M. Ives, Herbert Lehman, and George Malone; Congressman Bernard W. Kearney; James H. Casey, Jr., secretary of the National Association of Leather Glove Manufacturers; and to the entire membership of the House and Senate of the United States."

Norway's Independence Day

EXTENSION OF REMARKS
OF
HON. CHESTER A. CHESNEY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 23, 1950

Mr. CHESNEY. Mr. Speaker, under leave to extend my remarks, I would like to extend to His Excellency King Haakon and to all the people of Norway my warmest greetings on their celebration of the anniversary of Independence Day on May 17.

The American people have always had a warm affection and a great respect for Norway. Many of our finest citizens are direct decesendants of the heroic Viking land. During World War II we became more cognizant than ever before of the valor of Norwegian fighting men and women, and of the Norwegian population. The courage and fortitude of the Norwegian people by practicing the strictest economy, rigidly denying themselves of the smallest luxury in working out their economic recovery has gained them the admiration of all honest people.

During these troubled times the bravery of these people in boldly entering into the North Atlantic Pact along with her sister Denmark is most remarkable when one stops to consider their close proximity to the Russian hordes. May this brave country under the able leadership of King Haakon hold determinedly to its independence and to the traditional freedoms of its citizens.

I know the members of this legislative body will join with me in sending our warmest congratulations and wishes for a greater prosperity and a lasting peace.

The Foreign Aid Bill, or the Folly of a National Inferiority Complex

EXTENSION OF REMARKS
OF
HON. JOHN W. BYRNES
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 23, 1950

Mr. BYRNES of Wisconsin. Mr. Speaker, under leave to extend my remarks, I include a radio broadcast I made over stations in my district on April 18.

When the foreign aid bill was originally before the House, Members will recall that I spoke against the bill and voted against its final passage. Because of my previous support of the Marshall plan, I felt that my constituents should be informed promptly and in detail of the reasons for my position. Those reasons, applicable perhaps in greater degree to the conference report which we consider today, are covered in my April 18 broadcast to my district.

The broadcast follows:

YOUR WASHINGTON OFFICE

This discussion tonight might be titled either "Compromise as a Political Weapon" or "The Folly of a National Inferiority Complex."

I would like to talk about danger of compromise tonight as well as the folly of a national inferiority complex in relation to the recently passed foreign-aid bill. This is the bill which authorizes our 1951 participation in the European recovery program, as well as a number of other foreign projects which I will discuss later. This bill has passed the House and will shortly be considered by the Senate.

I was one of only 86 Congressmen who voted against the bill. My vote was a protest against the use of compromise as a political weapon and against the folly of building up a national inferiority complex as a basis for promoting our foreign policy.

By far the most important part of the foreign-aid bill was the authorization for a 1-year extension of the European recovery program, popularly known as the Marshall plan.

SUPPORTS MARSHALL PLAN

As most of you know, I have consistently supported this program. As a matter of fact, and as coincidence would have it, the same day that former Secretary of State George Marshall made his now-famous speech at Harvard in June of 1947 calling for the self-help approach to European recovery, I was making a speech in Milwaukee before the National Convention of the Young Republicans, calling for an end to the piece-meal approach to European recovery, and asking for a "bold program for peace" geared to a single administration of European recovery programs based upon rehabilitation rather than relief.

In general terms, the Marshall plan followed this approach, and I supported the original program and have voted for its extension since. I have praised the program, when I felt it deserved praise, and I have criticized it when I felt that it deserved criticism. I feel that it has accomplished a good deal in the recovery of Europe, but I do not hesitate to point out that it has not done all I had hoped toward the integration of European economies. The removal of intra-European barriers to trade, such as blocked currencies, embargoes and the like has not proceeded at anywhere near the rate we had the right to expect when we undertook the program.

NEW PROGRAMS ADDED

Still and all, it is my firm belief that we have a definite commitment to the free countries of Europe, that it is to our self-interest to keep them free and strong, and that the Marshall plan should be continued until its planned expiration date in 1952. This does not mean that Congress should not carefully scrutinize each year's authorization to revise the program or to determine how much can be constructively spent or how much this country can safely afford. We have no commitment, in law or in fact, to any exact sum or any set provisions.

In other words, it was my intention to support the extension of the Marshall plan for another year, voting for those reductions in funds which could safely be pruned without impairing the effectiveness of the program.

But—and here is where compromise as a political weapon comes in—I had no opportunity to vote on the Marshall plan, standing alone on its merits. Instead, if I wanted to take the Marshall plan, along with every other Member of the House, I had to take three other programs of dubious merit along with it. (These other three programs were aid to Palestine refugees, most of them Arabs, a $200,000,000 far-eastern assistance program, including $100,000,000 for Korea, and $45,000,000 to get the President's controversial point 4 program under way.) These three programs were thrown into the Marshall-plan authorization by the administration knowing that if they had to stand on their own feet, they would have had a hard time standing up.

LEGISLATIVE TRICK

This is an old legislative trick. It has been used frequently in this Congress and will probably be used again. The idea is to gain votes for programs with little or questionable support by including them in bills for which there is substantial and widespread support. Standing alone, I do not believe more than a handful of Congressmen would have opposed or voted against the Marshall-plan authorization. Similarly, standing alone, as they should have done, these three new foreign-aid programs, would probably have not garnered sufficient votes to pass or would have been changed radically in the process. Put together, however, the whole program, while gathering substantial opposition, passed the House easily.

The question, here, is, "How far must a Congressman go in accepting the bad with the good?"

Let's consider the facts in this case. There is much talk about a bipartisan, or an unpartisan, foreign policy. We may say, I believe, that in its inception the Marshall plan was an example of the highest expression of this kind of policy, since it was developed by a Republican Congress with the support of a Democratic administration. Bipartisanship in foreign policy means more, however, that just Republicans and Democrats voting together for foreign-policy measures. It means that Republicans and Democrats alike must participate in the formulation of those measures, in their development, and in their final acceptance. Bipartisanship is a two-way street.

HARMS BIPARTISANSHIP

I can think of no better way to kill the spirit of bipartisanship in foreign affairs than to jam new programs down the throats of Members of Congress, whose party leaders have not been consulted in the formation of these programs and who are given the stultifying alternative of either voting for these programs, or of casting a vote against a program they may believe in. Vote, we were told last week, for all of these programs, including the ones of which you are skeptical, or you vote against the Marshall plan. I refused to be blackmailed in this manner. The point 4 program, one of the included programs, for instance, while calling for only a nominal sum the first year, has been estimated by the Senate Expenditures Committee staff to entail future spending totaling at least $500,000,000 every year. There are broad and important questions of policy to be determined in the original authorization of such a program. The House, dawdling along while it waits for the Senate to catch up, has plenty of time to give full-scale debate to such a momentous issue. The only possible reason for including it with the Marshall-plan authorization was that its proponents were afraid it could not stand up alone, and that it could only be passed if included with must legislation.

Compromising, in this case, I firmly believe, did almost irreparable harm to the spirit of bipartisanship in foreign policy, prevented full discussion of a vital foreign policy determination and saddled us with three new foreign commitments of dubious merit. It is for these reasons that I refuse to lend my support to the use of such compromise as a political weapon, and it was for these reasons that I voted against the entire bill.

THE HONEST WAY

But, what about the effect of my vote? What if my vote had served to defeat the entire measure? Well, in the first place, I can assure you that if this bill had been defeated largely because of loading it down with new programs, we would have had a new bill, this time dealing only with the Marshall plan, so fast it would have made monkeys out of

those who have said that Congress is a slow-moving body. And further, the new bill would have passed the House with many less votes against it. In fact, I am sure that at least four or five Members from Wisconsin who voted against the bill as presented to us would have voted for a bill dealing only with the Marshall plan. Such action would have been a rebuke to those who speak of bipartisanship but sabotage that policy by autocratic and partisan actions.

However, if this basically honest way of handling this legislative problem had been followed, you and I can hear, even now, the cries that would have arisen in the State Department and from certain segments of the so-called liberal press and among the commentators.

"What will Europe think?", those voices would say. "Congress has repudiated the Marshall plan. Congress has gone back on its friends. Congress has sabotaged our foreign policy. What dopes our friends in Europe must think we are now. Of course, we can remedy this by passing a new bill, but the harm has been done. Our friends in Europe will never trust us again." Thus, the wail would go up in this country, and the tears would flow copiously throughout the land. The sure knowledge of this reaction led many Members to vote for the bill even though they were opposed to many of the things in it.

INFERIORITY COMPLEX

I say to you right now, however, that this wail, which we have heard frequently in the past, is nothing more nor less than an inferiority complex which is doing more harm to this country and its foreign policy than almost any other single factor.

Are we so ashamed of the workings of our representative system of Government that we gage the results of our legislative actions not upon their merits but upon the reaction of other governments to our deliberations?

Are our elected representatives to decide issues, not upon the basis of their understanding of them, but upon the basis of what other nations and governments will think if Congressmen vote "aye" or if they vote "no"?

If our foreign policy has not the strength, if our appeal to other nations in this titanic struggle for the minds of men is so weak, that neither can withstand the pull-and-tug of the legislative process in a representative republic, then certainly we have little hope for success in coming battles of the cold war.

I, for one, have enough confidence in the intelligence of the citizens of Europe to believe they will judge us upon the end result, rather than upon our method of achieving that end result. And, I believe even more strongly, that that end result will be better for us and for the other nations of the world if we meet our problems by recognizing the genius of the American representative system of government instead of stifling that genius by holding the extraneous issue of world opinion over the heads of our legislators.

Too often, in the past, we Members of Congress have been asked to pass foreign-policy legislation, not upon the basis of its merits alone, but upon the basis that we cannot afford to risk lowering our prestige in the world by failing to pass it. There are some members of the State Department, and some Members of Congress, who shudder to subject tender foreign-policy bills to the rough handling of the legislative process for fear that some Member will give foreign nations the wrong impression during debate.

SELLING FREEDOM

In my view, we will win the cold war, God willing, not by gagging free debate, violent though it may be, in order to impress peoples that we are solidly united, but by showing them that we are not afraid to subject the most delicate issue to the crucible of full discussion. We are selling freedom in this cold war; we won't find any buyers for freedom if we enter the arena of conflict with an inferiority complex toward the institutions of that freedom. If our diplomats continue to manifest their distrust of Congress, if they continue to have an inferiority complex toward its actions, they are ill-equipped to sell American freedom to those who must make the choice between it and communism.

Truly, in my opinion, those who have adopted compromise as a political weapon and those who foster a national inferiority complex to promote foreign policy are serving neither sound political action nor a dynamic foreign policy.

Federal Aid and Education

EXTENSION OF REMARKS
OF
HON. THOMAS H. WERDEL
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 23, 1950

Mr. WERDEL. Mr. Speaker, as we walk about the halls adjacent to this Chamber, we hear it often said that the hour of this second session of the Eighty-first Congress is growing late, and that Federal aid to education is as dead as slavery. As the author of a bill to provide Federal aid in those areas of the United States which cannot supply a reasonable minimum standard of education for themselves, I am deeply concerned by these statements. If they are true, then I firmly believe it is the result of the selfish desires of certain proponents of similar legislation. It is undoubtedly true that the American public is becoming more critical of Federal tax moneys raised on their home in order to give supervised aid to their home. I am reminded of the published quotations from Andrew Jackson, in the United States News of December 28, 1936. That publication quoted ex-President Jackson as saying:

SPENDING PUBLIC FUNDS FOR POLITICS

We have it constantly before our eyes that professions of superior zeal in the cause of internal improvement and a disposition to lavish the public funds upon objects of this character are daily and earnestly put forth by aspirants to power as constituting the highest claims to the confidence of the people. Would it be strange, under such circumstances, and in times of great excitement, that grants of this description should find their motives in objects which may not accord with the public good?

Those who have not had occasion to see and regret the indication of a sinister influence in these matters in past times have been more fortunate than myself in their observation of the course of public affairs. * * *

LIMITATIONS ON AUTHORITY OF EXECUTIVE

In the regulations which Congress may prescribe respecting the custody of the public moneys it is desirable that as little discretion as may be deemed consistent with their safekeeping should be given to executive agents. No one can be more deeply impressed than I am with the soundness of the doctrine which restrains and limits, by specific provisions, executive discretion, as far as it can be done consistently with the preservation of its constitutional character. In respect to the control over the public money this doctrine is peculiarly applicable. * * *

The duty of the legislature to define by clear and positive enactments, the nature and extent of the action which belongs to the Executive to superintend springs out of a policy analogous to that which enjoins upon all the branches of the Federal Government an abstinence from the exercise of powers not clearly granted. * * *

The same rule of action should make the President ever anxious to avoid the exercise of any discretionary authority which can be regulated by Congress. The biases which may operate upon him will not be so likely to extend to the representatives of the people in that body. In my former message to Congress I have repeatedly urged the propriety of lessening the discretionary authority lodged in the various departments. * * *

EQUAL LOADS INTENDED FOR THE STATES

The shortest reflection must satisfy everyone that to require the people to pay taxes to the Government merely that they may be paid back again is sporting with the substantial interests of the country, and no system which produces such a result can be expected to receive the public countenance. * * * A distribution to the people is impracticable and unjust. * * * It would be taking one man's property and giving it to another. * * * We know that they contribute unequally, and a rule, therefore, that would distribute to them equally would be liable to all the objections which apply to the principle of an equal division of property. To make the general Government the instrument of carrying this odious principle into effect would be at once to destroy the means of its usefulness and change the character designed for it by the framers of the Constitution. * * *

It was certainly the intention of that provision of the Constitution which declares that "all duties, imposts, and excises" shall "be uniform throughout the United States" to make the burdens of taxation fall equally on the people in whatever State of the Union they may reside. But what would be the value of such a uniform rule if the moneys raised by it could be immediately returned by a different one which will give to the people of some States much more and to those of others much less than their fair proportions? * * * It would be easy to show how by the operation of such a principle the large States of the Union would not only have to contribute their just share toward the support of the Federal Government, but also have to bear in some degree the taxes necessary to support the governments of their smaller sisters.

SYSTEM NOT SANCTIONED BY FOUNDERS

A system liable to such objections can never be supposed to have been sanctioned by the framers of the Constitution when they conferred on Congress the taxing power, and I feel persuaded that a mature examination of the subject will satisfy everyone that there are insurmountable difficulties in the operation of any plan which can be devised of collecting revenue for the purpose of distributing it. Congress is only authorized to levy taxes "to pay the debts and provide for the common defense and general welfare of the United States."

There is no such provision as would authorize Congress to collect together the property of the country, under the name of revenue, for the purpose of dividing it equally or unequally among the States or the people. Indeed, it is not probable that such an idea ever occurred to the States when they adopted the Constitution. But however this may be, the only safe rule for us in interpreting the powers granted to the Federal Government is to regard the absence of express authority to touch a subject so important and delicate as this is as equivalent to a prohibition * * *

All will admit that the simplicity and economy of the State governments mainly depend on the fact that money has to be supplied to support them by the same men, or their agents, who vote it away in appropriations. Hence, when there are extravagant and wasteful appropriations there must be a corresponding increase of taxes, and the people, becoming awakened, will necessarily scrutinize the character of measures which thus increase their burdens.

By the watchful eye of self-interest the agents of the people in the State governments are repressed and kept within the limits of a just economy. But if the necessity of levying the taxes be taken from those who make the appropriations and thrown upon a more distant and less responsible set of public agents, who have power to approach the people by an indirect and stealthy taxation, there is reason to fear that prodigality will soon supersede those characteristics which have thus far made us look with so much pride and confidence to the State governments as the mainstay of our Union and liberties * * *.

BAD EFFECT OF THE POLICY ON LEGISLATURES

The State legislatures, instead of studying to restrict their State expenditures to the smallest possible sum, will claim credit for their profusion, and harass the general government for increased supplies. Practically there would soon be but one taxing power, and that vested in a body of men far removed from the people, in which the farming and mechanic interests would scarcely be represented. The States would gradually lose their purity as well as their independence; they would not dare to murmur at the proceedings of the general government lest they should lose their supplies; all would be merged in a practical consolidation, cemented by widespread corruption, which could only be eradicated by one of those bloody revolutions which occasionally overthrow the despotic systems of the Old World.

The safest and simplest mode of obviating all the difficulties which have been mentioned is to collect only revenue enough to meet the wants of the Government, and let the people keep the balance of their property in their own hands, to be used for their own profit. Each State will then support its own government and contribute its due share toward the support of the general government.

BIG NATIONAL DEBT A PERIL FOR COUNTRY

The experience of other nations admonishes us to hasten the extinguishment of the public debt. No political maxim is better established than that which tells us that an improvident expenditure of money is the parent of profligacy, and that no people can hope to perpetuate their liberties who long acquiesce in a policy which taxes them for objects not necessary to the legitimate and real wants of their government.

Flattering as is the condition of our country at the present period because of its unexampled advance in all steps of social and political improvement, it cannot be disguised that there is a lurking danger already apparent in the neglect of this warning truth, and that the time has arrived when the representatives of the people should be employed in devising some more appropriate remedy than now exists to avert it. * * *

WORKERS ARE HARDEST HIT BY INFLATION

The progress of an expansion, or rather a depreciation, of the currency by excessive bank issues is always attended by a loss to the laboring classes. This portion of the community have neither time nor opportunity to watch the ebbs and flows of the money market.

Engaged from day to day in their useful toils, they do not perceive that although their wages are nominally the same, or even somewhat higher, they are greatly reduced in fact by the rapid increase of a spurious currency, which, as it appears to make money abound, they are at first inclined to consider a blessing.

It is not so with the speculator, by whom this operation is better understood, and is made to contribute to his advantage. It is not until the prices of the necessaries of life become so dear that the laboring classes cannot supply their wants out of their wages that the wages rise and gradually reach a justly proportioned rate to that of the products of their labor.

When thus, by the depreciation in consequence of the quantity of paper in circulation, wages as well as prices become exorbitant, it is soon found that the whole effect of the adulteration is a [drain] (word inserted) on our home industry for the benefit of the countries where gold and silver circulate and maintain uniformity and moderation in prices. It is then perceived that the enhancement of the price of land and labor produces a corresponding increase in the price of products until these products do not sustain a competition with similar ones in other countries, and thus both manufactured and agricultural productions cease to bear exportation from the country of the spurious currency, because they cannot be sold for cost.

When the agents for the collection of taxes due to the Federal Government go forth to make their collections from our citizens, they return with more money from my State of California than from any other State in the Union, except Illinois, New York, and Pennsylvania. From my State, those agents collected, in 1949, $2,955,909,545. The total income of the State of California was only $14,000,000,000 last year.

When the cost of State and local government is added to the $3,000,000,000 collected by the Federal Government in California, it is apparent that the people of that State are paying approximately one-third of the State's total income for costs of government.

Before discussing the Federal-aid-to-education bills, I want to point out to the House certain glaring realities in regard to Federal grants-in-aid as they affect California. California received back from the Federal Government, for all purposes, in 1949, only $372,984,862. In other words, California received back from Washington 12.27 percent of the money collected by the Federal Government in that State.

If we deduct 70 percent of the total paid by California for the cost of Federal Government, as California's proportion of the cost of past wars, public debt, cold wars, and all of the costs of the general administration of Government, including the 2,080,000 Federal employees in the general administration of Government, you have left $886,000,000 paid by California as its proportionate cost of the Federal grants-in-aid program. They cover old-age assistance, roads, veterans' rehabilitation, soil conservation, agriculture extension, school-lunch programs, vocational education, public health service, child health service, unemployment compensation, National Guard, and many others, totaling about 50 such programs.

By deducting what California actually does get back, namely: $372,984,862 from $886,000,000, you will see that California loses in the whole Federal-aid manipulation, about $513,015,138 each year. That is approximately more than 57 cents out of every dollar. In other words, 57 cents out of every dollar collected in California by the Treasury Department for Federal grants-in-aid programs are not returned to California.

The citizens of California are beginning to realize that the words "Federal aid" are a deception, and that for California taxpayers, the belief that there can be Federal aid, is an illusion.

There is no doubt but what the Federal Government is constantly impoverishing the States and the local State subdivisions, so that they cannot adequately provide for their own self-government and desired local government projects. Agencies of the United States Government are successfully using Federal aid projects as an excuse for taking money from California citizens for other purposes. In other words, California is paying annually for Federal-aid projects, $513,788,000 that by rights should go back to California. That is a sum equal to about twice the original estimated cost of the Central Valley project. It is paid annually by the people of California and voted by this Legislature away from California in vote-getting projects in other parts of this Nation as prophesied by Andrew Jackson. We have about 2,000,000 heads of families in California. By its secret tax-collecting methods, our National Government collects $1,500 a year out of the standard of living of each family in California. It returns back to California only $186 per family. It collects for so-called Federal-aid projects $443 per family per year and spends $257, per California family, of the amount collected in other parts of the United States, for the political purposes of the National Government.

It is small wonder, therefore, that the California housewives who must balance the family budget are awakening to the fact that there is no such thing as Federal aid for California. The citizens of California are awakening to the fact that they would be much better off to keep their own money, manage it themselves, and raise their own teachers' salaries, out of their own funds.

Mr. Speaker, at this point I want to make reference to the table printed in the CONGRESSIONAL RECORD, at page 5316, on April 29, 1949. The table was prepared by the Council of State Chambers of Commerce, based on data prepared by the National Education Association, in conformity with provisions of S. 246, as amended February 4, 1949. This table differs somewhat from table 2, shown in the Senate Labor and Welfare Committee report on S. 246, which fails to show the penalty amounts deducted in the case of 10 States under section 4 (D) of S. 246. The figures in the table showing what each State's taxpayers would pay are based on tax-distribution formula used in Spending Facts Bulletin No. 36. The table purports to show what each State gets and what each State will

pay under Senate bill 246. I, therefore, quote it as follows:

What each State gets and what each State pays under S. 246

	What each State would receive	What each State's taxpayers would pay toward the program	Net gain (+) or loss (−)
Alabama	$14,451,000	$3,056,000	+$11,395,000
Arizona	1,500,000	911,000	+589,000
Arkansas	11,708,000	1,716,000	+9,992,000
California	8,435,000	22,304,000	−13,869,000
Colorado	1,240,000	2,171,000	−931,000
Connecticut	1,685,000	4,638,000	−2,953,000
Delaware	280,000	1,072,000	−792,000
Florida	2,365,000	3,458,000	−1,093,000
Georgia	14,163,000	3,780,000	+10,383,000
Idaho	625,000	804,000	−179,000
Illinois	7,490,000	21,125,000	−13,635,000
Indiana	3,825,000	5,978,000	−2,153,000
Iowa	2,625,000	3,968,000	−1,343,000
Kansas	1,880,000	3,110,000	−1,230,000
Kentucky	13,367,000	3,137,000	+10,230,000
Louisiana	10,370,000	3,003,000	+7,367,000
Maine	945,000	1,206,000	−261,000
Maryland	2,010,000	4,557,000	−2,547,000
Massachusetts	4,115,000	9,571,000	−5,456,000
Michigan	6,235,000	12,546,000	−6,311,000
Minnesota	2,920,000	4,960,000	−2,040,000
Mississippi	15,469,000	1,743,000	+13,726,000
Missouri	3,790,000	6,890,000	−3,100,000
Montana	585,000	858,000	−273,000
Nebraska	1,305,000	2,359,000	−1,054,000
Nevada	125,000	349,000	−224,000
New Hampshire	505,000	777,000	−272,000
New Jersey	3,840,000	8,713,000	−4,873,000
New Mexico	3,130,000	697,000	+2,433,000
New York	11,925,000	41,499,000	−29,574,000
North Carolina	21,070,000	4,209,000	+16,861,000
North Dakota	860,000	911,000	−51,000
Ohio	7,320,000	15,629,000	−8,309,000
Oklahoma	8,350,000	2,868,000	+5,482,000
Oregon	1,410,000	2,708,000	−1,298,000
Pennsylvania	10,120,000	20,803,000	−10,683,000
Rhode Island	645,000	1,555,000	−910,000
South Carolina	13,365,000	1,930,000	+11,435,000
South Dakota	1,080,000	885,000	+195,000
Tennessee	10,629,000	3,565,000	+7,064,000
Texas	10,845,000	10,804,000	+41,000
Utah	1,170,000	885,000	+285,000
Vermont	390,000	483,000	−93,000
Virginia	4,074,000	3,968,000	+106,000
Washington	2,250,000	4,236,000	−1,986,000
West Virginia	9,360,000	2,305,000	+7,055,000
Wisconsin	3,325,000	5,522,000	−2,197,000
Wyoming	290,000	429,000	−139,000
District of Columbia, Alaska, Hawaii, etc.	8,622,000	3,432,000	+5,190,000
Total	268,083,000	268,083,000	

I direct your attention to that part of the table disclosing the figures in connection with California. You will observe that under Senate bill 246, California would pay in $22,304,000, and would receive back only $8,435,000. California would annually lose in this transaction $13,869,000.

I also direct your attention to the fact that S. 246 now only purports to appropriate about $300,000,000 per year, and that the eventual purpose of some of its proponents is that the total appropriation approach the sum of $5,000,000,000, in a few years. The Federal Government and the planners of the Central Valley project have been working on and expanding the cost of that project for almost 20 years.

From the foregoing figures, it can be seen that S. 246, under the guise of Federal aid to education in California, would deprive California taxpayers in the period of time that the Central Valley project has been in the course of construction of a sum equal to the original estimated cost of that project. That is to say, the difference between what California would pay for Federal aid to education and what it would receive in the program, as it appears in its infancy under S. 246, would, in 20 years, deprive California of approximately $280,000,000. If the reported purpose of some of the proponents of the legislation is accomplished, it would deprive California annually, under the formula of S. 246, of the sum of $236,000,000.

I know of no person in California who does not desire to improve our public-school system and pay teachers' salaries in sufficient amount to justly compensate them for their years of education and to adequately staff our California schools with competent teachers. However, many of our California citizens are being misled by some of the proponents of this legislation. The argument is that the amount a State receives out of Federal-aid projects cannot be measured only in dollars and cents. The very worth-while argument is presented that ignorance is a national problem important to all local areas because uneducated persons can and do travel across State lines and wherever those persons are located in their adult years they cannot meet their requirements of citizenship. I believe we must all admit the fact that certain areas of our country with low income and large numbers of children are not able to adequately finance education at the local level. If we admit that condition and also admit that it creates a national problem, then, of course, California should acknowledge its just expense in alleviating the condition.

However, I want to refer you again to the table that I have heretofore mentioned in my remarks. I also want to direct your attention to the fact that S. 246 sets forth a formula admittedly based on the so-called rich State-poor State concept. The original allotment to each State is either, first, the amount by which $50 multiplied by the number of children from 5 to 17 years of age in the State exceeds a sum equaling 1 percent of a 5-year average of aggregate individual income for that State; or, alternatively second, a flat amount of $5 per child from 5 to 17 years of age, whichever is greater.

You will note from the third column of the table that the amount is set forth by which all of the States would either gain or lose under the formula. There are 18 States that gain and there are 30 States that lose money under the formula. In theory, the States that lose money are the richer States, and, therefore, should aid the 18 States that gain money. Under the theory of the bill, the 30 States that lose money are all able to finance their own education systems within their States. If we divide the amount that a State pays, by the total estimated cost of $268,083,000, we will determine the percentage that the aggregate taxpayers of each State pay on the total appropriation. In the case of California, that is 8.2 percent. Then, if you will total the amount of money to be paid to the poor States, you will find it to be about $120,000,000. In other words, the proponents of the bill, under the guise of aiding education in the United States, are raising only $120,000,000 for needy areas and yet raise $148,000,000 for States that admittedly can finance their own school systems. By multiplying the $120,000,000 by 8.2 percent, it is readily discernible that the State of California would pay $9,840,000 of the sum raised to aid the needy States. It is, therefore, also apparent that California pays $12,564,000 into the $148,000,000 pool, to be distributed to States that admittedly can finance and operate their own schools, and yet receives back only $8,425,000. In other words, after paying its just portion to aid the needy States, California still pays $12,564,000 annually to help the Federal Government infiltrate education in States that can operate and finance their own schools, and only receives back 57 percent of that amount. This amounts to an annual appropriation from the taxpayers of California for the political purposes of the Federal Government, to be handed out to States which, like California, admittedly can finance their own school systems, the sum of $3,129,000. This is a deliberate fraud and theft of California taxpayers' money and if some of the proponents of the bill accomplish their purpose, to increase this total appropriation to $5,000,000,000, the fraud in California will be stupendous. In addition to paying its just portion to aid the needy States, it will be annually deprived of $53,000,000, to be sent to States that admittedly have no more need for aid than California has.

Under such circumstances, it is readily understandable why the State government officials of California, like those of all the other States, have made no request for Federal funds to aid the schools of their States. At the present time, the children of school age are increasing in California at the estimated rate of 40 percent every 2 years.

No person who understands the provisions of S. 246 and is aware of the circumstances that place urgent demands on California schools, could reasonably support S. 246. The cost of educating a child in average daily attendance, in California, is estimated at $180 per year. It seems unbelievable that persons attached to the California school system should support a powerful teachers' lobby in Washington, when they know that California can only receive $5 per school child under the terms of S. 246. In compliance with the desires of that lobby, they are now politically active in California. They are propagandizing the taxpayers of that State and recommending that our presently over-burdened taxpayers pay $13,869,000 per year to the other States of the Nation. They do this knowing that California is now being flooded with new families from those other States, increasing our school responsibilities at an alarming rate. These new children will cost California at least $180 per year to educate. Some of these proponents undoubtedly act on selfish motives—perhaps, they eventually hope to earmark funds received from Washington for teachers' salaries. An analysis of S. 246 will demonstrate that such

persons are shortsighted. Out of a selfish motive, they are deliberately aiding in setting up a Washington bureau that will further disable California in its ability to pay higher teachers' salaries and increase other public school facilities.

A review of the history of public education in California will conclusively demonstrate that both the people and the legislature of that State are desirous of improving our excellent public schools and increasing teachers' salaries to where they are fair and reasonable. There are still other persons attached to the California public school system who support S. 246 as a political stepping stone for themselves. We hear reports that some people in the education field in California are mouthing falsehoods and half-truths conceived by some of their Washington lobbyists. They are willing to prostitute their prestige for personal political gain, and knowingly make confusing statements on this subject, which is difficult for the average person to understand. To be a demagogic functioning part of such a lobby as a salaried employee in the field of education in California is a situation that I cannot find words to describe.

The only conceivable purpose of the provision granting $5.00 per child of school age in S. 246 to States that admittedly can finance their own education, is to open the door to a selfish lobby in the future. I have received the following wire from one of such persons. He is presently the County Superintendent of Schools of Kern County, Calif. The wire as received by myself, reads as follows:

APRIL 22, 1950.

Hon. THOMAS H. WERDEL,
House Office Building,
Washington, D. C.:

Two years ago you pledged yourself to support Federal aid to education without Federal control. Your single vote in committee defeated S. 246 which did not contain Federal control. I have liked you and your family. Members of my family are your close friends. From my point of view you have not carried through on your pledge to education and I can be satisfied with results only. Passage of the Burke bill will, however, clear your record since you single-handedly defeated S. 246. You have the obligation of seeing that an adequate Federal aid bill without Federal control is passed into law before honor is restored with Catholics, Masons, teachers, trustees, etc., all opposed to Federal control of education. It is obvious that Federal aid to education can be continued after a history of 165 years' support with Federal control.

JESSE D. STOCKTON,
County Superintendent of Schools,

I cite the wire to show how far the National Education Association has gone in organizing the country for political activity. It also demonstrates how they will use elected school officials in the States, who are themselves politically ambitious, to aid in setting up a Washington Bureau intended to accomplish the eventual control and centralization of education in the United States. The wire states that I pledged myself to vote for a particular measure before I was elected. This is false. S. 246 had not even been drafted at the time I am alleged to have made the pledge. The State law of California makes the solicitation of such promises, as well as the giving of such promises by a candidate, a crime. Perhaps, that is too much to expect the Kern County Superintendent of Schools to know, so I will quote the California law in that regard:

SUBSEC. 5006. Soliciting or giving pledge to vote in specified way on certain prospective measures (acts constituting misdemeanor): Every person is guilty of a misdemeanor who, either individually or as an officer or member of any committee or association, solicits or demands of any candidate for the legislature, supervisor, school director, or for any legislative body, that he vote for or against any particular bill or measure which may come before the body to which he may be elected. Every candidate for any of such offices is guilty of a misdemeanor who signs or gives any pledge that he will vote for or against any particular bill or measure that may be brought before any such body.

(Excepted pledge or promise:) The provisions of this section do not apply to any pledge or promise that any candidate may give to a convention by which he may be nominated for any such office, or to those who sign a certificate for his nomination. (Enacted 1939.)

The wire also insists that in order to salvage my lost honor, I aid in the immediate passage of the so-called Burke bill. It is my considered opinion that neither the author of the wire, nor anyone else in America, understood the language of the Burke bill at the time the wire was sent. The only thing that was certain in the Burke bill was that the desires of the CIO and certain elements of the National Education Association would be accomplished. For political purposes, the bill did earmark about $300,000,000 for school teachers' salaries. It is a definite deliberate step away from local control of education. It is an expression of National policy that the local school boards will not be fair and reasonable in determining how local school funds for their respective school districts should be expended.

The gentleman from the Tenth District of Ohio [Mr. BURKE] is the author of the Burke bill. The congressional directory discloses his many official connections with the United Auto Workers, CIO. The fact that the CIO are actively supporting the gentleman's bill cannot be denied.

In the last sentence of his wire, the Kern County superintendent of schools uses the common tactic of demagog politicians by referring to groups and classes of honorable American citizens to which we all owe and give respect.

The fact is that on numerous occasions I have written the Kern County superintendent of schools, enclosing copies of proposed legislation, expecting to receive comments from him as to how such legislation would affect Kern County, Calif. On those occasions I also anticipated that I might receive an opinion in the interest of California schools, expressed by a person qualified on the subject. I received few replies. They were expressed in generalities and it now seems clear that even at that time the author of the wire had alined himself with the left-wing invasion which has already taken control of the Democrat central committee in that county. He is apparently willing to dignify their cause by having the title "County Superintendent of Schools" attached to it. He is apparently willing to participate in their demagoguery by aiding in their programs of falsehoods, half-truths, confusion, corruption, and Federal control.

The wire also states that I singlehandedly defeated S. 246. This is also false. I am not advised whether the Kern County superintendent of schools knew the statement to be false when he made it or not. It is possible that he was acting on the advice of the power-hungry element of the National Education Association lobby. The fact is, I could not support S. 246 without amendments to protect California. It is also a fact that, in my opinion, S. 246 was so amended in the House Education and Labor Committee that no person could reasonably support it when the motion was made to vote it out of committee. It is a fact that on March 15 I cast the controlling vote to keep the subject of Federal aid to education open for further discussions in the House committee, including S. 246.

I could not support S. 246 in its present form because it discriminated against California schools as hereinabove set forth. I also could not support aid to States who admittedly can finance their own education. Such action, in my opinion, is only requested by proponents of this legislation so that an existing vicious lobby can use it for selfish political purposes. In my opinion, if the selfish purposes were accomplished, it would not benefit the school teachers of my State. In this connection, I am also unwilling to participate in a movement by that lobby group to so earmark funds as to take them from under the control of the local school board of trustees.

I also oppose any provision which would give money to a State on the basis of children of school age in that State, rather than on the basis of children actually attending school. The Southern States have enjoyed a long history in our country. They were not always "poor States." However, in all that history, some of them have not seen fit to pass truancy laws and require a certain degree of education of their children of school age. I believe that if we handed ten or fifteen million dollars per year to some of the political machines of the Southern States, to be used as they saw fit without truancy laws, we would be creating the very situation that would soon demand Federal control of education in those States. The demand would come from the other States of the Nation that are paying the bill.

The education discussions in the House committee charged with the responsibility of hearing that legislation have been interesting. I am one of those who could not support a requested amendment providing for bus transportation for private schools. I want to make it clear that I do not believe that there were any proponents of such amendments that desired Federal aid to

private schools. In fact, I am firmly convinced that those groups that expressed the desire for Federal assistance in transporting children to private schools would actively and strenuously oppose the principle of Federal aid to private schools, as such. However, I could not agree with such groups that transportation to school is an auxiliary service to be rendered to the individual child. I felt that such service would be cumbersome and difficult to render. It would be unreasonably costly. I also felt that adequate teachers' salaries, playground facilities, school buildings, and so forth, could be classified as benefits to the individual child, as well as hot-lunch programs, medical attention, and transportation. The question in my mind was: Is bus transportation not only of benefit to the individual child but is it also a benefit to the private school? I felt that it was. I believe that private schools would be developed in the future in reliance upon bus facilities. They would be geographically located for efficiency purposes in reliance upon school transportation facilities supplied by Washington. I believed that a threat of discontinuance of such services in the future, after private schools had oriented themselves to the granted services, would conclusively demonstrate that they would affect the private schools of the future. It is the threat of discontinuance of Government hand-outs that leads to eventual Government control and direction.

It is my honest opinion that the Federal lunch program and physical and medical examinations extended to children through school facilities are not education and are not of particular benefit to a school so as to alter its economic condition. The transportation amendment is to be distinguished from these two services in that it is not only of benefit to the individual child, but it is a definite economic benefit to private school education, and could not help but alter the financial policies and school plans of such schools.

Mr. Speaker, I am one of three Members of this House who introduced identical bills providing for Federal aid to needy States. The number of my bill is H. R. 7221. It has been before the Committee on Education and Labor, but no appreciable time was allotted by the chairman for its consideration. That bill is free of the following objectionable features of Senate bill 246:

First. It does not grant aid to areas of the United States which admittedly do not need such aid. It grants aid in proportion to the respective States' efforts to aid themselves.

Second. It covers all States whenever the income of the States falls so low that such States cannot finance a minimum standard of education by spending that percentage of their State income spent on the average by the other States of the Nation. It, therefore, would not lead to greater and greater Federal control. The respective State departments of education would have complete control of the funds.

Third. H. R. 7221 is not both unfair and dishonest as is Senate bill 246. It is an honest proposal. According to its avowed purposes, it would distribute money only to those States that are put forward as indigent cases. In this connection, Senate bill 246 rests on the same purpose by way of argument, but by its language it takes from all of the States and gives back to all of the States. Senate bill 246, therefore, runs up a heavy bureaucratic expense and thus demonstrates that its proponents want an overall distribution so as to eventually exercise over-all control.

Fourth. H. R. 7221 is not a group pressure movement. Although in fact it accomplishes the purposes expressed Nation-wide by the National Education Association, it is not supported by that lobby. There is no probability under this bill that the powers of local school trustees would ever be curtailed by earmarking the funds for the purposes of some lobby.

Fifth. The bill would adequately finance the needy States at a total cost of only $120,000,000. The principles expressed in the bill would not require or permit the appropriation to grow into billions in a few years. There is nothing in the bill to induce proponents to grow bolder.

Sixth. Instead of undermining State responsibility and encouraging indifference at the local level, H. R. 7221 actually stimulates local responsibility and effort.

Seventh. By its formula, it only gives aid to the respective needy States on the basis of children actually attending school, as distinguished from grants for all children in the State of school age. This provision would stimulate the respective States to require the attendance in school of the children of those needy States.

The bill I introduced admits that the inability to give adequate education in low-income areas of the country creates a national problem. It admits that the State of California has an obligation of about $9,000,000 per year in that regard. But it saves $13,000,000 a year of California income to be expended in that State as its citizens might desire.

I want to point out again that I believe the Federal Government, by its policies, is bleeding the States of the Nation white. Consumers in the low-income areas of our country are paying exorbitant taxes, collected by the producers of automobiles, washing machines, and even food that poor families must eat. I believe the whole necessity of Federal aid to education could be alleviated by a change in those spending policies. The adoption of all of the Hoover Commission recommendations and the effective use of the Hoover Commission plans by the administration would save the Nation at least $2,225,000,000.

If Congress believes that all of the States or any of them is unable financially to provide an adequate system of public education, then there is a way that Congress can help. It would be more effective than through any Federal-aid-to-education bill providing for $300,000,000 to be distributed among the States. For instance, it is estimated that S. 246 would provide $11,708,000 to the State of Arkansas; it is one of the poor States. Of this appropriation, Arkansas taxpayers would contribute $1,716,000. Thus, Arkansas would gain about $9,992,000 at the expense of taxpayers of other States, including California. There is a much better way to help Arkansas, California, and all of the other States, too. It is a very simple method, except that it might cost this administration some votes. The Hoover Commission reports can be adopted and honestly put into effect by this administration. We could also save the entire Nation over $2,225,000,000 in Government payroll alone. This saving to Arkansas taxpayers would be approximately $14,000,000. Arkansas could then increase her own State support to education by that amount, which is over $4,000,000 more than the Washington planners intended to give her from my State and the other so-called rich States. This would not put any greater burden upon Arkansas than it now has and it would put no burden whatever on taxpayers of the other States. Certainly, there would be no threat of further centralization of education. If this policy could be adopted, then California would not pay in an additional $22,000,000 as required under S. 246, but she would actually be taxed $267,000,000 less than she is at the present time. California then could raise that amount without any additional burden on the standard of living of her people and build her own reclamation projects comparable to Central Valley, or, she could enter upon some other projects deemed by the local people to be in the general welfare.

I, of course, insist that this is the right way for Congress to help my State and at the same time, help the States of low income. As I have heretofore pointed out, California is now paying $2,955,909,545 a year to the Federal Government. Of that, she gets back about 12 percent. S. 246 provides that the Federal Government take still more from California and give back only about 32 percent.

Mr. Speaker, what would we think of a doctor who drained three pints of blood from a man already weak, and then exclaimed, "Why, you look anemic. I am sorry for you. You need aid. I am going to give you a transfusion of a pint of blood from my plasma bank."

Mr. Speaker, I sincerely believe that the first step in solving some of our so-called minority problems is to insure available education facilities so that free men have a full opportunity to demonstrate their individual excellence. I believe that the "gimme mine" philosophies of the pressure groups that made this administration possible have forced upon our country a spending program that is unjustifiable. If our country survives, it will be looked upon as scandalous. That political program of tax and spend forces producers of necessities to act as tax collection agents for the Federal Government in the areas of our country that have low incomes. Under those circumstances, I not only believe that a lack of education in those areas is a national problem, but I submit to you that it is obvious this situation has been created

in the well of this House and in the other body by the tax-and-spend program of this administration and its predecessor. The pressure groups have provided a compass, now being used by this administration's ship of State—the four points of that compass are well marked; they point in all four directions—to Government confusion, corruption, communism, and control.

The prophecies of Andrew Jackson are coming true. Government policies of cheap money and low interest rates have destroyed the effectiveness of private-school endowments. High income taxes and high inheritance taxes have also greatly shrunk the sources from which gifts for private schools have heretofore come. A threat of Federal control and centralization of public-school education heretofore operated by local cities, towns, and school boards is a justifiable warning to the fathers and mothers of over 2,000,000 children annually attending private elementary and secondary schools. There are those in the education field who even desire to extend Washington subsidies and controls to junior colleges and colleges.

It is poor deception for the drafters of legislation to put a clause in a subsidy bill providing for no Federal control as was done in Senate bill 246. The language of the bill, delegating and withholding powers, is the controlling feature. We have only recently received a Supreme Court decision in that regard. When farmers accepted subsidies they also got controls; when some of them objected to the controls a test case went to the Supreme Court. Justice Jackson ruled: "It is hardly lack of due process for the Government to regulate that which it subsidizes."

Mr. Speaker, in closing, I desire to quote a portion of the remarks of the gentleman from New York, the Honorable RALPH W. GWINN, found in the CONGRESSIONAL RECORD for Saturday, July 26, 1947. In those remarks, the gentleman from New York [Mr. GWINN] ably expresses his conclusions in regard to the lobby now desiring to mold the Federal aid to education bill. Those remarks are as follows:

> In this connection, it is most enlightening to see how the lobby works and also to see revealed in its public statements the character of the people who expect to control the vast money power of Federal aid and control when and it if is ever granted.
>
> The principal registered lobbyist for Federal aid is the National Education Association. It has a membership of 386,643 paying dues for the year ending May 31, 1947, of $1,138,100. Their headquarters and personnel are greater than the Republican and Democratic Party headquarters combined. It is one of the most active power lobbies in Washington and has been for many years. Through its Journal, of national circulation among teachers, it announces:
>
> "Arrangements have been made to throw every resource of the NEA [National Education Association] back of the campaign for Federal aid to education." (NEA Journal, February 1943, p. 35.)
>
> "Activities [summarized] of the Director [Howard A. Dawson, director of rural education, NEA], in behalf of this bill [the Harrison-Black-Fletcher bill, 1937] as follows: Conducted negotiations for sponsorship and introduction of the bill in both Houses, through executive secretaries of State education associations and State chairman of the legislative commission arranged for controlling of candidates for Congress, for the United States Senate, and for governor in a majority of the States." (NEA convention board, Cleveland, 1937 report, p. 946.)
>
> The lobby speaks again:
>
> "We have powerful friends in Congress. * * * The power of the organized teaching profession has but begun to find expression and I predict that before next November 7 (election date) there will be many people in the Nation aware that the school children of America have a voice of justice and equity as well as a voice of power and of influence." (Dr. Howard A. Dawson, CONGRESSIONAL RECORD, 1944, p. A4258.)
>
> Its Journal constantly hammers away for federalization, as follows:
>
> "October is an important month for the campaign on behalf of S. 637–H. R. 2849, because it is the month before election. * * * Candidates who oppose this legislation or who are indifferent to the public schools should be defeated wherever possible." (NEA Journal, September 1945.)
>
> We observe that whether the year be 1937, 1943, 1944, or 1945, the partisanship and intimidation remained the same. Who believes that this self-righteous and haughty spirit might change in 1948 or any other future year when the will of this organized minority of "benevolent" seekers after goodness through Federal compulsion, exercised by Federal bureaucrats, has been imposed upon American education? Imagine them as the educational controllers in Washington dishing out billions and staying content to exercise "no control." Imagine them as administrators of Federal education changing into bureaucratic lambs that would never think of encroaching upon the rights of free citizens to run their own schools, administer their own funds, and control the education of their own children in their own communities.
>
> Then imagine what will happen when a million school teachers, tens of thousands of janitors and assistants, all educational personnel, have become the direct beneficiaries of appropriations which they might get by such organized pressure politics. Will they not quite generally support the candidates for Congress who make the biggest promises? Each succeeding election our Central Government will become more nearly controlled by employees and beneficiaries from appropriations. It is the vicious circle of statism. Add to the present 2,000,000 Federal employees a million Government-controlled or influenced teachers and public-school personnel. Then add a million tenants in the proposed Federal public housing, and you have attained the socialized state, which you will probably have to keep indefinitely.
>
> In the face of such a way of feeling and thinking, it is imperative that we remind ourselves of the brutal truth that the modern state today everywhere is killing off a free society. Wherever the government legislates and appropriates it curtails and extinguishes still another realm of personal and communal liberty, responsibility, and economic capacity. In all languages and among all peoples, big government, however created, means less freedom. The nation is always taken over, not by the good but by the roughest and toughest when the one-party overpowering police state is finally organized.
>
> We should constantly remember that in our country, until now, two areas of the human spirit have been left alone by our Central Government. Two areas have been left free in which the citizens themselves have governed—namely, their religious institutions and their free schools. Protecting the religious area there is the specific provisions of the Constitution itself, forbidding the Government to make any laws restricting freedom in religious matters. Above any law of the state, man's obligation and loyalty to God stand.
>
> Having thus safeguarded the religious freedom by explicit language, our Constitution proceeds to treat Federal interference in education with a dignified and eloquent silence. This silence reflects the fundamental faith of the early American Government in its free citizens as the proud and responsible custodians of their children's education. Until now the individual States, their legislatures, counties, towns, and cities have stood fast in the maintenance of their constitutional liberty against each encroachment by Federal authority in the field of education. Since this is an established fact the insidious pressure groups demanding the unconstitutional interference with local self-government of schools, based upon local support and responsibility, stand revealed as being unauthorized and unrecognized by any political subdivision of any of the States.
>
> They must be stopped. They must be stopped by a growing passion for self-government and by a resulting fear of the power and propaganda of the Federal Government.
>
> Modern history proves with tragic clarity that where a nation's education is placed under a federally controlled system, freedom dies out. May the Federal Bureau of Education never become the Federal Commissar of Education in America.

In the light of the remarks of the gentleman from New York [Mr. GWINN], it is apparent why H. R. 7221, introduced in this Congress by myself, and other legislation properly confining aid to the areas that need it, have not had consideration. To my knowledge, none of the States of this Nation have asked for Federal aid. The proponents of this subject are the above-mentioned lobby and other spending pressure groups. They do not want permanent legislation covering all States of the Nation when either at the present time or in the future, they need reasonable assistance for adequate education. They are not content to retain what we have and improve upon it. They want to destroy and recreate. Such action is vulgar in its conception and perilous in its execution.

Milk for the Kiddies

EXTENSION OF REMARKS
OF
HON. FRED MARSHALL
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 23, 1950

Mr. MARSHALL. Mr. Speaker, I would like to call to the attention of the House an editorial written by Alfred D. Stedman, in the St. Paul Sunday Pioneer Press of May 21, 1950. What Mr. Stedman says is important to every person in Washington, as well as every Member of Congress:

MILK FOR THE KIDDIES

(By Alfred D. Stedman)

Unless things have improved mighty fast lately in Washington, it is not far from the spreading sycamores that shade the Capitol approach to sights that are by contrast pitiful. The limousines with their coats of arms, bearing high-ups and their ladies southward to yacht landings for a holiday sail on the broad Potomac, must indeed be skillfully chauffeured to miss the slums.

And now a question arises as to how many of the kiddies, white or black, in those teeming, tumbledown tenements, are coming up to minimum health requirements in milk to drink. Having too little else that goes along with sanitary and healthy living, often not even decent water closets, these myriads of youngsters or their parents don't have money to buy a lot of nature's finest food. All Americans, rich, poor, and medium, are averaging only half of health needs. Thus hordes of people in seaboard cities are a vast potential dairy market. Washington therefore symbolizes one side of a two-sided story.

The other side is that Midwest dairying is crying for bigger markets for milk and cream. We would like to sell in seaboard cities paying twice the price in outlying areas here. But we're barred—barred not just by freight or other actual, legitimate cost differences, but by legal and artificial and misused sanitary barriers that amount to tariff walls.

But why pick on Washington that, after all, is only one among many seaboard markets?

Well, for one thing it's the National Capital we're talking about. There if anywhere Americans might expect that commerce would be free. Also Washington's city council is the National Congress. So people "out in the sticks" can properly have some say about what goes on there. Further, the Congress operates under the Constitution. And the Constitution happens explicitly to forbid the imposition internally of import and export exclusions of commerce among States.

And now a geographic tariff wall has been put around Washington's surrounding dairy area in Virginia, Maryland, and nearby Pennsylvania and West Virginia in a very simple way. This is done by prohibiting milk and cream shipments from outside that area after July 1, or until further notice beyond that date.

That's the effect, by the District health officer's own statement to this writer, of action he has taken under sweeping powers conveyed on him by Congress. His order effectively bars milk and cream shipments from outside of Washington's inspection area. The exclusion operates absolutely irrespective of compliance of outside shipments by areas designated by the United States Department of Agriculture with quality requirements of State boards of health—requirements officially recorded as previously acceptable to Washington health authorities.

The Washington trade barrier is a sample of the walls being erected by municipal and State regulations, now being increasingly fortified by Federal milk price orders in seaboard cities. A camouflaged import duty is now even levied upon distant shipments into New York City—a penalty assessed and paid into the market fund and explained as being necessary to equalize costs of distant shipments purchased at a bargain.

And while such tariff-like barriers are being raised around seaboard centers against Midwest milk, other tariff actions of an international nature impend in Washington, where expiration of United States import licensing authority and a 50-percent cut in the 14-cents-a-pound butter import rates are scheduled for June 30.

Thus while doors are being closed and walls raised to reduce milk and cream shipments to seaboard cities from the Midwest, the barriers are being lowered to allow more dairy imports into the United States from other countries. So we're doubly on the short end.

But someone asks whether the eastern cities' high prices behind their barriers really affect us much after all, since the freight rate on milk of around $2 a hundredweight fully covers usual price differences between here and Washington or New York, so we couldn't ship there anyway.

The answer is that those things do affect us in vital ways. One is that, except for the barriers, cream could be shipped even at the present freight costs from many points including here at a profit, and a sharp cut in freight rates is pending. Also means of concentrating frozen milk as well as cream are on the way.

More importantly, the eastern high prices serve as a brake on milk consumption there. Also, they attract sales of our dairy cows out of this area. With the huge production of milk generally per cow, that means a large volume of milk both here and at seaboard. Then the barriers there back up milk close outside. That in turn piles up and so on progressively until there's a huge supply of Midwest milk and cream to go into cheese and butter. And then the Government's flat price support system on butter works out to hand over more and more of that market to seaboard, thus completing the disruption of Midwest dairying.

In describing a New York State dairy promotion campaign, Jacob Pratt, president of Milk for Health, Inc., of Syracuse, has written, "There's one liquid shortage New Yorkers aren't worrying about. That's a milk one. For the 70,000 dairymen of the New York milkshed find themselves with quite the opposite situation. Their cows are producing more and more milk. But people aren't drinking up the increased production. Rather they're not even consuming as much milk as in the past. So while the New York State consumers haven't a milk shortage to disturb them, the producers have an oversupply that wrinkles their brows. These producers could and have disposed of a large amount of milk to manufacture cheese, butter, and other dairy products. But this gives them less money than by selling it in fluid form."

So there's a dramatic demonstration right out of New York State as to how the East's milk is backing up. The Midwest in the critical flush period ahead is sure to take the brunt of the effects when the backing-up proceeds far enough.

But the Midwest has weapons to do something to rectify this situation, if it wishes to use them. We have some good dairy farmers in both the Senate and House of Congress, Washington's city council. Also the Constitution happens to give the United States Supreme Court original jurisdiction in constitutional questions in which States are parties. So, if the Midwest should want to start a legal fight to knock out State, municipal, and District of Columbia tariff walls, the way should be open to take the case right to the highest tribunal without the usual tortuous appellate processes.

Some of our Midwest States' dairy officials might try bringing the legal question to a head by selling some of our approved and inspected grade A milk and cream on the streets of Washington or New York or Boston to folks who don't feel able to pay eastern prices. Or maybe better ways than that could be found to bring the milk tariff walls tumbling down and to get some more milk into the stomachs of the hungry kiddies.

That Part of a Minister's Compensation Paid in Lieu of Furnishing Him a Dwelling Should Be Tax-Exempt

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 23, 1950

Mr. VAN ZANDT. Mr. Speaker, on April 25 I introduced H. R. 8405, a bill to amend section 22 of the Internal Revenue Code, which has been referred to the House Committee on Ways and Means.

Under existing law, the rental value of a dwelling house and appurtenances thereof furnished to a minister of the gospel as part of his compensation is excluded from taxable gross income.

Prior to the addition of this exclusion such rental value was considered part of a clergyman's income and was considered as cash and taxable.

In 1942 a Federal income-tax ruling provided that despite the exclusion of the rental value of a dwelling house actually furnished "allowances to a clergyman given in lieu of providing him with a parsonage are not so exempt."

In my opinion the present income-tax law with respect to tax on a minister's dwelling represents inequality and should be amended to include exemption from gross income the rental money given a clergyman in lieu of actually furnishing him a dwelling house.

My bill, H. R. 8405, will end this discrimination and will help hard-pressed ministers of all faiths. I am hopeful that Congress will realize the justice in approving this legislation.

Summary of Progress in Housing in Connecticut

EXTENSION OF REMARKS
OF
HON. WILLIAM BENTON
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Tuesday, May 23 (legislative day of Wednesday, March 29), 1950

Mr. BENTON. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a letter by Hon. George E. Carr, chairman of the Connecticut State Housing Authority, which appeared in the Hartford Courant on May 13, 1950. In this letter Mr. Carr gives a brief summary of the outstanding housing program which has been carried on by the Connecticut State Housing Authority under the direction of Gov. Chester Bowles.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

SUMMARY OF PROGRESS BY STATE HOUSING AUTHORITY

To the EDITOR OF THE COURANT:

Mr. Howard Hayes, in a letter printed in the Courant Sunday, May 7, puts forth the interesting thesis that the reason we need rent control in Connecticut is that the Connecticut State Housing Authority is not functioning as it should.

Since the present State housing program calls for construction of a total of 10,000 family units and most experts agree there is a shortage of about 70,000 family units in the State, it is obvious that even when completed, the State housing program will not solve the housing problem for the whole State. It is, however, providing substantial relief to the problems of some 10,000 families.

Mr. Hayes makes a great point of the fact Governor Bowles had proposed a housing

program to build 56,000 homes, but the housing authority has not produced them. He does not mention the fact that the Republicans controlling the house of representatives in the general assembly refused to adopt that proposed program and that the present 10,000-unit program represents the bipartisan compromise program finally approved by both Republicans and Democrats in the legislature.

In his letter Mr. Hayes seeks to give the impression the Connecticut State Housing Authority has made no progress in pushing forward the State housing program. Let's take a look at the record:

Last July, when the present State housing authority took over the expanded moderate rental housing program, 168 units were occupied after 2 years of operating the program, 1,821 units were under construction, and 170 units were ready to go into construction. Now, 10 months after the present staff took over the program, more than 70 percent of the units then under construction are completed—approximately 5,800 persons are living in 1,455 family units. Nearly 3,000 units are under construction with occupancy schedules set up to provide homes as quickly as possible, a total of 2,206 units have gone under construction since July. Another 1,500 units are slated to go into construction in May and June. More than $63,000,000 of the $65,000,000 available for moderate rental housing is under signed assistance agreements with local housing authorities, as contrasted with about $21,000,000 under signed assistance agreement last July of the $45,000,000 then available. The reorganized State housing authority has speeded up progress on the moderate rental program all along the line by working more closely with the local housing authorities.

The other facet of the Connecticut housing program, the home-ownership program, was enacted by the 1949 general assembly. When the present State housing authority took over last July, this program was still just a section of the statutes. Since that time, the program has been set up completely, regulations drawn up, staff assembled, State loan correspondents appointed, applications processed and certificates of eligibility issued, and builders and prospective home buyers informed of the working of the program.

Nearly 7,500 certificates of eligibility for State mortgage loans have been issued. Loans to 164 individual home buyers have been approved, loans to operative builders for construction of 388 houses have been approved, and application for loans from hundreds of eligible families and several large-scale operative builders now are being processed. The home ownership program, as the building season reaches its height, is accelerating at a rate that makes it seems probable that most of the $30,000,000 available for State mortgage loans will be committed by the middle of the summer.

I think this record is an enviable one and a record in which every citizen of the State can take pride. I do agree with Mr. Hayes that the Connecticut housing program will not eliminate the need for rent control, but I think it is essential to point out that the 10,000 homes to be provided under the program will represent a sizable move toward relieving the hardship and actual suffering the housing shortage is causing.

Rents paid by families living in moderate rental housing projects and the 1½ percent interest paid by families obtaining State mortgage loans on new homes will pay back, with interest, the money borrowed by the State of Connecticut to finance these programs and other expenses of operating the programs.

GEORGE E. CARR,
Chairman, Connecticut State Housing Authority.
HARTFORD.

The Public Right

EXTENSION OF REMARKS
OF
HON. FORREST C. DONNELL
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Tuesday, May 23 (legislative day of Wednesday, March 29), 1950

Mr. DONNELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Public Right," published in the Greenville (S. C.) News of May 12, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE PUBLIC RIGHT

It is of course not surprising that the bill by Senator DONNELL of Missouri to prohibit railroad strikes is bitterly opposed by spokesmen for the railroad unions.

But it must be said that this country needs a more effective policy than it now has to protect the vital public interest in uninterrupted operation of such indispensable utility services.

Spokesmen for railroad executives have appeared before the Senate Labor Subcommittee in favor of this measure which would compel settlement of such disputes by arbitration. And it is significant that one of these witnesses admitted that the railroad managements would not have approved compulsory arbitration some years ago.

He pointed out that while both railway management and labor realized that the recommendation of Presidential boards, under the Railway Labor Act, were not binding, both sides formerly believed that railway strikes were "unthinkable." It thus was generally accepted that the processes of the law in effect prevented railway strikes because of the willingness of both sides to abide by these methods of getting settlement of disputes without a strike.

But the labor groups no longer have that view, the witness said, and more definitely compulsive legislation is necessary.

And it is a logical position, we think, that where absolutely essential public utility services are involved, if both sides will not voluntarily abide by these legal processes to settle disputes without a strike, the public interests demands a definite requirement for settlement by fair process of arbitration when negotiations fail to bring agreement.

Such a public policy now clearly seems in order not only as to railroads but to other public utility services actually essential to public welfare. With respect to these services it is the right of the public to demand that disputes must be settled without penalizing the people.

Maintenance of Peace in the Middle East

EXTENSION OF REMARKS
OF
HON. ANTHONY F. TAURIELLO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 23, 1950

Mr. TAURIELLO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and resolution:

HANITA GROUP OF THE PIONEER WOMEN,
Buffalo, N. Y., May 19, 1950.
President HARRY S. TRUMAN,
White House, Washington, D. C.

DEAR MR. PRESIDENT: I respectfully forward the enclosed resolution which was unanimously adopted at a recent meeting of the Hanita Group of Pioneer Women of Buffalo, N. Y.

We hope you will give this matter favorable consideration.

Sincerely yours,

LORETTA ROGERS,
President, Hanita Group of Pioneer Women.

RESOLUTION

Whereas it is known from reliable sources that arms of a quality and quantity indicating intended use beyond the purpose of internal security are being supplied to the Arab states in the Middle East, most particularly to Egypt, by Great Britain; and

Whereas this Arab rearmament by Great Britain has the acknowledged approval of the United States Government; and

Whereas at the same time Great Britain has denied Israel arms for its defense; and

Whereas the Arab League has proclaimed its intention to organize a united economic and military front of all Arab states against the struggling State of Israel; and

Whereas we are convinced of the genuine concern of the United States for the peace and security of the Middle East: Therefore be it

Resolved, That we, the Hanita Group of Pioneer Women, in meeting in Buffalo, N. Y., on May 17, 1950, do call upon the United States to implement its proclaimed concern and desire for peace in the Middle East by providing Israel with arms to defend itself thus lending its strong influence to the maintenance of peace in the Middle East. The officers of the Hanita Group of Pioneer Women are instructed to forward this resolution to President Harry S. Truman.

President Truman's Dream Was Jefferson's Nightmare

EXTENSION OF REMARKS
OF
HON. JAMES P. KEM
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Tuesday, May 23 (legislative day of Wednesday, March 29), 1950

Mr. KEM. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "President Truman's Dream Was Jefferson's Nightmare," published in the Richmond (Va.) Times-Dispatch of May 17, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PRESIDENT TRUMAN'S DREAM WAS JEFFERSON'S NIGHTMARE

"We are a party that is not afraid to dream," President Truman told his Jefferson jubilee audience in Chicago Monday night.

This popular note drew applause. This was the sort of talk people like to hear, as those who composed that theme song for Mr. Truman knew only too well.

The President's summary of the over-all political-economic philosophy of the Fair

Deal was accurate. Much of it is such stuff as dreams are made on.

A dream is a series of thoughts, images, and emotions occurring during sleep. If it is pleasantly optimistic, we hate to be rudely awakened.

Mr. Truman wants everybody to feel confident that everything will come out all right. He tells us not to worry. Just let "the Government" take care of everything, and everything will be just fine.

But it is impossible for a people, who are normally skeptical when awake, to keep on dreaming forever. A sporific is indicated. A narcotic, like opium, which in time becomes habit-forming, and causes the patients to call for more of the same utopian stuff in increasing doses, until like confirmed drug addicts, they become moral imbeciles, their will power shattered, maudlin slaves to the master's will.

The ultimate result is what an eminent Presbyterian minister denounced as "state idolatry." The Reverend Harrison R. Anderson earnestly implored Mr. Truman to "quit playing with the truth." Apparently Mr. Truman failed to listen in on Mr. Anderson's sermon, for the very next day, he opened the big wind-up speech of his nonpolitical tour with the following words:

"The American people have chosen our party as their instrument to create the kind of Nation Jefferson dreamed of."

It is true that the great Virginian, with almost clairvoyant power, foresaw the kind of Nation Mr. Truman would make of us.

"I see with the deepest affliction," he wrote, "the rapid strides with which the Federal branch of our Government is advancing toward * * * the consolidation in itself of all powers, foreign and domestic. * * * The multiplication of public offices, increase of expense beyond income, growth, and entailment of the public debt * * * (these) are indications soliciting the employment of a pruning knife."

Yet those who would wield the pruning knife are condemned by Mr. Truman as "backward-looking obstructionists."

And the Fair Dealers had the consummate gall to advertise that Chicago rally as the Jefferson Jubilee.

Any Other Way?

EXTENSION OF REMARKS
OF
HON. FORREST C. DONNELL
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Tuesday, May 23 (legislative day of Wednesday, March 29), 1950

Mr. DONNELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Any Other Way?" published in the Petersburg (Va.) Progress-Index of May 12, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ANY OTHER WAY?

The strike of locomotive firemen which is paralyzing four major railway systems has the marks of an unnecessary and a potentially disastrous affair.

The featherbedding which is the basic issue in the firemen's demands makes no appeal to public sympathy, nor are the railroads generally in a financial position which permits them to engage in uneconomic practices in order to avoid trouble. A public which is already paying a high price for rail transportation should look with no favor on the creation of unnecessary jobs which would force rates higher or at least operate against eventual reduction.

With the railway mediation board having abandoned the case as hopeless, and with doubt existing that the President could, if he would, take emergency action to restore service, no end is in sight for the strike. It is entirely legal. It could be contagious, in which event it would play havoc with the Nation's economy. Such results would be bad enough at any time, and they are made intolerable by the present tenseness of the world situation.

Consequently Senator DONNELL'S bill to outlaw railroad strikes by establishing compulsory arbitration, under which both parties would have to abide by the decision of a Presidential board in case of major disputes, has more appeal than it otherwise would have. Compulsory arbitration has not been looked upon with favor in the United States, but in instances where the public interest is directly affected the slugging-it-out or sitting-it-out processes cannot be accepted as normal. Since neither side likes the idea of compulsory arbitration the existence of such a law should make for a more reasonable spirit at the bargaining table.

Maintenance of Peace in the Middle East

EXTENSION OF REMARKS
OF
HON. ANTHONY F. TAURIELLO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 23, 1950

Mr. TAURIELLO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and resolution:

AMERICAN ZIONIST COUNCIL,
BUFFALO COMMITTEE,
Buffalo, N. Y., May 19, 1950.

President HARRY S. TRUMAN,
White House, Washington, D. C.

DEAR MR. PRESIDENT: I respectfully forward the enclosed resolution which was unanimously adopted at a recent meeting of the Buffalo Zionist Council.

We hope you will give this matter favorable consideration.

Sincerely yours,

DAVID REIFER,
Chairman, Buffalo Zionist Council.

RESOLUTION

Whereas it is known from reliable sources that arms of a quality and quantity indicating intended use beyond the purpose of internal security are being supplied to the Arab States in the Middle East, most particularly to Egypt, by Great Britain; and

Whereas this Arab rearmament by Great Britain has the acknowledged approval of the United States Government; and

Whereas, at the same time, Great Britain has denied Israel arms for its defense; and

Whereas the Arab League has proclaimed its intention to organize a united economic and military front of all Arab States against the struggling State of Israel; and

Whereas we are convinced of the genuine concern of the United States for the peace and security of the Middle East; Therefore be it

Resolved, That we, the Buffalo Zionist Council, do call upon the United States to implement its proclaimed concern and desire for peace in the Middle East by providing Israel with arms to defend itself thus lending its strong influence to the maintenance of peace in the Middle East. The officers of the Buffalo Zionist Council are instructed to forward this resolution to President Harry S. Truman.

Opinion on McCarthy Splits Along Party Lines

EXTENSION OF REMARKS
OF
HON. JAY LeFEVRE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 23, 1950

Mr. LEFEVRE. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include an article taken from last evening's New York World-Telegram.

Mr. Speaker, I was back in my district over the week end and I was surprised to find so many people ready to offer their opinions on Senator MCCARTHY'S charges against the Department of State. Not long ago, some letters from constituents would indicate that some felt that Senator MCCARTHY'S charges were only an effort on the part of the Senator to seek publicity. The majority of the people today are taking this matter more seriously and very definitely let you know they are for investigating all Government departments if it is necessary to rid Government agencies of subversive elements. With this much background on the subject, I think the following article bears out the situation as I have found it among my own constituents:

OPINION ON MCCARTHY SPLITS ALONG PARTY LINES—DEMOCRATS DIVIDED, REPUBLICANS VOTE 2 TO 1 THAT CHARGES ARE HEALTHY

(By George Gallup, director, American Institute of Public Opinion)

What you think of Senator JOSEPH MCCARTHY'S charges against the State Department is likely to depend to a great extent on whether you are a Democrat or Republican.

A Nation-wide opinion survey by the institute finds that Democrats who have heard or read about the charges are evenly divided in their opinion as to whether they are a good thing or a bad thing for the country.

Republicans, on the other hand, by a 2-to-1 ratio, think the airing of the MCCARTHY charges has been a good thing.

More than 8 out of every 10 persons (84 percent) questioned in the survey said they were acquainted with the Wisconsin Senator's charges. In comparison with the public's knowledge of other national topics, this is a high proportion.

The MCCARTHY affair has many ramifications, with his supporters saying that the Federal Government has been lax about Communists while his critics say the MCCARTHY charges are fantastic, are handicapping our conduct of foreign affairs and playing into the hands of Russia.

Anti-MCCARTHY forces also declare that the issue is not so much whether there were Communists in the State Department as it is whether the number there was any greater than in any other Government department of comparable size, or in private business organizations employing as many people.

While the average American has no first-hand knowledge of the situation regarding Communists in Government, he can pass

judgment on the question of whether Senator McCARTHY's charges are doing more harm than good.

That question was put to voters in the institute survey in the following manner:

"Some people say these charges are doing the country more harm than good. What do you think?"

Here is the national vote:

	Percent
Harm	29
Good	39
No opinion	16
Haven't heard of charges	16

The sharp difference of opinion according to political affiliation is seen in the following vote of persons who, in answer to another question on the survey ballot, classify themselves as either Democrats or Republicans.

	Republicans	Democrats
	Percent	Percent
Harm	22	33
Good	50	35
No opinion	15	14
Haven't heard of charges	13	18

The survey is the first test of national sentiment on the McCarthy charges.

Among college-trained persons interviewed, 41 percent said they thought the McCarthy charges are harmful, while 46 percent said they are a good thing, and 11 percent gave no opinion, leaving 2 percent who had not heard of the charges at the time of the survey.

It Goes Right to White House

EXTENSION OF REMARKS
OF
HON. FORREST C. DONNELL
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Tuesday, May 23 (legislative day of Wednesday, March 29), 1950

Mr. DONNELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "It Goes Right to White House," published in the Muncie (Ind.) Star of May 12, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

IT GOES RIGHT TO WHITE HOUSE

The railroad firemen's strike is a perfect example of the dangerous monopoly powers exercised by many labor unions. In the interest of the general welfare these powers must be restricted. But we shall have to look elsewhere than President Truman for relief. He is afraid of losing votes if he acts to protect the general welfare, as he is sworn to do.

The firemen's brotherhood is striking for a third man on multiple-unit Diesel locomotives. Two Presidential fact-finding boards, functioning under the Railway Labor Act, have found no justice whatever in this demand and have rejected it.

Therefore the firemen are really just trying to featherbed the Diesels. To gain their end they are using their power to strangle the economy of large sections of the country and to cause widespread public suffering.

The Railway Labor Act was once regarded as a model of its kind. It worked well for many years. But the indulgences of Presidents Roosevelt and Truman undermined the Railway Labor Act. When a brotherhood didn't get exactly what it wanted from a Presidential fact-finding board it struck, and then got what it wanted from the President. The situation has now reached the point where a union is willing to paralyze the economy in order to win a featherbedding demand.

That is what happens when Presidents are more interested in votes than in the general welfare. Properly administered, the Railway Labor Act probably would still work. But it won't be properly administered under Mr. Truman.

New legislation is therefore needed to protect the American public from disastrous railway tie-ups. Either there must be real compulsory arbitration to prevent the unions from high-handedly rejecting the rulings of mediation boards and calling a strike, or the unions must be shorn of their power to strike whole networks of railroads vital to a region's economy. Relief can come only through a public demand which will convince Congress that Mr. Truman is wrong when he thinks irresponsible strikes win votes.

Communism Feeds on the Absence of Reforms

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 23, 1950

Mr. KLEIN. Mr. Speaker, under leave I am inserting in the CONGRESSIONAL RECORD the text of a recent address by Delbert Clark of the New York Times who, in his usual incisive way, says a great many things that I have been saying for a long time; but I confess that frequently he says them better.

Delbert Clark will be remembered as the brilliant New York Times correspondent in occupied Germany who, for several years, was the vocal conscience of our military authorities, and who repeatedly and mercilessly exposed the failure of the denazification and decartelization programs. I wish that he were still performing that function in Germany, where his voice is greatly needed. I have made two minor deletions out of deference to the rule of comity; the remainder of his address follows as reproduced by the Times:

DEMOCRACY ON THE DEFENSIVE

(By Delbert Clark, director of educational activities)

There are now, and have been for a long time, substantial groups in the United States who wish to change our familiar society from what it has been to something quite different. Their influence rises and falls in direct ratio to the rise and fall of tension in international relations and in domestic economics.

These groups divide, roughly, into Communist and Fascist, and they are not always easy to identify. But they all have one aim in common—the substantive alteration of the institutions which have made America great and prosperous.

Between these extremes of right and left, both hostile to American ideals, are the rest of us, the vast majority. Most of us advocate no substantial change, nor any change at all. Our one great desire is to continue more or less intact the forms and principles to which we have become accustomed over a century and a half, because they are comfortable and generally satisfactory.

But among us there are some, a relative few by comparison, whose background, education, and general view of community life impel them to think more in terms of "the general welfare" than the rest of us. These individuals advocate neither fascism, communism, nor as a rule any 'ism' at all, but only adjustment of specific operational faults, plus a general improvement in our democratic system, so that life may be even better than it is for a larger number of people. Not all their ideas are necessarily sound, but they are acting in the best and most patriotic tradition, upon which the Republic was founded and has prospered.

At one time in our national history such people would have been called liberals, at another time progressives; what they stood for might have been opposed by some, but few would have dared condemn them as bad citizens. Yet in the past few years they have found it more and more economically and socially unsafe to continue as in the past. They find themselves criticized as Communists or fellow-travelers for supporting equality of opportunity for all; for believing what the Constitution says about civil rights; for publicly preferring peace to war; for espousing Federal aid for low-income housing; for believing in Government-sponsored health insurance; for supporting the idea of world government. And within the past month we have even been subjected to the spectacle of high-minded, patriotic citizens being denounced as traitors because the foreign policy they advocated in a specific instance had not worked out.

So, by a deadly appeal to fear and ignorance, fostered in some cases by organizations in themselves violently anti-American, the only means Americans have of seeking constant improvement in a system in which they believe enough to want to see it improve, is removed or rendered hazardous. And the way is paved for the United States to slip into something resembling a Fascist state without the addition or repeal of a single law or of a single clause in the Federal Constitution.

Fascism, said Prof. Charles A. Siepmann, of New York University, is the ultimate upshot of growing to like what you get, and he might well have added that its development is greatly facilitated when those who do not like everything they get are scared out of saying so. We are confronted with the necessity for accepting the leadership of one set of enemies of democracy to avoid being classed as followers of another set, and between these millstones large numbers of decent, loyal Americans are being ground.

The political middle class, which includes most of us, is in serious peril of being wiped out, casualties in a cold civil war. When it is, and not one dares any longer to criticize for fear of losing his livelihood, then the unmasked forces of communism and fascism will be free to fight their obscene battle over the corpse of the oldest and largest democracy in the world.

I should like to state at this point that all antidemocratic, totalitarian thought and action is abhorrent to me and should be to all Americans. The Platonian theory of government by an elite group, based on the conviction that the great mass of the people aren't bright enough to govern themselves, is very much with us today, among people who never heard of Plato. It is the opposite of democracy, and so far as I can see, there is no essential difference, operationally or philosophically, among its advocates. They may be Communists, or members of the German-American Bund, or members of the Christian Front, or knights of the Ku Klux Klan, the white camelia, the purple stinkweed, or whatever botanical specimen they happen to choose. All, in the last analysis, want the same thing—the destruction of democracy.

As it has worked out in America, many prominent citizens, deeply concerned with

the simple fact of having to earn a living, have chosen to forego all other activity, to become nonentities, so far as exercising the normal duties of citizenship is concerned. Some, to reinforce their spiritual air-raid shelters, have gone so far as to denounce publicly all that they have stood for in the past. But a few, less timid or more confirmed in their views, have refused to join the league of frightened men and have stood their ground. They have refused to concede that democracy is a dead duck, and are convinced that what is happening to a few can happen to everybody, if nobody is interested enough to fight back.

A short time ago there was a mass assault upon the artists of America, and particularly film and theater actors, led by one Myron Fagan, a disappointed playwright, whose book, "Red Treason in Hollywood," listed 150 people as Communists, starting with that pillar of conservatism, Louis B. Mayer. He received liberal financial aid from Gerald L. K. Smith, former spiritual gadfly for Huey Long, and now leader of one of our several American fascist movements.

It was obvious that the average American pays more attention to the political opinions of a film star than to those of the wisest political scientist on earth, and that if the film stars could be forced to shut up, it would be a great victory for the haters of democracy. I don't say all film stars are politically pure, but the Fagan list was ridiculous.

A wave of fear spread over the film industry. Many ducked into the nearest foxhole, or joined their accusers in denouncing what they had previously advocated. Those who did, seemed to find their paths miraculously smoothed, financially speaking. Those few who did not, continued to be subjected to the worst sort of smear publicity.

One member of the Hollywood community, Jack Tenney, delivered in 1939 a speech before the Hollywood Anti-Nazi League in which he denounced the House un-American Activities Committee in unmeasured terms. Ten years later Tenney, now a State Senator, was branding as pro-Communists individuals who had been members of the Anti-Nazi League at the very moment he was addressing it in 1939. And the committee he headed was a carbon copy of the one he had then attacked.

It is common talk that the most frightened class of people in America today is the great body of Federal employees, who feel their loyalty is being investigated in accordance with extremely vague criteria. Yet the Federal employee has a minute source of comfort, so far as job security goes, in the existence of elaborate appeal machinery which is frequently effective.

No such machinery exists for the privately employed citizen who is accused, not by an official agency, but by an irresponsible newspaper, by Fulton Lewis, Jr., by Westbrook Pegler, or by some sinister pamphleteer or confessed traitor squatting snugly behind the statute of limitations. It can be argued that a citizen so maligned has recourse to civil suit. But he cannot bring a libel charge against a witness before a congressional committee, or a Senator speaking on the floor wrapped in his toga of immunity. Even if he has the opportunity, it takes a lot more money than most people can afford or even lay their hands on and until that suit, if any, is decided, the smear campaign goes on.

Paul Draper, the dancer, a while back brought suit in Connecticut against a woman who publicly called him a Communist. I don't know Draper, nor do I know whether he is or is not a Communist. But I do know that a large and extremely noisesome newspaper chain whipped up a violent campaign of synthetic fury against him before the case was heard in court, and frightened a broadcasting company into reprimanding the conductor of a program who had invited Draper to appear.

This is the very nearly perfect illustration of the new and terrifying notion that a citizen is no longer innocent until proved guilty, a logical corollary of the doctrines of guilt by association. Thus a popular New York newspaper was able to say in all apparent seriousness that Alger Hiss had ample opportunity to prove himself innocent.

This alarming state of affairs has come about as a direct result of our cold and very uncivil war with the Soviet Union. We have come to accept, for all practical purposes, what amounts to Soviet direction not only of our foreign policy, but of our internal practice as well. When people get the idea that their physical safety is in danger, anything connected with that threat tends to become an object of fear and loathing. And when the threat depends for its existence and expansion upon a body of ideas, as does communism, then the hatred and fear are multiplied, because you cannot kill an idea with a gun.

We talk a great deal about arming for defense against Russia, but we are pretty sure, if we stop to think about it, that were it not for the ideological weapon of communism Russia would not be a serious threat. It is a weapon which is sharpened by human misery, as we have recognized in our point 4 and Marshall plans. We may by a show of force prevent Soviet armies from marching, but no conceivable multiplication of military alliances alone can stop an idea from marching.

Now it so happens that the Soviet Union has appropriated to its own purposes the sponsorship of many reforms which hitherto had been considered not at all disreputable and which have long been advocated by respectable people the world over. Yet in the year 1950 we incline to denounce these very desiderata for no other reason than that the Communists also say they believe in them.

Anyone familiar with the writings of Marx and Lenin knows perfectly well that the last thing the Communists want is peaceful reform, for if human grievances are adjusted, human misery mitigated, by civilized means, then the proletarian revolution is indefinitely postponed if not actually canceled. That is why, in every country they take over, the Communists move first of all against the middle-class liberals who are trying to achieve reforms without setting up a dictatorship.

Unfortunately, and in shame I say it, this cold civil war is being intensified by the activities of certain newspapers and newspaper writers and radio commentators who either have an ax to grind or who are criminally irresponsible. And I appeal to you, in this critical period in our national history, to refrain from forming judgments without adequate evidence. Don't assume you know all about a Senate investigation by reading a headline in the Morning Smear over someone else's shoulder in the subway. Don't set some fellow-American down as a traitor because of another headline in the Daily Slanderer. Take the time, as a patriotic duty, to read and evaluate the facts as set forth in an honest, responsible periodical. Try to use your intelligence, not merely your eyes and your emotions. If you don't, the day may come when you will be sorry.

Those who hate democracy, be they reactionaries of the right or of the left, are fighting, not really one another, but all believers in that cooperative freedom. They are fighting with the weapons of blind prejudice, ignorance, and fear of the unfamiliar. They have seized upon our external peril and the resultant popular confusion as a device for altering our traditional institutions. And I can assure you, you would not like to be governed by either of them. The only essential difference is the color of the shirt.

The essence of a democratic society is that it is not assumed to be perfect operationally, that it is on the contrary susceptible of continuous improvement without physical revolution or fundamental structural change. With this as a first principle the fact of political activity, of constant constructive criticism, becomes a prime obligation upon every citizen. This is a matter of common knowledge with all of us, yet in the recent past too many of us have abdicated the right and duty to oppose and criticize because they were scared.

Assuming that there is merit in the position that a Communist-dominated—and I mean dominated—organization is no place for a true American, no one has yet come forward, to my knowledge, with acceptable criteria for judging whether the organization in question is so dominated. A public-spirited citizen considering a contribution to the American Red Cross, the Boy Scouts, the Infantile Paralysis Foundation, as access to a body of information based on a long public history. But what of the numerous ad hoc groups, newly formed, and with something entirely laudable as their only announced objective? How can one find out about them?

Martin Dies once advised a friend of mine to solicit and accept the advice of the local American Legion post or chamber of commerce. This needs no commentary—it is simply a means of never running counter to the views of a powerful, organized and generally orthodox group. A simpler device would be never to say or do anything not essential to keeping physically alive.

The history of subversive organizations is interesting and complex. Some were originally not in this category but were later taken over through the negligence of their members, yet self-constituted leaders of public opinion take no note of this in condemning anyone who ever had anything to do with them. Others, while perhaps actually organized as "fronts," were of such a character, so far as publicized aims were concerned, that only one who recognized a Communist by his red tie or his long hair could possibly have been suspicious.

It is generally far easier to detect the true character of a subversive organization of the Fascist type than one devoted to the propagation of communism. The first almost invariably has certain visible signs, such as racial and religious hatred and xenophobia which mark it for what it is. The other seldom has such outward birthmarks, and it may take a long time for its true nature to become generally known. I know of no positive test, nor does anyone else I ever heard of.

In the last analysis, the real issue in this cold civil war of ours is not national security. No good citizen can be against that. It is not communism versus capitalism, although that certainly is the issue in the struggle between the United States and Russia. Here at home the issue is, in plain words, whether Americans shall be able to continue to be good citizens or whether they must become a nation of furtive mice, frightened into silence by extralegal terrorism against which there is virtually no defense.

What we need to realize, and keep remembering, is that communism feeds, not on reforms, but on the absence of reform. By silencing all honest reformers, we make things far easier for the Communists, and advance the opening date for the class war we all want to avoid.

The National Interest

EXTENSION OF REMARKS
OF
HON. FORREST C. DONNELL
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Tuesday, May 23 (legislative day of Wednesday, March 29), 1950

Mr. DONNELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The National Interest," published in the Rockford (Ill.) Register-Republic, of May 12, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE NATIONAL INTEREST

Once again a section of the American public is beginning to suffer from the effects of a strike that was carefully planned so as not to be against the national interest, or so the union hopes.

As in the coal strike earlier this year, there were demands for stern measures by the Federal Government. Since one issue of the railroad firemen's strike is the employment of an extra fireman on Diesel locomotives, the matter already has been before Presidential fact-finding boards. In this case the boards have ruled twice against the union, and the railroads' refusal to try the issue again appears to be justified.

The Donnell bill, proposed by the Missouri Republican Senator, would require compulsory arbitration in railway labor disputes. This would be a far-reaching measure, but pressure for it will increase as industries affected by the strike are forced to close down, throwing thousands of employees out of work.

It also is unfortunate that Chrysler Corp., just resuming production after a 100-day strike, faces curtailments in case it cannot receive necessary supplies delivered by rail.

Just how extensive must a strike be in order to be against the national interest? Most of the recent Nation-wide strikes have affected other segments of the United States economy. The time is here for devising legal settlement machinery which will go into operation as soon as a strike in one industry begins to affect related and dependent industries.

Congress Please Note

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 23, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Christian Science Monitor:

CONGRESS PLEASE NOTE

Of all the new courses we've heard of that are going to be added to already bulging college catalogs, Harvard University's on fundamental human rights sounds among the more significant.

"The course is designed," the university says, "to consider how the principal human rights in the United States Constitution got there and what has happened to them since." It would be difficult to imagine a more appropriate time for such study.

With Zechariah Chafee, Jr., Harvard's noted law-school teacher and a vigorous defender of human rights, presiding, it is likely that the students will hear as much about what has happened to fundamental human rights in recent years as they will about how they got in the Constitution in the first place.

This is all to the good. Today's congressional hearings tend to take increasing liberties with personal reputations and basic legal rights. In another area, prominent natural scientists are protesting that on nonsecret information the Atomic Energy Commission is following a program of censorship secretly conceived and never justified to the American public.

Fuller understanding of human rights—and responsibilities—is urgently needed. Such a course as Harvard plans should be taught in all schools and colleges. A special evening session for Congressmen might help, too.

Biggest Story

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 23, 1950

Mrs. ST. GEORGE. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include the twenty-ninth article by Mr. Frank C. Waldrop on the infiltration of communism in our country:

BIGGEST STORY
(By Frank C. Waldrop)

The sweated pennies of the working man did not buy communism its seat in the Government of the United States of America. After all, people who work in this country have better things to buy.

Communism, in its day, has spent millions to corrupt American minds with its own rewriting of history, its own version of all the arts and sciences, and to corrode labor unions, Government offices and homes.

How did it get in a position to do such things? It is a libel on the poor to say they are to blame. The dollars that hired the halls and bought the paper and paid the speakers and hid the spies came from well-lined pockets.

There will be a real study made, one day, of the millions in American money that have gone into Communist organizations and to the fantastic collection of front organizations carrying out Communist policy but not in communism's name.

No propaganda in history has turned over so many dollars and supported so massive an army of riffraff writers, speakers and Mr. Chairmen, Madame Secretaries and faceless, silent treasurers, who receive contributions but make no reports on expenditures.

Nor did it all come from Moscow. I have before me as I write this, the sworn testimony by a former general secretary of the Communist Party of the United States that in his day Russia sent over only about $100,000 a year and that just for headquarters work.

This same man, on the other hand, estimated that the friends of the Soviet Union raised over a million dollars on one campaign to save the starving Russians of the 1920's, yet, he swore, the cash only circled back to the agitation and propaganda offices in New York.

American consideration for the suffering poor abroad was turned on America. American money given in the spirit of charity was used to attack the very foundations of our civilization.

The Sacco-Vanzetti case I mentioned in this space yesterday, the "free Tom Mooney" campaigns earlier described, were typical devices for concealed Communist money-raising—until the Communists got on the United States payroll. Then they got a better system.

It is impossible to review and encompass all the multitude of money-raising machinery that Americans fell for.

A fair sample of good American money gone is that of the "Garland fund."

In that instance a foolish young man in New York City gave some $900,000 of first-class securities, his total inherited fortune, to a set of trustees to be used in effect for the good of the cause. The values of the securities rose to something like $2,000,000 before they got rid of it all. No doubt he felt he had done a good thing.

Or you can consider the case of Corliss Lamont. Here is the son of Thomas Lamont, one of the ablest bankers the United States ever produced. Corliss Lamont has never worked for his living. His father gave it to him. Lamont was one of the early Marxists and still is.

His influence in raising millions for Marxist purposes has been enormous.

Then there is that other prize package, Frederick Vanderbilt Field, whose family names are solid gold. To what has this man given his life? You get an idea from the fact that he refused, a few days ago, to talk to a Senate committee about the Amerasia spy case.

One way or another, less of all this money goes to the Communist Party's official bank accounts than to the operations in the mysterious shadowland of the front organizations that play on human decency.

That mission for relief of the starving back in 1922 was headed by Herbert Hoover. Rev. Edmund Walsh, S. J., now vice regent of Georgetown University and a world-renowned authority on the facts of Marxism, went deep into Russia distributing food and saving human life.

Little did Mr. Hoover and Father Walsh know that behind their backs and the backs of all those undertaking a humane mission for the relief of the starving, Communists in America were swindling people in their name.

Yet the fact is sworn to in the official records.

It was early, and typical of the differences between Communist ideas of ordinary decency and our own.

By 1933, when F. D. Roosevelt came to the White House, that sort of Communist duplicity had been demonstrated a thousand times over. More than that, the Communists had blown their own organization wide open with a reeking scandal for all to see.

By then, anybody could know, who wanted to, that communism and civilization were totally incompatible.

Yet Roosevelt gave them priceless prestige, for which they would one day show their thanks by gathering on the White House lawn to mock him to his face.

The Public's Stake

EXTENSION OF REMARKS
OF
HON. FORREST C. DONNELL
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Tuesday, May 23 (legislative day of Wednesday, March 29), 1950

Mr. DONNELL. Mr. President, I ask unanimous consent to have printed in

the Appendix of the RECORD an editorial entitled "The Public's Stake," published in the Charleston (S. C.) Post, of May 12, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE PUBLIC'S STAKE

Such indefensible strikes as that which the Brotherhood of Enginemen and Firemen is conducting against four railway systems may impel Congress to enact compulsory arbitration or even stronger legislation to protect the Nation against disastrous disruption of its economy.

Two Presidential commissions have found the demands of the brotherhood unjustified, declaring that an additional fireman on Diesel-operated locomotives is unnecessary. The strike stands as an attempt to force the railroads to accept featherbedding—the employment of men not required for safe and efficient operation.

To whatever extent the four railway systems are tied up, business and industry will be slowed down and thousands of workers not a party to the dispute will be thrown out of jobs. The entire Nation will be adversely affected by a work stoppage that is essentially a strike against the public. Were the firemen to win their point, the public, through higher rates, would be called upon to pay for the needless jobs.

There is now before Congress a bill to outlaw railroad strikes. It calls for compulsory arbitration, with the decision of a Presidential board being binding. Proponents of this measure are impelled by a sense of public interest. The existing legislation does not impose upon the brotherhoods a due responsibility to the Nation. A few thousand men can tie up vital transportation and, if permitted to go their way unchecked by law, can force acceptance of exorbitant demands due to their monopolistic power.

This is an intolerable state of affairs that cannot be permitted indefinitely.

Let's Stockpile Fabrics

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 23, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Evening Tribune, Lawrence, Mass., for May 20, 1950:

LET'S STOCKPILE FABRICS

Stockpiling of raw wool helps the sheep but makes goats of textile workers. Raw wool is a durable commodity, not perishable like eggs and potatoes, and the Government undoubtedly takes comfort from this fact. There is, at least, not the tremendous shrinkage involved in other efforts to bulwark weak areas of our economy. But the Government does deal in perishable items, and if there is anything more perishable than a human being out of work, we would like to know about it. Sheepmen can convert some of their wool into homespun cloth, if their need is great enough, and they can eat their sheep. The farmer's problem is not that he is underemployed but overemployed; he produces too much. At the worst, he has things to eat, even if his level of subsistence is marginal. But the textile worker has no capital of raw material to be subsidized; he has only the skill of his hands.

If the Government stockpiled cloth—the finished product instead of the raw material—it would, in effect, be stockpiling textile workers—which, even if it is an undignified, analogy—is a practical one. The day will never come when this country, or the world, will be able to get along without the skill of textile workers. Textiles is as basic an industry as the production of food. In fact, it is one of the few really basic industries. Autos are important and useful, true, but a good percentage of that industry's creativeness is in the luxury category. The same thing applies to another spiraling activity—television. Television adds to the richness of life, but life doesn't depend on it. Cloth, fabrics of all sorts, is an indispensable necessity, not only for reasons of modesty, but as an extra skin against the rigors of climate—heat as well as cold. If all this is true, and we don't see how it can be controverted, stockpiling raw wool puts the cart before the horse.

The idea that it is a more practical expedient to stockpile fabrics, rather than wool, is the brainchild of the Greater Lawrence Citizens Committee for Industrial Development. And it has already found supporters in the State legislature where a resolution has been filed urging the Federal Government to give serious consideration to the proposal. The resolution lays emphasis on the fact that the Government would be far better off, in time of emergency, with a reserve of finished cloth on its hands than it would with acres of unprocessed wool. We agree, although it seems that this approach falls somewhat short of the real purpose of such stockpiling, which is to help textile workers in time of crisis. It isn't necessary to make a particular point of the fact that textile workers are good, productive, and skillful citizens. Everyone agrees that they are. Why wouldn't it be a good idea to give them the same deal that farmers and poultrymen get? Textile workers vote too. And they have to eat.

A Guarantee of Service

EXTENSION OF REMARKS
OF
HON. FORREST C. DONNELL
OF MISSOURI
IN THE SENATE OF THE UNITED STATES

Tuesday, May 23 (legislative day of Wednesday, March 29), 1950

Mr. DONNELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "A Guarantee of Service," published in the Charlotte (N. C.) News of May 11, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A GUARANTEE OF SERVICE

When, at 6 o'clock yesterday morning, the paralyzing tide of the railroad firemen's strike against four major rail systems began rolling west from the Atlantic coast, stranded commuters at suburban stations were the first to understand the ominous significance of the strike.

But as the day wore on citizens with less apparent need for rail service began to wonder how it was that 18,000 railroad firemen could launch a strike which might bring hardship to millions.

And, when, at midday, hopes for immediate settlement of the strike went aglimmering, citizens listened with more care to a railroad executive's warning that the strike against the Southern, Santa Fe, New York Central, and Pennsylvania systems will "have an immediate and disastrous effect on the public interest."

The executive was Harry A. De Butts, former Charlottean and now vice president in charge of operations for Southern. He warned further:

"It would bring about almost instantaneous paralysis of the life of the large parts of the country served by these four major systems, bringing the terror of starvation and disease to great numbers of citizens."

If, as members of the striking locomotive firemen and enginemen would have it, starvation, disease, and economic paralysis are not around the immediate corner, it is all too true that a prolonged Nation-wide railroad strike would endanger public and economic health. This single union now has the power to bring about such a strike; no single group should wield so mighty a weapon.

The railroads are essential to the Nation. They bring food to market, workers to their plants and offices, pharmaceuticals to drug stores, tractors to farmers; they bring mail, industrial equipment. We have, all of us, become dependent to some degree on railroad service.

We must have a guarantee that that service will not be withdrawn.

We must not be victimized by such featherbed demands as that which prompted the firemen to quit work yesterday morning. (The firemen had demanded an extra fireman aboard multiple unit Diesel locomotives. Twice the Presidential fact finders have ruled that the union demand was not justified. But after the long, careful process of the Railway Labor Act had found them at fault, the firemen struck anyway.)

Southern executive De Butts has already sounded the cry for passage by Congress of a bill to outlaw rail strikes. As a result of the hasty action of the firemen's union (and past violations of the public interest by unions like John L. Lewis' United Mine Workers), such a bill will find much favor with the public and with Congressmen.

A likely result of the firemen's strike will be the passage of a bill calling for compulsory arbitration as a last resort in rail strikes. A law guaranteeing the continuance of this essential public service has long been needed. It should, of course, provide for justice to both employer and employee. It should insist upon fair wages and satisfactory working conditions, but it should also restrain unions from irresponsible strikes against the public interest, which even officials of other rail unions have recognized the firemen's strike to be.

Planned Inflation

EXTENSION OF REMARKS
OF
HON. HAROLD H. VELDE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 23, 1950

Mr. VELDE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Peoria Star of May 12, 1950, entitled "Planned Inflation":

PLANNED INFLATION

In his speech (ostensibly nonpolitical) at Pendleton, Oreg., President Truman promised that the average American family's income could be doubled by 1960, if the whole country tries.

Some people might think that is an extravagant promise for the President to make, but it isn't. The average family's income can easily be doubled by 1960 or long before 1960. It can be done without effort by the whole country. In fact, it is being done now and the people are hardly conscious of it. It is being done through the cheapening of money, the debasing of the value of the dollar. Every time the Federal Government spends more than it collects (deficit financing) it clips the value of the dollar. Next year the Government faces a deficit of $7,000,000,000, with the President urging even a larger gap between income and expenditures.

To say that the average family's income may be doubled, however, is to tell only half the story. Inflation increases income, in terms of dollars, but it correspondingly increases the cost of living. The dollar today is worth only a little more than half what it was worth 10 years ago. Continued deficit financing can easily make the dollar worth only one-fourth what it was 10 years ago.

The trouble with raising apparent income by debasing the currency is that people who depend upon fixed values in bonds, savings deposits, annuities, life insurance values and pensions are financially ruined. The man who bought $10,000 in life insurance in 1940 knows today that it will accomplish only about half of what he expected it to accomplish. Let inflation again "double" incomes and that man's life insurance will be worth only about $2,500 in terms of the 1940 dollars in which he was calculating the future needs of his family.

What President Truman proposes is ridiculously easy. Printing-press money is limitless.

But here is the question President Truman should be asked: "Can you, Mr. President, while doubling the average family's income, also proportionately increase the income of those who depend upon pensions, annuities, bonds and savings?"

If this cannot be done, then the promise of increasing average family incomes is nothing more than a fiscal trick from which none will benefit and many will suffer.

Portuguese-Americans Protest India's Purpose To Annex Territory of Goa

EXTENSION OF REMARKS
OF
HON. JOSEPH W. MARTIN, JR.
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 23, 1950

Mr. MARTIN of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter which I have sent to Secretary of State Acheson, informing him of the strong opposition of Americans of Portuguese descent against the proposal of India to annex the territory of Goa.

My letter to Mr. Acheson follows:

MAY 22, 1950.

Hon. DEAN ACHESON,
Secretary of State,
Washington, D. C.

DEAR MR. SECRETARY: In behalf of the thousands of Portuguese-American citizens of my district and of New England, may I enter with you a protest against the acquisition by India of the territory of Goa.

For nearly 500 years, the territory has been under the Portuguese flag. Its 650,000 people are loyal to Portugal, as indicated by the fact that only a scanty military force is kept in the territory. Fifty thousand people from Goa work in Bombay, but few have relinquished their citizenship.

This little territory was secured by Portugal in those early days when the hardy mariners from Portugal went to all parts of the world and planted the flag of civilization.

During the last war, Portugal aided materially in the Allied victory. Its air bases in the Azores were a vital part of our offensive.

To take the territory of Goa away from a loyal ally and give it to a country with which it has had no legal ties for 500 years would be unfortunate. It is difficult to believe India would be short-sighted enough to ask it.

On the past Sunday, a mass meeting of Portuguese-Americans of Fall River, Mass., strongly expressed their opposition to the intentions of India. I transmit to you their sentiments, which I heartily endorse. I hope the Government of the United States will use its great moral influence in world affairs to persuade India that its plans with respect to Goa should be abandoned in the interests of international justice.

Sincerely yours.

A Strike Against the Public Is No Private Affair

EXTENSION OF REMARKS
OF
HON. FORREST C. DONNELL
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Tuesday, May 23 (legislative day of Wednesday, March 29), 1950

Mr. DONNELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "A Strike Against the Public Is No Private Affair," published in the Louisville (Ky.) Times, of May 10, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A STRIKE AGAINST THE PUBLIC IS NO PRIVATE AFFAIR

Strange bedfellows are made almost every time compulsory arbitration is proposed as a strike preventive in vital industries. When the question was before the Senate Labor Committee in 1947, for example, AFL and CIO leaders were no more outspokenly opposed to the proposal than were such conservatives as Senator TAFT and Ira Mosher of the National Association of Manufacturers. That was not surprising. As a rule, management and labor are equally opposed to a third party settling their disputes, being inclined to regard them as private quarrels regardless of the effect on the public's welfare and convenience.

Thus the fact that three of the nation's top railroad executives, appearing before a Senate subcommittee on the eve of today's walkout, urged compulsory arbitration for rail disputes is news of more than passing interest. No doubt they, too, would hesitate to support such legislation as a remedy in all industries, or even in all vital industries. But railroads are in a special category. They are a public utility, and as such are subject to governmental rules and restraints that are not applicable to other industries.

In his testimony 3 years ago, Mr. Mosher expressed the fear of big business when he declared that compulsory arbitration would invite government control of prices and markets. That argument, whatever its validity in general application, does not fit the situation of railroads. They, like other public utilities, have been under such controls for years—without, incidentally, losing their identity as instruments of free enterprise. Railroads are not free to charge whatever rates they like, or to run their trains whenever and wherever it suits their fancy.

To some extent, regulations designed to protect the public now cover employer-employee relations on the railroads. The National Railway Labor Act, with its cooling-off periods and mediation machinery, was enacted more than two decades ago for the purpose of preventing strikes or lockouts. It, however, stops short of forbidding such strikes, which is what the Donnell bill now before the Senate would do. It would substitute arbitration as a last resort after collective bargaining and mediation had failed.

Compulsory arbitration for public utilities and their employees rests upon the sound principle that the public interest must come before any private interest. It was upon this principle that a committee appointed by President Woodrow Wilson recommended compulsory arbitration for such services in 1919. It said:

"The continuous operation of public utilities is vital to public welfare. As the capital invested is employed in public use, so is the labor engaged in public service; and the withdrawal of either with the result of suspending service makes the people the real victim."

Stop Rail Strikes

EXTENSION OF REMARKS
OF
HON. FORREST C. DONNELL
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Tuesday, May 23 (legislative day of Wednesday, March 29), 1950

Mr. DONNELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the El Paso (Tex.) Times of May 2, 1950, entitled "Stop Rail Strikes."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

STOP RAIL STRIKES

Railway Age has come out editorially for a substantial amendment of the Railway Labor Act.

Because America depends so heavily upon its railroad system every citizen should be interested in any effort that possibly could have a bearing on preventing future strikes on the railroads.

Railway Age in its current issue says in part:

"The only practicable solution of the present dangerous drift in industrial relations on the railroads lies in substantial amendment of the Railway Labor Act.

"Senator DONNELL, of Missouri, has introduced a bill, S. 3463, to outlaw railroad strikes or lockouts in defiance of awards by Presidential boards. Without weighing the merits of the bill's specific provisions, its basic approach is unquestionably sound.

"The threatened strike of railroad firemen—postponed for 2 weeks a few days ago—is no isolated phenomenon. It is far more important as a symptom than as an actual danger in itself. The really significant fact is that the much-praised Railway Labor Act has completely broken down as a mechanism for protecting the public from railway strikes. As a consequence strikes on the railroads must now be recognized as a constant danger. They will continue so until the law is changed.

"The reason the country now suffers from frequent railroad strikes, and from almost constant threats of them, is that all fear has been removed from railroad unionists that they will lose anything by striking.

"The railroads have never refused in a dispute of any significance to abide by the decisions of these boards. The unions, on the contrary, have hardly ever, since 1941, accepted any of the board's decisions if they have had any reason whatever for dissatisfaction."

The Times always has looked upon the railroad brotherhoods as being on the conservative side of organized labor. This newspaper would suggest to the brotherhoods at this time, however, that they be a little more careful.

There was a period not too many years ago during which both sides lived up to findings of arbitration boards called in when a railroad strike was threatened. That period should be brought back. Otherwise it may be necessary to enact legislation such as that proposed by Senator DONNELL to outlaw railroad strikes or lockouts in defiance of awards by Presidential boards.

Our economy cannot stand disastrous tieups of our rail transportation system.

Compulsory Arbitration

EXTENSION OF REMARKS
OF
HON. FORREST C. DONNELL
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Tuesday, May 23 (legislative day of Wednesday, March 29), 1950

Mr. DONNELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Compulsory Arbitration," published in the Glens Falls (N. Y.) Post-Star of May 12, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

COMPULSORY ARBITRATION

A report from Washington written prior to the railroad strike declares that some Government officials believe compulsory arbitration may be the only solution to strikes against public utilities. Both labor and management are opposed to the idea. Management's opposition stems from the fact that compulsory arbitration would deprive it of more of its already limited right to manage and that unions would be tempted to "make" disputes in the expectation that they would gain something through each arbitration board's attempt to compromise the case. On their side the unions fear that if arbitration were substituted for the strike force, they would not get as much as they otherwise might.

Now, there should be no pretense about this question of compulsory arbitration. It would not be the perfect solution to labor-management relations in public utilities and it would be only as fair as the arbiters themselves were fair. However, it does not follow that because an administration is outspokenly favorable to labor as the Truman administration is, and the Roosevelt administration before it was, that an "impartial" board of arbitration would be similarly inclined, or vice versa.

For example, boards acting under the authority of the Railway Labor Act have twice rendered decisions on the subject of this strike which was called for the purpose of compelling the railroads to hire an additional fireman for Diesel locomotives. Both boards said the demand was without merit. A railroad strike of a few years ago was called after such a board made a wage award in which management concurred but which the unions refused to accept.

For a great many years the Railway Labor Act functioned very well. It broke down only when the administration in Washington gave labor every encouragement to strike and led the unions to take a cynical view of the act and the voluntary responsibility to accept arbitration which is the essence of it. What made this act good was the assumption that both union and management would accept the arbitration findings whatever they might be. This assumption was based on the further assumption that arbitration would be fair, and as far as we are aware it always has been.

It would be possible and it might not be bad at all to amend the act in one principal manner, making compliance with the arbiters' findings compulsory rather than voluntary. The point is that strikes against the public interest can be justified and at the same time disastrous to that interest. Actually three interests are involved in every public utility strike, labor's, management's, and the public's, of which the latter is most important. If public health, safety, and prosperity are not to be unduly damaged by strikes, compulsory arbitration may be the only answer short of Government ownership. Congress could do worse at this time than introduce the subject for discussion.

Cardinal Spellman's Poem

EXTENSION OF REMARKS
OF
HON. LOUIS B. HELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1950

Mr. HELLER. Mr. Speaker, on May 14, 1950, the new Alfred E. Smith Memorial Building at St. Vincent's Hospital, New York, was dedicated. Many church and State dignitaries participated. The most poignant point of the ceremonies came, however, when His Eminence Francis Cardinal Spellman spoke of the late Al Smith, and included in his address a poetic tribute to the former great Governor of New York State. Following is the Cardinal's poem, which I commend to the reading of my colleagues:

CARDINAL SPELLMAN'S POEM

We must not think of this high lifted mass
In terms of steel, concrete, and carven stone,
Of rooms and corridors, of halls and clinic space.
This building is a living thing, it has a soul,
It breathes the spirit of a man who walked
A friend of all, an enemy of none—
For bigotry—the realm of little men—
Too great; in vision—for the grasp of time—
Too large. And so in this memorial
Al lives again, extends to those in need
His friendly hand and lends a willing ear
To every human woe. Here may he soothe
The fevered brow, his smile again give light
His courage steel the spirit wavering,
His charity and faith sustain us all.
No lifeless stone today we dedicate
But that wide spreading of a great man's soul,
That seedling upwards from a city street
And nourished by the deep-thrust roots of faith
Did reach its branches to a grateful state,
And dying, lives again within these walls
That breathe Al's spirit and proclaim his creed—
God made us all, God loves us all, and we
As brothers must within these troubled years
Protect, maintain Al's heritage and ours
Devotedly in service to our fellow men.

Roughneck Youth

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 23, 1950

Mr. MADDEN. Mr. Speaker, several months ago James S. DeLaurier, publisher of the Hammond (Ind.) Times, started a campaign to curb lawlessness and immorality which has been spreading among our American youth.

The following is an editorial from his paper which set out some of the reasons why the national Government should take steps to curb this deplorable juvenile problem:

ROUGHNECK YOUTH

In Los Angeles the police are having trouble with gangs of tough boys who roam the streets, beating any man, woman, or child with whom they come in contact at night. And for no apparent reason, at all.

A few days ago some of these young hoodlums slugged a policeman and then dragged a 43-year-old woman into a car, fractured her jaw and whipped her unmercifully.

In Tolleston a few evenings ago some young rats, swilling up on canned beer, noticed a youth coming from a wedding. Taking a dislike to his formal attire they started to muss him up. His father and mother were in a nearby car and the father, a police sergeant off duty, went to his son's assistance and was knocked unconscious when hit over the head by an iron pipe.

All good citizens know that the police will make every effort to round up these young brats and see to it they are put out of circulation for some years to come.

According to the New York Times, Brooklyn, with more teen-age gangs than any other borough, has the most highly organized form of street and park warfare in all New York City.

The Brooklyn roughnecks battle with knives, zip guns and bigger weapons than used elsewhere, although they are not as murderous as young toughs in the Bronx.

Many of the 3,000 active members of Brooklyn's teen-age gangs are tough girls, some of whom are not listed as virtuous. The problem of young roughnecks has indeed become a matter of grave concern to the New York City police department.

However, all of the young toughs are not confined to the streets. Take the 200 hoodlum students at Ohio State University who invaded the girls' dormitories of the college, as well as those of the sororities.

After this criminal trespassing the Ohio State University toughies doused the pajama-clad coeds in showers and fled with the girls' underclothing.

This is what the people of the United States read on May 5 when a UP dispatch gave the news about the Buckeye State university rowdies.

After the disgrace of one of its students being tried for an alcoholic-haze murder and with mobs of men students crashing

into women's dormitories in predawn hours, one would think the Ohio Legislature would order the State university cleaned up, some of its authorities fired, and the hoodlums kicked out.

It must be a matter of concern to fathers and mothers of girl students at Ohio State to have to worry over the gangster element that seems to have a free hand at the tax-supported university.

Railroad Men Should Submit to Compulsory Arbitration

EXTENSION OF REMARKS
OF
HON. FORREST C. DONNELL
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Tuesday, May 23 (legislative day of Wednesday, March 29), 1950

Mr. DONNELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Railroad Men Should Submit to Compulsory Arbitration," published in the Pasadena (Calif.) Star-News, of May 12, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

RAILROAD MEN SHOULD SUBMIT TO COMPULSORY ARBITRATION

In view of the locomotive firemen and enginemen striking against four major railroad systems, crippling the Nation's transportation network, and through the Santa Fe affecting the Pasadena area, and threatening to idle half a million other workers, it is to be hoped common sense leads the Senate labor subcommittee to approve the bill of Senator DONNELL, of Missouri, which would make strikes and lock-outs in railway disputes illegal, and force the contending parties to accept compulsory arbitration. The Nation and the people's interests need such a law.

The demand—that railroads employ two firemen on the larger Diesel locomotives—is without real merit. Two Railway Labor Act fact-finding boards, one appointed by President Roosevelt in 1943, and the other by President Truman in 1949, have so held after careful consideration.

Now Mr. Truman can perform a valuable service by making plain he stands firmly on the report of his own 1949 board which said unanimously:

1. That replacement of steam locomotives by Diesels, instead of knocking firemen out of jobs, creates more jobs. The Diesel's high efficiency should attract more freight to railroads and enable them to compete more successfully with highway truckers.

2. That two firemen are not needed for safety. Rates of train and crew accidents indicate that Diesel operation (with one fireman to a Diesel) is "safer than steam locomotive operation."

This strike has nothing to do with hours, nothing to do with working conditions. It is simply an effort to impose upon the railroads by force a "featherbedding" proposal, one without basis in reason or logic. When Diesel power was first introduced on the Burlington system in 1934 the locomotives were operated safely and efficiently with one man in the cab—the engineer. Shortly afterwards the Burlington, under threat of a strike, was forced to add a fireman. The firemen and the Brotherhood of Engineers have intermittently sought since then to "pack" the Diesel crew with additional and unneeded men.

The Government, through the Interstate Commerce Commission, has constantly encouraged the railroads to expand their Diesel operations on the premise it would cut operating costs, thus making possible rate reductions urgently needed if the rail carriers are to hold their share of the Nation's freight and passenger business and employment.

The railroaders are now serving notice that these two unions intend, if possible, to nullify these operating economies by an indefensible program of "featherbedding," to flout the previous findings of Presidential fact-finding boards and to defy public opinion.

Because railroads operate in the public interest and movement of trains is absolutely necessary for protection of the public health and safety, rigid control was established over them years ago by governmental agencies. Railroad chiefs, for instance, may not arbitrarily close down their lines, as a shopkeeper may roll up his shutters.

Therefore it is logical that railway labor may not flout its obligations to the public and arbitrarily strand trains.

Time for Decision

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 23, 1950

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "Time for Decision," which appeared in the May 19, 1950, issue of the East St. Louis (Ill.) Journal:

TIME FOR DECISION

The time has come for Americans to face squarely up to this hysterical business of the Communists in Government.

We have had enough of the accusations and insinuations. We have had enough of the smears. We have had enough of the charges that are not, and perhaps cannot be, proved. We have had more than enough.

The time has come for this country to settle down, now, and face this issue calmly. The time has come to stop acting hysterically, to stop reacting emotionally to every charge and every denial. The time has come for some common sense to enter the picture.

But how is common sense to enter the picture? What will it take to lay this cloud that is not only confusing our citizens and frightening them but is undermining whatever position of leadership we may have had in the world?

George N. Craig, national commander of the American Legion, says, "If there is communism in the State Department, the public is entitled to know it. If there is not communism in the Department, the public should know that." He says the public wants the unvarnished facts and they are entitled to them.

So much is certainly true. But what will satisfy people? What kind of proof must we have?

For example, if we get proof that there have been Communists in the State Department, can we get rid of them and have that be the end of the business. And also, if it is proved that there has been no communism in the State Department, will the accusers then be still? Or, if they will not be still, will they be ignored?

In other words, what will it take to settle the hysteria, to uncover the facts in a calm and quiet manner, and let the public have them and then go on from there?

Obviously all present approaches to this problem are proving unsatisfactory. Would an investigation by an impartial, nonpolitical commission do the trick? Or must we admit that we are, as a Nation, too immature to cope with such a problem as this one?

History Repeats

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 23, 1950

Mr. DONOHUE. Mr. Speaker, I should like to include an excellent article, written by Ralph Boyce, entitled "History Repeats," which appeared in the April 22, 1950 issue of the Vet-Times.

This young man, a veteran himself, with a very promising journalistic future, here presents a brilliant and poignant editorial feature about the "unknown soldier" which merits wide circulation and I am pleased to commend it to your reading. The article follows:

HISTORY REPEATS
(By Ralph Boyce)

At long last, he is coming home.

A little more than a year to wait now, and we shall see him laid to rest, to a peaceful slumber deepened by the eternal tread of sentries' boots and the hushed murmurs of those who come to stand in mournful tribute.

They call him an "unknown" hero of World War II. But they are wrong. He is not unknown. We knew him like a brother. He's that 18-year-old kid from next door who never got off the beach at Anzio; he's that farm boy from the Midwest who crashed in a flaming glider in Normandy; that Brooklyn kid whose numbed hands slipped from the life raft many hours after the ship went down; that lanky Texan whose patrol was caught in an ambush along a winding trail on Bougainville.

Yes; we knew him well. And now he is coming home. We wonder if he ever had a chance, in life, to visit the birthplace of the freedom for which he died—Independence Hall in Philadelphia. He will visit it now, in death, and his buddies from all of the armed services will be there, and thousands of us will wait long hours in line for the privilege of sharing his visit.

And later he will come to the Capitol of the United States. Maybe, when he was in school, he visited Washington during Easter vacation on a bus filled with school buddies and toured the Capitol. Maybe that time he sat briefly in the gallery of the historic Chamber of the House of Representatives where later the solemn vote was taken that called upon him to lay down his life for his country.

He will not visit that Chamber this time. Instead, he will lie in state in the great rotunda, where perhaps his school-days' guide once pointed out the blank spaces in the murals around the ceiling which tell the history of our Nation. Blank spaces that eventually will record the progress of the freedom for which he died.

And thousands upon thousands more of us will stand in line for the privilege of visiting with him at the Capitol and our ranks will be joined by the great and the near-great and the never-to-be-great, all equally

humble in his presence and in the knowledge of his sacrifice.

Finally, on Wednesday morning, the 30th of May 1951 (how old would he have been on this date, we wonder?) the guns will begin to boom from Fort Myer, across the Potomac. The gun bursts will echo and die away throughout the entire morning. Meanwhile, from out of the Capitol the funeral cortege will begin its last journey—probably led by the President of the United States.

As the casket on the black-draped caisson is drawn down the broad, tree-lined avenue by six coal-black horses, escorted by prancing cavalry, and followed by a parade of the highest dignitaries of the land, television cameras will pick up the scene and flash it instantly around the Nation.

I guess he never saw television. He'd heard about it, even talked about it—but probably wouldn't have believed that so soon after the war we would be watching baseball games right in our own living room.

But now the miracle of television he never saw will make it possible for an entire Nation to be present at his funeral. Millions who knew him well will share the grief of a Nation, alone and together pay him this belated tribute.

The millions will be with him as his caisson rolls slowly and smoothly past the White House—refurbished and rebuilt since he went away—past the monument to the father of our country, to circle the awe-inspiring Lincoln Memorial where the benign and gaunt figure of another martyr to American freedom looks down in solemn majesty.

The guns will crack loud in the television sets as the caisson rattles across the rough stones of Arlington Memorial Bridge and up through the wide, gold encrusted gates of Arlington National Cemetery.

Perhaps the still-to-come miracle of color television will pick up the riotous color of the azalea bushes—and the breath-taking formal garden of tulips bowing their tribute—as the cortege winds its way to that hallowed place where he is to lie with an older brother who also died for freedom, and came to his final rest in this same spot 30 years before. How often must history repeat itself?

And then, before his casket is lowered into the ground, the President of the United States will pin the Congressional Medal of Honor—highest military honor of all—on the casket. The President will be followed by leaders of allied nations, bestowing similar high honors—until the casket gleams with more decorations than any man has known in life or death.

But please, God, let there be no speech-making. He never was much of a one for speeches, anyway. Deeds, not words, were his way of life, and his way of death.

Let it be recorded that the tears in a nation's eyes and the prayers in a nation's heart were the ultimate, silent honor that brought him, at last, to rest.

Rail Strike Accents Need for Law Protecting Public Interest

EXTENSION OF REMARKS
OF
HON. FORREST C. DONNELL
OF MISSOURI
IN THE SENATE OF THE UNITED STATES

Tuesday, May 23 (legislative day of Wednesday, March 29), 1950

Mr. DONNELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Rail Strike Accents Need for Law Protecting Public Interest," published in the Long Beach (Calif.) Press-Telegram of May 12, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

RAIL STRIKE ACCENTS NEED FOR LAW PROTECTING PUBLIC INTEREST

The current strike by 18,000 railway firemen—affecting the major railroad systems, crippling the Nation's transportation network, and threatening to idle half a million workers—focuses attention on a bill by Senator DONNELL of Missouri. This measure would make strikes and lockouts in railway disputes illegal and force the contending parties to accept compulsory arbitration.

It is regrettable that such drastic legislation must be suggested. Collective bargaining, if conducted in a spirit of fair play and graceful compromise, should forestall these great disruptions in our national life. But the stark truth is that this conflict has not been resolved and it has now reached a stage where enormous public harm is threatened. Because railroads are so vital to the national economy, it is inevitable that the Congress will turn to more stringent legislation to protect the public interest.

What is the merit of the demand that railroads employ two firemen on every Diesel locomotive, the crux of the present issue? The answer has been written by two Railway Labor Act fact-finding boards, one named by President Roosevelt in 1943, another by President Truman in 1949. After careful consideration, these boards decided the two-firemen proposal is untenable.

Now Mr. Truman can perform a valuable service by making plain he stands firmly on the report of his own 1949 board, which said unanimously:

1. That replacement of steam locomotives by Diesels, instead of knocking firemen out of jobs, creates more jobs. The Diesels' high efficiency attracts more freight to railroads and enables them to compete more successfully with highway truckers.

2. That two firemen are not needed for safety. Rates of train and crew accidents indicate that Diesel operation (with one fireman to a Diesel) is "safer than steam-locomotive operation."

This strike has nothing to do with hours, nothing to do with working conditions. It is simply an effort to impose upon the railroads and the public by force a "featherbedding" proposal. When Diesel power was first introduced on the Burlington system in 1934, the locomotives were operated safely and efficiently with one man in the cab—the engineer. Shortly afterward the Burlington, under threat of a strike, was forced to add a fireman. The fireman and the Brotherhood of Engineers have intermittently sought since then to "pack" the Diesel crew with additional and unneeded men.

The Government, through the Interstate Commerce Commission, has constantly encouraged the railroads to expand their Diesel operations on the premise that this would cut operating costs, thus making possible rate reductions urgently needed if the rail carriers are to hold their share of the Nation's freight and passenger business and employment.

The railroaders are now serving notice that these two unions intend, if possible, to nullify these operating economies by flouting the previous findings of Presidential fact-finding boards.

The Donnell bill follows mounting evidence that the Railway Labor Act, once regarded as a model measure for labor disputes, has failed to adequately protect the public interest. Unions have refused to accept decisions of fact-finding boards, using these decisions as a line of departure from which to pursue their demands. That new legislation should replace the Railway Labor Act thus becomes a public necessity.

Because railroads operate in the public interest and movement of trains is absolutely necessary for protection of the public health and safety, rigid control was established over them years ago by governmental agencies. Railroad chiefs, for instance, may not arbitrarily close down their lines as a shopkeeper may roll up his shutters.

Therefore it is logical that railway labor may not flout its obligations to the public and arbitrarily strand trains. But such is the case in the present dispute where the unions demand an extra fireman on Diesel locomotives—to help the regular fireman look out the window.

This same line of reasoning applies to other public utilities on which the people rely for their transportation, communication, light, telephone, heat and power.

For a Free and Independent Slovakia

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 23, 1950

Mr. PRICE. Mr. Speaker, at the request of Mr. John Sedlacek, chairman of the Southern Illinois Slovak Federation, 1321 North Thirteenth Street, East St. Louis, and under leave to do so, I herewith extend in the Appendix of the RECORD an article which appeared in Jednota, largest Slovak Catholic weekly in the United States, published in Middletown, Pa., by the First Catholic Slovak Union:

FOR A FREE AND INDEPENDENT SLOVAKIA—THE ORIGIN AND AIMS OF THE SLOVAK NATIONAL COUNCIL ABROAD

(By Peter Pridavok)

III

An internment camp is not a very suitable political platform, and the only thing Benes adversaries there could do was to protest against their detention and against the recognition of Mr. Benes' government by the Government of the United Kingdom. This latter protest was made in a telegram sent to Mr. Churchill from the Lingfield Race Course Aliens Internment Camp in July 1940.

When the present writer was finally released from internment in April 1941 and came to London, he had ample opportunity to observe at close quarters Dr. Benes' anti-Slovak policy. The step taken by the British Government in recognizing Dr. Benes' government as representative of the Czecho-slovak nation, followed subsequently by the United States, the Soviet Union and by the Polish Government (both of them having previously recognized the Republic of Slovakia), as well as by all the other Allied governments-in-exile, was of course a terrible blow and an insurmountable obstacle. The dilemma which presented itself was to give up the struggle and keep silent, or to challenge the whole allied world in an absolutely hopeless struggle and to face persecution, derision and slander? A handful of patriotic Slovaks chose the latter, disregarding all consequences. This writer and his few friends tried to inform the Allied governments and public opinion by memoranda and press articles, but with very little visible effect. More favorable results were obtained in America, where they succeeded, after several years'

hard work, in winning over for the Slovak cause the almost one million strong Slovak-American community, which had previously been confused by the Benesites and intimidated by their influential friends and supporters in the various agencies in the West.

To revive the Paris Council was not possible for the reason already stated. In addition, Dr. Hodza, its president, proved to have been too much entangled with Dr. Benes, and was not a free agent any longer. And anyway, in the following year he left for the United States, where he died shortly afterward. A new group was therefore formed, under the name of "Slovak National Union," with the present writer at its head. Its aims were twofold: To counter the propaganda of the Czechoslovaks, which had progressively become more and more anti-Slovak, and to foster, in cooperation with similar organizations of other nations the idea of a central European federation. For this purpose an independent central European association was established early in 1943. The objects of the association were "the struggle for a new national, political, economic, and social organization of the central European area on a Federal basis * * * and for national freedom, the right of self-government and full nationhood for all nations in central Europe and the rejection of any imperialistic or hegemonic attempts, either external or internal, within its territory." (Cf. Commonwealth of Central Europe, London, 1943, p. 13.) This association later transformed itself into a central European federal club, which became the mother organization of numerous other central European federalist organizations operating today all over the free world.

It may be perhaps worthwhile noting that within the association the first genuine and sincere Czech-Slovak agreement was reached between the Czech and Slovak national unions. On March 9, 1943, these two unions signed a declaration, according to which they mutually recognized the right of the Slovak and the Czech nations to full national freedom and independent, i. e., to a Slovak and a Czech state respectively, within the framework of a central European federation, and pledged themselves to render mutual assistance and support in defending the vital rights of both neighboring sister nations. This agreement which still holds good between the successors of the two national unions, is to this day considered the best workable basis for a Czech-Slovak reconciliation and cooperation, and as far as the Slovaks are concerned, the only acceptable one.

Dr. Benes' sinister influence upon European affairs, exercised by him ever since 1916 (cf. R. Arnold Jones in "Dublin Review," January 1945), which resulted in disaster in 1938 and 1939, reached its climax in December of 1943, when he concluded, against the strong warnings of the British and American Governments, what he tried to present as his magnum opus, i. e., the treaty of friendship, mutual help, and postwar cooperation between the then still nonexistent Czechoslovak Republic and the Soviet Union, so disastrous in its consequences. The Moscow pilgrimage of the self-styled President of Czechoslovakia prompted the handful of Slovaks organized in the National Union to act and to denounce, in the strongest manner possible, this charter of enslavement, if only to put a Slovak protest on record. At a meeting held January 9, 1944, the union formed itself into a Slovak National Council, and in an open letter addressed to Mr. Anthony Eden, the Foreign Secretary of the United Kingdom, and published a few days later, announced that it had assumed the defense of Slovak interests on Allied soil until the Slovak people would be able to speak for themselves through their democratically elected representatives. The present writer was elected its chairman, and Mr. Karol Vychodil its secretary. In its open letter, the Slovak National Council "declared most solemnly that (the Moscow Treaty) was null and void, and did not bind the Slovak Nation in any way," insisting that "the President of the Czechoslovak Republic and Mr. Fierlinger * * * acted as unauthorized negotiators * * * and could not be regarded as authorized negotiators with juridical or political title to represent the Slovak Nation." Besides being a protest against Dr. Benes' compact with Stalin, the document was a plea for the defense and maintenance of the Slovak State as a separate unit in a future Central European Federation. This document, a thoroughly democratic and patriotic plea on behalf of the Slovak Nation, let loose the fury of the Benesites. In their press they denounced it as a "document of national treason." and accused its author of open hostility toward the British Government. (Nove Ceskoslovensko, February 19, 1944.) They went even further and demanded of the British authorities—this time, however, without any results—the imprisonment of the "traitors."

These and other intrigues, in which the Czechoslovaks enlisted the active assistance of Mr. Maisky, the Soviet Ambassador, did not deter the Slovak National Council from further work. When every opportunity presented itself, they did everything to put the case for a free Slovakia before the Allied Nations and their representatives. Had its various proposals and suggestions been accepted at the time, much bloodshed and horror could have been avoided not only in Slovakia, but in other countries of central Europe as well, and probably the whole central European picture would be different today.

The work of the Slovak National Council in London could not end with the termination of the war, because the Slovak people were not given the opportunity to decide freely about their future. In complicity with his Soviet protectors and their misled stooges, Dr. Benes destroyed the Slovak state and started in Slovakia a bloody reign of terror and revenge. Until February 1948 the cruel persecution of Slovak patriots was being carried on under the well-worn mask of democracy. When Dr. Benes' policy, too clever by half, ended in complete communization of his "people's democracy," when Gottwald completed the work started by the presidential decrees of his predecessor and fresh refugees began to pour into the western countries, the numbers of exiled Slovak politicians of various parties and convictions forced to leave the "wonderful republic" increased, and many of them expressed the wish to join the Slovak National Council in London and to support its policy as being in accordance with the desires of the people and with their own convictions.

Taking into consideration this new situation, as well as the magnitude of the tasks before it, the council decided on August 11, 1948, to enlarge its ranks and to reorganize itself completely in order to become the central and leading organ of the Slovak emigration in its struggle for an independent, democratic Slovak state within the framework of a central European and European federation. The name of the council was modified into Slovak National Council Abroad, and chose a new president in the person of M. Karol Sidor, the wartime Slovakian envoy to the Holy See, who is generally considered the most popular and trusted of all the surviving Slovak leaders. The former president of the Slovak National Council in London (the present writer) was elected general secretary, and prominent politicians, diplomats, and other figures of Slovakia's public life entrusted with offices in the presidium and in the various committees of the new council, and with the task of representing it in many of the capitals of the free world.

The purpose in reconstructing the council was announced to the Western Powers and to the exiled representations of other nations now under Soviet and Communist oppression in the following terms:

1. That measures shall be taken for coordination of the struggle by Slovak national elements toward democracy that can be identified with freedom and independence.

2. That measures shall be taken to seek a solution or closer approach to solution than is at present possible of the unsettled national problems in central Europe which have continuously been the source of international trouble; and to that end our opinion is expressed that such problems may become solved only by a policy which in operation would bring about a federation in central Europe, composed of separate states of the nations involved.

3. That this step shall be regarded as a practical and balanced impulse toward cooperation with bodies representing other central European nations for the creation of a democratic federation or commonwealth of central Europe and will thereby serve to harmonize such efforts with further objectives toward the integration of Europe as a whole.

The Slovak National Council Abroad is reliably assured that its national and federalist policy meets with the most wholehearted approval of the Slovak people at home. It has the backing of the overwhelming majority of the Slovak emigration and of the Slovak-American and Slovak-Canadian organizations which recognize the council as "the only institution having every right to act in the name of the Slovak nation and to voice its convictions, will, and desires and pledge it their full moral and material support." (Cf. resolutions of the 30th congress of the Slovak League of America held at Chicago, Ill., Mar. 3, 1949, and of the 8th congress of the Canadian Slovak League, held at Winnipeg, Manitoba, from the 25th to the 27th of July 1949.)

Being not only a national, but a federalist institution as well, the Slovak National Council Abroad realizes the importance of close cooperation with the free representatives of Slovakia's neighbors and prospective partners in the central European commonwealth all of those nations envisage and desire. To this end it has established normal relations and fruitful collaboration with the Czech National Committee in London, with the Hungarian National Committee in Washington, with the legal government of the Polish Republic, the Ukrainian National Council, and with the Government of the Byelorussian Republic, and is in close contact with many national and federalist organizations of various nations. The only group with which the Slovak National Council Abroad does not and will not entertain any relations are the so-called Czechoslovaks, for they do not represent any nation, not only the sad heritage of their discredited leaders and of a bankrupt ideology which has been the main source of discord among the nations of central Europe. (Reprinted from Eastern Quarterly, London, January 1950.)

It's Time To Call a Halt

EXTENSION OF REMARKS
OF
HON. FORREST C. DONNELL
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Tuesday, May 23 (legislative day of Wednesday, March 29), 1950

Mr. DONNELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial

entitled "It's Time To Call a Halt," published in the Beaver Falls (Pa.) News-Tribune of May 12, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

IT'S TIME TO CALL A HALT

People of the Beaver Valley who did not bother to become concerned over the developing strike threat of the Railroad Firemen's Union have been rudely shaken out of their complacency. They now fully realize, along with the rest of us, before the strike has even entered its third day, that the work stoppage and tie-up of transportation lines is much more than a national problem. It effects, with increasing impact, every home in every hamlet and town; if not quickly settled it will seriously affect our pocketbooks and the economy of the entire Nation.

It is not only the railroad systems involved and their employees that will suffer because of this ridiculous strike of the firemen's union that is an affront to every citizen of the Nation. Steel mills and coal mines, but recently back into production after strike-induced idleness, will very shortly feel the pinch of curtailed raw supplies and shipping facilities. Sharp cuts in production are not only likely, they can be definitely expected. Multiply this effect by the number of smaller, dependent fabricating plants and kindred industries and the dire consequences of featherbedding become apparent in all their startling reality.

Before the second day of the strike was over, such a commonplace, yet vitally important, facility as mail delivery was badly disrupted and practically at a standstill. Delivery of foodstuff will next be impaired since truck-delivery facilities cannot possible be expanded enough to accommodate the heavy demands that will arise.

The bald, unadulterated truth of the matter is that the Nation's economy is being dealt a serious body blow by this strike that is not more money, not because of hours, but only for soft featherbedding spots for additional unnecessary firemen to go along in Diesel locomotives just for the ride.

And what is behind it all? The reckless leaders of the firemen's union want to force down the throats of the railroads and the public a ridiculous make-work proposal which has been twice ruled out by Presidential fact-finding boards duly appointed under the provisions of the Railway Labor Act.

This demand of union leaders for additional and unnecessary firemen to ride in Diesel locomotives was rejected—after months of hearings—by a Board appointed by President Roosevelt in 1943.

It was again rejected in 1949 by a Board appointed by President Truman.

Recent meetings with the National Mediation Board have brought no change in the attitude of the union dictators.

The union leaders helped write the Railway Labor Act. Yet in an attempt to jam through this scheme of pure featherbedding by leading the members of their union out on strike and threatening paralysis to large areas of the Nation, they are defying the spirit and intent of the very law which they helped to create.

The strike is not for higher wages. It is a strike to force the railroads to employ many more thousands of firemen who are not needed. It would be indefensible waste. The railroads have refused to place this additional and unnecessary burden on the public.

But more important than any other consideration is the action of these few irresponsible union leaders in seeking to force a crippling strike upon the Nation for their own selfish purposes.

It is time to put an end to such un-American demands. As was stated in testimony before a Senate Labor Subcommittee hearing on a bill banning rail strikes: "A strike in no other industry can so quickly and so thoroughly paralyze the Nation and bring such disaster to its economy and general welfare nor work such havoc in its defense program or its efforts in the world today."

Point 1 in a Policy for Asia

EXTENSION OF REMARKS
OF
HON. LOUIS B. HELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 11, 1950

Mr. HELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Times magazine of May 14, 1950:

POINT 1 IN A POLICY FOR ASIA—WE MUST INSIST ON SOCIAL AND POLITICAL REFORM OR INTERVENTION WILL FAIL

(By Nathaniel Peffer, professor of international relations at Columbia University)

It seems certain that the United States is going to do something systematic in southeast Asia. Why, is clear enough—to stop the advance of communism and Russia in Asia. But what the United States is going to do is less clear, though more important.

We appear to be thinking now in terms of money and advisory commissions, both military and civil—and even more in Indochina—and it is better at the outset to ask whether that is enough. We did that in China and the results are painfully evident: Two and a half billion dollars thrown away, a Communist regime sitting in the national capital and the implacable hostility of the government. The same measures in southeast Asia will have the same effect, and if we are to learn anything from the fiasco in China we shall have to do more or do less.

First of all it is necessary to estimate the task correctly and to recognize the obstacles. If we are to succeed in keeping all of Asia except the Indian subcontinent from going the way of China we have three enemies to overcome. The first is Russia. The second is the native Communist Party in each southeast Asian country. The third is the ruling class in each country. And of these three the last is the most important, the most difficult to deal with, the most formidable. If we can deal successfully with it—that is, persuade or force it to follow a course it has never yet followed and is reluctant to follow—we may be able to withstand Russian incursion; if not, not.

In consequence the second need is to acknowledge, to ourselves even more than to others, that the course on which we are embarking is one of intervention. It will be charged against us anyway, and we may as well acknowledge it frankly, justifying it to ourselves by the urgency of the world conflict and to others by what we aim to achieve.

Now, there is a good case to be made against intervention, in any country, at any time, in any circumstance. On all the evidence of history it seldom comes off. There is a good case to be made, to, for intervention that is effective. But there is no case whatever to be made for ineffectual intervention. That only results in futility and the hostility of those against whom we have intervened—a dangerous combination, more especially when the world is choosing up sides, as it is now.

This is the prime consideration to be borne in mind before we set out on any positive course in southeast Asia, and the choice is between going in with intent to use all the means required to bring about a political and social structure impregnable to Communist intrusion and not going in at all.

What does this mean? What are the conditions that invite communism in southeast Asia? It is not enough to cite the Communist victory in China and the danger of infection or invasion from there. As a matter of fact, the growth of communism in southeast Asia had set in before the Communists won in China. Indeed, communism has spread in southeast Asia for the same reasons that it won in China.

There are two main reasons:

First, the whole of southeast Asia is or has been colonial. Thailand was independent by permission. Those countries in the region that have not yet won independence are resentful of foreign control and those that have recently won it are suspicious of its return. The Russians have skillfully exploited native nationalism since the first World War. They have ostentatiously taken on the role of defender of oppressed peoples against western empires, and the colonial powers have played into their hands by making no concessions, or belated concessions, to their dependent peoples.

Second, and much more important, is the question of livelihood. The huge majority of individuals in southeast Asia live on a standard that has now come to be accepted as beneath human worth or dignity in other parts of the world, and the ease of communications in our time has made them aware of it. This, too, has been left to the Russians to exploit, and the native Communist leaders trained by them have won followers by the promise of a better material lot.

Nationalism is, on the whole, a dead issue now. Indochina and Malaya are the only countries in which independence has not yet been won. In Malaya nationalism is not yet virulent, because consciousness of unity is of recent origin, and a crisis could be avoided by concessions in time. In Indochina alone is the crisis sharp on the issue of independence versus continued colonialism, and precisely for that reason communism will be most difficult to stem there, with or without American help. Indeed, unless American help is combined with pressure on France of the same kind that was applied to Holland in Indonesia in order to bring about a compromise, American help will not only be futile but will make the Indochinese people bitterly anti-American.

The crux is the social issue. On this it will be determined whether southeast Asia goes Communist or not. And on this American aid, whether in the form of money or the aid of technicians, is not necessarily decisive. In fact, it might only result in accelerating the advent of communism. In this respect it is immaterial whether the area in question is newly independent or still colonial.

There has long been a comfortable liberal belief that if colonial peoples were only emancipated they would be free from exploitation and contended. That is an illusion. The opposite might be true. Western countries, in all of which opinion has been formed by the influence of nineteenth century humanitarianism and twentieth century liberalism, might be—and probably are—more restrained in exploitation than native rulers and landed proprietors who still have the social ideas of a thousand years ago and corresponding attitudes toward the mass of their people.

Now suppose the United States does decide to embark on a large-scale program in Indochina, or Burma, or Indonesia, or all three. Suppose it appropriates large sums to build railways and power plants, irrigation and

reclamation works, hospitals, and schools and numerous industrial establishments. And suppose thereby it does create higher productivity and a manifold increase in production and the national income. Will that work for the benefit of the mass of the people? Not necessarily; it might do just the reverse. It might make the rich much richer and the poor even poorer, and thus inflame popular discontent and make easy converts to communism. In fact, unless definite efforts were taken for prevention, it would do that.

Much is being talked about point 4, and the most important thing to say about it is this: It can be the most enlightened social measure in modern times and it can produce the conditions of peace in large parts of the earth; but also, unless administered with foresight, determination, vigilance and understanding of social fundamentals in undeveloped areas, it can serve as the spearhead of communism and Russian expansion.

The explanation is simple. If industries are established with American capital and the rich classes get in on the ground floor—as they can, since they have money and knowledge—they will reap the huge profits always yielded in the first stages of industrialization, and with those profits invest in more enterprises and make still more. If at the same time the poor, whether former urban handicraft workers or workers brought in off the land, are paid the subsistence wages they have been accustomed to and worked the traditional 14-hour handicraft day, they will be worse off than before.

They will then have to work at the pace of the factory, live in urban slums, acquire urban demands which they have to satisfy by paying with cash instead of making things with their hands on the farm. The disparity between the classes will become even wider than it is now, but it will be more glaring and obvious than now, because industrial workers soon acquire sophistication, even in the Orient. Discontent will fester and the voice of the Communist will have a siren lure.

In the land it can be even worse. The countries in question are all agricultural, their people almost all peasants. The main problem therefore is the agrarian problem. If by irrigation and other projects we improve the fertility of the land, but leave untouched the system of landownership, land rent, usurious rates of interest and disproportionate taxation, the benefits of increased fertility will accrue to the landowner exclusively. In fact he will be able with his large profits to buy in more land, and more peasants will become rack-rented tenants.

Peasant discontent is endemic in such countries. It will become more virulent as conditions worsen, and everywhere communism's first and most successful appeal is to the peasants. With or without industrial development there can be no stability or internal peace in southeast Asia unless the agrarian problem is drastically dealt with.

In short, to put American money into development of technologically backward areas while leaving as they are the internal distribution of wealth and power and the existing relation between the small omnipotent minority and the impoverished majority is to aggravate conditions already so bad as to be volcanic.

The moral is plain. If we go in at all it is intervening. It is intervening for the purpose of keeping Russia out. Then it had better be intervention with a prospect of success. That means we have to use power as well as dispense money. If we want to undercut Russia we have to remove the grounds on which it can work. That means we have to bring about conditions that will leave the mass of native people no reason to lend a sympathetic ear to Communist exhortations or promises. We cannot do that if we leave decision to those who now have power in such countries, whether they still are colonial under French or British jurisdiction or are independent, as in Indonesia or the Philippines or Burma.

The Philippines can be taken as an example here. They are now free and independent. And it is generally recognized that communism has gained since emancipation in 1946 and is still gaining. The Hukbalahaps, who are Communist led but in the main not Communists, are suppressed at one point and pop up at another point. They do so because the mass of the people, especially on the land, are disaffected. They are disaffected because the government, controlled mainly by large landowners, has taken no step to improve the peasants' lot; if anything, to the contrary. Nor does it show any inclination to do so.

That being the case, it can be confidently predicted that communism will grow, regardless of whether or not America provides additional financial help. In other words, continued colonial status or emancipation is irrelevant. In fact, we may be more helpless in countries that are now independent.

No matter which country and what its status, financial aid of any kind—whether ad hoc or under a formal point 4 program—must be accompanied by pressure; not military pressure against local Communist guerrilla forces, not pressure against local Communist parties, but pressure against native classes holding power of decision.

In newly established industries we must insist on fair wage scales and working hours more nearly in keeping with Western standards. On the land we must insist on reform in the organization of land ownership, including redistribution where necessary, on reduction of land rents, on reduction of rate of interest for peasants, on elimination of the various forms of manipulation whereby peasants have to pay exorbitantly for what they buy and get too little for what they sell.

Both in industry and on the land there must be equitable taxation. This comes close to the heart of the matter. There must be an end to the system under which those who have least carry the burden of paying for such public services as there are, while those who have most go almost scot-free. For example, there is no excuse for the negligible income taxes paid by rich Filipinos, while the peasants have to pay their share of the cost of government.

Any belief that the economically powerful groups in each country will do this voluntarily is illusory. They will do it only if compelled, and we alone can compel them if we intervene at all with money and technical assistance. We can do so by keeping our representatives on the spot, watching the exception of the program, threatening to withdraw unless the measures we demand are carried out, and withdrawing both in money and personnel, if they are not.

In that case we may succeed. The perquisites growing out of the development made possible by our funds will be valuable, legitimately, to those who now have most wealth. The fear of losing those perquisites gives us a powerful weapon. Furthermore, they have more to lose from the advent of communism than we have. They will hesitate if we are firm, and they recognize that we mean business. We may get our way then—and only then. Intellectual persuasion and moral suasion are futile. Only threat of withdrawal can possibly be effective.

In short, the way to intervene is to intervene. If we are not prepared to do that, it is better not to start.

It can be taken for granted that if we intervene there will be a loud outcry of American imperialism, raised first in Moscow and then echoed by local Communists and perhaps taken up at the outset by many who are not Communists. But whether it carries conviction and wins adherents in the end depends on whether or not our pressure gets the kind of results we aim at.

The oriental peasant, though illiterate, is not ignorant. He has an intellectually unreasoned but sure sense of what conduces to his welfare and what does not. If he sees that by virtue of our action, however much compulsion is used on his own influential classes, he has more land, pays less rent when he rents land, is freed from usurious interest when he has to borrow till his crop is harvested and pays lower taxes—at least lower than the rich—the cry of imperialism will carry little persuasion. He will be aware that the kind of imperialism that gives him enough to eat does him no harm.

Nor will the cry be too persuasive to the intellectual classes, those most responsive to nationalism, most sensitive to the threat to independence or most dedicated to recovering it where it has been lost. If they see that American intervention is confined to bringing about modernization and laying a foundation of a better social order and that America demands neither political prerogative nor economic perquisites, they, too, will be unmoved by the cry of imperialism. They will perceive the distinction between that kind of intervention and the old orthodox colonialism.

The Chinese people would not have resented our interference if, in 1945, when we started pouring money and arms and supplies into China, we had insisted that the Chiang Kai-shek regime put an end to carpet-bagger looting, throw out those palpably guilty of profiteering, appoint men of another stripe and institute the agrarian reforms plainly called for. Had we told Chiang Kai-shek that unless he did these things, not another dollar or gun would be forthcoming and he would be left to the mercies of the Communists, he might have yielded—it is not sure, but it is possible.

If he had yielded, Mao Tze-tung would not be sitting in Peiping now. And for that, the Chinese people would hold no grievance against us. As it is, they do have resentment—and not only the Communists among them. Indeed, it may be the non-Communists and anti-Communists who resent us most. We intervened, supported Chiang Kai-shek, made no conditions, gave the corruption and malpractice of his regime our economic underwriting, and thus produced the disaffection of the Chinese people and opened the doors to communism. Now both Communists and anti-Communists are embittered.

Imperialism in our time is a word that can have any content one chooses to give it. Intervention is as it does. It is questionable at best, risky at best. It can be justified or not, according to what it produces. In itself point 4 is a high social concept, with the potentiality of making a better dispensation the world over. But it can also operate to its own frustration.

So could the program now proposed for southeast Asia. If that program is carried out with a clear recognition of the needs to which it is applied and firmness in overcoming the obstacles, no matter how highly placed their origin, we may succeed in throwing up barriers that will arrest the Communist tide. If not, it will be self-defeating. We shall have wasted money, incurred the enmity of all sides, and both southeast Asia and ourselves will be worse off. Russia will be the gainer.

Rail Strike

EXTENSION OF REMARKS
OF
HON. FORREST C. DONNELL
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Tuesday, May 23 (legislative day of Wednesday, March 29), 1950

Mr. DONNELL. Mr. President, I ask unanimous consent to have printed in the appendix of the RECORD an editorial entitled "Rail Strike," published in the Johnstown (Pa.) Tribune of May 11, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

RAIL STRIKE

Each strike, of course, stands alone, since the issues differ in each case. But the combination of strikes which has afflicted the country in the last year—and which have particularly afflicted this part of Pennsylvania—has had a seriously discouraging effect on business, industry, and the public in general.

The latest strike affecting this district has tied up the Pennsylvania Railroad west of Harrisburg, along with part or all of three other railroads in the country. Together these roads handle an estimated one-third of the Nation's passenger traffic, and one-fifth of its freight. This area, dependent upon Pennsylvania Railroad for most of its heavy transportation—coal and steel—is particularly hard hit. And yet it can do nothing but wait until the strike is settled on the national level.

Approximately 18,000 members of the Brotherhood of Locomotive Firemen and Enginemen have brought this partial paralysis upon the country. They seek an additional fireman on multiple-unit Diesel locomotives. The firemen and the engineers have a long-standing feud on this question, each seeking to compel the railroads to employ an additional member of the union on the big Diesels.

In 1943, a Presidential fact-finding board found no justification for adding either an additional fireman, or an additional engineer to the train crews. The demand was raised again by the firemen, and another Presidential fact-finding board held that the union's argument of safety was "devoid of merit." That was last September. Since then the dispute has lingered on, culminating at last in a strike. To avoid Federal interference on the ground of national emergency, the strike has been called against only part of the national railroad system, but that part is extremely important.

This is another instance in which a relatively few men in a key industry can bring the economy of the country to a halt. For the stoppage of transportation means that very soon other industries must close down too. In this area, coal is piling up and mining, which suffered a 9-month partial or complete stoppage in the last year, must soon cease major operations again if the rail strike persists. Steel, also, may soon be compelled to cease production.

The Railway Labor Act was devised to avert such shut-downs of transportation in this country, but like other measures of this kind it merely delayed strikes, without forbidding them. We have accepted for many years the principle that the strike is a legitimate economic weapon. But when that weapon is wielded irresponsibly by small key unions, the safety and the welfare of the country takes precedence over the right to strike.

Congress is weighing a law for compulsory arbitration of railroad labor disputes, and yesterday a spokesman for the Southern Railway system said he had been brought reluctantly to the conclusion that such a law is needed. If there were any other solution, he said, the railroads would be for it, but "we have no other solution." If such strikes as this one continue, it is highly possible that public opinion will support a measure to outlaw railway strikes, even though compulsory arbitration is not an entirely satisfactory substitute for sound, responsible bargaining between employers and employees.

Railroad Strike

EXTENSION OF REMARKS
OF
HON. FORREST C. DONNELL
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Tuesday, May 23 (legislative day of Wednesday, March 29), 1950

Mr. DONNELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Railroad Strike," published in the New London (Conn.) Day of May 13, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

RAILROAD STRIKE

This country seldom has a railroad strike of any consequence. To the credit of the rail unions, they ordinarily manage to settle their differences with management through the means of the special board established for the purpose of adjusting such dispute, although it certainly is not a fact that the members of the union have suffered greatly in this process. They have done pretty well in their bargaining of recent years, particularly in the operating unions. The significant point, though, is that the methods provided for discussion and adjustment of differences, between the unions concerned and the management of the railroads, usually have worked admirably. This is one time when they did not work. The country faces the prospect of increasing inconvenience and then paralysis of business because 120,000 locomotive firemen are on strike on some roads.

The dispute concerns the presence of a third man on Diesel-powered locomotives, two instead of one firemen on multiple-unit Diesels. The strike is confined largely to a few railroads, for instance, the Pennsylvania on its divisions west of Harrisburg and the New York Central divisions west of Buffalo. The net effect of the shut-down of service (in many areas other railroad employees refused to cross picket lines to operate equipment that was not involved in the strike) has been to cut down shipments of vital necessities, in some parts of the country, and to put various workers in totally unrelated industries on the lay-off list. For instance, the strike is already being felt in New England in some industries, because of lack of delivery of supplies, etc. In Detroit it was said that automobile production would be cut down at once, and shut off altogether soon in all likelihood, because of the transportation difficulty.

The railroads call attention to the fact that the strike issue has been thoroughly arbitrated, and the union involved has been turned down—not only by the regular railroad arbitration agency but also by a special committee appointed by the President. Yet the strike took place. The railroads make no bones about contending that this is a case of featherbedding employees—providing unnecessary or unusually easy jobs for them, or paying higher wages than the actual hours worked, etc. The union responds that it is completely unreasonable to expect one fireman—who in the last analysis apparently becomes more of a mechanic than a fireman on the new Diesels—to watch, oil, and otherwise service one of these multiple-unit locomotives. The suggestion is raised, too, that safety is involved—that the fireman is required to be well away from the controls of the engine, much of the time, and that he is hence not apt to be available to do whatever is necessary to be done, for the sake of safety, if something should happen unexpectedly to the engineer.

The deplorable part of this whole dispute is that the public, as usual, gets it in the neck when the men walk out. Not only are many thousands of employees in other industries going to lose wages because of the strike—unless it is settled promptly—but the general public will suffer. The railroads, as a vitally necessary part of life, cannot stop operating for long. Strikes in this field ought to be outlawed, with reasonable provision made for settling them by conferences.

For a New Rail Labor Act

EXTENSION OF REMARKS
OF
HON. FORREST C. DONNELL
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Tuesday, May 23 (legislative day of Wednesday, March 29), 1950

Mr. DONNELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "For a New Rail Labor Act," from the St. Louis Globe-Democrat of Saturday, May 20, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FOR A NEW RAIL LABOR ACT

Sentiment is mounting in Congress, and the Nation, for a Federal statute that would outlaw rail strikes and enforce compulsory arbitration. Labor hates such a prospect uncompromisingly. Yet unions in the railway industry are doing more than any other source to bring about such an act.

The A. F. of L. Switchmen's Union by its strike order against 10 Midwest and Western roads has heaped new fuel under the issue. Only Government mediation seems able to prevent a second rail stoppage, first called for Tuesday, now postponed to June 1. One of the most unpopular strikes in recent years was the walk-out to obtain an extra fireman on multiple Diesels. This ended in the union's agreement to accept arbitration. Other railroad strikes in the last few years have whipsawed the economy and raddled public patience.

The present Railway Labor Act, long regarded as a model law, has broken down. Its fact-finding machinery has been ignored by unions, or repudiated. So persistent has been

the list of the law's failures, spokesmen for the Pennsylvania and the New York Central roads have asked Congress to pass the bill sponsored by Senator DONNELL, of Missouri. This would prohibit rail strikes and compel acceptance of arbitration.

Rail management was formerly as rigidly opposed to such a statute as labor. The roads want to do their own bargaining, make their own labor deals. But that has increasingly grown precarious, or virtually impossible. So they now plump for Federal arbitration as an only out. Unions still are dead set to fight the legislation.

The roads, labor, nor the public like enforced ruling by Presidential fact-finders. This could open the way to Government domination of industrial wages and prices, to Washington control of industry. Such an act might be the wedge to open other industries to compulsory Federal arbitration.

That possibility must not be allowed to materialize. But the Nation and its economy cannot persistently be stagnated and crippled by transportation tie-ups engineered for advantage of a relatively small segment of the people. Pillory of the economy and the public cannot be justified by self-interests of a small minority, no matter how valid might be their claims. And many of these claims are dubious or frankly excessive.

A new labor-rail act is demanded and should be passed.

We like compulsory arbitration no more than the unions. Yet unless some better program is devised, and none seems in the offing, the Donnell bill should be adopted. The rights of labor or management must be subservient to the rights of the Nation, and it is time Government accepts this policy.

The Railroads

EXTENSION OF REMARKS
OF
HON. FORREST C. DONNELL
OF MISSOURI
IN THE SENATE OF THE UNITED STATES

Tuesday, May 23 (legislative day of Wednesday, March 29), 1950

Mr. DONNELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Lynchburg (Va.) Advance of May 11, 1950, entitled "The Railroads."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE RAILROADS

The Presidential fact-finding boards have declared that the demand of the striking railroad workers for an extra fireman on Diesel locomotives is not justified. The railroads make the same contention. Yet the workers strike and tie up four major railroads. Passengers, freight, express, and mail are blocked in the areas these railroads serve. The workers will lose money, the railroads will lose money, and many other persons and interests will lose money. There is not likely to be any gain for anyone. That is, unless the public and the Government are made aware of the necessity for keeping the trains running and demand that they be kept running.

The railroads are our basic transportation. They already suffer from many ills and injustices. The Second World War showed the job required of them and the job they can do, which can be done no other way. Since the war there have been huge expenditures for equipment and improved services. But there has been no tax relief and no relief from subsidized competition. Now comes a strike which is wholly unjustified.

Experts on union tactics find a special technique in this strike. They consider it to be a means of browbeating four lines and, if successful, "softening up" the other lines for similar or more drastic demands.

The practice promoted in the union demand is known as featherbedding, which means employing superfluous workers. That costs the railroads extra money, if practiced, and the extra cost eventually is paid by patrons of the railroads. At the same time the railroads lose business to competitors, trucking lines for example, not burdened with featherbedding, with road-bed maintenance, with excessive taxes.

As long as there is a strike it should be faced down until the union knows it can not force superfluous workers on the railroads—and expect the public to pay the bill. Meanwhile the Congress is faced once more with the need for legislation to keep essential services in operation. No help can be expected from the President. He aids and abets strikes, justified or plainly unjustified.

Home Building Activity at New Peak

EXTENSION OF REMARKS
OF
HON. RALPH A. GAMBLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 23, 1950

Mr. GAMBLE. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I insert the following report of the United States Department of Labor, Bureau of Labor Statistics, on the number of housing starts in April—126,000 dwelling units—the highest number in the history of the United States. Private industry in the United States is still on the march. This year it will, I believe, again break another all-time record.

The report follows:

HOME BUILDING ACTIVITY AT NEW PEAK—126,000 NEW DWELLING UNITS STARTED IN APRIL

Home building activity for the first third of 1950 reached new record proportions, according to preliminary estimates of the United States Labor Department's Bureau of Labor Statistics. In April alone, builders started 126,000 new permanent dwelling units, an increase of 16,000 (15 percent) over March, and 37,700 (43 percent) over April 1949.

So far in 1950, each month has been record-breaking in number of new dwelling units started. From January through April 1950, new housing units totaled almost 395,000, which surpasses 1949 activity for the same months by 53 percent. Last year, the half-million mark was reached in July; this year it seems quite likely that a half a million new dwelling units will have been started by the end of May.

The acceleration in home-building activity was country-wide, according to preliminary reports from local building-permit officials. When the first 4 months of 1949 and 1950 are compared, the most striking advances this year were reported for the West North Central, Middle Atlantic, East North Central, and West South Central States. In all of these areas the number of new dwelling units authorized for construction was about double the volume for the January–April period in 1949.

For the first 4 months the east north central States led all other regions this year in the volume of new dwelling units for which permits were issued, followed closely by the Pacific, middle Atlantic, and west south central regions. Last year for the same period the Pacific States led by a wide margin.

Among some of the larger cities reporting, the number of units authorized was double, and even triple last year's volume for the first 4 months. Marked increases were reported for Washington, D. C.; Chicago, Ill.; Wichita, Kans.; Baltimore, Md.; Kansas City and St. Louis, Mo.; Oklahoma City, Okla.; Philadelphia, Pa.; Dallas, Tex.; and Milwaukee, Wis.

TABLE 1.—*Number of new non-farm-dwelling units started 1948, 1949, and 1950*

1948	931,300
January	53,500
February	50,100
March	76,400
April	99,500
May	100,300
June	97,800
July	95,000
August	86,600
September	82,200
October	73,400
November	63,600
December	52,900
1949	1,025,100
January	50,000
February	50,400
March	69,400
April	88,300
May	95,400
June	95,500
July	96,100
August	99,000
September	102,900
October	104,300
November	96,500
December	78,300
1950:	
January	[1] 78,700
February	[2] 80,000
March	[2] 110,000
April	[2] 126,000

[1] Revised.
[2] Preliminary.

Strike Without Reason

EXTENSION OF REMARKS
OF
HON. FORREST C. DONNELL
OF MISSOURI
IN THE SENATE OF THE UNITED STATES

Tuesday, May 23 (legislative day of Wednesday, March 29), 1950

Mr. DONNELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Strike Without Reason," published in the Commercial Appeal, of Memphis, Tenn., on May 11, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

STRIKE WITHOUT REASON

The strike which the Brotherhood of Locomotive Firemen and Enginemen have called against four of the Nation's major railroads

and three subsidiaries is utterly without reason and should be countered with all the means at the Government's disposal.

It is slowly crippling the American railroad system. It will drastically affect the normal economy of the South. Eventually, the economic paralysis will creep over the Nation. Again we say, this vast stoppage is without slightest justification and therefore completely undeserving of public support. It makes the processes of the National Railway Labor Act a failure and destroys whatever was the merit of Presidential fact-finding boards.

The firemen and enginemen sought a second fireman for multiple-unit Diesel locomotives. The demand has received exhaustive consideration by two Presidential fact-finding boards and, in each instance, was rejected. The railroads' position that the demand is nothing but featherbedding and job making is undeniable. About all that a second fireman could do on a Diesel would be to get in the way. His contribution to the safety factor would be nil. The last fact-finding board held that Diesel locomotive usage by the railroads was actually making jobs. Better schedules made possible by their use have attracted more freight and passengers.

The rule or ruin attitude of the striking firemen suggests the cure. There is now pending before the Senate Labor Committee the so-called Donnell bill requiring compulsory submission of railroad labor-management disputes to fact-finding boards whose decisions would be binding. Disputes involving wages and working conditions would be submitted to Presidential fact-finding boards. Those involving interpretation of agreements would go to the Railroad Adjustment Board. Court decisions on appeals taken from board decisions would be final.

The record shows that the railroads have consistently accepted the recommendations of fact-finding boards while the opposite is true of some of the unions. This and the background of the present stoppage clearly emphasize the need of the companies contained in the Donnell bill. The national welfare is not well served by any process which permits of strikes even though fact-finding agencies have denied the claims and demands of unions. In this instance national welfare is being greatly damaged and national safety seriously endangered.

Ultimately, national welfare and safety are going to require a prohibition against strikes in the communications and transport industries—the two through which revolutionary communism moves first.

Contracting of Mexican Farm Labor in the United States

EXTENSION OF REMARKS

OF

HON. JOHN F. SHELLEY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 22, 1950

Mr. SHELLEY. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I wish to include an analysis recently made by Dr. Ernesto Galarza, director of research and education for the National Farm Labor Union, of the procedures followed, and the resultant effects of the policies used, in the recruitment of Mexican workers for employment in agriculture in the United States. This recruitment program, inaugurated as a wartime measure, has been extended and entrenched until now, in view of the excess of domestic agricultural labor available, it is having a drastic effect upon the situation of farm labor, not only in California but throughout the South and West. This effect is felt indirectly in the industrial labor market also. Dr. Galarza's program for reform of the procedures should be given serious consideration by every Member of this House with a real interest in maintaining and improving living and working conditions of which we need not be ashamed. Recent Nation-wide publicity in the press and magazines gives real evidence that we do now have real reason to feel shame.

Dr. Galarza's analysis follows:

MEXICAN-UNITED STATES LABOR RELATIONS AND PROBLEMS

(By Ernesto Galarza, director of research and education, National Farm Labor Union, Washington, D. C.)

Since 1942 the recruitment of Mexican workers for employment in agriculture in the United States by intergovernmental executive agreements has become a settled policy. The first agreement of that year was an emergency war measure. The last one, signed on August 1, 1949, indicates how the Governments of Mexico and the United States propose to carry out their normal, peacetime labor relations.

It seems unnecessary to say that the circumstances which led to the 1942 agreement were not the same as those which appear to have justified that of 1949. The real shortage of manpower in this country and the heavy demand on our food resources were obvious to all of us. We supported this policy in the war years in spite of the faulty administration of the original agreement as well as the injustices, graft and irresponsibility that attended certain phases of the program.

We have now had nearly 8 years of experience with this type of international labor policy, and half of that experience has occurred since the end of World War II. It is time that we consider fully some of the practical effects of these agreements on labor and inter-American relations. For those who have not read the text of the August executive agreement and related documents, it may not be amiss to summarize their provisions.

The agreement itself is supported by an individual labor agreement and a joint interpretation of the international executive agreement. All three documents are binding. They provide for the legalization of the so-called wetbacks or illegal entrants and give them precedence for farm labor contracts. Although the employers and workers are parties to the individual labor contract, they cannot change the terms of the contract without the consent of the United States and Mexican Governments. The United States Employment Service is designated as the agent of the employers.

These documents further provide that processors, as distinguished from growers, of food may employ Mexican contract workers and the USES is given the role of promoter among United States growers to encourage the hiring of nationals. The USES is also given the authority to determine which employers in this country are to be permitted to sign contracts as well as the power to certify as to the need and nonavailability of workers in the United States. This concurrence by the USES is made a condition of the enforcement of many of the critical clauses of the agreement.

The documents authorize the signing of labor contracts up to a period of a year, except for the cotton and beet crops, where contracts may run for as short a period of time as 6 weeks. Workers may elect their own representatives to deal with employers except for purposes of collective bargaining. Compulsory arbitration is imposed on both the growers and the Mexican nationals.

Under the head of minimum living and working conditions, the agreement prohibits racial discrimination and promises the worker full advance information on wages and other conditions at the place of employment before he arrives there. It assures the payment of the prevailing wage for a given class of work and establishes compulsory accident insurance, calls for decent housing, makes available free health examinations and free medical services, eliminates deductions from wages for savings funds and guarantees safe and adequate transportation, the 8-hour day, maximum cost of meals and no work on Sunday as well as employment for three-fourths of the total period stipulated in the contract.

On paper, these and other provisions represent an attempt to correct many serious objections that were present in previous agreements and, on paper, there is much to commend them. Indeed, the agreement extends to alien workers employed in the United States certain rights which domestic workers do not enjoy. The 8-hour day, free medical service and compulsory accident insurance provisions are examples of this inequality.

We are now concerned, however, with something more than the paper weight of these agreements. We in the National Farm Labor Union want an honest appraisal of the facts, not the promises. In this interval of precarious peace, we want experience, not expediency, to guide our decisions.

First of all, there is no question that the effect of these agreements on farm wages, especially on the corporation type of farms, has been decisive. During the war years, the effect was to discourage wage increases among domestic farm laborers in the Southwest. In the postwar years, the agreements have constituted an effective diplomatic support for the wage cutting that has come about, notably during the past few months.

In California the corporation farms have been carrying out this policy of wage reductions. Last September they tried to put over a 17-percent squeeze on the pay of cotton pickers. A few weeks ago they decided to cut the wages of Filippino workers by 10 cents an hour. Throughout the Central Valley of California wages have fallen from 85 and 90 cents an hour to 75, 70, 65, and even 50 cents an hour. In Mississippi, cotton wages fell from $3.25 per hundred pounds to $2.10 in 1949. In Arkansas the rate fell from $3.25 to $2.65. Time after time we have found situations of this kind, where the domestic worker either has had to work for 10, 15, or 20 cents an hour under the 1948 wages or relinquish his job to a Mexican national or "wetback."

The illegal or wetback is mentioned in this connection because of a certain provision of the August agreement. This provision permits the legalization of wetbacks who were in the United States as of August 1, 1949. In California alone this paved the way for the legalization of more than 40,000 workers who had entered the country illegally. Since it is impossible to determine when an illegal crosses the borde , this provision is practically an escalator clause on which wetbacks may ride to legality in the future.

It has become a common experience of members of the National Farm Labor Union to be told by corporation farms that they can either work for less or go home, since plenty of Mexican contract workers are available. But there are additional facts to be placed on the record in this connection.

It is becoming more difficult for domestic workers with families to get jobs in competition with imported contract labor. In some areas of California it is a definite handicap, often a fatal one, for a farm worker to have a family and to be a local resident. Contract workers are preferred because they are single and must live on the farm. They must room in the corporation bunkhouse, thus becoming internes who are unfamiliar with the customs, practices, and standards of the outside community and who for that reason are easy marks for the many subtle forms of exploitation practiced upon them.

We of the National Farm Labor Union have no hesitation in saying, in the light of our experience over the past 4 years, that the labor-recruiting agreements have been used to support a Nation-wide attack on the wage scales of farm labor. A major part of the present crisis in the Central Valley of California is due to the immediate and direct, as well as to the remote and indirect, effects of these agreements. The conversion of the great Central Valley into a hunger bowl during this winter is a national spectacle for which the authors and administrators of those agreements must take a large share of responsibility.

Obviously, these wage cuts could have been accomplished only by the weakening of the bargaining power of the domestic agricultural workers. This, too, has been a practical byproduct of the agreements. The DiGiorgio Fruit Corp. of California used more than a hundred contract nationals behind a picket line at the most critical point in a strike that has now been going on for more than 2 years. More recently, legalized "wetbacks" and nationals worked behind the picket lines in the September 1949 strike of cotton pickers, who successfully resisted the attempt of the corporation farmers to reduce the wage scale from $3 to $2.50 per hundred pounds.

There is no large-scale farm enterprise in the United States where a peaceful, lawful effort to maintain wages of domestic workers is not threatened with failure by the actual or potential use of Mexican contract labor.

Guided by our own experience in this matter, we can already suggest some of the practical results of the agreements as they affect labor. These agreements have already accomplished, in greater or lesser degree, the following:

1. They have excluded organized labor from the negotiations preceding such agreements.

2. They have undermined wages and collective bargaining for domestic farm workers.

3. They have encouraged the infiltration of other crafts and trades such as building and food processing, by underpaid, unorganized and unorganizable labor.

4. They have facilitated the dumping of Mexican unemployment into the United States.

5. They have set up the principle of the determination of domestic wage scales in a foreign country exclusively through government channels.

6. They have set up the practice of government officials negotiating for workers without the right or power of the latter to change or revoke the resulting agreements.

7. They have established the principle of compulsory arbitration.

8. They have enabled the National Government of one party to the agreements to surrender the constitutional rights of its citizens

9. They have made illegal entry into the United States the basis of a labor contract.

10. They have set up different standards for wages and working conditions for domestic and foreign workers.

11. They have invested government officials with the right and duty of acting as agents for finance farmers and other corporate interests who operate on a national and international scale.

12. They have prohibited the collection of union dues.

13. They have evaded domestic law and existing international machinery bearing on the matters with which the agreements have been concerned.

14. They have restricted collective bargaining by the supposed beneficiaries of the agreements.

15. They have fostered and given wide currency to misconceptions and fallacies which will not stand up to honest reporting and forthright analysis.

On each of these counts, a good deal might be written. Suffice it to stress two of them.

The violation of existing laws is, I think, involved every time foreign labor is contracted without the previous public hearing and investigation by the United States Attorney General called for by Federal statutes. In addition, the legalization of the status of illegal entrants for the purposes of a labor contract is a usurpation of congressional authority. Had the Federal Congress wanted to amend the immigration law to make illegal entry into this country anything other than a felony, undoubtedly it would have done so. The amendment, however, was accomplished by an executive agreement at the recommendation of the Department of State.

On a different plane we can say, with justification, that the negotiators of these agreements also evaded or ignored existing international machinery that by this time might have been adapted to the proper, orderly and necessary movement of farm workers between Mexico and the United States. But here also the negotiators have chosen to follow a bilateral, semisecret course. The Pan American Union and the International Office of the United Nations exist for the declared purpose of achieving international friendship through the protection and improvement of living standards. However, in the matter of the recruitment of Mexican workers for employment in the United States both institutions have been ignored.

More extensive comment is called for under the head of misconceptions, fallacies, and economic myths which have been given currency by the apologists of these agreements. These myths are four in number: (1) that contract workers have not displaced domestic workers; (2) that domestic workers are not available; (3) that the need for contract labor is determined by the free play of the labor market, and (4) that wages for foreign contract labor are set on the basis of a domestic prevailing scale.

The agreements have specifically prohibited the displacement of domestic workers by contract laborers. Displacement, nevertheless, has been and is taking place on a large scale. There is direct displacement, as in California, where nationals and legalized "wetbacks" are given jobs at lower wages when domestic labor refuses to work for those wages. We have checked field crews in which the proportion of nationals to domestic workers was as high as 6 to 1. Direct substitution of nationals, however, is the lesser of the forms of displacement. There is indirect displacement which takes the form of a series of waves of migration of domestic workers from the border areas northward. These migrants are retreating from the low-wage pressure created by nationals, principally in the Imperial and Rio Grande areas. The Mexican colonies in California's Central Valley are growing rapidly by the accretion of families long established in communities just north of the border. This chain reaction has forced thousands of families to take to the road again, forming a body of displaced persons for whom Congress has as yet provided no relief.

The notion that domestic workers are not available and that therefore the importation of contract labor for agricultural employment is justified rests on a personal interpretation by Federal officials as to what constitutes availability. The following interpretation was set forth by one employment official of the State of California when he said that "foreign labor will not be used except as a supplementary labor force when domestic workers are not available and willing to accept the job offering."

Now, this job offering is never made in terms of a decent minimum wage or other minimum standards. To these officials the refusal of a domestic cotton picker in 1949 to work for $2.50 a hundred pounds would constitute unavailability and would justify certification of need of foreign labor. That is what has happened also in the Citrus Belt of California and in the Cotton Belt of the South.

There is no such thing as availability pure and simple. Conditions are always inherent in a job—wages, hours, treatment accorded employees, etc. Stripping the employer-worker relationship to an economic fig leaf is merely a device to protect negotiators of international labor agreements from indecent exposure.

Third in the list of current myths is the one that runs to the effect that certification of need is determined by the free play of forces in the labor market. But determination and certification of need do not run this inexorable course. In California, certification of need actually starts with the county farm labor advisers. It rises through echelons of other advisers, past State employment officials who believe it to be an axiom that some crops and certain areas require foreign contract labor, and up to the USES and the Department of State, whose approval is automatic. Certification of need under these procedures is not an economic but a political process loaded against the workers. In brief, there are no agreed standards subject to open hearing and public inquiry by which need can be measured and certification justified.

Finally, there is the fallacy that foreign contract workers do not push farm wages down or serve as instruments for depressing labor conditions because they are paid the prevailing wage in the area of employment. This is the argument that has been most persistently thrown at organized labor by government and corporation farming apologists of the agreements.

Outside of agriculture, the concept of the prevailing wage is clear enough. The Davis-Bacon Act and the Walsh-Healey Act, for example, both specifically state that the prevailing wage in a craft or trade is the wage which has been set by the Secretary of Labor. The determination is made after a check of wage rates based on union contracts. In California, the labor code specifically states that the prevailing wage is the wage determined by the public body which awards the contract. It seems obvious that outside of agriculture the elements of a prevailing wage are, first, determination of wage rates for the given type of employment as set forth in collective bargaining agreements, and second, a declaration by a public agency fixing the actual level of the prevailing wage

Neither of these conditions exists in California agriculture, nor, so far as I know, anywhere else. There is no public body that makes a declaration fixing the prevailing agricultural wage. There are no union contracts upon which such a declaration might be based. The State Department of Agriculture of California has said that there is no so-called prevailing wage in that State. The United States Department of Agriculture has said that there is no so-called prevailing wage in agriculture. Every official agency of the Federal Government seems to know that

there is no so-called prevailing wage for farm labor—everyone, that is, except the United States Employment Service and the Department of State. The closest the State employment service of California comes to this concept is the "most common wage rate" which it uses in its weekly reports.

Since the prevailing wage does not exist in United States agriculture, the use of that expression must be regarded as an unconscious or deliberate economic myth. Why is it so persistently used as such?

The answer seems to be that it distracts attention from the actual, practical methods by which wages are set in agriculture. This is the way it is done in California.

Wages are set by meetings of growers in each major crop. These meetings take the form of "wage conferences" for cotton, grapes, raisins, and other products. The conferences are held under the auspices of organizations directly influenced by or highly sympathetic to the labor views of the Associated Farmers of California. Workers and labor contractors are invited to these conferences, but neither of these groups may vote. Resolutions and action upon proposals may be taken only by the growers' delegates.

The aims, methods, and intent of these "wage conferences" have been aptly described by one who has had much experience in organizing them in the following words: "(the conferences) are subject to the wishes of the growers." Their object is "to enable growers to discuss and recommend a prevailing wage rate covering the harvesting of their crop."

Here, then, is the real prevailing wage rate. It is the rate set by the growers under the auspices of a private organization controlled or influenced by corporation farming.

Then, by what would appear to be sheer coincidence, some Mexican Government official announces in Mexico City that his government is willing to accept a certain prevailing wage for contract laborers. Thus, in the spring of 1949, when the wage-cutting offensive in California was just getting under way, the Mexican Government announced that it would accept a minimum wage of 60 cents an hour. This was from 20 to 30 cents an hour less than farm labor was receiving in various parts of California.

Again, in September 1949, there was the same notable coincidence. While the corporation-dominated San Joaquin Valley Agricultural Labor Bureau was reducing cotton picking rates from $3.00 to $2.50 a hundred pounds, the United States and Mexican negotiators of the current agreement had agreed on $2.50 a hundred as the rate to be paid the contract Mexican workers. It would appear, therefore, that the so-called prevailing wage is the scale fixed by finance farming, certified by our Federal Government and approved by the Mexican Government.

In the face of all this, we continue to read statements coming from Washington and Mexico City that the Executive agreement of August 1, 1949, is actually helping to raise farm wages in this country; that domestic workers are not being displaced; that domestic workers are not available; and that prevailing wages are being respected. But since these assertions do not fit the facts, a theory is needed to explain the tenacity with which the agreement is defended.

The only theory that seems to be in accord with the facts as the National Farm Labor Union sees them is this: the Department of State is keeping the Mexican-United States labor recruiting machinery in a state of what might be called activated moth balls. The Department appears to be expecting a return, sooner or later, to a crisis like the one in which the original agreement was born. When that next crisis is reached, this labor-recruiting machinery can simply be expanded. It need not be negotiated, arranged, or assembled.

This, it would seem, is what makes the American farm worker a peacetime expendable in the eyes of the State Department. If that is the way it is, let us face it and stop kidding. However, let us also face the consequences, immediate and possibly remote.

First of all, there is the possibility, slowly emerging as a fact, that the machinery of diplomacy may be used throughout the Western Hemisphere to undermine living standards and labor's rights. There is more than one example of this on the record besides the Mexican-American labor agreements.

Secondly, by this device encouragement is also given to undermining the faith of the workers in international, multilateral arrangements which are supposed to work for their good and welfare. Today the farm workers of the United States and Latin America have no reason to place their trust in either current diplomatic practices or in existing inter-American or international institutions that are so far removed from the pressing, everyday problems of bread and butter, of good faith, and mutual consideration.

The National Farm Labor Union proposes a reconstruction of the entire approach to the recruitment and employment of foreign farm workers in the United States. That reconstruction should be made along the following lines: Certification of need of foreign workers should be made by public body of which the American Federation of Labor should be represented. Determinations should be made after public hearing and through investigation of agricultural labor conditions. Wage rates should be based on prevailing wages as established in collective bargaining agreements with the corporation type of farms. Availability of domestic workers should be determined on the basis of compliance by employers with standards as to wages and living conditions as set in collective bargaining agreements.

If it is established that under these safeguards there is an actual, demonstrated need for foreign-contract labor, such labor should be contracted on the basis of equal conditions for all. Bona fide, free trade-unions should be parties to the agreements. Workers should be members of such unions with transferable membership for the duration of the contract. The unions should also have full status for active participation in the negotiations for such contracting.

We believe that these premises are sound. They would work under changing conditions. They would make it possible to entrust the routine administration of such agreements to competent international organizations.

They would also remove Mexican-United States labor relations from the dubious company of economic arrangements between both countries which today make the farm workers the pawns in the game. The union would welcome a factual investigation by the Congress of the United States of those arrangements between the two Governments which on the hand push the people of Mexico into steadily more desperate poverty and on the other drive them out of their country to seek temporary relief on the farms of the United States. There is a connection, we contend, between the exodus of Mexican workers to the United States, and, for instance, the steadily rising electric light and power rates in Mexico, and the critical shortages of meat and other staple foods.

During the dangerous days of World War II hundreds of thousands of Mexican citizens helped save the crops in the United States. They also helped to swell the profits of corporation farms that have made the last 10 years a boom decade in American agriculture.

We of the National Farm Labor Union do not propose to forget, however, that in both Mexico and the United States farm workers are dying in poverty and starvation. We do not propose to forget that thousands of farm families in both countries are living in shacks and even under trees. We do not propose to let the diplomats of either or both countries force the workers of Mexico and the United States to share a deepening poverty. We, as workers and citizens of the Americas, will find the way toward a more decent life for all. But to find that way we must first dispel the fog in which we find ourselves today.

I Am An American Day

EXTENSION OF REMARKS

OF

HON. LOUIS B. HELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 11, 1950

Mr. HELLER. Mr Speaker, it is on I Am an American Day that all citizens of our great and beloved country become acutely conscious of their precious democratic heritage of freedom. On this day all Americans—whether Catholic, Jew, or Protestant, and no matter of what national descent—rise to acclaim the ideals and truths embodied in our Constitution and symbolized in Old Glory. It is in this spirit that I insert in the CONGRESSIONAL RECORD an inspiring I Am an American Day speech by his eminence Francis Cardinal Spellman, archbishop of New York:

FREEDOM BY RIGHT DIVINE

(Address of His Eminence Francis Cardinal Spellman, on the occasion of I Am an American Day in Lawrence, Kans., April 29, 1950)

I am come to Lawrence to be one with you who have gathered here from many corners of this heartland of our country, proudly to participate in the observance of I Am an American Day.

The name "Lawrence" has a familiar ring to me, for the city of Lawrence is not far from the New England village where I was born and educated in our blessed American way of life. Your city of Lawrence not only carries the same name as the great industrial center in my native Massachusetts, but it was, I learned, actually settled in the mid-nineteenth century by pioneers from the Bay State, men and women who bravely made their way across vast, unsettled regions, to what is now this State of Kansas, in the very center of our glorious and free United States. In devotion and gratitude, fervently I implore God to bless, protect and prosper the people of Kansas, and all America's varied peoples who, living and working as one, make great our free and noble Nation. And I ask you to join with me in thanks to God for His many gifts to us, and make of gratitude a litany; for liberty more dear than life, for faith and strength to face the problems of a world adrift. For these and other priceless gifts, let us now bow, and pray for all our Nation's valiant sons who fought and died to win and save for us God's gift of liberty, the liberty that gives to you and me, and every man down through the centuries to be blest by birth or adoption, the privilege to say "I am an American."

Liberty is America's beacon flaming from every hill and spire. Liberty is America's pledge to peoples yet unborn, both near and far, to pass on God's torch of freedom, its

light undimmed by the mock-light of atheist minds. Liberty is America's glory, for, in this land liberty was born; in this land freedom to exercise God-given rights was won; in this land hunted minorities found haven and homes; in this land enterprise and labor have prospered.

Throughout the life-span of our United States unnumbered millions of America's sons have bravely died, as unnumbered millions have no less nobly lived in sacrifice, those millions who have lost their loved ones, those veterans who have lost their limbs, their eyes, their normal lives, to preserve for us our liberty—and—they hoped and believed, our peace. Hosts of these soldier-dead stand suppliant beside us, countless trumpets warning us not to retreat but staunchly to live and united work for peace, lest their triumph dearly bought for us with priceless blood should yet be lost. What they did yesterday for us, we now must do for them, and bear the burden dropped from out their devoted, dying hands, lift up the torch that they put down, this torch—America—the hope of all the world.

But if we are to endure as a Nation of free, strong-hearted men, we must, in unity, stand sentinel against the potent, growing dangers of faithless, traitorous Communists and Communist-sympathizers who are using their freedom to destroy our freedoms. They are the host of traitorous men and women who, living beneath the protection of our American flag, enjoy the priceless privilege of being citizens of our republic, while their own allegiance is actually pledged to an emblem representing a theory of government opposed to everything for which Old Glory stands. And on this I Am An American Day, and every day of our years, it is the privilege and the duty of statesmen entrusted with the richest heritage of any people in the world, as well as the duty of every man who tills the farm, who toils in the factory, who tends the shop, who teaches in the school, who preaches in the pulpit, who graces the home, to pledge his plighted word devotedly to live and work courageously to fight and bravely to die if necessary, to protect America from violation, this America, our America, the world's treasure-house of freedom.

From the very birth of our country all her varied peoples have lived and worked together to make and keep our country consecrate. Yet we, their heirs, have often failed to put the proper price upon the precious things of life that our forefathers and sons bought for us with blood. Freedom is one of these. But freedom is not a treasure, which, once possessed, cannot be lost, and it will be lost for us and for our children and their children unless it is cherished, defended and preserved as it was fought for and won.

Loudly, proudly man may proclaim "I am an American." But that is not enough. Men must prove their pride and love for America by daily deeds of loyal, selfless living. They must remember that the very history of our United States is the story of the ceaseless struggle to keep alive the ideas and ideals of liberty and democracy and to defend them from enemies within and outside our borders. We must awaken to the truth that America is not immortal. Is America any safer from mastery by communism than was any European country where we witnessed the killing and enslavement of whole peoples by Communists who, with the shedding of blood, became as if drunken with it?

I have seen the ruins of great cities and countries, civilizations that were seemingly indestructible, yet ruined through internal decay. And we Americans must not delude ourselves that we can go on forever despite our enemies, and, above all, despite ourselves. In this atomic age of discord, with nations not only warring against one another but divided within themselves, where men make mockery of the meaning and majesty of faith, America stands before all nations and peoples, envious of none and fearing none, desirous of nothing from other nations save their respect and cooperation in the rehabilitation and salvation of mankind. We shall ourselves be guilty of contributing to our country's destruction if we do not protect her against the lust-born hates of Communist treacheries sweeping like scythes across the world, marring and despoiling even the fair face of free America.

For we are free men with the right to be free, defending the American way of life; free to adore the true God, loving His heart and believing His mind; free to overcome want for body and soul by sweat of our brow in gainful pursuits; free to conquer fear of losing God-given rights through godless laws and ungodly foes. Our rights are ours by right Divine, eternal to have and to hold against all aggression; to be cherished not as grants by law or gifts of men of power for we are free men because God is free—and we are His image and likeness.

From out the loins of every land under the sun came forth men and women of all races and peoples made one by the common will of all their sons, freely to work and worship as they built their common home—America. Their strong backs bent beneath the log chain and the tow rope. They toiled beneath the blazing benediction of the sun, and their arms and faces bronzed in the wheat fields and the logging camps. They teemed into this promised land of America from across the far plains of Europe, from the Mediterranean basin to the storm-beaten shores of Baltic countries—scene of the recent murders of the latest of America's martyrs. They came, labored, and suffered as all men are fated to and they sought and found here their daily bread as they had done of old in their fatherland.

There was, however, this difference: They earned their bread here sweetened with the hope of security and personal liberty, a people conscious of the Fatherhood of God, willing to contribute humbly yet generously to the brotherhood of man. And it should be the self-imposed command of every American citizen and patriot to live, to love, and if need be to fight and to die for God's glory, our country, and our brother, as, with avowed allegiance to his faith, his flag, and his fellow man, he aspires to become as were his forefathers the inspiration, not only of his own generation, but generations of Americans yet unborn.

Yes, to fight and to die for a cause is heroic; but to love and live for God, country, and neighbor is no less glorious. Therefore, do I pray you all, open wide your hearts to God, let His love pour in and nourish you as in the full-bloomed glory of His grace you find within yourselves a strength beyond even the strength to die; a strength which is the strength for what we love, to live.

This was the supreme spiritual strength which fortified our forefathers as they trod their way of the Cross, bearing in their bosoms the torch of freedom which God Himself lighted with the fires of His Spirit. Heirs are we of the bequeathing ages as our country stands today on the top of time, on its sunlit summit looking down the slopes which humanity has scaled from base slavery to rightful liberty. Heirs are we of the God of freedom; free men by law and by God. And free men we shall always be or die mingling our blood with the blood of our sires, who chose a thousand glorious deaths to the inglorious life of slavery. We dare not be traitor to their sacred trust—our Nation's heritage and the world's hope. We dare not barter liberty for lunacy. We dare not sell free rights for the gold of conquest, defying God, who from Mount Sinai flashed His will to be free through sinless sons living by His ten laws; betraying the hardy patriots of old who blazed the trail to freedom through the Magna Carta; playing false to the trust of American patriots who framed the Bill of Rights on the wall of history.

Standing here among you on this full, fertile, grain-giving, life-sustaining, yes, this sacred soil of Kansas, I long that each of my fellow-Americans realize that no man of any other land is so rich as the poorest of us; none greater than the last of us. For within the protective mantle of this mighty Nation, though a man may by circumstance be stripped of wealth, land, home, or fame, nothing and no one can strip from him that right in which are rooted all the God-given liberties of man—the right proudly to say, "I am an American," for liberty is ours by right divine. Liberty is God's gift to America, and faith in God is America's might.

"America, our America!
Thou art not alone,
Nor can'st thou ever be,
Helpless and hopeless,
The prey of fears within,
The pawn of plots without,
Amid the tumult of nations,
Wandering like homeless waves,
Roaring like hungry winds,
Breaking against thy coasts,
Spirits of the vasty deeps,
Leaping to rend thee.

"America, our America!
Thou art not lonely,
Nor can'st thou ever be.
Thine eyes look to the hills
Untroubled against the sky,
Whence help shall come,
Aglow with radiant light,
Itself the shining shadow
Of the matchless vision
That companies thee always
In places dark with death,
In hours weary with wars.

"America, our America!
Thou art not lonesome,
Nor can'st thou ever be.
The vision is thy sentinel,
Circling thy borders,
Guarding thy threshold,
Shedding rare light
That is life itself—
The life that lives on love,
The Voice ever beating out
On souls, the song of songs,
On hearts, the song of service.
May God bless America,
May God keep America—America!"

Address of Hon. Edward J. Hart, of New Jersey

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 23, 1950

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, it is an honor for me to be permitted to insert the following address delivered Friday, May 19, 1950, by our distinguished colleague, Representative EDWARD J. HART, before the Propeller Club of the Port of New York at the annual dinner in commemoration of Maritime Day. Representative HART has made a forceful address pointing to many of the problems facing the American merchant marine and about which problems all phases of the industry should be, and undoubtedly are, deeply

interested. Those of us who know Representative HART know that he will most competently discharge his duties as chairman of the Merchant Marine and Fisheries Committee and will be a worthy successor to his predecessor, Hon. Schuyler Otis Bland. The address is as follows:

Mr. Toastmaster, it is with a deep sense of appreciation that I stand here tonight as a guest of the Propeller Club of the Port of New York. I assume that the invitation to be your guest came to me primarily because of my recent assumption of the chairmanship of the House Committee on Merchant Marine and Fisheries. That chairmanship devolved upon me as the result of a circumstance injurious to the whole country, but especially to be regretted in its relation to the welfare and progress of the American merchant marine. I refer to the lamentable death of our late, great chairman, Hon. Schuyler Otis Bland. Mr. Bland was a great gentleman—a great man. He was a man of high principle, of splendid endowments, of true wisdom, and of generous heart. For 15 years I served with him on the Merchant Marine Committee, all but 2 of them under his chairmanship. His passionate regard for our merchant marine was matched only by his amazing knowledge of the complexities of the shipping industry and the unsparing energy with which he applied himself to the solution of the intricate and sometimes baffling problems which constantly confront both.

During these many years of service together, I was content to follow his judgment and support his leadership. It is my hope that in that time I have acquired something of his spirit and also much of his faith in the capacity of our merchant marine to grow increasingly greater, and more and more fitted to contribute to the power and influence of the Republic.

I think it may be truthfully said that the membership of the committee which I head have, to a man, an absorbing interest in the future of the American merchant marine. Why should not such be the case? It is a truism to say that its commerce is the lifeblood of a nation. And an American merchant marine, adequate to the tasks that lie before it, is indispensable to our country if her commerce is to be served and promoted at the highest level of benefit to her own interests.

The importance of the shipping industry in and to our national economy is most pronounced. It can, and should, be greater. It represents a money value of well over $2,000,000,000. Last year, the total wages derived from it amounted to almost one and a half billion, and it directly produced tax revenues for our Government well in excess of $200,000,000. But most important of all, a fact admitted to be the basis of our merchant marine legislation, and so often asserted by our top military and naval authorities as to be now axiomatic, an adequate, wisely balanced American merchant marine is absolutely vital to our national security and an indispensable arm of our national defense apparatus.

While our merchant marine may be even now an object of pride for all Americans, it is not all it should be, nor, if we are wise, is it what it must become. While it may be true that the existing American fleet of merchant freighters and tankers is the finest in history, as is so often stated, we must not lose sight of its shortcomings nor be lulled into a false feeling of satisfaction and security.

On the facade of a certain public building in my State, there is carved a legend. It reads: "If you stand well, stand still." Nothing more fallacious was ever written anywhere. Paradoxically, one can continue to stand well only if he moves. The movement must be ever forward and in pursuit of progressive ideas and policies.

Two questions we must keep before our minds are these: (1) Is our merchant marine adequate to fulfill its rightful part in the realization of our commercial potentialities? (2) Is it as ready as it can and should be to serve in the highest possible degree the requirements of our national defense? Unless affirmative answers can be confidently given to both questions, then work remains to be done.

Before this audience, knowledgeable as it is in such matters, it is neither necessary nor desirable to dwell upon the low estate to which the shipping industry had fallen before World War I, and again in many of the years preceding World War II. It is painfull to recall the vast expenditures our Government was compelled to make when both these calamities befell us, in order to bring our merchant marine in line with our desperate requirements. Lack of planning and lack of intelligent interest in our merchant marine were primary causes of the appalling waste involved. However that may be, we have every right to be proud of the achievements of our merchant marine in eventually meeting our wartime needs. When the end of hostilities came America was the leading maritime nation of the world. According to figures recently submitted, American flag vessels, in 1946, carried 67.6 percent of our foreign trade. But in each succeeding year this percentage has dropped severely, until in 1949, our ships carried less than 50 percent of our foreign trade. This ominous fact should cause us to stop, look, listen, and act.

Yes, the picture has changed very, very substantially in just a few short years. Other maritime nations have been striving with might and main to narrow the gap between themselves and us. And they are fast approaching the point where it will be closed altogether. Today they have ships more capacious, more up to date, and speedier than any we can boast of. More and more the advantages provided by their respective governments are enabling these foreign fleets to displace American vessels in the carriage of great segments of the world's trade.

The Committee on Merchant Marine and Fisheries is aware of these conditions. Its chairman, I assure you, is aware of them. Likewise, we are aware of other conditions equally dangerous, or nearly so, to the maintenance of such a privately owned, privately operated merchant marine as America must have at her service if she is not to lose the mantle of leadership with which events, under God's providence, have invested her. Lastly, we are aware of the obligation of our Government to furnish such assistance as is demonstrably necessary to prevail over these conditions.

I, for one, desire to see in America a self-sufficient merchant marine. I want no dependence placed on the ability of so-called friendly nations to furnish us with desperately needed ships during a war in which, if it should come, our very existence shall be at stake—on nations which hitherto have been unable to supply their own wants in this respect in their time of direst need.

I want to see a better balanced merchant marine. I want to see more passenger vessels flying the American flag in peacetime, of such a character as can be quickly converted to effective troop transports capable of carrying our forces wherever they may be needed for the defense of that flag in wartime. I want to see our domestic shipping services brought out of the doldrums and made again an active, virile force in the upbuilding of our national economy.

I want to see a speedy revival of our shipbuilding and ship-repair industries which shall not only afford employment to thousands of men now idle, but shall foster and maintain the technical skills indispensable to a satisfactory merchant marine.

I want to see renewed the stabilization of our entire merchant marine policy so that men of vision and faith may be further encouraged to supply the capital necessary for the expansion of the shipping industry in all of its various branches.

The Committee on Merchant Marine and Fisheries has before it many problems of grave import for its consideration. It will address itself to these problems with an equally grave consciousness of its responsibility to the country and of its duty to afford the necessary degree of cooperation to each and all of the elements of the shipping industry—ownership, management, and labor—without which no American merchant marine, worthy of the name, can continue to exist.

Don't Sell the American People Short

EXTENSION OF REMARKS

OF

HON. RALPH A. GAMBLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 8, 1950

Mr. GAMBLE. Mr. Speaker, having received unanimous consent to extend my remarks in the CONGRESSIONAL RECORD Appendix, I insert herewith portions of a speech by my friend, Rogers C. Dunn, head of the Dunn survey, of Greenwich, Conn., delivered at Canton, Ohio, on April 12, 1950. In my opinion there is a lot of truth in it whichever side you are on. Following and attached to the speech is a copy of an editorial from the New York Journal-American of April 23, 1950, approving the speech.

The speech and editorial follow:

DON'T SELL THE AMERICAN PEOPLE SHORT

(By Rogers C. Dunn, of the Dunn Survey)

I shall tell you about some of the facts we have found, and the conclusions I think they justify.

First of all, it seems to me that each of us should try to understand what is the basic struggle now taking place in American Government.

I think the answer is clear. We are in a fight that is determining shall the American people be master of their Government, or shall the Government be master of the people.

This is the basic struggle.

All issues and all men in public life should be accepted or rejected on their position in this fight.

History shows that the so-called welfare state is only the sugar coating serving as bait for totalitarian government, which means the government is master of the people.

Both the New Deal and Republican leaders are educating you to believe the American people have endorsed a system of Government handouts that make the welfare state.

This belief is false. It is not founded on fact.

But as you, and each citizen, accept this idea, the welfare state becomes stronger. For when we lose faith in the character and intelligence of our fellow Americans, we are admitting that the people are not qualified to be masters of their Government.

If any of you have come to believe that a majority of voters have abandoned the traditional concept of American Government, I want to say I think you are mistaken.

The people are lost in the wilderness of propaganda because they have been deprived of the opportunity to choose between two ideals or philosophies of government.

This is because the leadership of the opposition to the New Deal has lost its bearings and doesn't know where the American people stand. This failing is covered up by blaming the people for falling for the siren call of the handout state.

Up to now, there have been two ways of gaging what the American people want of their Government.

1. Analyses of the vote cast in national elections.

But, very strangely, the public has rarely been given cold election figures to prove that the voters are for or against the welfare state; for or against special privileges for union leaders; for or against special handouts from the Federal Treasury for farmers and other organized groups.

2. The acts of Congress.

Since 1937, hardly a piece of New Deal legislation, conspicuous to the public, has been passed by Congress, except as it was cloaked in war-emergency programs.

If you stop to think about the legislation Roosevelt and Mr. Truman have insisted that Congress pass, you will see that the real political division in this country is between two parties which I shall call the bureaucrat deal and the peoples' representatives.

WORKERS

It is generally accepted that the bureaucrat deal has won a great gain in labor vote. This gives an excellent illustration of how propaganda can hide the truth.

Congress passed the Wagner labor law in 1935. Labor leaders called it labor's Magna Carta. It gave union leaders great powers. Union membership increased from 4,700,000 in 1936 to 15,600,000 in 1948.

How did this affect the vote? You have been told that the great gain in labor vote was a major factor in electing Roosevelt and Truman.

Well, the cold facts tell the opposite story. And here they are:

The Census Bureau lists 96 counties that comprise the 33 largest industrial areas in the country. This is where the great concentration of labor is. It includes cities like New York, Pittsburgh, Chicago, Detroit, and San Francisco.

In 1936, before there was a CIO-PAC, Roosevelt won 65 percent of the vote in the industrial area. His voted dropped to 57 percent in 1940. And it dropped to 56 percent in 1944. And it dropped to 51 percent in 1948 for Mr. Truman.

The Democratic vote dropped 14 percent in 12 years in the great labor centers, despite all the benefits and organizations of labor unions.

In the great labor citadel of Detroit, the Democratic vote has declined, in spite of a growth in labor population. In 1936 Roosevelt won 68 percent of the vote. In 1944 he had 63 percent. And in 1948 Mr. Truman got 58 percent.

So, when you look at the facts, you will see that the bureaucrat deal has been losing, not gaining, the confidence of the American worker.

If similar declines in the vote had occurred in Republican communities, CIO-PAC and everyone else would say that Republican leaders were losing the confidence of the voters.

Both labor leaders and Republicans have told you about the great job CIO-PAC has done in getting workers to the polls. I don't believe that anyone here would challenge that view. But, the facts tell a different story.

In 1936, before there was a CIO-PAC, 10,700,000 Democratic votes were cast in the industrial areas. By 1944, only 10,200,000 Democratic votes were cast. In 1948, with all the efforts and money of CIO-PAC, the Democratic vote continued to go down, and was only 10,100,000.

Thus, in spite of the growth in labor population, and in spite of the activities of labor leaders, the facts show that the rank-and-file worker has been turning away from the bureaucrat deal and away from the political views of top union leaders.

I think that many local union leaders know this, but they can't speak.

A precinct-by-precinct study of the vote that we have been making for the past year is showing that the Democratic vote in the labor precincts has changed substantially the same as it has changed in the wealthy residential and white-collar precincts.

The country will soon be interested in primary elections. Most of you know that a primary election affords an organized minority its greatest opportunity to be effective at the polls. Have labor leaders delivered the vote they claim to speak for? They have not.

In 1948, 332 Members of Congress who voted for the Taft-Hartley law sought renomination. Only 12 who were opposed by CIO-PAC were defeated, and of these only 3 came from communities where there was a substantial labor population. Only 3 out of 332.

The CIO-Political Action Committee is the great American hoax. It is not a voting machine. It is a propaganda machine—but a most formidable one.

I believe its long-range objectives will be reached, unless the opposition—

1. Wakes up to the fact that fewer workers are voting today than voted 10 years ago—and the significance of this fact.

2. Wakes up to the fact that the great body of American workers has not accepted the political views or leadership of the bureaucrat-labor-leader combine.

3. Wakes up to the fact that the door is wide open for the Republican Party to fight as the champion of the American worker.

I want labor leaders to stand up and fight for what they believe is good for the workers and for the country. And I want an opposition party which will stand up and fight for what it believes is good for the worker and for the country. We do not have the latter.

I would be pleased if what I have told you would lead you to think that perhaps the worker hasn't changed any more than most of us in this room.

FARMERS

I would like to touch on the farm vote for just a moment.

In January 1948, when we reported that Mr. Truman would win and a Democratic Senate and House would be elected, we stated that Republicans would lose votes in the farm and suburban areas. This proved correct.

It was our view that throughout all economic groups there had developed a discouragement and disgust with the Republican Party for its failure to be an opposition party; and the consequent loss of Republican votes would be most conspicuous in the strongest Republican communities—the farm and wealthy residential areas.

After the election, Republicans have told you that the vast handouts from the Federal Treasury "bought" the Democratic farm vote. Although still incomplete, our study is showing that for every 100 Democratic votes in the farm precincts in 1940 there were only 84 in 1948. Democrats lost 16 farm votes for every 100 they had in 1940.

No opposition party can be successful if its leaders constantly misappraise the American people.

PAYROLL VOTE

The greatest misrepresentation of the will of the American people has resulted from the use of the Federal payroll vote to win national elections.

This completes the meaning of, "Tax—spend, and elect."

I shall try to give you the high lights, rather than discuss the many details of mechanical operation.

Statistical studies, confirmed by the accuracy of our pre-election reports on the vote, show that Federal employees account for an average of four Democratic votes apiece.

Two million Federal employees mean eight million Democratic votes.

The employees can be distributed among the States with an exact knowledge of the number needed to win each State.

I am sure that tens of thousands of Federal employees either do not vote, or vote Republican—but the average is four Democratic votes.

For any Republican who would doubt our statistical finding, I point out that before the 1944 election and before the 1948 election, we asked Republican Senators, Congressmen, governors, State chairmen, and national committeemen for their estimate of the payroll vote. Ninety percent of those replying estimated an average of three, four, or five Democratic votes per Federal employee.

Fifteen years ago we first found that there is a way to have a constant knowledge of the division of the Republican and Democratic vote in each State.

This has shown that from 1936 through 1948 Roosevelt and Truman received never more than 44 percent of the vote cast by those not directly influenced by the Federal payroll.

This is the maximum vote that Roosevelt or Mr. Truman would have received without the Federal payroll vote.

This means that a maximum of only 44 percent of the voters have ever endorsed the acts and policies of the New Deal or the welfare state.

Since 1940 the highest Republican leaders have refused to even study the relation of the Federal payroll to national elections.

As a result, every time the New Deal wins 51 percent or more of the vote Republican leaders generally acknowledge that the voters have endorsed New Deal issues.

This is why there is no opposition party with the intelligence or courage to go to the American people fighting for a program in contrast to the welfare state.

CONCLUSION

Substantially all that I have told you the Dunn Survey first pointed out and warned against in 1938—and many times since.

As for the future, I continue to expect the tentacles of totalitarian government to grow stronger and reach further—unless Republican leaders soon recognize that they have been constantly misinterpreting the vote, therefore misinterpreting the will of the American people.

When this is recognized, a whole new vista of the American people will be revealed.

It will be seen that the majority of American people still cherish and want the concept of government that was America from 1776 to March 4, 1933.

Republicans would no longer feel required to indulge in the expediency of "me too, but."

And when Republican leaders wake up to this, they will see the means to make this majority opinion effective at the polls, and in the Congress.

In the meantime—each of you can make a great contribution to your country by renewing your faith in the character and spirit of the majority of American people—and by getting behind those people who are fighting with this faith.

[From the New York Journal-American of April 28, 1950]

WIN WITH AMERICANISM

A misreading of election results in the years of New Deal-Fair Deal ascendancy has corrupted the effectiveness of the political opposition.

As a result of the me-too approach, the stay-away vote has become of colossal proportions.

Rogers C. Dunn, of the Dunn survey, in a recent speech at Canton, Ohio, gave the statistical basis for an effective campaign of genuine opposition based on authentic Americanism.

Unless the Republican Party has the wit and the courage to develop this patriotic theme, it will die on the vines of ineffectiveness.

Mr. Dunn revealed that between elections realists in Congress have found an effective way to block New Deal-Fair Deal legislative panaceas through a coalition between Republicans and southern Democrats.

"Since 1937, hardly a piece of New Deal legislation, conspicuous to the public," Mr. Dunn said, "has been passed by Congress, except as it was cloaked in war-emergency problems.

"You will see that the real political division in this country is between two parties which I shall call the bureaucratic deal and the people's representatives."

Mr. Dunn revealed that the New Deal-Fair Deal never again received as big a slice of the labor and farm votes as in 1936.

Referring to the 95 counties comprising the 33 largest industrial areas, where the biggest concentration of union membership dwells, Mr. Dunn disclosed that in 1936, before there was a CIO-PAC, Roosevelt won 65 percent of the vote in the industrial area. His vote dropped to 57 percent in 1940, and to 53 percent in 1944. Mr. Truman's vote fell to 51 percent in 1948.

The Democratic vote, Mr. Dunn showed, fell 14 percent in 12 years in the great labor centers, despite all the catering to the unions.

Mr. Dunn reported a similar drift in the farm vote, saying "although still incomplete, our study is showing that for every 100 Democratic votes in the farm precincts in 1940 there were only 84 in 1948."

Mr. Dunn concluded that a maximum of only 44 percent of the voters (not including those directly influenced by the Federal payroll) has ever endorsed the acts and policies of the New Deal, or the welfare state.

Mr. Dunn concluded that the New Deal-Fair Deal has been winning elections through the bought vote of those on the Federal payroll. He estimates that each payroller brings in four votes.

Mr. Dunn concluded that when the effect of the payroll vote is fully evaluated, a whole new vista of the American people will be revealed.

The statistician said:

"It will be seen that the majority of the American people still cherish and want the concept of government that was America from 1776 to March 4, 1933.

"And when Republican leaders wake up to this, they will see the means to make this majority opinion effective at the polls, and in the Congress."

Mr. Dunn's analysis reveals how to get the wasters and the political blue-sky operators off the backs of the American people next November.

Truman Pulls Rug From Under American Workers

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, May 19, 1950

Mr. SHAFER. Mr. Speaker, President Truman and his Fair Deal, through the so-called reciprocal trade agreements, is pulling the rug from under the workers of America. Some union leaders will admit this is true while there are others who will not.

I have here a letter from Harry H. Cook, president of the Flint Glass Workers of America, AFL, mailed from its headquarters in Toledo, Ohio, to retail merchants throughout the United States threatening a boycott of all merchants who handle and promote the sale of imported glassware.

This letter cites the excessive unemployment existing now in the flint-glass industry as the result of importations of cheap glassware from countries abroad. The letter states that it is the intention of the glass-workers union to enlist the entire membership of the American Federation of Labor, numbering 8,000,000 workers, in this boycott.

Whether inadvertently or intentionally, Mr. Cook's letter to me and the letter sent to the retail merchants, makes no reference to the Reciprocal Trade Agreements Act. Probably Mr. Cook is not aware that this Fair-Deal-conceived measure, which is the real cause of the large unemployment in the flint-glass industry, was enacted in part at the insistence of the American Federation of Labor and the Congress of Industrial Organizations.

At any rate, Mr. Cook has gotten his cart before the horse in writing his letter to retail merchants threatening a large-scale boycott if they continue to handle and promote the sale of imported glassware. He attributes the unemployment in the flint-glass industry to the eagerness of merchants to give their customers glassware at the lowest possible price, but he fails utterly to attribute the situation to a law which actually encourages importations of cheap-labor glass products from countries where wage rates average less than 25 percent of those in the United States.

For the benefit of Mr. Cook and Members of the Congress, I wish to point out that the ad valorem rate on glassware in 1930 was 60 percent and continued to be so until the Department of State chose to use the Reciprocal Trade Agreements Act to cut the ad valorem rate one-half. It is now only 30 percent. So it is that foreign glassware producers, paying wages that average 90 cents a day, are able to pay American import duties and still undersell glass made in America, where the same industry pays its workers from $9 to $10 a day.

Of course, the State Department, which most of us know has little knowledge of tariffs and cares less, uses this power over American import duties in part as a diplomatic weapon in the cold war; but the State Department also uses this power in part as a domestic political weapon against what the Fair Deal administration calls big business or these selfish interests.

It strikes me it is about time for industrial unionists to get wise to what is happening. It is time for them to realize that sooner or later, as things are going now, they will be ground to pieces between two millstones—the one being the hatred of successful free enterprise in the hearts of the Fair Deal Socialists; the other being the policy of the Fair Deal internationalists to build up foreign industry, even though at the expense of industrial job holders in America. It is time for unionists to combat this reciprocal trade-agreement business as something far more inimical to their interests than to those of anyone else.

That some trade-union leaders already do realize their mistake in supporting the Reciprocal Trade Agreements Act, and are honest enough to admit their mistake, is shown by copies of letters sent to President Truman by the Consolidated Glove Cutters Union of Fulton County, at Gloversville, N. Y., which recently fell into my hands. This AFL union came out decisively against the Reciprocal Trade Agreements Act.

The glove cutters union based their demand for a change in our tariff policy on the fact that more than 5,000 union members currently are drawing unemployment benefits, while an additional 1,600 have already exhausted their benefits. This they pointed out to President Truman is the direct outgrowth of trade agreements whereby import duties on leather gloves have been drastically reduced.

But the glass workers and the glove cutters are not the only American industrial workers now suffering miserably as a result of the Reciprocal Trade Agreements Act, which in turn stems from socialism and internationalism in the Fair Deal and in union leadership. There are thousands of shoe workers in Massachusetts and other States, jobless because of low tariffs which permit importation of slave-labor-made shoes from Czechoslovakia at prices American industry cannot hope to meet, unless American shoe workers are willing to work for far less than a dollar a day.

Still another instance of the subversive effects of the Reciprocal Trade Agreements Act is provided by the fine watch industry of the United States. In this instance, the consequences are likely to be extremely serious as affecting national security. Already the Waltham Watch Co., one of the oldest in America, has gone into bankruptcy, and other companies of the kind have been forced to seek Government loans—all because import duties on watches and watch parts have been reduced to a point where American companies cannot compete against the low-wage industries of Switzerland and some other European countries.

I have said that the failure of American watch manufacturers—and more may fail unless tariffs on watches and watch parts are moved upward—will adversely affect our national security. Such failures would do so simply because these companies are the only ones which have the equipment and the know-how to make fine radar equipment and the delicate precision parts of Norden bombsights and the improvements thereon.

Many other American industrial companies than those I have named here already are feeling the effects of the mistaken Reciprocal Trade Agreements Act and the ill-judged administration of that act by the State Department. More and more Americans are being thrown out of work. The time has come for a change.

For a long time I have felt that tariffs are not the province of the State Department, or any other department of Government. That is one reason why I have always opposed the reciprocal trade agreements bill. We have a United States Tariff Commission. Why not let it do its job? Some new blood, and perhaps a little more authority, is all the Commission needs to enable it to do the tariff job on a scientific basis. Then we might be able to use trade agreements as a potent weapon in the cold war, without penalizing American industry and American workers for the benefit of slave-wage employers abroad.

We Believe in the Inviolate Rights of Men, Women, and Children To Live in Freedom

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 23, 1950

Mr. KLEIN. Mr. Speaker, that my independence of thought and action has more than once brought me into conflict with various organizations, even with some with which I usually agree fully, is a matter of general knowledge. It was not many weeks ago that I had a disagreement with the national organization called B'nai B'rith over a specific incident when I decided that the organization was following a wrong procedure.

However, in the current issue of the National Jewish Monthly, an official publication of B'nai B'rith, I have found a statement of the principles and objectives of the organization which is simple, dignified, and profoundly moving, and insures my continued cooperation with B'nai B'rith.

These words are from the message of the national president, Mr. Frank Goldman, to the triennial convention here in Washington last month. I am happy to insert them in the CONGRESSIONAL RECORD that the world may know of the noble objectives of this Nation-wide organization of responsible American citizens, rejoicing in the democratic processes of our country and looking forward always to a fuller realization of our opportunities for service:

WE HAVE OUR WORK TO DO

We are not an organization in search of a program. We have a program. So long as there is a Jewish people, so long as human rights are not everywhere fulfilled, and the recognition of human dignity is not a tenet of universal faith, we have our work to do. We need plow no furrows save those which move straight to objectives clearly understood. We need tack our sail to no wind save that which blows in the direction of service to our fellow man. The whole of humanity is our workshop, and the eternal principles of Judaism are our guide and lodestar.

There is but one B'nai B'rith. It is the same B'nai B'rith in every town and hamlet in this country. It is the same B'nai B'rith on this continent and in lands overseas. We believe in the dignity of the human being. We believe in the brotherhood of man. We believe in the inviolate rights of men, women, and children everywhere to live in freedom, but with full understanding that as there are rights, so there are obligations. We believe in a community of interests among all citizens of all states—and of the state's responsibilities to its citizens. We believe that B'nai B'rith came into existence because it was needed—because it fulfilled a basic need among our people. We believe that it has been blessed with a long and vigorous life because it has continued to fulfill that need. Our program flexible, our many instrumentalities of service ever aware and ever alert, our order plays a high and significant role in Jewish life.

Surely B'nai B'rith must never stand still, never mark time; it must be in action always, in repose never. It must move forward, not backward; it must serve in the truest and purest meaning of the word.

To all men and women who are joined together in this splendid order, let me say this: in B'nai B'rith we possess, and we are breath and bone of a precious thing. It is each of us, and all of us. Ours is the obligation; ours is the challenge; ours is the opportunity. Let us, in the days to come, not fail to be worthy of whatever we may be called upon to do; and may it never be said of us that whatever was done was less than the very best that we could do. (From President Frank Goldman's Message to the Triennial Convention of B'nai B'rith.)

Addresses on the Occasion of the Publication of Volume 1 of the Papers of Thomas Jefferson

EXTENSION OF REMARKS
OF
HON. ELBERT D. THOMAS
OF UTAH
IN THE SENATE OF THE UNITED STATES
Wednesday, May 24 (legislative day of Wednesday, March 29), 1950

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the address delivered by the President at the Library of Congress on the occasion of the publication of volume 1 of the Papers of Thomas Jefferson on May 17, 1950, and also the address of Douglas Southall Freeman entitled "The Paradoxes of Jefferson" delivered at the same ceremony.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

ADDRESS BY THE PRESIDENT

I accept with great pleasure the first copy of volume 1 of the Papers of Thomas Jefferson. On behalf of the people of the United States, I congratulate Princeton University and the Princeton University Press on undertaking to edit and publish the great series which this volume begins.

I should like to add a personal word of appreciation and encouragement to the editors for the years of hard work that are still ahead of them. I am very well acquainted with what many people call paper work, and I appreciate the immense amount of painstaking effort which each of these volumes requires.

We should also be grateful to the New York Times for the financial assistance which that newspaper has given to help compile this complete edition of the writings of one of the greatest Americans. This edition will be of lasting value to our Nation for generations to come.

As many of you know, I returned to Washington yesterday from a visit to the Pacific Northwest. Traveling at what is today a very leisurely rate, in 9 days I went nearly 7,000 miles through 16 States. In 1803, President Jefferson sent out two young pioneers to explore the same area I had just been through. Jefferson wanted to find out what was in the great new territory he had just bought from Napoleon. Meriwether Lewis and William Clark took 28 months to make the round trip from the banks of the Mississippi to the mouth of the Columbia River on the Pacific coast. Where they found only Indian villages, herds of buffalo, and trackless wilderness and sagebrush, I saw great cities, immense structures like Grand Coulee Dam, and rich farm land. These sharp contrasts are only a few of many that point up the dramatic changes that have occurred in our country since Jefferson's day. Since the United States today scarcely resembles the United States when Jefferson knew it, why should the publication of his letters be so important to us?

The answer should be obvious, as we turn the pages of this first volume. Throughout his life, Jefferson waged an uncompromising fight against tyranny. The search for human liberty was a goal which he pursued with burning zeal. The spirit of democracy shines through everything he ever wrote.

Today, when democracy is facing the greatest challenge in its history, the spirit which Jefferson expressed in his battle against tyranny, and in his search for human liberty, stands out as a beacon of inspiration for free peoples throughout the world.

Jefferson lived in a time of great struggle, when this Nation was trying to establish itself as a democracy of freemen. We today, in a different time and under different conditions, are in a great struggle to preserve and expand human freedom.

Our stage is larger—our struggle must be waged over the whole world, not merely in our own country. But the essential nature of the struggle is the same; to prove, by hard work and practical demonstration, that freemen can create for themselves a good society, in which they live together at peace, and advance their common welfare.

When freedom is at stake, we need to draw upon every source of strength we can. Jefferson thought deeply about how to make liberty a living part of our society, and he proved the rightness of his thinking by practical demonstration. That is why I think it is particularly important that we are reasserting Jefferson's ideals by publishing these volumes.

History can be fairly written only when all the facts are on record. Jefferson has suffered at the hands of unscrupulous biographers and biased partisans ever since his death. The publication of his papers should correct the mistakes that have been made about him and should help prevent misinterpretations in the future.

There are others like Jefferson whose lives have enriched our history, but about whom we know too little. Many of them have been victims of unfair treatment at the hands of historians; others have been neglected because the record of their work is scattered about in remote places.

I hope that this edition of the writings of Thomas Jefferson will inspire educational institutions, learned societies, and civic-minded groups to plan the publication of the works of other great national figures. In far too many cases, there are incomplete and inaccurate editions of the writings of the great men and women of our country.

In some distressing instances, we have only fragmentary records of men whose ideas and actions have helped shape our history.

I am convinced that we need to collect and publish the writings of the men and women who have made major contributions to the development of our democracy.

I am, therefore, requesting the National Historical Publications Commission, under the chairmanship of the Archivist of the United States, to look into this matter and to report to me. I am sure this commission will wish to consult with scholars in all fields of American history, and to report what can be done, and should be done, to make available to our people the public and private writings of men whose contributions to our history are now inadequately represented by published works.

I am interested not just in political figures, but in the writings of industrialists and labor leaders, chemists and engineers, painters and lawyers, of great figures of all the arts and sciences who have made major contributions to our democracy.

Obviously, we cannot hope to collect, edit, and publish all the writings of all such leaders, but we can and should select the works of those who have been too long neglected and who need to be better known if we are to understand our heritage. This is a big undertaking. It will take a long time. It should be done as far as possible by private groups and not by the Federal Government, although the Federal Government can and will be of assistance whenever possible. The editions should be in every instance completely objective and should maintain the same high editorial standards that are evident in this first volume of the Papers of Thomas Jefferson. They should aim to place the facts beyond debate and distortion.

At a time when democracy is meeting the greatest challenge in its history, we need to turn to the sources of our own democratic faith for new inspiration and new strength. These volumes of Thomas Jefferson will be a great reservoir of hope and faith during the critical years ahead. I sincerely hope that similar editions of the writings of other great men and women who have made our Nation what it is today can be placed with them.

I shall give my full support to this endeavor.

Thank you very much.

THE PARADOXES OF JEFFERSON

(Address by Douglas Southall Freeman, in the Library of Congress, May 17, 1950, at the ceremony marking the publication of the first volume of the Papers of Thomas Jefferson)

Is it possible for Princeton scholars, well furnished though they are, to make grist for the American mind from the vast plantation Thomas Jefferson cultivated? John Foley, using the sickle on the high heads only in the fields of Jefferson's wisdom, gathered 9,228 maxims into that tight bin he called the Jefferson Cyclopaedia. These cradlers, Dr. Julius P. Boyd, Dr. Lyman H. Butterfield, and Mrs. Mina R. Bryan, are to harvest and glean 18,000 letters and are to gather them into the barn of 52 volumes, provided from funds generously given by the New York Times and by Princeton University.

The editors know that the cloak on Jefferson's shoulders gave him what appears to be the scholar's stoop but that he had the florid robustness of 6 feet 2½, that he was scarcely second to Washington as a horseman, that he made it his inflexible rule to rise as soon as he could see the hands on the mantel clock, that he said the sun never caught him in bed in 50 years, that as a student he worked 15 hours a day, and that from the time he discovered as a boy the delights of reading, he never sat in idleness an hour.

This unexcelled energy, this awesome diligence of Jefferson will not frighten students who almost rival it. They sense his invincible zeal and understand precisely what he meant when he said, "I fear that my zeal will make me expose myself to ridicule * * * but this risk becomes a duty by the bare possibility of doing good." These scholars will not fail to follow Jefferson through the five languages he mastered and the diversified subjects he had investigated so thoroughly that it was easy for him to make one function of the Presidential office the discriminating patronage of all the arts and sciences. The editors appreciate, as every American gratefully may, what Benjamin Rush meant when he said "The objects of Jefferson's benevolence were as extensive as those of his knowledge." The spiritual life and the long faith of Jefferson similarly are patent. They were compassed in as plain words as ever an honest statesman wrote: "Love your neighbor as yourself and your country more than yourself. Be just. Be true. Murmur not at the ways of providence." He meant precisely what he said when he wrote his daughter Martha from a Paris already muttering of the grievances that went into the cahiers, "Be good and be industrious and you will be what I most love in this world." It will not be difficult for Dr. Boyd and his staff, to see in one profile of Jefferson the Pico della Mirandola, the uomo universale, of the revolution. Significantly and by avowed preference when Jefferson was in England, he wrote of gardens, not of the Guildhall or even of Westminster. He could say in one breath, "Music is the favorite passion of my soul" and in the next, "Nature intended me for the tranquil pursuits of science, by rendering them my supreme delight." Readers and editors alike will understand how Jefferson came to loath the calumny of politics and to realize that distinction did not compensate for vilification. "There are minds," he groaned as early as 1783, "which can be pleased with honors and preferments; but I see nothing in them but envy and enmity." Although he had told Dr. Rush he would "go to hell to serve his country," he protested to Madison in 1799, "I am giving everything I love in exchange for everything I hate."

Thus far and even further it is possible to penetrate and to understand. In much that Jefferson wrote there is clear light "unto the feet" of those who follow after, and unto the eyes of all who read; but when the fold in the last of those 18,000 letters of his is opened and the final reflection from 25,000 incoming papers is put in focus, is the entire man there? Can editor or biographer assert, "Here is Jefferson; this is the image of his soul; see in these words, the kernel of his creed?"

If that can be said of any complex personality—and what personality is not complex?—it is an achievement. In the case of a man like Jefferson, who wrote for more than half a century of revolutionary change, it will be a superlative triumph of scholarship. Were there no other obstacles, the apparent contradictions in Jefferson's own writing are well nigh countless on superficial view, and, if taken from their context may appear to prove either side of scores of propositions Jefferson put forward. In that very fact may be one secret of the man. You dwarf him if you demand of him the "consistency . . . of little minds." His political philosophy bespeaks not confusion but experimentation. His greatness is, in part, his willingness to face the inherent paradoxes of government and the always-dangerous adventure of administration. Who contended more vigorously than did he for the "natural rights of man"; but did he not write officially in 1790, "All natural rights may be abridged or modified in their exercise by law," and as late in his career as 1816, did not he draw a sharp-edged distinction: "No man has a natural right to commit aggression on the equal rights of another, and this is all from which the laws ought to restrain him"?

Again, hear him on the paradox of science and art in government, "Freedom is the first-born child of science," he said, but he held that government, the guardian of this freedom, was an art and "that the whole art of government consists in the art of being honest." To Jefferson, likewise, we owe perhaps the clearest statement of the paradox of leadership and representation. In the year the Philadelphia constitution was drafted he thus perfectly expressed one of its high and hard ideals: "To inform the minds of the people and to follow their will is the chief duty of those placed at their head." This manifestly calls for patience and self-control beyond the reach of time-serving mediocrity. Yet, the very word "inform" is a signpost to another cross-road paradox, that of education and ignorance, of attempted self-government in the face of indifference. "Government cannot be good," Jefferson told John Adams in 1819, "but under the control of the people," and again, "the natural progress is for liberty to yield and government to gain ground," but over against that set his familiar and eternally glorious declaration of faith: "truth is the proper and sufficient antagonist to error, and has nothing to fear from the conflict, unless, by human interposition, disarmed of her natural weapons, free argument and debate".

To the attainment of truth, the way was that of education. Where are words that sound with loftier challenge the bugle call to war on ignorance? "For promoting the public happiness, those persons whom nature has endowed with genius and virtue, should be rendered by liberal education, worthy to receive, and able to guard the sacred deposit of the rights and liberties of their fellow citizens; and they should be called to that charge without regard to wealth, birth, or other accidental condition or circumstance."

He believed in stability—"My God," he cried to Monroe from France, "how little do my countrymen know what precious blessings they are in possession of, and which no other people on earth enjoy"; but he said unhesitatingly, "a little rebellion now and then * * * is a medicine necessary for the sound health of government," and he cheerfully, aye, happily, told John Adams in 1796, "this, I hope, will be the age of experiments in government, and that their basis will be founded on principles of honesty, not of mere force."

All the while, and to the end of the tests and ventures of his own public service, he warned America: "To take from one, because it is thought that his own industry and that of his fathers has acquired too much, in order to spare others who, or whose fathers, have not exercised equal industry and skill is to violate arbitrarily the first principle of association." That there might be no doubt what he considered this first principle of association he wrote it down forthwith—"the guarantee to every one of a free exercise of his industry, and the fruits acquired by it." These "rights of the people to the exercise and fruits of their own industry," he told Isaac Tiffany that same year, 1816, "can never be protected against the selfishness of rulers not subject to their control at short periods."

Here, as Jefferson saw it, stood government in the grapple with greed and in the contest with circumstance that neither can be foreseen nor deflected. The paradoxes of Jefferson do not end with those of natural right and law, of leadership and representation, of political science and governmental art, of self-rule and personal ambition. You will find like paradoxes in Jefferson's concept of benevolence and political partisanship, of continuing Federal debt and the

unescapable mortality of the generation that creates the debt, of the general welfare as desirable in se and as "lace[d] * * * up strictly" to use his own metaphor, "within the enumerated powers of the Constitution." Few men lived, as Jefferson did, to the fiftieth anniversary of their greatest declaration, and fewer still to see the work of their hands prosper in the peace of a nation. Eighty-two when he died and afflicted with personal misfortune beyond the meet and measure of most men's woe, he kept his faith in America. The spirit of his last years, the spirit of this hour, is that of one of the final lines of a lovely letter to Mme. de Corny in Paris, October 1787: "The sky is clearing," he said, "and I shall away to my hermitage." For us as for him, the sky will clear; and he will remain with us in his new hermitage, this book.

Contributions of Hon. Herbert H. Lehman, of New York, to the Dairy Industry

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 24 (legislative day of Wednesday, March 29), 1950

Mr. HUMPHREY. Mr. President, the Metropolitan Milk Producers News, a publication of the dairy industry in New York, recently carried an editorial praising the contributions of our colleague, the junior Senator from New York, Senator LEHMAN. I think the RECORD might very well include this editorial from this very fine and outstanding publication. I ask unanimous consent to insert this editorial in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SENATOR LEHMAN WOULD KNOW FACTS

With due respect to other Members of the United States Congress, we feel safe in saying that no other has the intimate, first-hand knowledge of the complex problems of milk marketing as does Senator HERBERT H. LEHMAN, of New York. Neither has anyone had closer knowledge of the problems of the common man and the underprivileged, than he.

This knowledge has been gained by his early determination to use his ability and his opportunities to the fullest possible extent in being of service to others. To do this he first makes sure that he thoroughly understands the problem and then he squarely shoulders every responsibility that is his. His responsibilities have been heavy, his accomplishments have been worthy.

He became governor of New York State at the low point of the depression (1933) when the dairy industry was at the lowest ebb in its entire history. He served as governor for 10 years during which time the pioneering of Government assistance in helping cooperative associations handle their marketing problems was started. By trial and error the present system was developed, protecting, as he insisted, the principles of cooperative marketing.

It is, therefore, not surprising to us that it was Senator LEHMAN who quickly diagnosed the problems arising from the unrestricted sale of yellow oleomargarine, and who put his finger on the two vital points that require careful study.

In introducing the two resolutions, which are printed on pages 2 and 7, Senator LEHMAN said, "These resolutions would provide the necessary protections for the consumer on the one hand, and the necessary information on the basis of which we might take steps to avert serious damage to American agriculture on the other."

The action that he has taken is that of a statesman who is determined to serve all citizens and who appreciates the vital position occupied by dairy farmers.

The resolutions are typical of the man who introduced them. We are fortunate and grateful.

Ohio Poll on Farm Program

EXTENSION OF REMARKS

OF

HON. JOHN W. BRICKER

OF OHIO

IN THE SENATE OF THE UNITED STATES

Wednesday, May 24 (legislative day of Wednesday, March 29), 1950

Mr. BRICKER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a press release from C. Maurice Wieting, director of information, Ohio Farm Bureau Federation, and a preliminary report of a poll taken in Ohio by the Ohio Farm Bureau as to what the farmer membership of the Farm Bureau in our State desires in regard to the farm program. I do this largely because of the advance information which was given publicity in the Washington papers and other newspapers of the country generally as to the result of the poll approving the Brannan plan. The poll clearly shows that there is a very small percentage of the farmers who are in favor of any such plan as that.

There being no objection, the press release and poll were ordered to be printed in the RECORD, as follows:

OHIO FARM BUREAU POLL SHOWS SENTIMENT FOR AMENDING 1949 FARM LAW

WASHINGTON, May 24.—Preliminary returns from a poll now being taken by the Ohio Farm Bureau Federation show there is strong sentiment among farmers for amending the present Agricultural Act of 1949.

John W. Sims, executive secretary of the Ohio Farm Bureau, told the Ohio congressional delegation at a luncheon today that "many Ohio farmers believe that the present farm program is not working well; 50 percent of those we polled want amendments made and only 13 percent favor the Agricultural Act of 1949 as it now stands. However, it should be remembered that this poll shows that 63 percent support the principles of the present law."

Sims is heading a delegation of 43 Ohio Farm Bureau men and women who are the congressional spokesmen and home and community congressional representatives of that organization. These people met this morning with their own Congressmen and then entertained the entire Ohio delegation at a luncheon at the Congressional Hotel.

The Ohio Farm Bureau representatives met with President Truman this noon and commended him for his support of farmer cooperatives. They also had an appointment with Secretary of Agriculture Charles F. Brannan, at which time they discussed with him farm programs. Conferences were also scheduled with Senator GEORGE D. AIKEN, Republican, of Vermont, and Senator MARGARET CHASE SMITH, Republican, of Maine.

"While there is widespread discussion in Ohio concerning the Brannan plan, only 15 percent of those farmers voting in the poll favor it when identified by name," Sims reported. "However, it is significant that 39 percent believe that production payments should be used for perishables. One conclusion is that farmers think the 100-percent price supports guaranteed by Government are too high, since only 25 percent agree with that provision of the Brannan plan."

One of the most unexpected results of the poll, the farm leader said, is that 32 percent of the farmers are for no Government plan at all. "Perhaps this is a reaction against the confusion which has surrounded the writing of farm programs and not a true indication that farmers want no Government plan at all," Sims stated.

Though instructed to vote on only one plan, about 10 percent checked two possibilities.

"Farmers in Ohio, as revealed in this poll, have definite ideas about the principles upon which a farm program should be built," Sims told the Ohio Congressmen.

FARM SURPLUSES

Asked in the first section of the poll what should be done with farm surpluses, farmers made these suggestions:

(1) Promote research to find new uses for surpluses (76 percent); (2) store enough of the storable crops to stabilize supply (65 percent); (3) encourage the establishment of more cooperatives (57 percent); (4) distribute surpluses to State and county relief agencies (56 percent); (5) encourage the establishment of an animal agriculture (46 percent).

On the other hand farmers are reluctant to vote marketing quotas (15 percent) or the use of acreage allotments (22 percent).

SUPPORT LEVELS

The second section of the poll deals with the level at which the Government should guarantee farm income. The largest vote is for a price level to prevent national farm income from reaching depression levels (38 percent). Flexible price supports ranging from 75 to 90 percent of parity received the nod from 26 percent of the farmers, which when added to the 38 percent asking for a guaranty against depression levels makes 64 percent favoring flexible price supports at some level.

A quarter of the farmers (25 percent) think that farm income should be supported by the Government at a rate equal to the average of the first 10 of the last 12 years, which is practically 100 percent of parity. This is one of the proposals which has had the strong support of the Secretary of Agriculture.

At the other extreme 27 percent of all farmers want no Government guaranty at all, while 13 percent of those polled made no answer to these questions.

HOW A FARM PLAN SHOULD OPERATE

Farmers are asked in the third section of the poll to give specific suggestions on how they thought a farm program should operate. Though they answered other parts of the poll 25 percent left this section blank.

Of those who answered, 39 percent think that a combination of price supports for storables and production payments for perishables is feasible. Again 36 percent want no supports at all, 17 percent said use price supports only; while 8 percent want to use production payments for both storables and nonstorables.

VOTE ON SPECIFIC PLANS

Asked to vote for the farm program they favored most, 21 percent of the Ohio farmers who had answered other parts of the poll left this section blank. One conclusion that can be drawn is that farmers are greatly confused by the present farm debates now going on in Congress and over the country.

While only 13 percent favor the present Agriculture Act as it now stands, an additional 50 percent will go along with it if amended. Some of the amendments favored

are: Establishment of a bipartisan agricultural committee to advise with the Secretary of Agriculture, with wide discretionary powers in determining the methods and level of price supports (32 percent); put flexible price supports into effect now (17 percent); and use modernized parity formulas only (10 percent).

No Government plan at all is the answer given by 32 percent of the farmers polled.

The Brannan plan receives the support of 15 percent of the farmers when it was listed by name. However, it is interesting to note that two features of the Brannan plan: support of farm income by Government at 100 percent of parity receives the vote of 25 percent; and that production payments for perishables is approved by 39 percent.

HOW THE POLL WAS CONDUCTED

Sims stressed that these returns are only preliminary and that many more polls are still to be received. The questionnaire was printed in the May Ohio Farm Bureau News, official publication of the Ohio Farm Bureau, and went to all 63,000 members.

The poll was also sent to some 20,000 Farm Bureau families who participate in home discussion groups called Advisory Councils. A discussion guide, Building a Sound Farm Program, is being used by these 1,500 groups during May.

Final results of the poll will be reported to the Ohio Farm Bureau board of trustees at their June meeting.

Returns have been received thus far from 3,233 people, and an additional 3,000 returns are expected to be received by June 1.

PRELIMINARY RESULTS OF AN OHIO FARM BUREAU POLL—WHAT KIND OF A FARM PROGRAM DO YOU WANT?

I. What do you think we should do when we have farm surpluses? (Check all those statements you agree with.) (Total of 3,233 returns, 4.1 percent failed to answer this question.)

	Percent
1. Store enough of the storage crops to stabilize supply	65
2. Distribute surpluses to State and county relief agencies	56
3. Vote marketing quotas upon ourselves to keep production down	15
4. Use acreage allotments to prevent the production of surpluses	23
5. Distribute surplus abroad through CARE, CROP, etc	38
6. Maintain one price at home and sell at a lower price abroad	11
7. Use a food-allotment plan to get food to low-income families	35
8. Promote research to find new uses for surpluses	76
9. Encourage the establishment of more cooperatives	58
10. Encourage the establishment of an animal agriculture	46
11. Let surpluses take care of themselves	27

II. At what level should we ask the Government to guarantee farm prices or income? (Check one item.) (Total of 3,233 returns, 12.8 percent, failed to answer this question.)

	Percent
1. There should be no Government guaranty at all	27
2. Farm income should be supported at a level which would guarantee farmers a rate equal to the average of the first 10 of the last 12 years, which is practically 100 percent of parity	25
3. There should be flexible price supports (ranging from 75 to 90 percent of parity) depending upon supply and changes in cost of production	26
4. A price support to prevent national farm income from reaching depression levels	38

III. How do you think a Government program should operate? (Check one item.) (Total of 3,233 returns; 24.7 percent failed to answer this question.)

	Percent
1. Use price supports only	17
2. Use production payments only for both perishables and nonperishables	8
3. A combination of price supports for storables and production payments for perishables	39
4. No supports at all	36

IV. Which of these proposals for a farm program do you favor most? (Check one item.) (Total of 3,233 returns; 21 percent failed to answer this question.)

	Percent
1. Do you favor the Agricultural Act of 1949?	13
2. Would you favor amending the Agricultural Act of 1949 as follows	50
(a) By putting flexible price supports into effect now	17
(b) By using only modernized parity formulas	10
(c) By establishing a bipartisan agricultural committee to advise with the Secretary of Agriculture, with wide discretionary powers in determining the method and level of price supports	32
(d) By other amendments	4
3. Would you favor the Department of Agriculture plan proposed by Secretary Brannan?	15
4. No Government plan at all	32
5. Other suggestions	9

NOTE.—Because of the fact that some checked more than one item, the response in percentages may total more than 100 percent.

National Affairs Platform of the American Veterans Committee

EXTENSION OF REMARKS

OF

HON. WILLIAM BENTON

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Wednesday, May 17 (legislative day of Wednesday, March 29), 1950

Mr. BENTON. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD the national affairs platform of the American Veterans Committee, adopted by its fourth annual convention held at Chicago, Ill., in November 1949.

I am informed by the Public Printer that the manuscript will make approximately 2¼ pages of the RECORD, at a cost of $184.50.

There being no objection, the platform was ordered to be printed in the RECORD, as follows:

NATIONAL AFFAIRS PLATFORM

PREAMBLE

We believe that the United States, having the greatest productive capacity in the world and a heritage of freedom and democracy, has outstanding opportunities and responsibilities to set examples of high social, political and economic standards which can lead mankind to a freer, more abundant life. In order to strengthen our democracy and our economy so as to enable us best to carry out and fulfill these responsibilities and opportunities, we support the following basic principles:

ECONOMIC SECURITY

Economic security and personal freedom are consistent objectives which can and must be achieved in an ever fuller degree.

Full employment and full production: In the tremendous productive capacity of the American economy we have the potential to eliminate want and to provide a decent living standard for all our citizens. To achieve these ends we must maintain a high level of production, full employment, and opportunities for all our people to share fairly in our vast production of goods and services. Particularly, we must utilize all public and private means consistent with the preservation of essential individual freedoms to prevent recurring depressions with resulting mass unemployment, widespread business failures and devastating losses of our productive resources.

Private responsibility: Labor, management, farmers and consumers must cooperate toward achieving a constantly expanding and stable economy. To facilitate this cooperation, the Federal Government must assure a free and strong labor movement, eliminate monopolies and restraints of trade so as to restore and strengthen competition, assure opportunities for private business expansion, take other action to aid and assist small business and assure a fair return to agriculture for abundant and efficient production. The Federal Government must assure the conditions under which a free and strong labor movement can exist.

Government responsibility: All governments, Federal, State, and local, must provide the environment necessary for sustained prosperity. The ultimate responsibility for full employment and full production, however, rests with the Federal Government. The Congress and the executive branches of the Federal Government have and must exercise the powers to accomplish the full and efficient utilization of our human and material resources through such measures as:

(a) Monetary policies;
(b) Taxation;
(c) Spending programs;
(d) Credit control;
(e) Trade policies;
(f) Conservation and development of natural resources;
(g) A long-range Federal program of atomic research and development for peacetime purposes.

INDIVIDUAL SECURITY

Individual economic security is predicated on a stable and expanding economy.

Equality of opportunity: The rights to equal economic opportunity for all are essential not only to individual security but also to a strong and free democratic economy.

Private responsibility: In our complex and interdependent economy the ability of the individual to provide personal economic security is limited. Therefore, in their economic relationships with each other, labor, management, and farmers must provide ever-increasing protection against such economic hazards as old age, accidents, ill health, and seasonal unemployment.

Government responsibility: The ultimate responsibility for a reasonable minimum level of economic security for all individuals rests with government. The entire government economic and social security program should be greatly expanded with respect to persons covered, level of benefits, additional types of risk such as illness, adequate public housing, and educational aids. A successfully functioning American economy can well afford to provide security for all its people.

CIVIL RIGHTS

The fullest measure of individual liberty subject only to the minimum restraints necessary to assure maximum freedom for all the people must be our goal.

Protecting civil rights: It is vital to our free democracy that we resist all attempts to

make inroads on our basic civil liberty. We have complete confidence in the intelligence and discernment of the American people to reject undemocratic ideologies and in the efficacy of our Constitution and judicial system to protect our democracy without hysteria and thought control.

Expanding civil rights: Discrimination, segregation, and intolerance have no place in a democratic society. They must be fought aggressively by legislation, education, and in the courts.

CONCLUSION

We reiterate our faith in a free democracy and a vigorous competitive economy. We pledge ourselves to fight for expanding civil rights and against all inroads designed to weaken or destroy civil liberties.

RESOLUTIONS ON ECONOMIC AFFAIRS

Housing

Housing Act of 1949: We commend the Congress for its enactment of the General Housing Act of 1949, which lays the basis for a national housing program by providing for slum clearance and urban redevelopment, low rent, federally subsidized public-housing projects, additional farm housing aids, and increased housing research. We now call on local communities to take prompt action to implement the provisions of this act by applying for Federal loans and grants and we urge AVC chapters to take the lead in bringing action by local housing authorities, municipal councils, and State legislatures.

Middle income housing: We do not believe, however, that the national housing job is completed. Millions of our fellow citizens, including many veterans, in the middle-income brackets, need nonsubsidized housing at rents they can afford. We therefore call on Congress to enact promptly the so-called Sparkman bill, S. 2046, which provides for direct Government long-term loans at a low rate of interest to housing cooperatives.

Standardization: We urge revision and increased standardization of building codes throughout the Nation so as to lower the cost of housing by taking advantage of recent technological advances.

Temporary housing: We ask for an investigation of the permanence of temporary housing facilities to determine how long they may be used for decent, sanitary housing.

Discrimination: We further urge that there shall be no discrimination or segregation in the sale or rental of housing units, financed or aided by public funds, for reasons of race, creed, color, national origin, political beliefs, or family status.

Rent control: We call for the strengthening and continuation of rent control in all areas where there is a continuous shortage of adequate housing at reasonable rents. We specifically urge local AVC chapters to be on the alert to prevent selfish interests taking advantage of the local-option clause to lift controls where they are still needed.

TAXATION

National Taxation Commission: One of the most pressing needs of our Government today is a revision of the National, State, and local tax programs to gear them to the needs of a fully employed and expanding economy with special reliance on the principle of taxation according to ability to pay. Toward this end, we urge the President of the United States to appoint a special nonpartisan, technical tax commission similar in principle to the Hoover Commission, this commission to work with the Council of Economic Advisers to set up a sound, just, and stable tax program.

Sales taxes: We oppose Federal, State, and local sales and excise taxes because they fall proportionately more heavily on lower-income groups, not being based on ability to pay. We urge the immediate repeal of all wartime excise taxes and substitution of more progressive taxes to make up the losses in government revenues.

Taxation stabilization: As recommended as early as 1947 by the Committee on Economic Development, we urge the revision of our present national taxation policies by stabilizing various income and other tax rates for a period of 5 years, based on an agreed desirable level of employment and annual national income to be stimulated by all means possible.

Equity investment and small business: With a view toward giving incentives to equity investment and new and small businesses, we urge the following revisions of our present national taxation policies:

(a) Formulation of a program permitting profit carry backs and loss carried forward for new small businesses.

(b) More effective enforcement of section 102 of the Internal Revenue Code, with the appropriation of additional funds for this purpose if necessary.

COOPERATIVE MOVEMENT

We endorse the cooperative movement as an extension of economic democracy. We recognize the value of the farmer-owned and farmer-operated cooperatives and urge closer relationship with urban and rural agencies. We support the Rochdale type of urban consumer cooperative. We oppose any proposed taxes on the funds of cooperatives used to pay patronage refunds. We oppose specifically the tax proposals of the National Tax Equality Association.

AGRICULTURE

We urge the continued national stabilization of farm purchasing power through adoption of a plan such as proposed by Secretary of Agriculture Charles F. Brannan.

PUBLIC WELFARE

Department of Public Welfare: We recognize the need for and urge the creation of a Federal Department of Public Welfare under a Secretary with Cabinet rank.

Social security: We urge the United States Senate to enact the "Social Security Amendments of 1949" (H. R. 6000) as passed recently by the House of Representatives, expanding the coverage of workers.

Unemployment benefits: We support the extension of unemployment benefits to persons who are unemployed because of illness or injury not connected with employment.

Health insurance: We support legislation providing for national compulsory health insurance to be incorporated within the Federal social security program.

LABOR

In order to implement the policies of AVC with respect to labor, we seek to accomplish the following objectives:

(a) Immediate repeal of the Taft-Hartley Act and reinstatement of the principles of the Wagner and Norris-LaGuardia Acts.

(b) The appointment of a General Counsel of the National Labor Relations Board under the Taft-Hartley Act will impartially represent the best interests of labor, management, and the public as a whole.

(c) Elimination of jurisdictional strikes.

(d) A universal minimum wage under Federal and State laws of not less than $1 an hour.

(e) Enactment and enforcement of Federal and State laws establishing adequate safety and health standards for all workers in hazardous industries.

(f) Transfer of functions of State unemployment offices to the Federal Government.

PUBLIC WORKS

We strongly urge the President to have the administration of the Public Works Agency immediately undertake in cooperation with State and local agencies the planning of an adequate public-works program. These shall be aimed at providing a potential shelf of public works and jobs to be used in time of possible economic depression. We support this in order to encourage State contributory programs.

NATURAL RESOURCES

Columbia Valley Authority: Recognizing the necessity for efficient development of the natural resources of the Nation, we urge immediate establishment of a Columbia Valley Authority as a logical next step in carrying out the principles and procedures so successfully demonstrated by the Tennessee Valley Authority. We specifically urge passage of the CVA bill (S. 1645) which in addition to providing for a better development of natural resources, would help to maintain full employment and strengthen national defense. Such an agency should continue the present Federal policies of favoring widespread public distribution of electric power and the development of family-size farms.

Reclamation: We support the present Federal irrigation, reclamation, forestry, and grazing policies, and favor retention of the 160-acre irrigation and reclamation limitation.

David E. Lilienthal: We commend, upon his resignation as Chairman of the Atomic Energy Commission, the outstanding public service of David E. Lilienthal. We are confident that the relinquishment of his present burdensome responsibility, which he has so ably executed in the face of persistent attacks by those less far-seeing than he, is only the beginning of a new phase of his long career of devoted public service.

ECONOMIC CONFERENCE

We recommend that the National Planning Committee invite all major like-minded organizations in this country to participate in a national economic conference to be held some time during the first half of 1950. The purpose of this conference will be to discuss and formulate ways and means of avoiding another disastrous depression such as the world experienced in the 1930's, these findings to be publicized through the press and the organizations represented at the conference, so that influence may be brought to bear on our legislators to see that they are fully aware of their responsibilities in this critical period in our history.

EDUCATION

Federal aid to States: While we are opposed to segregation and discrimination in schools, we support as the best bill possible at this time the Thomas bill, as passed by the Senate in 1949, which provides:

(a) Aid to States in terms of the need for such assistance and the ability and willingness of the States to cooperate in the program.

(b) That segregated schools must be given their proportionate share of Federal assistance in States where such funds are used.

(c) That as to auxiliary services to nonpublic schools, the question of Federal aid is to be left to the States.

We call on Congress to establish a system of Federal financial assistance to qualified students without regard to race, creed, or color seeking college and advanced training.

Social science research: We further call on Congress to appropriate funds to foster research in the social sciences.

We urge the passage of State fair educational practice laws similar to those laws passed in New York and Massachusetts.

AMERICAN TERRITORIES

We urge Congress to enact legislation promptly:

(a) To enable the Territory of Hawaii to become a State.

(b) To enable the Territory of Alaska to become a State.

(c) To provide organic acts for Guam, American Samoa, and the trust territory of the Pacific islands and to provide adequate funds to effect the orderly transfer of administrative responsibility for these is-

lands from the Navy Department to a civilian agency.

(d) To extend the benefits of Federal grants-in-aid programs to territories under United States jurisdiction to the fullest extent possible.

RESOLUTIONS ON CIVIL RIGHTS

The American Veterans Committee believes that the dignity and freedom of the individual citizen are the foundations of democracy, both at home and abroad.

In furtherance of these beliefs we espouse the following resolutions:

RACIAL AND RELIGIOUS SEGREGATION, DISCRIMINATION, AND INTIMIDATION

We oppose all forms of racial discrimination and segregation—in housing, education, the armed forces, places of public accommodation, employment, and in all walks of life. Distinctions based on race are contrary to the ideals upon which this country is founded. We urge the following measures to narrow the gap which now exists between those ideals and the practice of discrimination and segregation which is now unfortunately so widely prevalent in our country:

(a) The repeal of all State statutes and municipal ordinances which compel discrimination and segregation based on race.

(b) We urge the immediate adoption of effective measures to curtail filibusters and the enactment of Federal laws requiring fair employment practices, punishing lynching, outlawing poll taxes, protecting the right to vote, and the creation of a civil rights division with adequate funds in the Department of Justice.

(c) The extension of Federal, State, and local civil-rights laws.

(d) Inclusion in all Federal legislation making grants to States, cities, or private institutions of a provision requiring the benefits of those grants to be used without discrimination or segregation on the basis of race or religion.

(e) Termination of all Federal tax exemptions of institutions practicing racial or religious discrimination, whether by segregation or otherwise, except religious or sectarian institutions discriminating only on the basis of religious creed.

(f) Amendment of the Displaced Persons Act of 1948 to end discrimination against Catholics and Jews.

(g) Passage of antimasking legislation where necessary and enforcement of antimasking legislation already passed as a means to check the Ku Klux Klan.

(h) Action of AVC'ers to boycott the American Bowling Congress and the American Contract Bridge League and other similar national bodies which practice discrimination.

(i) We urge a Federal program of promotion of the attainment of full rights of citizenship and economic self-sufficiency of the American Indians through existing Federal agencies.

(j) We urge the end of segregation and discrimination as practiced in the Panama Canal zone and urge the abolition of those conditions that give rise to the term, "Gold and silver standard."

(k) We urge that economic discrimination be combatted by requesting the manufacturers and retailers so to label their goods clearly to indicate that they are made under conditions free from practices of discrimination based on race, creed, or color and by bringing pressure through consumer groups to purchase only products so labeled.

(l) Appropriate legislation or judicial action to compel the Federal Housing Administration to operate in accordance with the Federal Constitution by ceasing to guarantee the loans of financial organizations which in turn refuse loans to applicants because of race or color or which grant loans to minority groups only on houses in areas inhabited by nonwhites or to building and developers who practice discrimination because of race, creed, or color.

(m) Cooperation with other organizations in conducting community civil-rights audits similar to the Montclair, N. J., project, covering various phases of discrimination in housing, education, medical care, employment, and social attitudes toward minority groups.

(n) Enactment of legislation removing the last vestiges of discrimination against orientals in the Federal immigration and naturalization law and in the Federal Reclamation Act.

EDUCATION

We urge that no educational institutions shall henceforth accept grants which are not available to members of minority races and that no nonsectarian educational institution shall henceforth accept grants which are to be available only to members of certain religions.

We oppose all discriminatory practices in our educational institutions that deprive Americans of the right to an education because of race, religion, or national origin. The quota system and every form of racial segregation must be eliminated from the educational system of this country. We urge AVC to take action to achieve these objectives, including obtaining public statements from educational officials on this matter and seeking to have eliminated from application blanks any questions relating to race, religion, or national antecedents, and any photograph requirements.

We recognize the right of sectarian institutions to prefer students of their own religious affiliation.

We urge that until segregation in schools is eliminated in those States which now require it the Federal Government should impose strict supervision to insure the equal distribution of Federal aid-to-education funds to white and Negro schools.

MILITARY AFFAIRS

We urge NPC and all the chapters to gather and publicize documentary evidence from all veterans in their respective communities regarding discrimination on basis of race and religion in the armed forces at the present time and during the war.

We are encouraged by the progress already made by Secretary of Defense Johnson toward the elimination of discrimination in the Navy and the Air Force, and we urge the immediate extension of this policy toward a final successful end with the full inclusion of the United States Army.

We call upon the various State councils and their constituent chapters to adopt a vigorous program aimed at legislative action to eliminate discrimination in the National Guard units in their respective States and to pattern this legislation after the laws in regard to the National Guard units in the States of Massachusetts, Connecticut, New Jersey, Wisconsin, and Minnesota.

CIVIL RIGHTS IN THE DISTRICT OF COLUMBIA

The District of Columbia, which should be a symbol of democracy, is a graphic illustration of decay in our great tradition of civil liberty. Racial discrimination and segregation in our Nation's Capital adversely affect our international relations and impede progress in racial relations throughout our country. AVC, therefore, urges, in addition to other civil-rights measures which we request for the country, that Congress enact legislation establishing a Commission on Human Relations for the District of Columbia and that such legislation authorize appointment of the Commission's members by the President of the United States and not by the Board of Commissioners of the District of Columbia, which now sanctions racial segregation in the District of Columbia.

We endorse the bill, passed by the Senate and now before the House of Representatives, to grant to residents of the District of Columbia the right to local self-government and the right to vote. We urge all chapters to call upon their Representatives in Congress to sign the discharge petition so that the bill may be brought to the floor of the House for vote.

FREEDOM OF SPEECH AND CONSCIENCE

We oppose the hysterical attempt at thought control evidenced by bills introduced in the Congress, in numerous State legislatures and city councils, which would require teachers and other Federal, State, and city employees to take loyalty oaths.

We urge the abolition of the House Committee on Un-American Activities.

We oppose attempts by congressional committees to force Americans to state publicly their political affiliations under penalty of being cited for contempt.

We urge the repeal of those provisions of the Smith Act which endanger freedom of speech and freedom of political opinions and beliefs.

We urge that Executive Order 9835, establishing the Federal loyalty program, be amended to require that no person shall be discharged from Federal employment on loyalty grounds except where such employment jeopardizes the national security, and then only on the basis of competent evidence and in accordance with a procedure which provides for a fair hearing based on specific written charges, with full opportunity to answer all charges and examine all witnesses, and the right of administrative and judicial appeal. We further urge that no organization be branded subversive without a fair hearing.

We deplore such outrageous assaults on minorities by subversive mob action, as at Peekskill, N. Y., Groveland, Fla., and in Chicago, Ill. We condemn the tacit approval of such assaults on decency and democracy by the officials concerned. We denounce Governor Dewey, Mayor Kennelly, and other officials concerned for crass neglect of duty in failing to enforce the law or even rebuke the mob-cooperating officials under their control.

We commend Mayor Zeidler, of Milwaukee, and his commission on human rights for his courageous, effective, and prompt action in halting mob rule by anti-Democratic elements in his city.

Spending Ourselves Into Prosperity

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 24, 1950

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following excerpts from a speech by Albert C. Agnew, vice president and general counsel of the Federal Reserve Bank of San Francisco, delivered before a convention of the American Institute of Banking at Salt Lake City, Utah, May 17, 1950:

IT IS TIME TO DEBUNK FALSE DOCTRINE OF SPENDING OURSELVES INTO PROSPERITY

Not many months ago we were told that economy was the order of the day and that substantial reduction of our national mortgage was on the program. But now we hear again that old, repudiated and discredited cry, "We will spend ourselves into prosperity," and more of that buncombe to the effect that, since we owe the money to ourselves, the size of the national debt is immaterial.

Federal debt can only be paid by spending less than we collect in taxes. Practically speaking, not one cent of new wealth is produced by Government. The tax bill in this country has almost reached the point of diminishing returns and, unless we call a halt, will reach the point where private incentive is destroyed and the risk of new capital is no longer attractive because of tax burdens. The next step is repudiation or still further dilution of dollar value, followed by economic chaos.

The money representing the $256,000,000,000 Government debt has been spent. It has been consumed. It is gone. It went for shells and office supplies and welfare projects and Government salaries. Where did it come from? It came from you and me, from American individuals and organizations who turned over their capital to be consumed by Government. In exchange for this capital they received Government bonds and notes which can only be repaid by further surplus production and earnings of the people.

If a nation is to have better housing, more food, clothing, and shelter for its underprivileged, higher real wages for its workers and pensions for its aged, such good things can be had in only one of two ways, through increased production of economically useful things and services, or through the redistribution of what's available; forcibly taking from those who have and giving to those who have not. The latter course is clearly the one being pursued by our Federal Government today.

Herculean efforts are being made to sell the idea of the so-called Brannan plan to the American farmer. I am told that special pamphlets, adapted to differing communities, are being sent out by the millions in an effort to popularize this idea. What is it? Merely that all agricultural products shall be sold on the open market at whatever price they will bring in competition and the difference between the price thus realized and that fixed by the Government as "fair" shall be paid as a subsidy.

At about the same time that this proposal was placed before this country, Sir Stafford Cripps, the British Chancelor of the Exchequer, presented the new budget to the British Parliament. He said that the food-subsidy program had grown far beyond any expectation. Losses for the current year, he said, were estimated at $2,250,000,000. "That," said Sir Stafford, "just can't go on." He also said, "When I hear people speak of reducing taxation, when at the same time the cost of social services is rising in response to the demands of the same people, I sometimes wonder whether they understand the old adage that we cannot eat our cake and have it too."

Then Sir Stafford told the British people that there would be a rise in regulated prices and that the tax rate must remain at the same devastating level, 40 percent of the pay of the average worker. And mind you, we are only 15 percent behind Great Britain in this regard, for our tax bill is now 25 percent of national earnings.

So far we have dealt with figures, but what about the more important if less tangible moral degeneration of our people which has been the inevitable byproduct of the loose thinking, profligacy, and violation of fundamental economic precepts which, for the past decade, we have witnessed in Government? Fifty-eight percent, or 83,000,000 of our population have no adult experience with a prewar administration. Most of our teen-agers have lived their entire lives under the cloud of some sort of ism—socialism, collectivism, spendism, wasteism, taxism, or Uncle Sam will provide for you from the cradle to the graveism. They have been taught to spend as they go, and take no thought for the morrow, to consider frugality an out moded custom and to demand more and more pay for less and less work.

Nor have these soporifics, administered in overdoses from Washington, been confined to our youngsters. Many of us oldsters have, perhaps unconsciously, come to applaud each successive assumption of State, local, and individual burdens and obligations by government until we are well on the road to complete bureaucracy.

Slowly but surely, over the past 16 years, we have been approaching the so-called collectivist state. One by one the areas formerly subject to exclusive State control have been taken over by Government. Public housing, minimum wages and hours, education, social security, and crop control are a few examples. Socialized medicine is next on the proposed agenda.

I sincerely hope that none of us will ever forget the fact that once the dead hand of government is laid upon the private lives, the private fortunes, and the private enterprises of our people, it is never released. So-called welfare and socialistic schemes have only one gearshift; forward, never in reverse. One of the favorite and well-known techniques of those who would sell us down the river of socialism is to drive an entering wedge by obtaining a relatively small appropriation from Congress just to try out some cockeyed scheme leading to utopia and then urge that because we have gone that far, the money would be wasted if we did not go on. No; my friends, beware of trial baloons in socialism and managed economy. They are filled with a powerful gas that will take us to heights a fall from which spells utter ruin.

Address of Hon. Clare Boothe Luce

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 24, 1950

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks, I wish to include the following address by Hon. Clare Boothe Luce at the gold-medal-award dinner to Mrs. Eleanor Roosevelt at the Hotel Waldorf Astoria in New York City on Sunday, May 21, 1950:

Ladies and gentlemen, no award is more prized in this great city than the Williamsburg gold medal. And surely you have chosen the perfect recipient for it—Mrs. Roosevelt.

Perhaps not everyone tonight feels you have chosen the right speaker to give witness to this happy event. Then, they do not fully understand why, among women, Mrs. Roosevelt is the best loved woman in the world today. She is and always has been glad to meet anyone on the common ground of charity. And anyone who wants to stand on that high ground is always honored to meet there the first lady of the world.

Who can, in so short a time as 10 minutes, enumerate the many other reasons why Mrs. Roosevelt is so admired by her sex?

You can't even speak in that time of her extraordinary career. By count she has made the world headlines in 18 careers. The mother of five children, and a grandmother, she was the world's best known wife. And she has been, to use a popular expression, the most operative first lady in history. She has been a school teacher, a business woman, a world traveler, a propagandist, and a charitarian—or if you prefer, a crusading reformer—an editor, author, columnist, radio speaker, television broadcaster, and now, in the United Nations, a stateswoman.

Here is a life as variegated and colorful as Joseph's coat. And like Joseph's coat, it has sometimes inspired envy, less of itself than because it covered such a multitude of virtues.

I can do no more than hint at two or three of these enviable virtues.

Perhaps after the virtue of charity, which she possesses in abundance, one should put her extraordinary serenity. Said Thomas a Kempis, a saintly old Dutch monk of the Fifteenth Century: The person with "large tranquillity of heart * * * heeds neither praises nor censures." Surely, Mrs. Roosevelt has had more of praise and blame than any other living woman.

There are some people who still refuse to admire Mrs. Roosevelt for any reason whatsoever. These are, for the most part, unhappy folk who have no higher concept of liberty than the right it gives them to heap personal insults on public characters with impunity. Such people often try to justify their malice by attributing to the characters whose public acts they dare not attack, the basest of private motives.

This habit of imputing to our neighbors wholly evil motives for good deeds is a peculiarly modern one.

It is a common thing these days to hear people say: "Oh, yes; he is 'generous,' and gives lots of money away, but it's just a guilt complex about the way he treated his family."

Or: "Oh, yes, she does spend herself visiting the poor, but that's just because she's hungry for power over her inferiors."

Or— and this must ring a bell—a loud bell—for Mrs. Roosevelt: "Oh, yes; he (or she) is on the right side of the issue—but it's just because they're trying to get votes."

Of course, only the saints do things purely for the love of God, and solely for the love of neighbor. That is precisely why they are saints! But the majority of mankind acts from somewhat mixed motives. And that is why honesty, if not charity, counsels all of us to refrain from judging the rest of us harshly.

Now the plain fact is, Mrs. Roosevelt has done more good deeds, on a bigger scale, for a longer time, than any woman who ever appeared on our public scene. No woman has ever so comforted the distressed—or distressed the comfortable. It follows, in an increasingly un-Christian world, that the interpretations of her activities are often as mean as they are silly.

Perhaps that is because our generation has forgotten—or mustn't we honestly admit, it was never taught in our public schools: "Judge not, lest ye be judged."

In the salty language of Al Smith, let's look at the Eleanor Roosevelt record. Since girlhood, the thread of compassion for unfortunate and innocent victims of society has been dominant in the pattern of her life. Tonight she is being given a gold medal for a lifetime of work among the underprivileged. She began, as a shy girl of 18, at the University Settlement on New York's lower East Side, teaching gymnastics and dancing to the city's poor children.

No one can say how many individuals, as well as groups, she has since helped with her hands, her purse, her voice, her pen—and when necessary, her political influence.

In my own short public life I was constantly made aware of how many people she had succored. And who knows how many more of these victims of the palpable injustices that abound in our social system she tried to help, and could not, because no one person can do it all?

I hope Mrs. Roosevelt and I are agreed that most of these injustices can be corrected short of stepping up the trend toward state socialism. The work of Williamsburg Settlement itself is proof of the dynamic effectiveness of voluntary social-aid patterns. Though may I say, in passing, even if we were not agreed, it is another of Mrs. Roosevelt's virtues, that she would not mind my differing with her. She has always tolerated contrary opinions with good humor, even when they fundamentally disagree with her own, as—it is no secret—one or two of mine do.

But to the virtue of tolerance, Mrs. Roosevelt adds that of fortitude. She has faced not only contrary and reasonable opinions with great sweetness, but—what is harder—harsh and irrational opposition with calm inflexibility.

For example: Consider the criticism—which often degenerated into foul abuse—that she suffered for her steadfast championship of minority racial groups. Certainly not the bitterest foe of her political party or of her personal ideologies can deny that, since Abraham Lincoln no one has done more to lift the hearts and raise the heads of the Negro people.

I spoke a few nights ago with a Roman Catholic bishop from the African missions. He told me of the great intellectual ability of some of his young colored priests in his Tanganyka dioceses. He said they conversed fluently in four languages, passing their philosophy examinations—in Latin—with grades that would be the envy of most white seminarians. We agreed that the failure of our colored people to "register" intellectually was the result of their being persistently treated like third-class citizens—which is to say, not like citizens at all. He said that what is called the racial inferiority of the Negro is not the cause, but the result, of the discrimination practiced against them, even in our so-called democratic public-school system. But what we agreed on most heartily was that no woman in all American history had tried harder or done more to break down racial discriminations, through an appeal to humanitarian ethics, than the winner of tonight's award.

If Mrs. Roosevelt had never done anything else in her whole career, if indeed all else she has ever done had been ill done, there would remain the story of her fight for this cruelly used 10 percent of our population. It alone would earn her a glorious place among the heroines of democracy.

But much else has been well done. No less an authority than Time magazine has called Mrs. Roosevelt "the greatest female political force in the world." She has recently enlisted this great force against communism abroad. As one of the five United States delegates to the United Nations Assembly, and during her tenure as Chairman of the Human Rights Commission, she came to know, the hard way, how Soviet communism seeks to sabotage or denigrate American democracy. And she saw at last how it would destroy those very human rights for which she has fought her whole life long.

Since then, in the United Nations, she has over and over again thwarted, and beaten down, and outargued, and when all else failed—outsat the Soviet delegates.

In her column, in her speeches and broadcasts, she is the oracle to millions of American housewives. She influences millions of American homes. When her justly notable tolerance and patience with the Communists finally gave out, that day tolerance of communism in America ended officially.

It is safe to say that her resistance to Soviet communism is a more potent factor in winning the cold war than an extra billion dollars of Marshall-plan aid.

"Who," asks the Prophet, "shall find a valiant woman? Far and from the utmost coast is the price of her." Well, far and to the utmost coasts, anyone who can read or write, and who is not iron-headed or iron-hearted can find, with no trouble at all, a very valiant woman—in the beloved and familiar figure, Eleanor Roosevelt.

Sigh of Relief Day

REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 24, 1950

Mr. WOODRUFF. • Mr. Speaker, I want to propose a new national holiday. It will be called Sigh of Relief Day, and it will be celebrated every year on May 28. The purpose of the celebration is to commemorate the fact that on May 28 the Truman administration, and especially the Justice Department, will be able to relax completely for the first time in 3 years.

In case anyone has forgotten, it was on the night of May 27–28, 1947, that somebody dynamited the election commissioners' office in Kansas City and stole the crooked ballots that constituted the evidence in the 1946 Democratic primary vote frauds. That was the primary in which Representative Roger C. Slaughter was defeated on the direct orders of President Truman. For these frauds 71 persons were indicted. Everyone implicated have gone scot free, thanks to the ballot thefts.

From that day to this, not a single person has been arrested for the ballot thefts. On this Sunday, May 28, the 3-year statute of limitations will run out, and the criminals will then enjoy complete immunity for the rest of their lives.

Yes, there will be many sighs of relief on Sunday, and they will come from some of the best-known people in Washington and Kansas City. I am sure they will want to remember Sunday, and hence I think the day should go down in history as Sigh of Relief Day.

Mr. Speaker, I include as a part of these remarks an editorial from the Detroit (Mich.) Free Press, which discusses this unsavory episode in a somewhat more pointed way than I have done:

FREEDOM FOR THE CRIMINALS—SIX MORE DAYS

This will be a critical week in Washington for the Truman administration.

In six more days the statute of limitations—3 years—will have been reached and the criminals who exploded the vaults of the county house at Kansas City, to steal evidence of vote frauds in connection with the purging of Congressman Roger Slaughter, ordered defeated by President Truman, will be free of all danger of prosecution.

Monday, Tuesday, Wednesday, Thursday, Friday, Saturday—what a celebration the underworld bosses of Kansas City can put on.

The Presidential grin will be beaming down at them lithographically from the walls as "a dues paying member of the club"—his proudest boast when he pardoned all the Pendergast gang and ostentatiously attended the funeral of his teacher and sponsor, the notorious Pendergast himself who grafted uncounted millions from every known form of corruption.

The St. Louis Post-Dispatch will say, again, today:

"SIX DAYS

"On the night of May 27–28, 1947, a safe in the Kansas City election commissioners' office was blasted and vital evidence in the 1946 Democratic primary vote frauds was stolen. From that day to this, no agency of the law, not even the celebrated FBI, has brought about the arrest of the guilty person or persons. Since the statute of limitations takes effect after 3 years, the FBI has 6 days to solve this outrageous crime against the cornerstone of American democracy—free and honest elections."

In fairness to the heroic members of the FBI with their high vision of civic duty and their integrity, let it be said here that the St. Lous Post-Dispatch errs in one slight degree.

The Federal Bureau of Investigation has no power to act.

Under the law, all that J. Edgar Hoover and his men can do is to investigate and report to the Attorney General.

Director Hoover and his staff are not allowed to even make recommendations. He is helpless.

The Senate Committee on Crime should demand the FBI files on the whole Kansas City parade of corruption which has been so desperately covered.

See if Mr. Truman will also refuse that.

The always careful and painstakingly accurate weekly review, Newsweek, says in the current issue that administration leaders are determined to keep President Truman's name clear of any involvements in the exposure of Kansas City crime and its connection with Kansas City politics.

How can such a thing be done in any honest investigation?

Who ordered Congressman Slaughter purged?

When the Kansas City Star exposed the vote frauds, why was it necessary to dynamite the county vaults to steal the evidence?

Who killed Charlie Binaggio and four others who were called to testify before a grand jury which, with only partial evidence, shocked all Missouri with its report of vice and corruption?

Why were these people murdered as part of 23 politico-gangster killings in 2 years with none ever solved?

The people can keep on asking this as there is no statute of limitations on murder.

Why, and why again, did Vice President BARKLEY violate custom and tradition, if not law itself, in picking his own, or the Truman administration's, committee of five to go through the motions of investigating the national crime syndicate which has its tentacles deep into Kansas City?

In violation of all senatorial protocol he himself picked the two Republicans to serve on the feeble little committee of five.

Always before a minority party has been allowed to select its minority members.

Ray Moley, of Newsweek, famed authority on the science of government, calls upon the American newspapers to do the investigating into the Kansas City mess, wherever it may lead. He says:

"It is a story of high politics and low living, of great influence, badly placed loyalties, safe blowing, murder, gambling, hoodlumism. • • • In the national interest it should be rooted out and told. • • • It is becoming clear that the sordid tale will not be elicited by official investigations."

There is here a Pulitzer prize for a good reporter; but, as the Kansas City gunmen shoot straight and often his accolade might have to be pinned to his shroud.

The Battle of the Budget Bulge

EXTENSION OF REMARKS
OF
HON. HOMER FERGUSON
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Wednesday, May 24 (legislative day of Wednesday, March 29), 1950

Mr. FERGUSON. Mr. President, on May 2 I had the great pleasure of addressing a luncheon meeting of the United States Chamber of Commerce, which was in session here in Washington. The subject was the Battle of the Budget Bulge. I took as my theme the vital importance to American institutions of that battle, just as was the Battle of the Bastogne Bulge in France. I sought to stress that the reduction of the Federal budget, with the ending of deficit financing, is a three-way effort. It involves Congress, which has constitutional authority over fiscal policies through its control of appropriations. It involves the President, who evolves policies and actually allots the money for spending. It involves the public, who ratify the policies that call for either big government and big spending or retrenched government and limited spending.

I am happy to report that the response to my remarks has been enthusiastic and gratifying. I think the people are recognizing that they have to pay for every bit of government they get, and that if they want to pay less they will have to take less. It remains for Congress and the executive branch to see that idea through, and to put forth our every effort in this Battle of the Budget Bulge which alarms the people.

I now have a transcript of my informal remarks before the United States Chamber of Commerce, and I ask unanimous consent that they may be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE BATTLE OF THE BUDGET BULGE

Members of the United States Chamber of Commerce, I come here today as one of those public officials who happens to be in the front-line trenches as far as the battle of the bulge of the budget is concerned.

I have just come from a meeting of the Senate Appropriations Committee, where we were considering the rivers, harbors, and flood-control appropriations. I can tell you that the mud in those trenches is knee deep, and we are not doing very well as far as the battle of the budget bulge is concerned.

We have just heard from the Department of Defense on its budget. I am not going to criticize the Department of Defense. All of us want to have the best defense possible, but I think that you have heard in a way what we who are in the trenches are up against when it comes to trying to reduce the bulge in the budget. It would appear that every dollar is essential in this national defense program. Of course, we heard the same thing before we found that they could reduce the civilian personnel in the Services by 163,000, which took off, as our good friend here has told you, just about a half billion dollars in the payroll.

We need a strong defense. But we are talking about a budget that is taking just about a third of your income. We are in a cold war. It is cold and getting even colder. When speaking of defense I think America must recognize that there is a great defect in our armor unless we can reduce the size of this bulge in the budget. Yes; we are told on Capitol Hill, and you are told out in the field, that 71 percent of the $42,000,000,000 that is asked to be appropriated is for nonreducible items, the cost of past wars, and future preparations. Seventy-one percent of the budget. However, it all depends upon what you call nonreducible. I would call truly nonreducible the $5,600,000 of interest to those who have put up those different bonds as being a nonreducible. I would say that certain salaries like that of the Supreme and the other courts, the reduction of which the Constitution prohibits, are nonreducible. Beyond those items that are irreducible by law there is nothing so sacred that it can't stand scrutiny.

The whole problem, my friends, is just this: We have a budget, which, as the President said when he sent it up to us last January, would call for a deficit of $5,100,000,000. But the Joint Committee on Internal Revenue has just recently told us at the present rates of receipts and expenditures the deficit will not be $5,100,000,000 but $7,300,000,000. Now, I haven't any idea just how much money that is. It happens to be very close to the total assessed valuation of my State of Michigan. It has taken the citizens of Michigan since 1837 to accumulate taxable estates of around $8,000,000,000. Here we are going to have almost that much in deficit spending at a time when we are said to be the most prosperous that we have ever been. Those are the figures that we are facing, and something, in my opinion, must be done about them.

If I didn't think there were chances of us losing this battle of the bulge of the budget, then I would say let's go ahead on this spending spree; but when I see ahead what it means to lose this battle, as our distinguished general saw over in France that to lose that Battle of the Bulge meant the loss of the war, I say to you today that if we lose this battle of the bulge of the budget, it can mean the loss of the great institutions of the United States of America. And don't forget it. General MacAuliffe said at Bastogne, and from my position in the trenches on the Hill I see the same thing. The institutions of America, the individual enterprise system of the United States of America, can disappear from the face of this globe. And don't say for a minute that it can't happen here. No, we can't just say, "Nuts," and let it pass over. General McAuliffe didn't just say "Nuts." He used his talents and his men to win that battle. I ask you this day to use your talents and your men out in the field to win this battle that we have to fight.

I am pleased to be on your program today with our distinguished economist, Edwin G. Nourse, who was Economic Adviser to the President. He left that position 6 months ago, and he is going to speak to you today, quite frankly I know, about this battle of the bulge in the budget.

Dr. Nourse said this up in New York to the Economy Club—and he didn't say it just because he was speaking to an economy club because I know that he believes in it as he, too, has been in the trenches—he said that "the first order of business for this country in 1950 is to turn from the easy acceptance of deficit spending as a way of life to the making of specific and hard-headed balance and getting back to black ink and a long-run program of sound debt management." That was a warning. That was something that should be heeded. That was something that showed to everyone ahead that we were, if not careful coming into deficit spending. That was also a warning of inflation.

Oh, yes; we have had a lot of preaching since 1932 about deficit spending. Lord Keynes was the hero on deficit spending. He told you that you could spend your way along to prosperity, that you had nothing to fear, that you could spend and spend, and no matter how large your budget would get, no matter how large your national debt would get, it was of no great concern because you owed it to yourself. Well, if that is true, with our $257,000,000,000 of debt we all ought to be getting rich very fast because we have certainly been increasing the debt to ourselves. But be that as it may, be that the wisdom as he may have told us about it when we were in a depression, I say to you that it does not apply when we have the greatest employment and greatest dollar prosperity that we have ever had. Yet we are increasing our spending so that we are taking a third of the national income, and increasing our debt accordingly.

I want to read you something that was said by Franklin Delano Roosevelt about deficit spending. Of course, this was in 1932 when the President was a candidate and not when he was in office, but I think he was sincere and it has a lot of wisdom in it. He said this: "If a nation is living within its income, its credit is good. If within some crisis it lives beyond its income for a year or two, it can usually borrow temporarily on reasonable terms, but if, like the spendthrift, it throws discretion to the winds, is willing to make no sacrifice at all in spending, is taxing up to the limit of the ability of the people to pay and continues to pile up deficitis, it is on the road to bankruptcy." There is a lot of wisdom in that.

Now, we have a lot of expenses besides the $12,000,000,000 that we have just been hearing about as defense costs. The budget is going to run better than $42,000,000,000. So if you are satisfied with every dollar for the national defense, let's talk about the other $30,000,000,000, and see what about those.

This statement that I have just read to you said that the Nation would be on the road to bankruptcy. Well, I don't think we can exactly apply this term "bankruptcy" to a nation. A sovereign power, such as the United States, will not go into bankruptcy as you and I might go into bankruptcy. Bankruptcy means the inability to pay your debts and your creditors start to press you. That doesn't happen in a Government such as ours. If the bondholders start to press the United States Government, we will just print more money, commandeer more credit. The President can request that more money be printed. You are not going into bankruptcy. You will print more currency, you will refund your bonds, you will extend the payment on them, you will pile up this deficit spending on top of this $257,000,000,000. That, my friends, is not bankruptcy. But it is inflation.

You know what has happened since 1939. As far as currency is concerned, one of the hardest things that we have in Congress—and I know you have this back home—is to have people appreciate what a dollar is. To many, many people it is merely the name, a dollar, and if they are getting a dollar for something, they are not concerned with what that dollar may buy.

Let's just take what has happened since 1939. Let's say that you bought—and I have a friend who did—$10,000 worth of Government bonds at a cost of $7,500. In 10 years he was to get $2,500 dollars interest. He cashed them in in 1949 and he then had $10,000 on his table. But let's look at the purchasing value of the dollar between 1939 and 1949. I will take the Government's own figures from the Labor Department. They placed the value of a dollar at 100 percent at that time and they now place the value at 59.9 percent. Let's use the figure 60 for a round figure. The man got back in buying power $6,000. Not only did he lose the amount of his interest, but he lost $1,500 of his capital. I asked that man what he was going to do with his $10,000 and he

said, "I am going to buy Government bonds again with it." Why? Because there are very few places that he feels he can invest that money and the tax gatherer wouldn't take it all instead of him losing the $1,500 dollars. He lost all his interest and a good part of his capital, but it was still better than confiscatory taxation.

If we will take the pattern that is laid down in Great Britain we will see where they have taken by taxation all of the surplus money so that there was no place the people could really have any money to invest as so-called risk capital. The people of the United States today are spending more money on horce-racing and gambling and so forth, than they are putting into what you and I used to think was risk capital. There is a reason for that, and taxation is one of the reasons for that. Confiscatory taxation, like inflation, is the by product of deficit financing.

So we come down to this: How are we going to cut the budget? Well, I think that we can say that the budget calls for two types of functions in government, those that already have existed and those that we want to add. You are going to get the amount of government you pay for—well not quite, and at times I think it is a very good thing that you don't get all the government you pay for, because if you did you would be worse off than you are today. [Laughter.]

But let's look at these functions that we are talking about, that you are paying for. You are paying for them because Government thinks or likes to think that you are demanding them.

As far as I am concerned there are three groups of persons that have to do with the reducing of this bulge in this budget. I am going to say to you that the people of the United States of America are No. 1. Your representatives in Congress are No. 2. The President, who symbolizes and is in effect the executive branch of the Government, is No. 3. All together are the Government, and each has its part to play in this battle of the budget bulge.

Now, I wonder whether or not you have ever known a candidate to either the Senate or the House who was defeated in his home district or State because he got big appropriations for his district or his State. Have you ever known an organization to go out to fight a man for reëlection because he was getting them big appropriations for their district or their State. No, but you have all known men who were defeated because it was felt that the Senator or Congressman wasn't able to get enough for their particular district or enough for their particular State. Now, you all have heard that politicians buy votes by these appropriations. You have heard the term pork barrel appropriations. But I want to say this to you, if votes are bought, they are only bought from those who cast them, and they happen to be the taxpayers of the United States of America.

If you ever come down here from your own district to insist upon getting something for nothing from Government, you are going to find out that you are going to pay more in tax dollars than you ever get back. I remember the cartoon recently in one of the papers which showed John Q. Public and Uncle Sam together. Uncle Sam was handing the tin cup out to the taxpayer, saying, "Put the money in the till, put the money in the cup. I have got to have more taxes." Under Uncle Sam's arm was another arm from John Q. Public, back to Uncle Sam, with the same kind of tin cup, saying, "Put it in there, Uncle; I have got to have more subsidies." That is exactly what is happening, except the tax eaters on the public payroll have to take theirs out before either one of them gets the services or the money that they expected.

So I want to tell you that you, the public, have a big part in this battle of the budget bulge. If you want Government services and supports, you'll pay for them. If you don't want to pay for them, you'll have to tell Government that you don't want some of those services and supports.

We in Congress have our full responsibility, of course. I don't want to avoid any of that responsibility, and I didn't come here to make any apologies. I think it may help if I tell you of some of our difficulties when it comes to putting Government economy into effect.

I want to tell you what can happen to you when you are on the Appropriations Committee—to show you how difficult it can be.

I remember once when we were talking about cutting some item out of the appropriation bill for the United States Post Office. It happened to be an executive hearing. I tell you, gentlemen, if you want a thing to get out quickly and go far, just say you have got an executive or secret meeting. The word seems to travel much faster and much better than if you held it in the open and published it. This was an executive hearing, and it was a question of cutting out some items of the Post Office appropriation. In a very short time my telephone started to ring, and it seemed that all the lawyers in Flint, Mich., started to call me. They said, "What is the matter with you down there in Congress? What is the idea of breaking up the mail service?" They told me, "You have practiced law. You know what it is to go to court in the morning without having received your mail, when you are apt to lose a good case just because you had to go over to court and stay there until noon, and you didn't get your mail until noon." Well, the first call kind of surprised me, and I said, "What are you talking about?" They said, "We just got word from the Postmaster that you are trying to cut an item in the Post Office budget, and they have stopped the morning mail delivery up here in Flint as far as the businessmen are concerned."

It was not a very subtle way, but it was a very effective way of putting pressure on members of the Appropriations Committee.

With all due respect to my good friends in the Defense Department, I just happened to check one interesting item before I came over. Do you realize how many public-relations men they have on their payroll? Well, I am going to read it to you. They have a total of 2,706, and their payroll is $8,162,505. That means there are 2,706 people who can go out into the highways and byways to propagandize the American people for that one department. And that's just one department. The last time I could get the figures on public relations and propaganda, do you know how many were on your total Federal payroll? There were some 24,000, and the payroll was $74,000,000. There were 1,080 people on the payroll of the executive offices of the White House alone whose duty it was to give you the propaganda and to tell you, among other things, why you couldn't reduce the bulge in the budget of the United States of America. [Applause.] There is one big source of our difficulty in Congress.

Yes; we have some remedies. I conceived one a few months ago, and I got a couple of Senators to go on the bill with me. It was a Senate concurrent resolution, No. 35, which would do this: Before any bill could be reported by any committee of Congress it would have to get from the agency involved an estimate of the cost of the administration of that law for the first 5 years of its existence. Wouldn't that be a good law?

I sit in the Appropriations Committee and I hear the same question coming up every day. I ask why this or that increase is needed, and they will say, "But, Senator, new duties have been added by virtue of bill so-and-so. Extra duties or new functions have been added." So I say, "Why don't we find out what it is going to cost to administer a bill before we pass it?" That may slow up the spending process at its initial and perhaps most important stage. Well, we have been able to get that bill onto the Senate floor. The first time it came up it was blocked by the majority leader. Let's say they need a little time to study it. But I hope they will study it before the next call of the calendar and that it will go through so that we may determine what a law is going to cost us before we put it on the books. That is fundamental and basic. It will save Congress a whole lot of later skirmishes in the budget battles.

Here's another item that illustrates our difficulties. We appropriated money last year to the Housing Administrator, who runs rent controls, because they told us that each employee would have to have 26 days off and 17 days for illness. A few weeks ago a bill came in for deficiency in that Agency. It seems the employees didn't take this vacation, they didn't take their sick leave, and now, when the rent control is about to end—and let's hope it does end on the 1st day of July—[Applause.] Well, they came up for $1,600,000 to pay for this leave that the men felt they had coming because they hadn't taken their time off. To me, it was no more or less than padding the budget of the United States of America to the tune of $1,600,000, so we started looking further. Do you know what the record now shows that is due and will be due in the future on this item for all Government departments? Better than a billion dollars for this so-called sick and annual leave that you have already appropriated money for but hasn't been taken. Did anybody come in and say we will reduce the budget that much? Oh, no, certainly not.

Now, there is one other matter I want to talk about and to stress. That is the distinction between an appropriation and an expenditure. I said the President had something to do about this business of economy, along with you and me, and he does. In an appropriation bill we say no more or less than "We will put this amount of money in the bank." It is like telling your wife you will give her so much money for the expenses. Now, some of our wives, naturally, want to spend all that is in the bank. [Laughter.] They say that if the bank gives them blank checks there must be money in the bank, or the bank wouldn't give them blank checks. [Laughter.] Well, that is the same way up in Congress. Congress is the banker. They spend the money and then they come back and say, "We have overdrawn. We have got a deficiency."

Now, what is the difference between appropriations and expenditures. I said an appropriation was only putting the money in the bank. Expenditures are the withdrawals on that account. The Department of Defense did pretty well with its bank account last year. You know the House, the Congress, insisted that they take $735,000,000 for a 70-group Air Force. One hundred fifty-seven million of it was cash and 577 million was for contract authority. They didn't use a bit of that money.

I say to the President of the United States today the mere fact that your Representatives put all that money in the bank is no excuse for him to squander and waste it. Moreover, it is no demand that he spend it. He could do just like he did on the 70-group Air Force if he has a will to do it. He can save. So equally responsible with the Congress—and I will take my responsibility and my blame—is the President of the United States when he uses money out of an appropriation. It is within his power to reduce expenditures even more effectively than for Congress to reduce appropriations.

Now, my friends, I am not going to take much longer, but I want to leave some of

these thoughts with you. We are on the battle front and we need your help. You are the reserves. This is your Government, after all. It doesn't belong to those who are 2,000,000 strong on our public payroll. You have to pay the bill, but as long as any of you are coming down and demanding this item, this subsidy and that subsidy, and this payroll or that payroll, someone has to pay.

I will never forget what an editor once told me about Louis Johnson cutting these 160,000 off the Defense payroll. He went in a barber shop out in Jackson to get shaved. After he got down in the chair he thought the barber was going to slash his throat. The barber said, "You are a fine citizen of the United States of America. Here you have been advocating this economy. You have been advocating this Hoover program. You laid out on the streets in Jackson petitions to the Congress to reduce the cost of Government, and what happens? This morning my son, who was on the Federal payroll in the Armed Services, is back home, and I am going to have to support him. You are a fine citizen." All this was said while the barber's razor was skimming my friend's neck. So, you see, it isn't all roses.

No, this is a big job. This is a real battle. There is a real bulge in this budget. We face a deficit of $14,000,000,000 this year and next, and it could be more.

How can we win the cold war if we are going to give to Russia the greatest secret weapon she could wish from anyone, and that is an economically unsound America? My judgment is that Russia will never fight with the weapons of a shooting war when she can see America going down the road to an insolvency that will create more confusion and allow her to penetrate the United States of America, as she did the other nations, with her subversive elements and take over. Let's consider that we must defeat her by depriving her of the use of this great weapon, an insolvent America.

It is up to you, it is up to Congress, it is up to the President, it is up to every citizen of the United States of America to help win this battle. [Applause.]

Happenings in Washington

EXTENSION OF REMARKS
OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 24 (legislative day of Wednesday, March 29), 1950

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD my twenty-fifth radio broadcast from Washington on the subject Happenings in Washington.

There being no objection, the broadcast was ordered to be printed in the RECORD, as follows:

HAPPENINGS IN WASHINGTON

(Program No. 25)

My fellow Pennsylvanians, this is ED MARTIN, speaking to you from the Nation's Capital, and bringing you another discussion of happenings in Washington.

A little more than a month ago, on one of these broadcasts, I discussed the social-security law. I explained its weaknesses and the new amendments now being written in Congress. I told you about the bill which the House of Representatives passed and how the Senate Finance Committee was striving to improve it. I am a member of that important committee.

You know of my fight for a sounder, safer foundation under the social-security structure. I believe the workers whose wages are subject to social-security deductions should have complete assurance that they will receive the benefits when they become eligible without being taxed a second time. But, as I said in my earlier broadcast, that cannot be accomplished in this Congress.

Since that time, I've had thousands of letters from Pennsylvanians. They expressed great personal interest in the law and the proposed changes. Many sought further information.

I am therefore taking this occasion to report once more on the latest developments. Of course, the bill is a considerable distance from becoming law. Some changes must be expected. But its general form is now sharp enough to give a reasonable picture of what the social-security future holds in store.

In my opinion, the bill which emerged from the Finance Committee is a better bill than the one approved by the House. Several important improvements have been made.

The first would greatly increase the number of persons to be covered under old-age and survivors insurance. The House would have taken in eleven million. We finally decided upon the addition of nine and one-half million to the thirty-five million now covered.

Mostly they would be the self-employed, except for professional men and women. The House bill would have forced in hundreds of thousands of State and local employees now already protected by sound pension systems of their own. These people appealed to us not to make them lose what they had for the lesser Federal benefits. In the Senate bill, public employees already under a retirement system are not included on a compulsory basis. Voluntary coverage would be available for the million and a half State and local government employees who are not under a retirement system.

The House would also have forced in those whose income comes largely from tips and gratuities. Spokesmen for these people appealed to us to exclude them. They are not in the law now and, at their request, we have kept them out.

The question of farmers and farm labor was handled much the same by the Senate Committee and by the House. Farmers and farm labor are excluded from provisions of the law. However, the Senate committee agreed to cover certain border-line agricultural workers.

For the first time there will be coverage for domestic workers, except on farms. This will apply to both full-time and day workers but not to those who do a day's work in one house and a second day in another.

The second big change is in the amount of the benefits to be paid. As we all know, prices of everything have been greatly inflated since the law was first enacted in 1935. Benefits which were regarded as good in those days are too small by today's standards. So the Senate committee voted to increase benefit payments an average of 90 percent. Actually, those receiving the largest benefits under existing law would receive increases of about 60 percent. Those in the lowest brackets would get increases of 100 percent.

The 90-percent average increase in benefits provided by the Senate committee compares with increases averaging 70 percent, provided by the House.

Although the benefits are greatly increased, the Senate committee decided that no higher payroll deductions would be needed until 1956. At that time the present 1½-percent rate will be raised to 2 percent and then would increase gradually until 1970 when it would reach 3½ percent.

Many people think of social security only in terms of its most important feature—the old-age and survivors insurance.

But this law includes other things. One of these is the public-assistance program, in which Federal funds are put up to match State contributions for the needy aged, blind, dependent children, and certain other smaller programs.

Now, when the social security law was passed in 1935, Congress had two principal things in mind.

The first and long-term feature was the old-age-insurance feature, which called for contributions from the employer and the employee, and no Government handouts.

The second, the public-assistance feature, was a purely temporary program. Let me emphasize that word—temporary.

Under this the Federal Government would make matching contributions to the States to help the needy aged and other beneficiaries. But as soon as the insurance system was well established Uncle Sam would get out of the business of providing local assistance. That, it was felt, was a job entirely for the States and local communities.

But things didn't work out that way. The old-age and survivors insurance has been in existence for 15 years. It is far bigger than when originally created, with more than 35,000,000 men and women under its coverage.

Yet, despite this fact, old-age assistance and other direct relief programs, with matching Federal contributions, have continued to grow at such a rate that its beneficiaries now outnumber those of the insurance system.

Do you know, for instance, that in the State of Louisiana 8 out of every 10 persons 65 years of age or older gets old-age assistance more than half of which comes from Federal tax money?

Do you know that 6 out of every 10 in Oklahoma and 5 out of every 10 in Georgia and Mississippi are given this old-age assistance?

In our State of Pennsylvania, which contributes such a large share of the Federal tax money, only 1 out of every 10 persons over 65 years old receives these funds. And the Federal Government bill for public assistance is over $1,100,000,000 a year.

Well, that was the way the so-called temporary feature has continued to grow. The bill which passed the House would have made it still larger. It would have the Federal Government pay more and more into the fund.

One firm advantage of the Senate bill is that it reverses the trend. It seeks to do what was intended in the first place—get more people under the social-security insurance plan and fewer under old-age assistance. By a change in eligibility requirements it provides that 500,000 more aged individuals would come under the insurance plan in 1951 alone.

That is a sound and constructive move.

In a number of other things, where there was a real need and where the strain on the taxpayers was moderate, the Senate committee has been more generous than was the House.

For instance, our committee increased Federal assistance to dependent children. Blind persons will be eligible for pensions even with earned incomes up to $50 a month.

Pennsylvania receives no Federal funds for its aid-to-the-blind program because we do not conform to the Federal pattern.

We permit blind persons who earn as much as $1,116 a year to get the full $40-a-month State pension because we believe it gives encouragement to the blind to become self-supporting, in part, at least.

We doubled the modest program for child welfare services in rural areas and increased from seven to twelve million dollars a House-approved fund for child welfare services to combat juvenile delinquency.

We are recommending larger Federal grants to provide medical, surgical and other services for needy, crippled children.

So you have now a picture of what the law is likely to be when congressional action is completed.

But it will continue to be far from a perfect law.

To operate successfully the system must be made sounder financially and more along actuarial lines than at present. It should be on a pay-as-you-go basis.

I believe the administration of the law must be made as simple as possible.

I believe a definition of employee must be written into this bill which will prevent future confusion. There has been much confusion and misunderstanding in the past.

The common-law definition of an employee is probably the best we can do at the present time.

Social security and public assistance must be kept separate.

Public assistance is essentially a local function. It should be taken care of by the local community, with financial assistance from the State. Only during great emergencies should the Federal Government step in and provide funds.

Sound retirement plans now operating for the benefit of State and municipal employees, teachers, policemen and firemen should not be forced into the Federal system.

I believe the next Congress should give thought to the steps necessary to modernize social security and set it upon a firm, broad foundation.

The working man who pays for old-age insurance by regular weekly payroll deductions should get what he is paying for. Under the present system the Government takes this money and spends it for anything from submarines to flood-control projects. Then when the worker reaches the age of 65 and wants his insurance payments, the Government taxes all the people to get the money to pay him and others.

The worker will pay some of those new taxes. So in effect, he will be paying twice for his social-security benefits. That problem must be faced and solved before it rises up to plague the Nation as assuredly it will one day.

My friends, I shall continue to fight for sound social security as long as I remain in Congress.

This is ED MARTIN, speaking to you from the Nation's Capital. I will be with you again in 2 weeks. Thank you for your attention.

Lynch Law for Ducks and Geese

EXTENSION OF REMARKS

OF

HON. A. WILLIS ROBERTSON

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 24 (legislative day of Wednesday, March 29), 1950

Mr. ROBERTSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article I have prepared entitled "Lynch Law for Ducks and Geese." It deals with a meeting of sportsmen in Annapolis for the discussion of shooting regulations, at which the senior Federal judge of Maryland, Hon. William C. Coleman, of Baltimore, is alleged to have made the astounding statement that he did not intend to enforce the Federal regulations which prohibit the shooting of ducks and geese over baited waters.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LYNCH LAW FOR DUCKS AND GEESE

For the past 35 years I have been active in the cause of wildlife conservation. When I was a candidate for the State senate in 1915 one plank in my platform was the creation of a State game department. It was my privilege as a member of the State senate in 1916 to sponsor that legislation. In 1926 Gov. Harry F. Byrd appointed me chairman of the Virginia Commission of Game and Inland Fisheries and for the following 6 years I headed that agency. In 1934 I sponsored a resolution to create a House Select Committee on Wildlife Conservation and for the following 12 years served as chairman of that committee. When the Senate Select Committee on Wildlife Conservation was abolished by the Reorganization Act of 1946 I was instrumental in having organized a Subcommittee on Wildlife of the Senate Committee on Expenditures in the Executive Departments of which I was then a member.

God blessed the North American Continent with a great abundance of wildlife and a habitat well suited for its maintenance. But in our mad rush to convert natural resources into gold we greatly damaged that habitat by the destruction of our forests, the pollution of our streams, the drainage of marsh areas, and the erosion of our topsoil through improvident farming. And that damage to our renewable wildlife resources was greatly accelerated by an ever-increasing number of those who loved to hunt and fish, who were skilled in the use of modern firearms and who were for the large part unmindful of the heavy inroads upon brood stock that were being made.

That is especially true of our migratory bird population Fortunately, Congress recognized the value of that natural resource and the importance of preserving it and under the guidance of a conservation-minded President ratified a migratory bird treaty, first with Canada and then with Mexico, under which the Federal Government gained the power through Executive orders to be issued by the President, to control the future hunting of migratory birds. The treaty in question prohibited all killing of migratory birds except to the extent thereafter authorized by Executive orders of the President.

In the years immediately following the ratification of that treaty the supply of migratory birds and especially of ducks and geese was still so plentiful that liberal regulations for hunting were issued. The season was 90 days, the bag limit was 25 per day on ducks and 4 per day on geese and it was permissible to shoot over baited waters. The destruction under that program, coupled with some adverse breeding seasons and an alarming increase in the drainage of nesting and feeding marshes, made curtailment in hunting privileges an absolute necessity. That curtailment, however, was accompanied by the passage of the Pittman-Robertson Act, which I cosponsored with the distinguished late Senator Pittman, to create funds for the States for the improvement of the game supply and by the passage of the Duck Stamp Act which was sponsored by my House Select Committee on Wildlife Conservation to create a special fund all of which would be used for the benefit of migratory birds. And during the depression years those funds were augmented by allocation of special relief funds by President Franklin D. Roosevelt for the acquisition and development of refuge areas in the United States.

Sportsmen interested in the problem of saving our ducks and geese organized a splendid association which they call Ducks Unlimited. That organization has used money raised in the United States primarily for the purpose of developing and protecting essential breeding areas in Canada.

But, in spite of all of these efforts, our supply of ducks and geese has continued to decline and further restrictions had to be imposed upon the kill to keep the essential brood stock from being exterminated. The very destructive practice of luring ducks and geese to the blind by the use of corn and chopped sweetpotatoes was prohibited. Shooting after 4 p. m. when ducks were returning to their feeding areas was prohibited. The daily bag limit on ducks was reduced to four and the open season reduced to 30 days.

These restrictions upon the kill would have been effective but for an unfortunate development of a spirit of lawlessness and a deplorable disregard for constituted authority, to say nothing of a disregard for the future of a great natural resource. Well-informed witnesses testifying this year before the Senate Committee on Wildlife estimated the unlawful kill at 25 percent of the total kill. It naturally follows if that type of lawlessness could be stamped out we could either have a longer season and a more liberal bag limit for legitimate shooters or we could to that extent increase the available supply.

In order to increase the effectiveness of law enforcement which was urgently needed, the Congress last year increased the price of the duck-stamp licenses from $1 to $2 which doubled the funds available to the Fish and Wildlife Service for the employment of enforcement agents in the field. Those agents, while still entirely too few in number, have shown a commendable activity in apprehending violators but unfortunately in some jurisdictions they have encountered Federal judges who, instead of discharging their sworn duty to uphold the law as well as setting an example for obedience to constituted authority, have deliberately adopted a contrary course.

A notable example is Hon. William C. Coleman, of Baltimore, Maryland's senior Federal judge. The following is an excerpt from a recent issue of Conservation News of the National Wildlife Federation, a privately financed institute dedicated to the conservation of America's renewable wildlife resources. It relates to a recent meeting of sportsmen or those who claim that title, in Baltimore at which the shooting regulations of the Federal Government was the subject of discussion.

"MARYLAND WATERFOWL MEETING A RIOT

"The waterfowl forum recently conducted at Annapolis, Md., turned into a riot and bitter criticism of the United States Fish and Wildlife Service, reports the National Wildlife Federation. Dr. Clarence Cottam outlined the status of waterfowl as determined by the winter surveys in order to give the Marylanders the picture and then threw the meeting open for discussion. Hon. William C. Coleman, Maryland's senior Federal judge, was the leader in leveling criticism at the waterfowl management program. He favored baiting ducks throughout the area, claiming that 95 percent of the ducks killed in Maryland are shot over baited waters anyway. He called for a longer season of 60 to 70 days with rest days and a larger bag limit than 4, stating that 4 ducks are not enough to make it worth while to go out hunting. He stated further that the district attorney had come to his office about a month ago with 67 cases of baiting ducks, but he did not think it worth while to bring them to trial. With only a few exceptions the meeting seemed to be unanimous—so far as expressions were made—in favor of a longer season for more killing of ducks. At the conclusion of the meeting it was put to an expression and it voted in favor of more shooting days and a bigger bag, in spite of the warning that this might result in a

closed season for 1951. Glenn Martin, president of the Maryland League of Sportsmen and well-known manufacturer of aircraft, was among the few who urged those present to temper their demands and listen to reason. J. Hammond Brown said in his newspaper story covering the meeting, 'there is little doubt that, if the Federal authorities satisfied the demands made at the meeting, most of the continent's (waterfowl) population would be wiped out utterly within 30 days.'"

I am inserting this statement in the CONGRESSIONAL RECORD for the information of the Members of Congress and the twenty-five or thirty million true sportsmen of America in order that they may get a clearer picture of some of the problems confronting us in saving our ducks and geese. If this notice to the Federal judges of the United States proves to be inadequate, I shall at some appropriate time present to the Senate a detailed account of every violation in which a Federal judge ignores his oath of office, ignores the Constitution, ignores statutory law, and metes out lynch law to the ducks and geese.

The Role of the Democrat in World Affairs

EXTENSION OF REMARKS

OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Wednesday, May 24 (legislative day of Wednesday, March 29), 1950

Mr. LEHMAN. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD remarks I made on May 19 before the Women's National Democratic Club, of Washington, D. C., on the role of the Democrat in world affairs.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mrs. Lehman and I both thank you very much for the opportunity to be here with you tonight, and we are grateful to you for your very friendly welcome. Neither of us is a stranger among you. The only new aspect of this occasion is my being introduced to you as a Member of the United States Senate. That makes this a special occasion. At least, coming here as a Senator ought to make me feel a little different. But to tell the truth, it doesn't. It merely feels good, as it always does, to be among friends.

I never fail to obtain a great satisfaction from meeting with the National Democratic Women's Club, and to see this continuing evidence of the vitality of the Democratic Party. Your organization is a witness to the leading part which the women of the Democratic Party are now playing in the affairs of the Nation.

It has not always been so. I recall that as recently as 25 years ago women, at least in my State, were given virtually no place in the party organization. They had little or no representation on the State committee, and their political influence was almost negligible. It was only when Franklin D. Roosevelt was elected Governor in 1928, that the importance of women as a political force was recognized and they were encouraged to demand full participation in the political organizations. Under the leadership of Mrs. Roosevelt, Mrs. Henry Morgenthau, Jr., Mrs. Harriman, Mrs. Good, Miss Marbury, Mrs. O'Day, and others, women were finally given equal representation on the State committee. But it took a lot of fighting with old-line political leaders to accomplish this.

The title I originally gave to my remarks tonight was The Democratic Woman in Woman in World Affairs. I hope you will not be too displeased if I change this title a little, and speak on the Democrat in World Affairs. I really cannot see the difference between the role of a democratic woman and the role of a Democrat period. So, tonight, I shall speak to you not as women but as citizens, as citizens who have had the sound judgment to aline themselves with the Democratic Party.

Titles given to speeches are not taken seriously anyway, certainly not by the speaker. Those of you who have read the life of William Lloyd Garrison, the Abolitionist leader, may recall Mr. Garrison's famous remark when he was invited by an organization—perhaps it was a woman's club—to make a speech, and was asked whether he could speak on some topic other than abolition, and if so, what his lecture fee would be. Garrison's reply was, "If I speak on abolition, I will charge no fee. If I speak on any other topic, my fee is $200. But whatever the topic, I assure you that the subject will be the same."

So tonight, although I have changed the topic, the subject will certainly be the same.

As a nation, we have never given as much attention to world affairs as we should. The fact that our immediate neighbors both to the north and the south of us were and are good neighbors, and the fact that on the east and on the west we bordered on vast oceans, gave us a false sense of security and detachment from world affairs. This illusion of separation from the rest of the world was reflected in the policy of which the Republican Party became the principal protagonist, the policy called isolationism. But there is no doubt that this isolationist policy was deeply rooted in the feelings of the overwhelming majority of the American people during the twenties.

You may be interested to know that the Republican Party was not the originator of even the name for the isolationist policy. The publisher of the Chicago Tribune and the junior Senator from Nebraska might both be horrified to know that the term "isolationism" was actually borrowed from Great Britain. Around the turn of the century, a British foreign minister, Mr. Joseph Chamberlain, father of the Neville Chamberlain of Munich fame, called upon his country to hold itself aloof from the quarrels and alliances of the European Continent, and to remain wrapped in what he called "splendid isolation." England, at the peak of her power after the Napoleonic and post-Napoleonic wars, regarded the English Channel and the British Navy as certain guaranties that this splendid isolation could never be violated.

England, of course, was awakened from her dream of isolation not long afterward, but not until her isolationism had very nearly destroyed her and the rest of the freedom-loving world.

We in America were awakened from our dream of isolation, too. But if it had not been for the great courage and foresight of Franklin D. Roosevelt, we, too, might have been engulfed and totally destroyed, and the whole Western World with us. Happily we awakened just in time. But today there are those who would have us return to the same illusion which once almost spelled our doom.

Our modern-day isolationists, however, are not quite as simple or as consistent as the isolationists of 20 years ago. The current crop of isolationists are only partial isolationists. They are opposed to helping western Europe economically, because, they contend, it is a waste of money. They are also opposed to helping western Europe militarily because, they say, that, too, is a waste of money. But they are not absolutely opposed to helping Europe.

Oh, no. They are willing to help western Europe help us against Russia, providing the following conditions are met:

1. That western Europe agrees to pay us back for all our help.

2. That western Europe agrees not to ship into the United States any goods that can compete with American goods.

3. That Europe agrees to buy from us most of our surpluses.

4. That western Europe agrees to discontinue much of its normal trade with eastern Europe.

5. And, finally, that western European countries agree to make all the changes in their political and economic philosophy that certain political sages in this country think are desirable for Europe.

So the latter-day isolationists are willing to save Europe from Russia, but only on terms which no self-respecting European nation outside the iron curtain could ever accept.

That, in essence, is the European policy of the isolationists. But, for Asia, the isolationists have quite a different policy. For that continent, the policy changes from timid to bold, and from halting to headstrong. Into those distant parts, the isolationists would send troops, guns, planes, ships, naval, air, and military missions, and dollars without limit. They would thus refrain from helping the traditionally democratic governments in Europe, and would instead commit our resources to the support of an autocratic regime which has a political structure, but no people, the Chinese Government of Generalissimo Chiang Kai-shek.

For those who disagree with these Formosa firsters, for those who point out that such a policy has no hope of success but can only lead to the catastrophe of war, and war on the worst possible terms, the isolationists reply with accusations that their critics are Communists or are following the Communist Party line.

It is strange, indeed, that the neoisolationists are able to stir up this entire country, and place our entire foreign policy in jeopardy with unsupported accusations of communism rampant in the State Department, based solely on the circumstance that the State Department opposes our total involvement in a hopeless adventure in China. What is the main evidence against the State Department? The main evidence is that the Communists also oppose giving aid to Chiang Kai-shek.

But it is an equally interesting fact—and yet seldom noted—that in Europe the Communists favor almost exactly the same policy that our isolationists do. The Communists, too, are against the Marshall plan, and the Atlantic Pact, and the arms-aid program. Is this not evidence, by the same sort of reasoning that is now so current, that Senator MALONE and Senator WHERRY and Senator JENNER are following the Communist Party line? I, for one, am willing to absolve them of such an accusation. I do not think that they should be investigated on this basis. Still I fail to see why sauce for the goose isn't sauce for the gander, too.

I hope that I have not given the impression that this latter-day isolationism is a philosophy peculiar to or is even exclusively identified with the Republican Party. Certainly we Democrats have our own neoisolationist fringe. But the Democratic Party as such stands for an enlightened and liberal foreign policy, but a foreign policy based on bipartisan support.

I, myself, am a firm believer in a forward-looking bipartisan foreign policy. I think that in the present state of the world, we must show as little disunity on foreign policy as possible. I know that on the broad principles of foreign policy, the overwhelming majority of the American people—of whatever political party—are firmly united. They are united for the defense not only of our

way of life but of the right of every people to be secure from external aggression.

This singleness of sentiment in our country is reflected in the present bipartisan foreign policy in the Congress. I want to emphasize that this bipartisan policy was not and should not be achieved at the price of surrender of vital principles. But the bipartisan policy does require some compromise, just as world peace requires a degree of compromise. We should be willing to make proper concessions both at home and abroad where necessary to win or to secure peace with justice. Flexibility is a mark of strength and not of weakness.

But the isolationists want compromise neither on the home front nor on the world front. Thumbing their noses at the rest of the world, they demand its unconditional surrender. They want no part of this bipartisan foreign policy.

They are as much opposed to the views of Senator VANDENBERG as they are to the views of Secretary Acheson. They are the true irreconcilables, whose attitude is just as intransigent at one pole as is the attitude of the Communists at the other; as I have just indicated, these two extremes meet more than occasionally.

But I have talked enough about the isolationists. I haven't talked at all about our positive role in world affairs or the role which the rest of us must play in order to enable our country to discharge its inevitable responsibility in the present world situation.

We must reject, not only passively but actively, the inconsistent philosophy of the isolationists. We must oppose and break the reign of terror which these harbingers of hysteria have succeeded in setting loose in this country.

We must support with all our vigor and energy the democratic principles which we advocate in the world today. Civil rights and human rights for all our people here at home and for all the peoples everywhere in the world must constitute our platform in world affairs.

We must support the principle of world cooperation for peace with justice, of intimate cooperation with all freedom-loving peoples, and of guarded cooperation with all others in the interests of peace and world security, for each as well as for all.

We must be ready and willing to surrender some of the extreme aspects of national sovereignty in favor of world peace and order. This is the basic principle of the United Nations. It is the only way to a lasting peace. Just as State's rights have had to yield in some respects to national rights, so national rights must also give way, under all necessary safeguards, of course, to world rights. These are concepts even more basic today than national rights. Our banner in world affairs must be human rights.

In passing I might mention an international agreement which is, at this time, under the consideration of the Senate Foreign Relations Committee, and which has been attacked in some legal quarters as a partial surrender of our sovereignty. I refer to the Genocide Pact. This great and historic document declares it to be an international crime wilfully to destroy groups of individuals because of their race, creed, or color, or to inflict conditions leading to the destruction of such groups.

The purpose of the Genocide Pact is to outlaw such bestial crimes as the mass murder of the Jews of Germany and of eastern Europe. It would also place beyond the pale of organized and civilized society such destruction of peoples as is now said to be going on behind the iron curtain in the Ukraine and Poland and the Baltic States.

I hope with all my heart that this Pact will be approved. For the United States to refuse to approve it, merely because it involves the surrender to an international body of the right to sit in judgment on such crimes within another country—even within our own country—is a sorry reflection not only upon our democracy but upon our sense of justice. I hope that you and the Democratic Party of the entire Nation, and all like-minded individuals of all parties, will insist that the Genocide Pact be approved without further delay.

I have not tried tonight to give you a complete description of what I consider to be our proper role in world affairs. I have merely sketched in a few high lights, some of the more important obligations which we as citizens and as members of the Democratic Party must assume.

We are in this undertaking together—as fellow Democrats, as fellow citizens, and as fellow human beings. There are really no party lines, State lines, or national lines across which the perils of this day will not pass. If we would save ourselves from deadly danger—and I believe it is a danger far greater than that which has ever been faced by the peoples of the world in my time and perhaps in all time—we must accept and seek the help of all men and women of good will, of every part of our country and of every part of the world.

Compulsory FEPC Law

EXTENSION OF REMARKS
OF
HON. RICHARD B. RUSSELL
OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 24 (legislative day of Wednesday, March 29), 1950

Mr. RUSSELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Senate in Mourning," from the Washington Star of May 21, 1950, relating to a proposed compulsory FEPC law.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SENATE IN MOURNING

Having never been among those who believe or who profess to believe that a compulsory FEPC law would be good legislation, this newspaper is not to be listed among those mourning its defeat in the Senate. The most sincere believer in the merits of FEPC, however, would be hard put to join in the Senate grieving.

The FEPC defeat came in the form of failure to adopt a proposal to limit debate on a motion to call up the FEPC bill. The vote was 52 for and 32 against. Since 64 favorable votes were needed to invoke cloture, this means that FEPC is dead for this session. Majority Leader LUCAS talks bravely of trying again, but the plain fact is that the FEPC advocates have not the necessary votes, and they know it.

In the Star's opinion not more than a corporal's guard of Senators really believe in and want to adopt a compulsory FEPC. No other issue has been so shot through with partisan politics as this one, and that is something which has to be kept in mind when, in the wake of the vote, the senatorial pot begins to call the kettle black.

The Republicans obviously are trying to make all of the political capital they can out of the administration's embarrassment. The President has put FEPC at the head of his civil-rights program, although it is by far the most objectionable of those proposals. When the test came only 19 Democratic Senators voted for cloture and 26 voted against. So it is not surprising, our politics being what they are, that the Republicans should be pounding the partisan drums.

Senator TAFT is taking the lead. He points out, in doleful tones, that the Democrats could muster only 35 percent of their total strength for cloture, that the President did not put pressure on his party members, that Majority Leader LUCAS did not bring up FEPC at the beginning of the session, etc. But how is this to be taken? Senator TAFT heretofore has advocated a voluntary FEPC. Does he now favor compulsion? Would he vote for such a bill on a final test? On both counts the true answer probably is no. The Ohio Senator, by implication, rebukes the President for not putting pressure on the Democrats. Would he feel the same way if the issue had been repeal of the Taft-Hartley Act and the President had refrained from pressuring the Democrats? And why chide Senator LUCAS for waiting to bring up FEPC? The votes for cloture would not have been forthcoming at any time, and to have brought FEPC up at the beginning of the session would have delayed and might have killed other more important legislation.

So as the Senate goes into mourning over this matter the people have reasons to frown on the whole performance. It is a performance which, on both sides of the aisle, unmasks politics in its drabbest form. The only Senators who can be said with certainty to have voted according to their convictions are the 6 Republicans and the 26 Democrats who combined to beat the cloture move.

"Who Killed Cock Robin?"

EXTENSION OF REMARKS
OF
HON. KENNETH S. WHERRY
OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 24 (legislative day of Wednesday, March 29), 1950

Mr. WHERRY. Who killed Cock Robin?

The VICE PRESIDENT. The Chair does not know. [Laughter.]

Mr. WHERRY. The Vice President did exactly what I thought he would do; he said he did not know. So I want to give him the information.

I ask unanimous consent to have inserted in the Appendix of the RECORD an editorial from the Wilmington (Del.) Journal-Every Evening for May 20, 1950. The editorial is headed "Who killed Cock Robin?" and in the opinion of the junior Senator from Nebraska correctly places responsibility for failure of cloture to be applied on the motion to consider the FEPC bill.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHO KILLED COCK ROBIN?

As a result of a test vote in the Senate yesterday the FEPC bill, heart of the President's civil-rights program, now becomes officially "unfinished business." That's a misnomer. The correct word is "finished"—meaning that no further attempts can usefully be made this session to translate the measure into law.

We can understand the disappointment many persons feel today in consequence of the failure of a Democratic Senate to redeem one of the main pledges of the Democratic Party's platform. But the vote yesterday shows well enough where the blame lies.

Only 19 Democrats supported the motion for cloture, while 26 opposed it. On the other side of the Chamber there were 33 Republicans in favor and only 6 against.

If, therefore, the FEPC bill is dead for this year—as is now generally agreed—it was the Democratic majority which killed it. The record is clear and it will remain there for all to read.

In view of this latest development it may well be asked if President Truman is still insisting, as he kept repeating on his nonpolitical western tour, that the present Democratic Congress is infinitely better than its Republican-controlled predecessor. And, by the way, who are the obstructionists now?

Grievances of the American Chamber of Commerce of Morocco

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, May 24 (legislative day of Wednesday, March 29), 1950

Mr. WILEY. Mr. President, I would like to call the Senate's attention to page 25 of the House statement regarding treaty compliance, especially that part stating:

> The committee of conference took note of a reassuring letter of May 5, 1950, from Administrator Hoffman * * * which letter is quoted.

Mr. Hoffman is quoted as saying:

> A similar amendment was carefully considered by the Foreign Relations Committee which decided that it was not necessary in view of arrangements made with the French Government to deal with this situation by the Department of State, the Department of Commerce, and ECA. These arrangements have been operating since December 31, 1949.

Mr. President, I have before me a copy of a letter written on May 12, 1950, by the president of the American Chamber of Commerce of Morocco, a member of the United States Chamber of Commerce. This gentleman says:

> The entire membership of the American Chamber of Commerce of Morocco was surprised to learn that a formal claim had been made to the effect that our grievances had been or were being remedied by official action in Morocco or in Paris. You will recall that similar claims have been made each time Congress became interested in the Moroccan situation to the point of seriously considering legislation that will remedy it.

Mr. President, the chamber of commerce lists 11 grievances which the Department of State has been unable to remedy. I am sure that it will convince anyone who reads it that the conference decision unfortunately relied too fully on ECA and State Department statements.

As a matter of principle, I am averse to restrictions in appropriation measures which bring about results that are more appropriate in authorization acts. In this case, however, I strongly recommend to the distinguished chairman of the Appropriations Committee that his committee take cognizance of these two documents and remedy once and for all the rank injustice which they indicate and which the Senate was unfortunately deterred from remedying by action of the conference whose report is before us now. I ask that these documents be included in the RECORD at the conclusion of these remarks.

There being no objection, the excerpt and letter were ordered to be printed in the RECORD, as follows:

[From hearings on the Foreign Economic Assistance Act of 1950]

Treaty compliance: The Senate version (sec. 106) sought to add to the act (sec. 115) a provision forbidding the expenditure of counterpart funds by any country having a dependent area which fails to comply with treaty obligations to the United States. The Senate version (sec. 107) also sought to add a provision to the act stating: "The terms of any treaty to which the United States and any participating country are parties shall remain in full force and effect until superseded by a new treaty ratified by the Senate unless, prior thereto, it expires by its own terms."

The House version contained no such provisions.

The conference agreement omits them.

The relevant provision of the Senate version was designed to deal with a situation in Morocco, where a number of Americans have complained of alleged discriminatory acts of local officials against United States nationals engaged in business. This topic was discussed briefly above in connection with the language pertaining to discriminatory trade practices. As noted, the language of the Senate version, strengthened at the instance of the House members of the committee of conference, has been included in the conference agreement.

The committee of conference took note of a reassuring letter of May 5, 1950, from Administrator Hoffman to the Honorable TOM CONNALLY, chairman of the Committee on Foreign Relations of the Senate, which letter is quoted. (The amendment referred to in the letter is the above-discussed amendment in the form prior to the addition of strengthening language in the committee of conference):

"An amendment has been proposed to * * * which would prohibit release of counterpart funds to any country so long as there exists a violation of a treaty between the United States and a dependent area of that country.

"This amendment is aimed at alleged discriminations against American businessmen in Morocco. A similar amendment was carefully considered by the Foreign Relations Committee, which decided that it was not necessary in view of arrangements made with the French Government to deal with this situation by the Department of State, the Department of Commerce, and ECA. These arrangements have been operative since December 31, 1949. They provide a consultative machinery in which American consular representatives can take part in the consideration of actions of the local French authorities in Morocco with respect to the granting of import and exchange licenses in circumstances where discrimination against American traders in the area is claimed to exist. If such local consultation does not satisfactorily take care of any particular complaint, the matter can be raised on a diplomatic level with the French Foreign Office and this has, in fact, been done when it appeared necessary. ECA is of the opinion that these arrangements should be adequate to protect American citizens against improper discriminations, and that a mandatory requirement to immobilize the entire counterpart account (which is used for large and important projects connected with the recovery of the entire French union) is a wholly excessive sanction.

"Furthermore, the * * * amendment * * * gives the Administrator an explicit basis in granting dollar assistance or in acting on proposals to release counterpart, for taking action to see that discriminatory business restrictions against United States citizens are terminated. Under this provision, I would consider myself bound to take suitable action in accordance with the intent of this provision in cases where it is established to the satisfaction of the responsible United States Government authorities that such discriminations are not corrected. Hence the * * * amendment gives assurance that discriminations against American businessmen can be dealt with promptly and effectively."

The committee of conference took note also of a memorandum of May 9, 1950, from the Department of State reviewing the problem in detail and stating the same conclusions as the above-cited letter.

In view of the above communications the committee of conference concluded that no provision additional to that added to the act in relation to discriminatory trade practices would be necessary.

AMERICAN CHAMBER OF
COMMERCE OF MOROCCO,
Casablanca, May 12, 1950.

Mr. ROBERT E. RODES,
Washington, D. C.

DEAR BOB: The entire membership of the American Chamber of Commerce of Morocco was surprised to learn that a formal claim had been made to the effect that our grievances had been or were being remedied by official action in Morocco or in Paris. You will recall that similar claims have been made each time Congress became interested in the Moroccan situation to the point of seriously considering legislation that will remedy it.

There follows a list of current complaints which have not been remedied and which, we are all convinced, will never be remedied until stiff legislation is passed which requires Morocco to live up to its treaties:

I. Customs are still valued by local authorities at the port of entry, whereas treaties require their valuation by an international commission on a long-term basis. While these valuations are not as flagrantly discriminatory as they were when the Department of State promised to remedy them a year ago, there still is much discrimination and much delay in customs that will not be avoided until treaty provisions are strictly applied. Furthermore, no provision has been made for refunds of any of the overassessments which were admitted by the Department of State.

II. "Consumption taxes" which applied to certain necessities like lubricating oil, supplied principally by the United States, and do not apply to French luxuries like furs and jewelry, still are being collected in spite of the fact that they are in addition to the treaty-fixed 12½ percent customs duty and despite the fact that our members were officially informed in writing by the Consul General that they were in no way required to pay these taxes.

III. Final agreement by the Department of State with the Protectorate was, in my opinion and that of the membership, a complete victory for French interests. However, as unfavorable as it is, it is not being applied honestly by Protectorate officials. Americans repeatedly have been refused licenses authorized under the agreement, and licenses actually granted have been subjected to delaying tactics. On the other hand, licenses not permitted by the regulations have been granted to favored persons.

IV. One of the most recent cases of license refusals is preventing an American from obtaining spare parts necessary to operate his bus line. The same American has likewise been delayed for months in obtaining licenses for spare parts for the Piper Cub

planes for which he is agent. The effect of this will be to cause future purchasers to turn to other makes.

V. Reverting to the regulations themselves, they are drawn in a way that is intended to give almost all business to the French syndicates and cartels. Most of the products selected for unrestricted import are those which were controlled largely by French interests. The fact that the list includes manufactured tobacco products should be ample proof that more concern was shown about profits to favored concerns than to the economic requirements of the country. As you know, Morocco has ample tobacco manufacturing facilities for ordinary products. The imported products will be primarily luxuries, and will, of course, profit only the tobacco monopoly, in which the Paris and Netherlands Bank have a heavy interest. On the other hand, cotton textiles, used clothing, and most other necessities formerly sold by Americans still are under rigid embargo.

VI. The agreement absolutely overlooks the fact that independent Americans did one-third of Morocco's total import business in 1948, when free competition prevailed. We should have been assured an over-all volume that represents the 1948 percentage. I believe that our negotiators tried to make this arrangement, but were rebuffed by the Protectorate government. As it now stands, most of the business that we did with our own dollars has been wiped out by the embargo. The influx of official dollars made possible by ECA is diverted to our former competitors. This is done by claiming a "historical basis" of allocations with provisions usually of 15 percent of the total to be shared by all "new importers." French new importers by far outnumber American importers. When one remembers that Marshall-plan money has increased imports in some categories to 10 times the prewar figure that determined the historical pattern, it will be easy to see how wealthy and powerful some of these cartel members are becoming, while their former American competitors are being driven out of business.

VII. There are many other discriminatory provisions in the agreement. For instance, importers of tractors must have repair facilities which the cartel considers adequate. Since the cartel members have large shops which were necessitated by the requirements to keep up old equipment during the war and postwar period, this is merely another way of ruling out our members. Obviously, if a user wishes to buy tractors and keep them up himself, we should be able to compete for this business.

VIII. One of our members who represents Remington-Rand consistently receives an allocation of official dollars for office equipment, which is about one-tenth of that of his French competitor, who represents Underwood.

IX. The regulations cite the Compagnie Marocaine des Transports as a priority user of certain products purchased with ECA funds. This company was created by the French administration with the intention of giving it a monopoly on transportation. The United States has repeatedly refused to recognize the legality of the position claimed for it. The recognition in the final agreement is the first step toward breaking down our resistance.

An example of how this company operates can be seen from the bus situation. Morocco needs additional bus service desperately. Some Americans here have been successful in providing American-type bus service with superior American equipment. They are unable to expand their services because the authorities have arbitrarily decided to limit the number of total passenger capacity allotted to Americans to a few hundred, while the Compagnie Marocaine des Transports, a non-American firm, has an allocated capacity of 17,000 seats, of which only 10,000 are in operation.

X. To add to the other difficulties which have been placed in our way, the French Government now is encouraging barter transactions which are costly to the whole French economy and which virtually freeze out normal enterprise. In order to be sure that Americans do not compete in this, the products offered in barter are not Moroccan products, but are taken from other colonial locations where Americans have no treaty rights and are not allowed to operate.

XI. During the discussions that followed the State Department's temporary acceptance of the decree of December 28, 1948, which put a ban on imports without official exchange, the American members of the so-called mixed commission, required that American citizens be granted the right to import any article they need for their personal use, with assurances that they would not to be resold. The Protectorate Government acquiesced to this clause, which, however, was not honored in practice. As soon as the Protectorate Government obtained the State Department's extension of the preliminary acceptance of the edict, it refused to permit the entry of any article that was not in the list of free imports.

As an example, Americans have been and still are being, refused the importation of a personal car, which invariably is essential for the conduct of their business. Mr. Edwin Sendro, an American citizen, established in transport business in French Morocco, in returning from the United States brought with him his personal car. He has recently been ordered by the Cherifian customs authorities to ship the car out and pay a fine of approximately $25. The enclosed letter signed by Mr. Sendro is self-explanatory on this subject.

Another example of this type: In returning from Tangier recently, my personal car broke down in Spanish Morocco. I managed to reach Casablanca, where, upon inquiry, it was discovered that replacement parts for the car were not available either in French Morocco or in Tangier, and that their shipment from the United States would require 2 to 3 months. As president of the American Chamber of Commerce of Morocco, the car was indispensable both for my business as well as for the chamber. A letter to the consulate general (copy enclosed) brought a negative reply from the local customs authorities. Simultaneously, a request to official Rabat for a car, even on temporary admission until my car was repaired, met with as little success. In the meantime I was obliged to rent a French-manufactured car that cost me $10 a day. The attitude of the French administration on this matter is most incomprehensible. We, however, can draw our own conclusions.

In summarizing, you may be assured that any change in our situation since January 1 has been for the worse, that no special machinery for adjusting claims exists that did not exist before (conferences between consular and residency officials involve the same personnel and lead to the same frustrating results even though they are now called deliberations of a mixed commission); that no attempt is being made to obtain reimbursements of the millions of francs that we have paid under protest, with United States official advice to do so; and that nothing is being done to ameliorate our situation.

Very truly yours,

GUS G. STRATTON,
President of the American Chamber of Commerce of Morocco.

CHAMBER OF COMMERCE OF THE UNITED STATES OF AMERICA,
Washington, D. C., May 17, 1950.

Mr. ROBERT E. RODES,
Washington, D. C.

DEAR MR. RODES: This is to inform you that the American Chamber of Commerce of Morocco, of which Gus G. Stratton is president, is a member in good standing of the United States Chamber of Commerce.

Cordially yours,

SAMUEL S. ERICSSON,
Assistant Manager, Foreign Commerce Department.

Wisconsin Essay Contest on Employing Physically Handicapped Workers

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, May 24 (legislative day of Wednesday, March 29), 1950

Mr. WILEY. Mr. President, I have prepared a statement on the subject of a wonderful institution, so to speak—a Nation-wide essay contest—which has developed in the crusade for employment of physically handicapped Americans. I ask unanimous consent that the statement be printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR ALEXANDER WILEY ON EMPLOYING PHYSICALLY HANDICAPPED

"Hire the handicapped, it's good business."

This is the title of the 1950 contest sponsored by the President's Committee on National Employ the Physically Handicapped Week, associated with the United States Department of Labor. This essay contest is open to students in public and private high schools in the eleventh and twelfth grades throughout the Nation. These original essays of 1,200 words or less are to my way of thinking a brilliant way of spotlighting the attention of the 48 States on this critical subject.

As I was happy to do last year, I should like once again to invite the attention of the Senate to the splendid way in which this essay contest has been conducted in my own State of Wisconsin. Our able Governor, the Honorable Oscar Rennebohm, appointed a committee on employment of the physically handicapped. Its secretary is Mr. A. L. Beier. As in 1949, when I commented on this issue in the CONGRESSIONAL RECORD, I feel that this committee has carried through its assignment with exemplary skill.

The State prizes and honorable mentions have now been awarded, and I want to express my sincerest congratulations to the Governor's committee, to the winning youngsters, to their proud parents, to their teachers and principals, who also feel justifiable pride. I want too to express my felicitations to the Wisconsin Association for the Disabled which made available the State cash prizes as well as to the members of President Truman's committee, the International Association of Machinists, and the Disabled American Veterans through whose courtesy the national cash prizes were made available. Let me express by congratulations, too, to the members of the Governor's committee of the physically handicapped, to the interagency committee, and to the 1950 essay contest judges.

These three groups comprise an honor roll of some of Wisconsin's most outstanding citizens—men of all political faiths, men devoted to the great goal of the essay contest.

Mr. President, I ask unanimous consent that there be appended to my statement a

fact sheet, listing the prize winners, as well as a list of the distinguished panel of leaders who serve in the various capacities I have mentioned, and that there follow this list the 1950 Wisconsin first prize essay by young Miss Betsy Ann Barland, age 16, of Eau Claire, Wis., Senior High School.

The matters referred to follows:

FACTS ON ESSAY CONTEST, "HIRE THE HANDICAPPED. . . IT'S GOOD BUSINESS"

WISCONSIN STATE PRIZE WINNERS

First prize, $50 United States Savings Bond; entrance in national contest: Betsy Ann Barland, age 16, Eau Claire Senior High School, junior class. Parents: Mr. and Mrs. George C. Barland (occupation real estate, Eau Claire).

Second prize, $25 cash award.

Barbara Alice Murray, age 16, Wauwatosa Senior High School—junior class. Parents: Mr. and Mrs. Ned Murray, (occupation, sales engineer, West Allis).

Third prize, $20 cash award.

Byron Lee Barrington, age 17, Little Wolf High School, Manawa—senior class. Parents: Mr. and Mrs. Harold Barrington, (occupation, instructor in agriculture).

Fourth prize, $17.50 cash award:

H. James Smith, age 17, McDonell Memorial High School, Chippewa Falls, senior class. Parents: Mr. and Mrs. Levi E. Smith. Occupation, logger, Chippewa Falls).

HONORABLE MENTION

Audrey Clemens, Hartford High School, Hartford.

Donald S. Clow, St. Francis Seminary, Milwaukee.

Leon David Hamilton, Appleton Senior High School, Appleton.

Kenneth Hintzman—St. Francis Seminary, Milwaukee.

Charles Lipscomb, Wauwatosa Senior High School, Wauwatosa.

Betty Mayer, Hartford High School, Hartford.

CERTIFICATES OF MERIT

State prize winners will receive parchment awards signed by the President of the United States. Contestants selected as State prize winners and for honorable mention will receive certificates of merit signed by the Governor of Wisconsin and the committee chairman.

THE GOVERNOR'S COMMITTEE ON THE EMPLOYMENT OF THE PHYSICALLY HANDICAPPED

Oscar Rennebohm, Governor; Harry Lippart, chairman.

Members: Harry Lippart, chairman, Madison; C. H. Crownhart, Madison; George Haberman, Milwaukee; John M. Sorenson, Milwaukee; William J. Petersen, Madison; Robert A. Ewens, Milwaukee; William F. Faulkes, Madison; Harry A. Nelson, Milwaukee; William H. Siemering, Madison; A. D. Kvool, Milwaukee; Ben E. Kuechle, Wausau; D. Weston Day, Milwaukee; Arthur F. Trebilcock, Madison; Jack Spore, Milwaukee; Robert W. Hansen, Milwaukee; Max Ninman, Reedsburg; Fred MacMillan, Madison; Milo Swanton, Madison; O. H. Plenzke, Madison; Joseph D. Mackin, Marinette; Mark R. Byers, Wausau; Sid Bliss, Janesville; A. L. Beier, secretary, Madison.

INTER-AGENCY COMMITTEE

Hobart Bondi, Veterans' Administration; Joseph Brown, Vocational Rehabilitation; L. T. Burdick, Veterans' Employment Service; Max Hays, Wisconsin State Employment Service.

ESSAY CONTEST JUDGES, 1950

Hon. Lyall T. Beggs, past national commander, Veterans of Foreign Wars. Hon. Walter S. Bottsford, secretary, Wisconsin Free Library Commission. Hon. Harry J. Burczyk, commissioner, Industrial Commission of Wisconsin.

CASH PRIZE DONOR

Wisconsin Association for the Disabled, R. E. Balliette, president.

THAT IS WHY THE IMPAIRED WORKER DOES BETTER WORK

(By Betsy Barland, Eau Claire (Wis.) Senior High School; David Barnes, principal; Ethel M. King, English instructor)

America cannot be called the land of opportunity unless it means an opportunity for all people regardless of whether they have a physical disability or not. Each year approximately 250,000 more men and women are added to the ranks of the handicapped. These Americans have as much right to be independent and self-supporting to their fullest capacities as they have to freedom of speech and freedom of worship. The problem of finding a job is a very serious one for these people. The American system of initiative and free enterprise is not working for them if they fail to find some sort of job with which they can provide for themselves and their families.

Today's handicapped have the full support of the United States Government. For more than 26 years there have been rehabilitation programs going on in one form or another. Sometimes the progess has been slow, but it has always been going forward. Now today, thanks to several bills passed by the Government, which provides "an effective job counseling—service," many more of the nation's handicapped are finding good jobs. The heaviest burden of the disabled is their idleness. Through the rehabilitation programs they can have the privilege of going forth each day to their chosen work. That is the greatest gift that free men may enjoy in a democratic society. There are no financial yardsticks to measure the difference between a self-reliant, happy worker carrying his own responsibilities, and a glum, depressed citizen depending on others for his everyday needs. The difference is more than in dollars and cents. It is in happiness, good citizenship, and social usefulness.

Rehabilitation means the "restoring of the handicapped to the fullest physical, mental, vocational, and economic usefulness of which they are capable." The services provided by this program vary with the individuals who are served; but in each case the particular difficulties and aptitudes of the persons concerned are the factors which determine which services are necessary. One person may need an artificial limb, another may need just advice and counsel. While one may need training for a job, another may need just a change in the type of work he is doing. No job can be considered entirely suitable for a given person until his remaining abilities have been found sufficient for that job. When the handicapped person is properly trained and properly placed, he can work as well as anybody. Production records prove it. It's not what a man has lost, but what he has left that is important. With proper placement, disability disappears as a job factor. The ability to do a thing is much more important than the disability.

Before the war, the normal tendency of the employer was to place the impaired worker in clerical or sedentary work. However, times have changed, and the handicapped are now taking the actual manufacturing and productive jobs. During the war when there was a scarcity of manpower, an armed America, stimulated with the urgency for maximum production, scraped the bottom of her manpower barrel and uncovered a veritable gold mine. The handicapped were called at last to the production benches, because there was no one else. In the war years there were three-quarters of a million impaired workers working in war plants. Their performance was praised by the management, and they made a marked contribution toward the winning of the war.

During these hard-pressed years, the employer found out a great deal about the impaired worker. Many jobs thought previously to need two hands, were found to be done just as well with one hand and a hook. In quite a number of jobs it was found out that the handicapped do better. For instance, midgets were found to be very useful and suitable for working in small spaces. The blind have developed an almost "supersensitive" feeling in their fingers, doing very well in jobs requiring a highly-developed sense of touch. The deaf do very well in large, noisy factories where the noize doesn't bother them, permitting them to concentrate much better. There is much less nervous strain on the deaf in these jobs than there is on the normal worker. In having lost the use of his eyes or ears, or having lost a limb, the impaired worker seems to have gained courage, stamina, responsibility, mental alertness, and stronger motivation. Most individuals use less than 10 percent of their physical potentials. Only in emergencies do they call on all of their tremendous reserves. When one organ is injured, nature automatically compensates psychologically. The same occurs with the loss of skills and abilities. When greater demands are placed on the different limbs, they become more sensitive. Fingers become dextrous, arms and shoulder muscles are abnormally powerful. That is why the impaired worker does better work.

A national survey was conducted recently by the Bureau of Labor Statistics. It was so organized that the difference between the impaired and the unimpaired worker was focused solely on the existence of the impairment. He was matched with someone of his own approximate age and work experience. These are the results of the survey:

1. Handicapped workers come to work regularly: 55 percent were absent less frequently than the able-bodied. Forty percent had the same record, and 5 percent of the impaired had worse records.

2. Handicapped workers stay on the job longer: 82 percent stayed on the job longer. Sixteen percent had records as good as able-bodied workers, and 1 percent had worse records than the unimpaired.

3. Handicapped workers are equally as efficient or slightly better: 66 percent were equal with the unimpaired. Twenty-four percent were better, and 10 percent of the handicapped were worse.

4. Handicapped workers have better safety records: 56 percent had fewer accidents. Forty-one percent had as good records as the able-bodied, and only 2 percent had worse records than the nonhandicapped.

These facts show that the impaired worker should not be set apart from society as a group for whom special privileges must be sought. The evidence of the survey showed that the impaired worker had a slight edge over the unimpaired. This can be explained by the fact that most of the impaired workers got their impairments through accidents, causing them to be extra careful so as not to let it happen again. They stay on the job longer because many of them know how it feels to be dependent upon someone. To be dependent upon anyone is the last thing that the handicapped person wants.

No forward-thinking company can ignore the employing of the impaired. The employer is the vital factor in the whole rehabilitation program, but in practice he is often considered by himself and others as an outsider. A great many large business concerns, such as the Ford Motor Co., the Bulova Watch Co., Western Electric Co., Goodyear Tire & Rubber Co., and many others, employ substantial numbers of men and women with impairments and say that they are just as good as, or even superior to, able-bodied workers.

With suitable jobs, handicapped Americans are an asset to their employers, communities, and Nation. Through a survey taken, it was shown that there was a major economic and moral gain in the Nation. If there were no work for the handicapped, he and his family would have to go on relief. This would cost the Nation an average of $1,248 a year for each family. This cost would go on year after year. It costs an average of $260 for rehabilitation and is paid only once. After rehabilitation 50,000 men and women were paying $5,000,000 a year in Federal taxes plus county, State, and local taxes. As can plainly be seen, the total cost of rehabilitation is repaid many times over in increased income tax payments alone. If able to work, the physically impaired are entitled to employment security and the opportunity to help the community and Nation produce needed goods and services. The employer does himself a genuine service by hiring the handicapped, as they ask for jobs not as a matter of charity, but on the basis of their abilities to deliver the goods.

The handicapped are not excluded when the brotherhood of man is spoken about. The Declaration of Independence was designed to give justice and freedom to all Americans, not just the nonimpaired workers. Show your faith in democracy by hiring the handicapped, because our democracy rests upon the belief in fundamental worth of every individual. Our Nation would be materially strengthened and our democracy enriched if all citizens capable of performing any sort of useful labor were afforded the opportunity of having employment. At a time when Europe and the hungry world need our help, we should indeed utilize the ability of every American willing and able to work.

Hiring the physically handicapped is not a risk, it is a sound investment.

Proposed FEPC Legislation

EXTENSION OF REMARKS
OF
HON. RICHARD B. RUSSELL
OF GEORGIA
IN THE SENATE OF THE UNITED STATES

Wednesday, May 24 (legislative day of Wednesday, March 29), 1950

Mr. RUSSELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Proposed FEPC Bill Is Unwise Legislation; It Should Not Pass," published in the Deseret News, of Salt Lake City, Utah, May 10, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PROPOSED FEPC BILL IS UNWISE LEGISLATION; IT SHOULD NOT PASS

Just what political advantage the White House can find in forcing Senate Majority Leader LUCAS to bring a Fair Employment Practices Commission bill before the Senate at this time is not clear to the nonpolitical mind.

There must be some. Mr. Truman is a shrewd politician. But the only practical effect of this move that the layman can see is that it will stop all Senate consideration of legislation which is immediately and urgently important, while the southern filibusterers talk FEPC to death.

Filibuster is a dangerous weapon because it is plainly tyrannical when used by Senators more deeply pledged to selfish interests than they are to the national good. But if ever its use is justified, it must be in this case.

FEPC is morally and socially and humanly wrong.

It is wrong because it purposes to use an unconscionable means to force a social change which can come properly only by social evolution.

It purposes to use informers, Government spies, and the State police power, to force employers to hire people whom they may not want in their employ.

The FEPC issue is as simple as that. The southern filibuster will be widely deplored again as another example of anti-Negro intransigence; and some of the southern resistance to FEPC may be exactly that. But that is an instance of being right for the wrong reason. Given time, prejudice will yield to reason but those who are on the right side now will stay there still. Mandatory legislation implemented with the apparatus usually assigned to the use of a despot's police is not correct.

The measure which has been presented for consideration by the Senate would set up a five-man Federal board, called the Fair Employment Practices Commission; make it illegal for an employer to refuse to hire a jobseeker because of his color, religion, or race; and give the FEPC—meaning, this Federal agency—power to compel an employer not to discriminate in the selection of the workers he hires.

If a worker felt that he had been denied a job because of his color, race, or religion, he could hie to the nearest agency of the FEPC and lodge a complaint. He would be encouraged by that apparatus to become a stool-pigeon for the FEPC.

The board would then look into the case. That would mean that its police would enter the employer's premises—farm, school, factory, store, office, mine, mill, or very household—and pry about to find whether he was a discriminator or not.

Once police are granted such a power any abuse is possible; the rifling of the content of records; violation of trade secrets; whatever else venal thought might conceive.

Every effort doubtless would be made to make the FEPC's agents persons of character above reproach; but black sheep do slip in. Consider some of the prohibition agents during the life of the eighteenth amendment. Consider the current case of Dr. Fuchs.

If, in the board's opinion, the employer did exercise discrimination in his choice of an employee, the FEPC could ask a Federal court to compel the employer to stop discrimination in his hiring practice.

So the employer would have an expensive lawsuit to fight—or he would have to give in and hire whoever the FEPC told him to hire, whether they were satisfactory employees in his case or not.

This newspaper believes absolutely without quibble, that any American is entitled to be hired on his merits for the job for which he is fitted better than other applicants for the same job, and not on the basis of race, creed, or color—except in such instances as some such element is an essential to the job.

If, for example, it should be useful that a secretary be able to speak fluent idiomatic Yiddish—or Persian—or Japanese, a highly skilled Negro who might know well a half dozen other languages but not the one desired, might be refused the job.

And he might feel that he was refused because of his color. And he might so report it to the FEPC. And the FEPC would send its police into the organization to investigate.

Absurd? Of course it is. Outrageous? Precisely. Impossible? Not at all.

Such things happened in New York when that State adopted such a law and put it into operation.

Utah's Senator ELBERT THOMAS, chairman of the Senate Labor Committee which reported the FEPC bill out for Senate consideration, says that the measure is "designed to right a wrong which shouts for a remedy."

The wrong that FEPC cannot correct, but rather must make worse, is this: If five people representing as many races, colors, religions—each all three—apply for a job the person who can do it best should get it. Doing it best includes satisfaction of the employer.

A law may force employees on an employer, who are unsatisfactory to him. Under such circumstances an employee of decent sensibilities would hesitate to take the job. He could not be satisfied in it because he would know, constantly, without surcease, that however hard or even well he worked, his employer still would not be satisfied. Some are not equipped with such sensibilities. They become FEPC "informers." Then follows the tyranny of this antisocial law.

Perhaps Senator THOMAS was thinking of mass employment in certain mass industries. We are thinking of human beings as people.

Proposed Transfer of the Navy Special Devices Center From Sands Point, Long Island

EXTENSION OF REMARKS
OF
HON. IRVING M. IVES
OF NEW YORK
IN THE SENATE OF THE UNITED STATES

Wednesday, May 24 (legislative day of Wednesday, March 29), 1950

Mr. IVES. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD the text of an editorial entitled "Johnsonian Economy," published in Newsday of Garden City, Long Island, on Friday, May 19, 1950, expressing opposition to the proposed transfer of the Navy Special Devices Center from Sands Point, Long Island, to the Washington-Philadelphia area.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

JOHNSONIAN "ECONOMY"

While we have always been sold on unification of the Armed Forces, we deplore the asinine byproducts of unification. The old service tradition of R. H. I. P. (rank has its privileges) is hard to control, particularly when it originates at the top of the unified command. Interservice operations too often express interservice jealousies—and the results are unfortunate for the services. We have on Long Island this month an example of how unification can give service operations a set-back instead of a stimulant.

Today we expect official decision on whether the Navy Special Devices Center is to remain at Sands Point or be uprooted and moved to the Washington-Philadelphia area. The move is advocated by Gen. J. T. McNarney, an Army efficiency expert intrigued with the idea that it would save a lot of paper work. If nothing else were involved in the transfer we could see good sense in it. But it is by no means a major consideration.

The Navy has leased its establishment from the Institute of Aeronautical Sciences and invested public money in adapting and improving the plant. The Institute will sell

the property, a 161-acre waterfront estate, to the Navy if the House passes an appropriation bill providing $350,000 for the purchase. As a real estate transaction that would be a good buy. The estate is worth far more and will increase in value.

Furthermore, it is conceded at the Special Devices Center that to move would mean a 2-year setback in its work. Of 500 employees, mostly Navy reservists, who work there, 82 percent would quit their jobs rather than move. They have bought homes here on GI loans. They intend to stay here. These are highly trained personnel, many of whom have been at the Center for 7 years. The Navy therefore opposes the move because it would break the back of its research program—and the Navy should know this better than the Army, which benefits equally from the results of that program without being responsible for it.

If McNarney wins he can boast a paper saving, while the Navy must explain a failure to progress. Boasts ring louder through the halls of the Pentagon, and are broadcast to the Nation from the Office of Defense Secretary Louis Johnson. The Sands Point project is something to keep in mind when the Secretary brags of his achieved economies. How much waste is behind the rest of them, and how much more development has been stymied?

Tribute to Address of Hon. William Benton, of Connecticut, on FEPC

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 24 (legislative day of Wednesday, March 29), 1950

Mr. HUMPHREY. Mr. President, the Minneapolis Morning Tribune in its editorial of Saturday, May 13, 1950, entitled "Cousinly Resemblance," paid appropriate tribute to the brilliant address on fair-employment practices legislation by Senator BENTON. Senator BENTON, through his experience in the State Department as Assistant Secretary of State for Public Affairs, has an intimate and practical understanding of the psychological aspects of the cold war. His address on fair-employment practices legislation demonstrated his clear understanding of the weaknesses in our foreign policy which are a result of our failure to guarantee equal rights and equal opportunity to all people regardless of race, color, religion, or national origin. The relationships between a domestic program and a foreign policy are inseparable. We cannot effectively champion human rights in the councils of the United Nations on the one hand and refuse to take positive action for the guaranty of human rights in the Chambers of the Congress on the other hand. I join with the editor of the Minneapolis Morning Tribune in paying a deserving tribute and thanks to the statesmanlike remarks of our colleague, Senator BENTON.

I ask unanimous consent that there be printed in the Appendix of the CONGRESSIONAL RECORD the editorial entitled "Cousinly Resemblance."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

COUSINLY RESEMBLANCE

Senator WILLIAM BENTON, of Connecticut, a former Assistant Secretary of State for Public Affairs, was discussing this country's civil rights problems in the upper House the other day. Our racial and other discriminations, he said, are providing Russia with propaganda ammunition that is having a dreadful impact in Europe and Asia. It is true, he said, that Soviet propaganda of the sort consisted mostly of lies; yet it bore "a cousinly resemblance to things which have true, or have an element of truth in them."

It is this "cousinly resemblance" which is so disturbing in terms of American foreign policy and the cold war. It would be far easier to combat this Soviet propaganda if it were completely unrelated to the truth; what damages is the hard little kernel of fact at the center of each mass of lies.

This kernel of fact usually involves the denial of certain rights to Americans because of the color of their skin, and is artfully distorted by Soviet propagandists to prejudice millions of nonwhites against us.

Senator BENTON happened to be arguing for a compulsory fair employment practices bill, but whether one believes in such a step or not, no serious observer of Russian tactics in the cold war can fail to be distressed by the effective uses to which they put our treatment of minorities, particularly the Negro.

It is this gap between democratic profession and democratic practice which must be steadily closed if we are to roll back the Russian propagandists on this cold war front. Much progress has already been made in closing it, but much progress remains to be made, too. The "cousinly resemblance" that BENTON speaks about is still too strong for comfort.

James Madison and the American Ideal

EXTENSION OF REMARKS
OF
HON. HARRY P. CAIN
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Wednesday, May 24 (legislative day of Wednesday, March 29), 1950

Mr. CAIN. Mr. President, the junior Senator from Washington was recently privileged to be a member of the Board of Visitors during its annual visit to the United States Military Academy at West Point. During this all-too-brief tour through an outstanding American institution, I spent one evening in listening to an oratorical contest in which Cadet Walter C. McSherry, of McAlester, Okla., participated. Cadet McSherry did not win the first prize, but he brought a full measure of credit to himself and the uniform which he wears so proudly. Cadet McSherry spoke of his hopes for the future and of his desire to compete among free men for success and his living. I was moved by his remarks because his faith is in liberty and a freedom of action rather than in security. What stimulated my admiration for this young American may arouse a similar feeling in others, and I ask unanimous consent that the McSherry oration be printed in the Appendix of the RECORD.

There being no objection, the oration was ordered to be printed in the RECORD, as follows:

JAMES MADISON AND THE AMERICAN IDEAL

(By Walter C. McSherry, class of 1950)

During the early days of our Republic giants walked the earth. Our young Nation was fortunate in having such men to guide its destinies as George Washington, Benjamin Franklin, Patrick Henry, Thomas Jefferson, Alexander Hamilton—to mention merely a few. And among the greatest of these was James Madison. He had a very long and distinguished career in service to our country. He drew up our Bill of Rights, was a leader in our first House of Representatives, founded one of our first political parties, was Secretary of State under Thomas Jefferson, negotiating the Louisiana Purchase, and finally served for two terms as President of the United States, guiding our young Nation through its most critical period, the War of 1812. Yet it is for none of these great achievements that James Madison is remembered—his name comes down to us for the first great achievement of his life, his work in the Constitutional Convention of 1787.

Let us go back to that year and consider the situation which confronted the delegates to that Convention. The 13 American Colonies had emerged from the Revolution as 13 separate sovereign States, with their own governments, their own currencies, their own tariffs, their own petty jealousies. These 13 States had never agreed under the Articles of Confederation, and yet this Convention was to reconcile the differences of these 13 disunited States and mold them into one nation. This was certainly a task for great men. And great men were present at Philadelphia. George Washington, who, as Commander in Chief, had led the Revolutionary armies to victory, was there; the wise and experienced statesman, Benjamin Franklin, then 82 years old; Robert Morris, who had financed the Revolution; John Rutledge, Roger Sherman, Gouverneur Morris, and many other men of wide experience and reputation. Yet to none of these older and more experienced men was there accorded the leadership of the Convention. That position was held by James Madison, a man with little experience save in the Virginia State Legislature, a man unknown outside his home State, the second youngest delegate at the Convention. It was this young man whose work at the Convention earned for him the title of "the father of our Constitution."

It is fortunate for us today that James Madison guided the making of our Constitution. For he was a young man, who built a document for the future in which he was going to live. He was looking forward to the ideal of a great and united America, not backward to the experience of the Revolution. His was a young and adventurous spirit which looked to the future, and built a Constitution to endure. And the value of his vision has been proven—that Constitution has endured longer than any other written document under which a nation exists today.

Our Nation needs more Madisons—more young men who look forward to a growing America and not backward, to rest on past achievements. Perhaps we as a Nation find ourselves today committing the error of looking backward. The cry today is not the cry of James Madison, not the cry of a young and adventurous spirit. It is instead the cry for security: our unions for noncontributory pensions, our electorate for social security, unemployment compensation, subsidies for particular groups. Our economists tell us that our economy is "mature"—in effect, that we have gone as far as we can go. Our philosophers tell us that we should be more concerned with the distribution of what wealth we have than with the creation

of new wealth. Our citizens are apathetic toward their blood-bought right to vote, and then tend to use it in favor of the party that can give them the most promises. Each of these "programs" may be fine in themselves, but are not they all symptomatic of a nation which is looking backward, which has stopped its headlong progress, which is resting on the achievements of its great and glorious past? Yes, we are in need of more Madisons, more young men—you and me—to take an interest in our Government and to help build for that future in which we are going to live.

Perhaps the most fitting tribute paid to James Madison was that of Fisher Ames: "Here was a man to whom principles came first." To us also should come first that principle which James Madison cherished: the principle of liberty, and not the desire for security. It was that principle which underlaid the young and adventurous spirit of James Madison, a spirit which never said we have gone as far as we can go, a spirit that was the great American dream, that is the great American dream, and that always will be the great American dream—so long as there are Americans who believe in it.

Rejection of Reorganization Plan No. 12, Relating to NLRB

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 24 (legislative day of Wednesday, March 29), 1950

Mr. HUMPHREY. Mr. President, on Saturday, May 13, 1950, there appeared an editorial in the Washington Post dealing with a recent decision of the Senate to reject Reorganization Plan No. 12. I ask unanimous consent to have the editorial printed in the Appendix of the RECORD.

At the same time, I want to associate myself with the opinion expressed in the editorial that the President of the United States remove Mr. Robert N. Denham from his office as general counsel to the National Labor Relations Board. I am convinced, in the light of my experience as a member of the Senate Labor and Public Welfare Committee as well as a member of the Senate Committee on Expenditures in the Executive Departments which held hearings on Reorganization Plan No. 12, that Mr. Denham is chiefly responsible for the friction within the National Labor Relations Board which impedes its effective operation. I join in the request to President Truman to remove Mr. Denham from office.

There being no objection, the editorial was ordered printed in the Appendix of the RECORD.

NLRB: WHAT NEXT?

Now that the Senate has rejected a plan for reorganizing the NLRB in a way that would enable the Board to exercise general supervisory powers over prosecuting activities, its operations are likely to be severely hampered so long as General Counsel Robert N. Denham remains in office. For Mr. Denham has been openly critical of Board decisions. He has issued complaints that he knew the Board would dismiss, causing a waste of time, energy, and money on the part of the Government, as well as private parties, and creating uncertainty as to the rights of labor and management under the law. As a result, the work of the Board has been needlessly increased and its efficiency has been impaired.

The conflict of personalities exacerbated by Mr. Denham's disposition to play the role of a mentor instead of a cooperator is chiefly responsible for the internal friction that has interfered with efficient administration. The defects of the existing organizational setup call for a thoroughgoing reform along the lines of the rejected plan to remove the danger of future conflicts. Meantime the appointment of a successor to Mr. Denham who could be relied upon to work with the Board instead of obstructing its activities would enable this "two-headed freak" to function with some degree of smoothness. We hope the rumor that President Truman is contemplating such a move is well founded.

Hon. Raymond S. McKeough

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 24, 1950

Mr. O'HARA of Illinois. Mr. Speaker, it is a matter of great pride to me that a distinguished predecessor of mine, as Representative from the Second District of Illinois, the Honorable Raymond S. McKeough, has emerged from the clouds of criticism long surrounding the Maritime Commission as a knight with white and unspotted armor.

In recognition of the great and fearless public service he has rendered as a member of the Maritime Commission, and which has won him the acclaim of the Nation, the Illinois Democratic delegation in the Congress, both Senate and House, waited on the President to congratulate him on having in the service of the Nation in a post of high responsibility and during a trying period such a stalwart of integrity and such a force of brilliant ability as our former colleague, the Honorable Raymond S. McKeough. The delegation was composed of Senators SCOTT LUCAS and PAUL DOUGLAS, and Representatives SABATH, O'BRIEN, GORDON, PRICE, BUCKLEY, CHESNEY, LINEHAN, MACK, YATES, and O'HARA, all of whom joined in the hope that the President might avail himself of the service of Mr. McKeough as the new Chairman of the Commission.

I may say only that the President's reception of our delegation was most pleasant to all of us, and his words left no doubt of his high esteem of the character and ability of our fellow-Illinoisan and his personal affection for him. We have the happy assurance that the great abilities, the loyalty, and the integrity of Raymond S. McKeough will not be lost to the Government, and that in whatever place of great responsibility he is called upon to labor he will continue to reflect bright credit upon the administration of President Truman.

I extend my remarks to include the following editorial from the Washington Post of May 23, 1950:

MARITIME SCANDAL

The new and searing blast at the Maritime Commission by the House Executive Expenditures Committee has had immediate impact in the acceptance by Congress of the President's reorganization plan abolishing the Commission. The unanimous committee report covering Maritime Commission ship subsidy and sales operations, though temperately worded, is crushing. It chronicles a record of incompetence, procrastination, and evasion rarely equaled in a Government agency. Some of the statements are disturbingly reminiscent of the Black report of 1935, which exposed the then current scandals and led to the passage of the Merchant Marine Act.

The Hardy subcommittee conducted lengthy hearings at which Commission members testified in detail. These hearings, stimulated by the findings of the Comptroller General, probed into the contention that higher ship subsidies than the law contemplates were justified because virtually every case was "exceptional." It concludes that: (1) Maritime Commission administration has been "deficient"; (2) better information on foreign costs could have been obtained for construction subsidies; (3) aid for reconstruction and reconditioning has been based on "unwarranted assumptions and error"; (4) operating differential subsidies are "inadequately supported"; (5) the record is replete with "inordinate delays" and "administrative lassitude"; (6) there has been reshuffling of personnel of "doubtful qualifications and competence."

In light of the Commission majority's efforts on behalf of shipping companies which complain about profit recapture provisions, the figures on one company's benefits from tax advantages under the law are most interesting. Since 1936 that company has paid $570,000 in Federal taxes; without tax benefits the same company would have paid $13,846,000. That record speaks for itself in showing the real nature of the huge subsidies, and it supports the recommendation that the tax advantages and intent of the 1936 act be restudied.

Particularly shocking is the trap Chairman Fleming made for himself when he wrote a letter justifying past subsidy excesses while pretending a short time later that the matter was still being studied. This letter is described by the report as merely an attempted defense of the Commission action which your committee concluded on the basis of earlier hearings to be fraught with error; characterized by administrative incompetence and ineptitude of the worst order; and unsupported by facts of the record. Indeed, the only member not coming in for censure is Commissioner McKeough, who has a consistent record of dissents. Along with the recommendation that the Civil Service Commission examine qualifications of Maritime Commission personnel (who, incidentally, have been under supervision of the Maritime chairman) the report calls upon the Chairman and the Commission to devote themselves to remedial endeavor instead of justifying past actions found to be faulty.

Congress has done its duty in approving the reorganization plan. It is now up to the President to staff the revamped Maritime Board and Maritime Administration with the fearless, uncompromising men, unsusceptible to the insidious influence of selfish interests which the Black report called for 15 years ago. That cannot be done by carrying over to the new set-up men who, with the conspicuous exception of Commissioner McKeough, have shown themselves unable to discharge their public responsibilities.

Seeds of Treason

EXTENSION OF REMARKS
OF
HON. HARRY P. CAIN
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Wednesday, May 24 (legislative day of Wednesday, March 29), 1950

Mr. CAIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which recently appeared in the Review which is a weekly newspaper published in Rosemead, Calif. I know the publisher, Mr. T. A. Stevenson, as a distinguished and completely patriotic American. In his editorial he has reminded all of us of those sentiments which bring real meaning to citizenship. I think that his suggestion that we read Seeds of Treason is deserving of our consideration.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SEEDS OF TREASON

If you are the type that would really enjoy hearing Charles Laughton recite The Face on the Bar Room Floor;

If you would rather hear Lawrence Tibbett sing Home on the Range than O Sole Mio;

If something inside you swelled up when you first heard Kate Smith sing God Bless America;

If you preferred hearing Lionel Barrymore in the Mayor of the Town to Jimmie Fidler or Louella Parsons;

If you have a little difficulty in remembering the names and correct pronunciation of "cavvier-r" and "orr-derves";

If you like your corn on the cob without the inadequate man-made handlebars on the ends;

If you like your chicken drumstick sans knife and fork;

If you like the covered-wagon movies and the rhymes of Eddie Guest;

If all these things fit your mien and manner, then lift up your chin, brother—you have about everything but wings.

We hope all such people, from Maine to California, will buy or borrow the current issue of Reader's Digest and read Seeds of Treason. It is the story, and it is well written, of the Communist cells in the bosom of our Government down in Washington.

It is not a political yarn. It is true detective and the creator of Sherlock Holmes never dreamed up anything so gripping. May God help the United States if we fail in our efforts to unveil and contain these traitors who would destroy the Government as we have known it since '76.

Read this story, please.

Mundt-Nixon Bills

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 24, 1950

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Lutheran for May 17, 1950:

MUNDT-NIXON BILLS

Washington has produced more than its share of hysteria lately. Senator JOSEPH MCCARTHY's charges and the public reaction to them are symptoms of a state of pathological fear. These Communist jitters seem strangely inconsistent with the soundness of American economy and the strength of United States national defense.

The latest contribution to this alarm psychology is the passage by the Senate Judiciary Committee of the Mundt bill (S. 2311), known as the Subversive Activities Control Act. This bill, together with the almost identical Nixon bill (H. R. 3342) in the House, purports to protect the country against communism by requiring the registration of subversive organizations. Actually, passage of these bills would aim a severe blow at the freedoms on which our country was founded and would place sinister power in the hands of a few men.

PROVISIONS

The Mundt-Nixon bills call for the setting up of a Subversive Activities Control Board of three men appointed by the President and confirmed by the Senate. This Board would be responsible for drawing up two lists, one of Communist political organizations and one of Communist-front organizations and of ordering them to register.

Groups which register would be required to submit annually a complete financial report. A Communist political organization would have to submit the names and addresses of all its members. A Communist-front organization would have to report the names and addresses of all its officers during the past year. These lists would be made public.

The criteria by which the board would determine which groups should be on this blacklist are vague and inconclusive. Failure to register would be punishable by $5,000 fine and 5 years' imprisonment, with each day of failure to register and each member's name left off the list constituting a separate offense.

Every piece of mail sent by a registered agency would be labeled "Disseminated by ———, a Communist organization." Members of these organizations would be denied passports to travel abroad. Public inspection of membership lists might be expected to result in loss of jobs and persecution of individuals and their families.

IMPLICATIONS

The basic danger in this legislation is that it attempts to control the things a person may believe and the company he may keep. It substitutes guilt by association for guilt on the basis of overt acts. It introduces the principle of government by intimidation rather than by impersonal legal processes. In seeking to fight communism, it has adopted communism's own favorite tactics.

Part of our country's strength lies in the fact that here a man is free to differ from the majority in his beliefs. If the power which it is proposed to vest in the Subversive Activities Control Board were to fall into the hands of prejudiced and unscrupulous men, no group of dissenters from majority opinion would be safe.

Two years ago a similar bill was introduced by the same two men. It passed the House, but was buried under an avalanche of popular protest in the Senate Judiciary Committee. A similar expression of sentiment may be needed to reassure the men in Congress of the essential level-headedness of the American people.

Honors for Scranton Times Newsmen

EXTENSION OF REMARKS
OF
HON. HARRY P. O'NEILL
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 24, 1950

Mr. O'NEILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Scranton Times honoring Scranton Times newsmen as follows:

HONORS FOR TIMES NEWSMEN

Scranton Times newsmen—reporters to you—are tops in their calling. As proof of that claim can be cited seven awards—two first prizes and five honorable mentions—in a State-wide writing contest sponsored by the Pennsylvania Newspaper Publishers' Association and the department of journalism at Penn State College. The seven awards, by far the largest number received by a regional newspaper in any year of competition, were by four prominent members of the Times news department.

To J. Harold Brislin, Times general assignment reporter, goes the honor of having won two first prizes. He is the first writer in the history of the contest to win more than one first prize in a single year. His awards were in the category of municipal or government story division and in court coverage classification. In addition he received first honorable mention in the public service campaign or crusade series. Nice going.

Other Times men receiving honorable mention were Neil L. Whitney, Times court reporter; John E. Mulherin, labor reporter, and George P. Walsh, general assignment reporter. Good work, boys.

To merit consideration each story had to meet three key tests—quality of writing, sustained reader interest, and general effectiveness. Quality of writing was the basic requirement. Judges in their comments said the entries demonstrated an increased interest among reporters to "go beneath the surface through independent research on the reporter's own initiative." In newspaper circles that has always been the standard by which a reporter's effectiveness and capableness are judged. He must be a digger.

The honors which have come to the Times newsmen are all the more gratifying when it is kept in mind that more than 1,100 entries were submitted for consideration, the greatest number in the history of the contest. Needless to say the Times management is mighty proud of the achievement of its staff members. Fellow workers also received the news with great satisfaction.

Only recently the Times received honorable mention in the Ayer Cup award contest for typographical excellence in first-page make-up in competition with many of the great papers of the Nation. It is writing of the type recognized by the contest judges which has helped to make the Times such an attractive and popular newspaper.

It is worthy of note that Mrs. J. Harold Brislin, woman's page editor of the Scrantonian-Tribune and wife of the Times staff writer, also won a PNPA honor, having been awarded first place for a news story in the field of women's activities. Mrs. Brislin was a winner in other years. Mrs. Brislin's father and brother are likewise newspapermen. It would appear that good writing ability runs in the Brislin family. Robert Mang, court reporter and political writer for the Scrantonian-Tribune, received honorable mention in court coverage classification.

Socialized Medicine's Ills

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 24, 1950

Mr. MILLER of Nebraska. Mr. Speaker, I ask permission to insert my remarks in the RECORD and to include the editorial from the Christian Science Monitor on the subject of socialized medicine's ills.

Mr. Speaker, a careful reading of the editorial points out the difficulties that England is having with her socialized-medicine program. It has always been true that sickness and days lost from work goes up under any system of government-sponsored medicine. It was true in Germany and has been true in every country that has tried compulsory health insurance.

Mr. Speaker, the President's national health program goes beyond politics. It is a bitter fight by misguided radicals of the New Deal to foster left-wing legislation which would destroy the bulwark of freedom and our American way of life. Its proponents give it a high-sounding name and claim that it is not socialized medicine. They do not tell the people it is compulsory. They do not tell the citizens that out of their pay checks will come the funds and that the citizens will have to comply with Federal regulations.

These left-wing proponents even tell you that there is a free choice of doctors. This is not true. Limits would be placed on the number of patients a doctor could serve. You might want the good physician "A," but he is overworked and his panel is full, so you must select some other physician.

The better doctors in England find long queues of patients; some who are neurotic, some with minor ills, and some very ill. The patient becomes a mere number. The doctor can give but a few minutes to each patient. The quality of medical care is lowered. It takes a great deal of time to fill out required endless forms.

The program sponsored by the administration becomes a political set-up with a horde of clerks and inspectors trying to keep track of 150,000,000 people.

Medicine in the United States, under our free institutions, has advanced the healing art until it is the envy of the world. We have the finest hospitals, the best medical equipment, technicians and the finest scientific research in the world. This did not come about under national health insurance; it came about because free men with free minds were permitted to work unhampered by Government regulations. Socialized medicine always destroys freedom of action. It is an assembly-line type of medicine. It destroys the personal relationship between doctor and patient.

The practice of medicine is personal. There comes a time in the lives of all of us when cold facts of science do not prevail. The people want personal service with sympathy, pity, cheerfulness, and confidence in the doctor. No amount of scientific efficiency can take its place in the dark hours of sorrow and trouble so common in the experience of all of us. These are intangible things and only your physician knows that, through the troubled situations of life, fame dies, honor perishes, but loving kindness is immortal.

I hope my colleagues will read carefully the following editorial which so truthfully points out the many problems England has encountered in her national health insurance program:

SOCIALIZED MEDICINE'S ILLS

The increase in reported sickness during Great Britain's first full years of socialized medicine has its significance for the United States. Much of the British program is embraced in the proposal of government medical care insurance which the Truman administration is promoting. This part of British experience with the system will hardly recommend it to Americans.

Sickness among adult Britons rose 8 percent and workdays lost through illness 22 percent, according to a government-sponsored survey. The increase occurred for the most part among women. The workdays lost by young women climbed 32 percent and by elderly women 41 percent, while the workdays lost by men went up 8 to 9 percent. Officials credit the growth of reported illness mainly to economic reasons—people now getting medical service who previously could not afford it.

But there are additional reasons. In the experience of European countries with compulsory sickness insurance it has long been observed that when workers are taxed for medical care they often claim it unnecessarily. That is the only way that many figure they can get something back for their money. The situation encourages a flood of patients with minor illnesses for which they would not ordinarily seek medical attention. Some doctors are consequently overworked to the point of hasty, careless diagnosis and treatment.

It is also a standard part of the government insurance system to give weekly cash payments to claimants. The chance to stay at home and live for a while with the aid of state funds frequently militates against a speedy return to work. In many instances the cash benefits delay recovery.

The more workdays lost through illness, the smaller the production and the lower the general standard of living.

These and other disadvantages of a national system of government insurance for medical care are getting no publicity from the Truman administration. British experience, however, is bringing out some of the missing facts.

Statehood for Alaska

EXTENSION OF REMARKS
OF
HON. LOUIS B. HELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1950

Mr. HELLER. Mr. Speaker, the question of statehood for the Territory of Alaska is no longer only the concern of the people in Alaska. It has become the concern of every American citizen whether in Alaska, Florida, Texas, New York, or elsewhere. The Second World War emphasized the Territory's strategic location and importance to the United States. It is the only part of the American continent that reaches into the Eastern Hemisphere. Across narrow Bering Strait, Siberia can be seen with the naked eye. Alaska lies on the great circle route to the Orient. Its Pacific coastline is longer than that of the three Pacific States of California, Oregon, and Washington combined. It is truly America's last frontier.

Alaska's importance to the United States does not rest solely on military considerations. It is a vast storehouse of largely undeveloped resources. These include fish and fish products, furs, hides, minerals, oil, forests, and hydroelectric power. One of the reasons why these resources are only partially developed is Alaska's Territorial status and the discriminations against her which result from this status.

Alaska was purchased from Russia on March 30, 1867, for $7,200,000. Until the discovery of gold in the Klondike in 1898, Alaska's impact upon the United States was practically nil. The purchase had been termed "Seward's Folly" by some, a contemptuous name derived from the fact that William H. Seward, Secretary of State at the time, had been chiefly responsible. During the years 1867–84, the area was under the control first of the United States Army and then the Navy. In the latter year, however, Congress passed the first organic act providing solely for the administration of justice in Alaska, and including no provisions concerning legislation. The general laws of Oregon were extended to Alaska as far as they were applicable and not in conflict with the laws of the United States. The first criminal code was enacted in 1899 and the first civil code in 1900. Alaska was granted a Delegate in the Congress in 1906, and in 1912, another organic act set up a formal Territorial government. Though amended several times since 1912, this act still provides the basic law under which Alaska functions. It has never been thoroughly revised to keep pace with changing conditions in the Territory.

In effect, the organic act has been discriminatory in character and operation. Under it, the legislature may not authorize bonded indebtedness or create any debt. It may not alter, amend, repeal, or modify the fish and game laws passed by Congress. The amount of general property taxes which may be levied is fixed by Congress instead of by the local legislature. The latter body may not provide for county government within Alaska without congressional approval. Restrictions such as these are not the attributes of free people. Alaska has served a very long period of tutelage in a Territorial status—longer than all but four of the States that have "graduated" from Territories to statehood. Until she is permitted to settle her own local problems, all our protestations

about the self-determination of peoples must continue to have a hollow ring.

There are a number of arguments advanced by the opponents of statehood. Most of them can be refuted with not too great difficulty. The proponents of statehood fail to understand why the fact that Alaska does not touch an existing State at any point should be an argument against her admission to full participation in national affairs. In point of time, Alaska is closer to the seat of Government than all but the immediately adjacent States were when Washington first became the capital city of the United States. Using modern means of transportation, it is possible to travel from Juneau to Washington in less than 24 hours. Facilities exist for rapid communication by telephone, telegraph, and mail.

There exists within the Union, as parts of States, several areas of noncontiguous territory. In addition to islands, these include two portions of the North American mainland separated entirely, as is Alaska, by interventing Canadian territory. One is the portion of Minnesota lying north of the Lake of the Woods. The other is the peninsular portion of Washington, containing the village of Point Roberts, which is cut off from the rest of that State by the forty-ninth parallel and Boundary Bay. At one time, Congress considered seriously, and apparently without mental reservations, a proposal to annex all of Alaska as a county of the State of Washington. If, in principle, parts of States may be noncontiguous with the rest of the Nation, why not entire States?

Eight of the present States were not contiguous with the body of States at the time of admission, for example, Louisiana and California. The latter was separated from the nearest State—Texas—by more than 450 miles. That was in 1850, when many weeks of difficult overland travel were involved in covering the distance. Only 515 miles of friendly Canadian territory separate Alaska from the present body of States.

One of the arguments most frequently advanced against statehood for Alaska is that the population of the Territory is too small. The 1940 census recorded a population of 72,524. In the years since then, Alaska's permanent population has steadily increased with estimates now placing it anywhere from 95,000 to 105,000. In relation to Alaska's vast area—586,400 square miles—her population is small. Twelve States had smaller populations than the Territory at the time of their admission, however. Historically, there always has been a rapid increase in population through settlement upon admission of a Territory to statehood.

What are the advantages of statehood for Alaska? There are many indeed, both for the Territory itself and for the Nation as a whole.

A rapid increase in the number of permanent inhabitants will follow statehood. This will mean an increase in the investment capital available and the establishment of new industries which are essential for Alaska's development.

Statehood will mean that Alaska will have a State constitution drafted in terms of the needs of Alaska rather than an organic act outmoded in many of its provisions and not tailor-made for Alaska even when first enacted.

With the advent of statehood, Alaska will automatically become entitled to the benefits of the Federal Highway Aid Act. With the help of this act, an adequate network of roads can be constructed and maintained, linking centers of trade with outlying districts and acting as an incentive to larger communities. As a State, Alaska will also become entitled automatically to benefits under other Federal grants-in-aid programs that are carried on in the States. This is in sharp contrast to Alaska's experience as a territory, when it either did not become entitled to them, as in the case of the Highway Aid Act, or waited for years for extension of such legislation, as in the case of the Adams and the Smith-Lever Acts for agricultural development.

As a State, Alaska will be entitled to two Senators and one Representative, elected by the people of Alaska, chosen to represent them, familiar with their constantly changing problems, and able to exercise much greater influence in the enactment and administration of national legislation affecting the welfare of Alaska.

Under statehood, it is to be expected that Alaska's judiciary and police systems will be expanded and adapted to the physical conditions of the area. At present, the District Court of the United States for Alaska combines the normal jurisdiction of similar Federal courts in the States with a general jurisdiction of all civil, criminal, equity, and admiralty cases. Court is regularly held at but four places in the whole vast Territory of 586,400 square miles, with additional terms left to the discretion of the judicial council.

Alaska as a State would be permitted to borrow for State purposes, pledging the faith of her people. This is a common practice among the States at the present time, but under the organic act is forbidden to the Territory. Alaska is able to raise the revenues necessary to support statehood. This is evidenced by the recent enactment by the Territorial legislature of an income tax on personal and corporate income at approximately 10 percent of the Federal levy, and a general property tax, the first such taxes in Alaska's history.

It must be remembered that not all Federal services and activities will cease with statehood any more than they have ceased in continental United States. Expenses of activities peculiarly the problem of local administration will be shifted to the State, but Federal-aid programs will continue.

Mr. Speaker, all Americans agree in principle on the desirability of self-government and the largest possible measure of home rule. The advantages of statehood for Alaska seem obvious. The time has arrived when she should enjoy these advantages. She has served her apprenticeship faithfully and well. She should be welcomed into the Union and given full partnership as our forty-ninth State.

Hauling the Mails

REMARKS
OF

HON. THOR C. TOLLEFSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 24, 1950

Mr. TOLLEFSON. Mr. Speaker, on May 4, 1950, I questioned the Postmaster General's effort to economize on postal expenditures by curtailing mail deliveries. I suggested that the Postmaster General revoke his order of April 18, 1950, making the letter carriers the scapegoats of a delusive economy measure. My remarks in the Appendix of the CONGRESSIONAL RECORD, on pages A3277-A3278, concluded as follows:

> If he is sincere let him do what he can to economize by paying the railroads no more than the law entitles them to.

In the course of those remarks, I called attention to the overpayments which the Postmaster General was giving the railroad carriers. I quoted his own testimony to the effect that he was paying them for about twice as much car space as the mail actually used. I quoted also from the General Accounting Office Report showing that the Postmaster General was paying de luxe passenger rates for mail carried in refrigerator and other kinds of freight cars. With mail payments to the railroads running about a quarter-billion dollars a year, these overpayments struck me as a very serious matter.

In a statement to the press released May 12, 1950, and styled "a factual statement to clarify the situation," the Postmaster General took up my remarks. He did not deny that he pays passenger rates for mail carried in freight cars. Nor did he claim that the law requires him to do that. The Postmaster General's position was that it is "futile to say that the Postmaster General should take some action to reduce the payments to railroads."

Regarding the enormous waste of mail-car space, he said the law requires him "to pay for space in two directions when it is ordered in one direction." To imply that the Department can correct this situation, he went on, is error.

Briefly, then, the Postmaster General did not deny my statements about overpayments made by him to the railroads. Instead, he derided them as "facetious statements."

I am serious about these surcharges which the Postmaster General magnanimously pays the railroads. I see nothing droll or comical in a tight-fisted policy being applied to letter carriers while at the same time railroad carriers receive

millions of dollars of public funds under an open-handed policy that deliberately overpays them. I doubt very much whether this Congress or the people to whom it is responsible appreciate that brand of humor. Let us take a look at the record and see the actual situation.

First, take the Postmaster General's statement that he cannot correct the situation which finds him paying for about twice as much car space as mail actually uses on the trains. The General Accounting Office report submitted to the Senate Post Office and Civil Service Committee earlier this month, which I quoted in my remarks, states, on page 8, as follows:

> Congress has established two necessary standards for the payment of railway mail service:
>
> 1. The service must be prescribed by the Postmaster General (39 U. S. C. 545).
>
> 2. The service is to be increased, reduced, or discontinued (necessarily by the Postmaster General) with pro rata reductions as the needs of the postal service required (39 U. S. C. 564).

In other words, the Postmaster General, according to the General Accounting Office, controls the amount of service the railroads are to be paid for. This appears to have been Mr. Donaldson's own view about his authority when he was still new in the office of Postmaster General. In reporting on the Railway Mail case now pending before the Interstate Commerce Commission, his 1948 annual report, on page 70, stated:

> As a result of studies made by the Department in the course of the pending proceeding, the Postmaster General, on July 2, 1948, filed with the Commission a new comprehensive plan for the transportation of mail by railroad. The purpose of this plan, which supersedes the original plan filed in 1917, is to enable the Commission to fix fair and reasonable rates for the transportation of mail in accordance with the service prescribed by the Postmaster General, and to revise and improve the manner and conditions of the service to meet modern postal needs. By order dated August 30, 1948, the Commission recognized the new comprehensive plan as effective October 1, 1948, and ruled that rates for the services prescribed thereby must abide final disposition by it of the pending proceeding.

What happened to this comprehensive plan of the Postmaster General which, less than 2 years ago, was announced to be a significant improvement in the railroad mail situation? Let us go back to the General Accounting Office report again. That report states:

> By the act of 1916 the Postmaster General is required (39 U. S. C. 546) to file with the (Interstate Commerce) Commission a comprehensive plan for the transportation of the mails on said railroads and shall embody therein what he believes to be the reasonable rate or compensation the said railway carriers should receive.
>
> The Postmaster General, under date of July 2, 1948, filed a comprehensive plan with the Interstate Commerce Commission which provides a basis for the changes necessary in the rules of the post office to ameliorate the difficulties attendant upon the round-trip provisions and otherwise. * * *
>
> The next step in implementing the measures recommended by the Postmaster General would, of course, be the establishment in the Post Office Department and promulgation to the railroads of the necessary rules and regulations to bring the plan to practical operation.
>
> This plan would not eliminate the round-trip provisions but would work toward better control and greater utilization of the space paid for under the provisions * * * (pp. 31–32).
>
> However, no regulations have been issued under the plan but the Interstate Commerce Commission by order of March 30, 1950, has set hearings for September 19, 1950 * * * (p. 3).
>
> Pending changes which may be made in the law it would appear to be highly desirable that the possibilities under the comprehensive plan be realized immediately so that an early and clear picture of the unjustified deadheading be obtained and so that difficulties in the way of proper audit of railway pay matters be eliminated (p. 36).

In other words, less than 2 years ago Postmaster General Donaldson started out to effect big economies in railroad mail service through a new comprehensive plan therefor. He was required by law to file such a plan with the Interstate Commerce Commission and he did so. The Commission recognized the plan as effective October 1, 1948. That was just before the last general elections. All that remained to put the plan into practical operation was "the establishment in the Post Office Department and promulgation to the railroads of the necessary rules and regulations." Almost 2 years later, however, the General Accounting Office reports to the Senate Post Office and Civil Service Committee that "no regulations have been issued under the plan" although "it would appear to be highly desirable that the possibilities under the comprehensive plan be realized immediately."

Now, what does the Postmaster General say about the railroad mail situation today? He says it is a situation that can be corrected only by Congress or the Interstate Commerce Commission, but is beyond his power to correct. He does not mention his comprehensive plan at all. Much less does he explain why he has not issued the regulations to put the plan into practical operation.

Does not the Postmaster General believe that Congress and the people are entitled to know what he has done or intends to do about his comprehensive plan for economies in railway mail payments, and what his reasons are? Self-styled "factual statements" of the kind recently released by him do not "clarify the situation" to my way of thinking. I, for one, would like to know why it is "futile to say that the Postmaster General should take some action to reduce payments to railroads," particularly when the Postmaster General himself has gone on record with an elaborate plan for that very purpose which the Comptroller General strongly recommends should be put into practice immediately. When we pass a law in Congress and the President approves it, it is effective unless a court sets it aside. I think Congress and the public are entitled to know why the Postmaster General still has not put into effect his railroad mail service economy plan which the Commission recognized as effective October 1, 1948.

Note that under this economy plan, the Postmaster General would not be paying passenger rates for mail carried by freight. The new plan stipulates that "the character of trains carrying the mails shall be that of passenger train. In the event mails are transported in freight trains, no more than the usual and just freight rates shall be paid in accordance with the classifications and tariffs approved by the Interstate Commerce Commission." This can hardly be called radical. Why, in the name of common sense, would anybody pay passenger prices unless he got passenger service, anyway? It looks wrong on its face. If there is any reason other than a deliberate policy of overpayment to railroads, I, for one, would like to know what it is.

Here again the Postmaster General's "factual statement" does not "clarify the situation" for me. It does not deny that he pays passenger rates for mail carried in refrigerator and other kinds of freight cars. Nor does it claim that the law or the Commission require him to make such overpayments. It may well be that it is necessary for the railroads to carry mail in "nonstandard equipment," as said in the "factual statement," but where is the necessity of paying deluxe passenger rates for such service? If it isn't in the law or in the Commission's rate orders, the only place it can be is in the Post Office Department's policy of deliberately overpaying the railroads.

Let me emphasize that I am serious about these surcharges which the Postmaster General magnanimously pays the railroads out of public funds while he justifies reductions in mail deliveries as a necessary economy measure at the expense of letter carriers. I stress again that this entire matter should be thoroughly investigated by the General Accounting Office, the agency of Congress charged with the duty of supervising payments by the Post Office Department. And to the Postmaster General, I say again that if he is sincere, let him do what he can to economize by paying the railroads no more than the law entitles them to.

James Madison, Father of Our Constitution

EXTENSION OF REMARKS

OF

HON. FREDERIC R. COUDERT, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 24, 1950

Mr. COUDERT. Mr. Speaker, under leave to extend my remarks, I include the following article by Mr. Harry Schlacht, which appeared in the New York Journal-American of May 10, 1950:

JAMES MADISON, FATHER OF OUR CONSTITUTION

(By Harry H. Schlacht)

The orator is the voice of the Nation.

We congratulate the young American orators who participated in the Hearst newspapers' forensic competition of 1950.

We commend the high-school and college students who were privileged to speak on the subject of James Madison, the father of our Constitution.

Our young Americans have done themselves proud. All Americans are proud of them.

They will be among the leaders of tomorrow. They will be among the defenders of democracy.

The Hearst newspapers' oratorical competition is sponsored in the interest of better speech, in the interest of better citizenship, in the interest of better Americanism.

As the poet derives from reading the poetry of the masters, as the painter derives from studying the great paintings, as the composer derives from listening to musical masterpieces, so our young speakers improve by taking part in oratorical contests.

This is the object of the Hearst oratorical competition.

Great men are the guideposts and landmarks in the Nation.

James Madison—gifted, favored, venerated man—father of our Constitution, fourth President of the United States, friend of liberty, friend of peace.

He was one of the pillars of his country. He was one of the ornaments of his age.

We see him playing a glorious role in the War of Independence. We see him fearless in his fortitude. We see him bidding defiance to the arms of power. We see him confident in the righteousness of his cause.

We see him toiling in war and in peace to form and perpetuate a Union to secure for an invisible posterity the priceless blessings of inseparable liberty and law.

We see him standing beside the Constitution as with a naked sword flaming with truth to protect it from desecration. We see him sounding an instant loud alarm to awake the hosts of the Nation to its rescue.

We see him as President of the Republic with a presence of purity, elevation, and moral dignity.

We must catch the spirit of his noble ideals. We must rise to the contemplation of the conscious virtue that inspire them.

It is our duty to preserve and cherish our inheritance which our forebears have bequeathed to us.

It was won by their toil. It was watered by their tears. It was fertilized by their blood.

James Madison was the father of our Constitution.

That document is the inspiration of our American way of life.

James Madison was the voice of peace, harmony, and union.

And may we, his fellow Americans, to the last second of recorded time, fix our eyes upon the memory of, and even listen with our ears to the life and achievements of this great American.

He glorified the generation in which he lived. Future generations will be honored by his glory.

British Income From Latin-American Investments

EXTENSION OF REMARKS

OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 24, 1950

Mr. O'HARA of Illinois. Mr. Speaker, the subject of investments of American capital in foreign fields is one of wide interest in connection with the development of point 4 of the President's plan and the Export-Import Bank loan guaranty bill which was approved by the Banking and Currency Committee of which I am a member. Part of our loans are going, and will continue to go with increased volume should the bank guaranty bill be passed, to the countries of Latin America. As contributing, therefore, to the fund of information on the general subject available to the Members of the House, I am extending my remarks to include the following article by J. Fred Rippy, the eminent Latin-American scholar and professor of American history on the faculty of the University of Chicago, from the April 1950 issue of the Journal of Business of the University of Chicago:

BRITISH INCOME FROM LATIN-AMERICAN INVESTMENTS, 1939 AND 1948

(By J. Fred Rippy, professor of American history, University of Chicago)

In explaining the economic difficulties of the United Kingdom, the proponents of the Marshall plan have strongly emphasized the recent shrinkage in British foreign investments and the consequent loss of income. Testifying before the Senate Committee on Appropriations on June 17, 1949, for instance, Paul Hoffman, Administrator of the European reconstruction program, stated that British "overseas investments" had "all been washed out" by the recent war. (Hearings on the foreign aid appropriation bill (81st Cong., 1st sess.), p. 446. Mr. Hoffman probably meant to say that the United Kingdom's foreign debts now exceed its foreign investments. According to Cleona Lewis, the United States and the Foreign Investment Problem (Washington, D. C., 1948), p. 60, British overseas investments declined from £4,600,000,000 in 1939 to £3,300,000,000 in 1947.) This article will examine the extent to which that statement holds true in respect to British investments in Latin America. (The statistics which follow have been compiled from the South American Journal (London) for 1939, 1940, 1948, and 1949. Stock-Exchange Official Year Book (London) for the same years has been utilized for background and some checking of detail.)

It may be stated at the outset that there had not been any marked decline in the net earnings of British capital in Latin America since 1939. The net income from this investment in 1948 was £18,536,620. It was £19,010,329 in 1939. The difference is only £437,709!

A decided decline in the nominal value of the aggregate investment had occurred, but the average yield had improved, rising from 1.6 percent in 1939 to 2.9 percent in 1948. Nearly 62 percent of the total British investment in Latin America yielded no return in 1939; the capital earning no income was less than 40 percent in 1948. The total investment had been considerably reduced, but there had been more than a corresponding shrinkage in the "sour" part of it. The Latin-American segment of the British overseas investment had not been "washed out." It had been pared down by expropriations, redemptions, liquidations, purchases, and various other means, but the net yield on what remained had gone up, especially the returns on shipping, banking, mining, petroleum, and various miscellaneous enterprises. All statistics in this analysis dealing with income refer to net income after payment of Latin-American taxes.

British capitalists received an income of £4,030,466 in 1939 from an investment of £324,149,858 in Latin-American government bonds. The rate of return was approximately 1.2 percent. In 1948 they received an income of £4,248,693 on a nominal investment of £206,145,017 in these government securities. The rate of return was more than 2.1 percent. A total of £210,891,878 invested in government bonds in 1939 yielded no income; this "bad" portion of the investment in governments had been reduced to £5,457,460 by the close of 1948.

A nominal shipping investment of £12,753,348 in the Latin-American sphere in 1939 yielded an income of £593,241, or 4.65 percent. The yield in 1948 on a nominal capital of £10,404,468 was £719,199, or 6.9 percent. An aggregate of £1,407,054 invested under this heading in 1939 brought no return; the comparative figure for 1948 was zero.

British investment in Latin-American banking, £8,977,630, returned an income of £202,000 in 1939, about 2.25 percent. In 1948 income was £242,400 on a nominal investment of £4,040,000, making a rate of return of 6 percent. The unprofitable segment of the banking capital, which stood at £4,937,630 in 1939, had disappeared by 1948.

Owing to sales negotiations and delays in liquidation, the return on railway capital was smaller in 1948 than in 1939. The British investment in Latin-American railways has not been profitable for many years. A nominal capital of £477,765,391 yielded only £5,773,648 in 1939, approximately 1.2 percent. The return in 1948 was £1,080,599 on a nominal investment of £176,215,257, considerably less than 1 percent. Rail capital, yielding no return in 1939, totaled £336,032,299, as compared with £152,865,562 in 1948.

On a miscellaneous investment of £304,258,078—in mining, petroleum, agriculture, manufacturing, public utilities, trading, and a few other enterprises—the return was £8,410,974, around 2.9 percent in 1939, with £144,799,022 paying no dividends. Income under this category in 1948 amounted to £12,245,279 on a nominal capital of £236,018,132, the yield being 5.1 percent, and only £93,438,089 failed to return dividends.

Omitting the bad investments, which will be referred to again in another connection, the salient details are set forth in table I.

TABLE 1.—*Income from British investments in Latin America: Distribution by types of investment*

	1939			1948		
	Capital	Income	Rate	Capital	Income	Rate
Government bonds	£324,149,858	£4,030,466	1.2	£206,145,017	£4,248,692	2.1
Railways	477,765,391	5,773,648	1.2	176,215,257	1,080,599	.6
Shipping	12,753,348	593,241	4.65	10,404,468	719,199	6.9
Banking	8,977,630	202,000	2.25	4,040,000	242,400	6.0
Miscellaneous [1]	304,258,078	8,410,974	2.9	236,018,132	12,245,279	5.1
Total	1,127,904,305	19,010,329	1.68	632,822,869	18,536,620	2.9

[1] Includes mining, petroleum, agriculture, manufacturing, public utilities, trading, and a few other enterprises.

The major British investments in Latin America, in both 1939 and 1948, were in Argentina, Brazil, Mexico, Chile, Uruguay, Cuba, and Peru. But the best rates of return were not obtained from those countries, where much of the capital was invested in Government securities, railroads, and other public services. The highest yields came from Bolivia, Venezuela, and Ecuador and from petroleum and mining enterprises. The comparative data for all but three of the countries are presented in table 2.

TABLE 2.—*Income from British investments in Latin America: Distribution by countries*

	1939			1948		
	Capital	Income	Rate	Capital	Income	Rate
Argentina	£428, 518, 172	£10, 984, 919	2.56	£88, 145, 690	£3, 390, 377	3.8
Brazil	260, 790, 683	1, 093, 419	.42	207, 973, 684	6, 643, 312	3.1
Mexico	172, 573, 838	489, 734	.28	141, 809, 181	1, 368, 305	.9
Chile	85, 878, 232	1, 501, 340	1.75	47, 180, 823	925, 666	1.9
Uruguay	39, 281, 186	1, 111, 614	2.82	28, 888, 503	1, 435, 927	4.9
Cuba	34, 403, 941	365, 335	1.06	27, 503, 497	254, 041	.9
Peru	29, 321, 862	313, 349	1.07	25, 133, 624	344, 904	1.3
Venezuela	18, 888, 408	1, 390, 714	7.35	18, 353, 300	1, 825, 791	9.9
Guatemala	10, 738, 300	207, 008	1.92	9, 908, 480	231, 082	2.3
Colombia	5, 797, 087	77, 985	1.35	5, 334, 047	202, 973	3.8
Costa Rica	4, 701, 600	118, 460	2.51	4, 459, 960	42, 575	.9
Bolivia	4, 481, 469	326, 063	7.27	3, 070, 817	675, 000	21.9

Paraguay	2, 235, 080	73.3	2, 809, 280	84.5
Honduras	1, 728, 400	100.0	889, 820	100.0
El Salvador	1, 105, 240	100.0	703, 500	41.4
Nicaragua	Nil	Nil	Nil	Nil
Shipping	1, 417, 054	11.1	Nil	Nil
Banking	4, 937, 630	55.0	Nil	Nil
Total	698, 077, 803	61.9	251, 806, 111	39.8

Tables 2 and 3 should be scrutinized together. They disclose striking differences in the yield of investments among the 17 countries and within each country. (Although no satisfactory statistics are available for Panama, Haiti, and the Dominican Republic, which are therefore not included in the tables presented here, it is likely that the British have some capital in all three of them.) If the income on the aggregate investment had been as large as the income on nearly 60 percent of it, the return in 1948 would have been approximately 4.4 percent on the total investment. If the yield on the aggregate capital had been as high as the return on the Venezuelan portion, British income in 1948 would have amounted to around £62,000,000. If the income on all the nominal capital had been as large as it was on the Bolivian investment, British investors would have received some £138,000,000.

Englishmen would have been fortunate if all their capital in this and other outlying regions had been invested in tin, quebracho, petroleum, and other monopolistic enterprises. Instead of drawing a good part of their income from their colonies, as in the past, the inhabitants of the United Kingdom, if they could greatly expand such investments, might obtain their income from a much wider area by monopolizing some of the world's most necessary commodities. British income from Ecuador, Venezuela, and Bolivia in 1948 should be examined closely. The return on nearly half of the Ecuadoran investment averaged above 8 percent. The yield on 46 percent of the Venezuelan investment was only a little short of 22 percent. It pays to invest in petroleum. British income from 44 percent of the investment in Bolivia was at the rate of 50 percent. Capital invested in tin brings good returns. There was a time when the yield of nitrate capital in Chile was equally profitable, but the competition of synthetic nitrates destroyed those bountiful yields. (I have dealt with British nitrate profits in an article published in Pacific Historical Review, XVII (November 1948), 457–465.)

It is obvious that most of the "sour" investments in the 2 years under consideration were in Argentina, Brazil, Mexico, Cuba, Peru, and Chile and that the major part of them were in government bonds and railways. The Peruvian Corporation, a giant organization which owns most of the Peruvian railways and a few other enterprises, has never been profitable except to the managers and the debenture holders. The United Railways of Havana, the biggest railroad enterprise in Cuba, has rarely paid dividends on its stock. The Argentine railways, enormously overcapitalized, yielded only scanty returns for decades, and the same has been true of the municipal transport system of the city of Buenos Aires. Only the São Paulo Railway, among railroads owned by the British in Brazil, has been profitable, and that has been sold to the Brazilian Government, which, after several years of default, reduced both the principal of and the interest on its government bonds held by foreign investors. Mexico not only has followed the same course, but its Government-controlled railways have paid almost no dividends in more than three decades. Cuba, however, requires further comment. The return on British capital not invested in Cuban railways was approximately 21 percent in 1948. The investment was in two American-controlled firms manufacturing tobacco—another virtual monopoly.

Regarding the remaining countries, little needs to be said. According to the South American Journal, the British investment in Honduras yielded no income either in 1939 or in 1948. This capital is involved in scandalous issues of government securities sold in the late 1860's and the early 1870's, but at least a part of the principal is being returned. The bad investments in Costa Rica, Guatemala, El Salvador, and Paraguay are in rails and government securities. The capital yielding no returns from Bolivia seems to be invested in gold mines and forest enterprises. In Ecuador a large part of it is in government bonds.

Further light may be thrown on this "sour" segment by approaching it from another angle. Table 4 distributes it among the five types listed in table 1. The "sour" investments in the miscellaneous group are mostly in public utilities and port works.

TABLE 4.—*British capital yielding no income: Distribution by types of investment*

	1939	1948
Government bonds	£210, 891, 798	£5, 457, 460
Railways	336, 032, 299	152, 865, 562
Shipping	1, 407, 054	Nil
Banking	4, 937, 630	Nil
Miscellaneous	144, 799, 022	93, 483, 089
Total	698, 077, 803	251, 806, 111

Finally, it may be rewarding to view the data in a tabulation combining the leading countries and the major types of investment. Table 5 is an effort to present this combination.

A careful examination of tables 4 and 5 will reveal two important facts. The main problem of low returns and complete lack of returns from British investments in Latin America arises in the fields of government securities and railways and in some sectors of the broad miscellaneous group, and the solution of low returns will have to be found, if any solution is possible, mainly in Argentina, Brazil, Mexico, Chile, Cuba, Peru, and Venezuela. Although the percentage of the investment yielding no returns or low returns is as high or higher in some of the other countries, the total investment in them is much smaller.

TABLE 5.—*British capital yielding no income: Distribution by principal countries and types*

Country and year	Government bonds	Railways	Miscellaneous
Argentina:			
1939	Nil	£156, 864, 304	£31, 898, 633
1948	Nil	3, 513, 987	34, 328, 134
Brazil:			
1939	£158, 528, 518	25, 963, 616	40, 082, 816
1948	654, 700	28, 489, 852	4, 828, 724
Mexico:			
1939	38, 597, 130	89, 541, 495	34, 355, 921
1948	Nil	73, 151, 940	24, 600, 212
Chile:			
1939	Nil	11, 400, 544	3, 738, 805
1948	Nil	7, 615, 344	2, 812, 500
Cuba:			
1939	Nil	25, 991, 661	1, 158, 700
1948	(1)	23, 166, 975	Nil
Peru:			
1939	5, 559, 100	[2] Nil	[2] 16, 500, 000
1948	2, 416, 000	(1)	[2] 16, 743, 764
Venezuela:			
1939	(1)	1, 999, 482	7, 222, 330
1948	(1)	1, 628, 922	8, 263, 365

[1] No investment.

[2] All except one of the British-owned Peruvian railways were listed by the South American Journal in 1939 under "Miscellaneous," and all were so listed in 1948. They are controlled, it will be recalled, by the Peruvian Corp., which accounts for nearly all the unremunerative capital attributed to Peru in this table.

Mexico, Brazil, and Peru accounted for £202,684,748 of the total of £210,891,798 defaulted Latin-American government securities held by the British in 1939. Chile's governments were paying the British only 2.1 percent that year; Argentina's yielded them 4 percent, and Cuba's 4.6 percent; they had no investment in Venezuelan Government securities. Peru and Brazil accounted for £3,070,700 of the British-held Latin-American government bonds in default in 1948, more than half the total of £5,457,460 for that year. The amount of bonds in default was far smaller than in 1939. But the yields were low: Argentina, 4.1 percent; Brazil, 2.2; Mexico, 0.9; Chile, 1; Peru, 0.6; there was no British investment in 1948 in Cuban or Venezuelan Government securities. By presenting the British bondholders with the choice between continuation of defaults and reduction of interest rates or principal, or both, many of the Latin-American countries have succeeded in reducing both their English-held debts and the interest rates thereon; but can principal and interest, once pared down by negotiation, ever be raised by the same process? The average return of 2.1 percent on Latin-American government securities held by the British in 1948 was low; but by what means can the rate of return be increased?

The average yield on the British railway investment, 0.6 percent in 1948, compared with 2.1 percent in 1939, seems preposterous. Perhaps the ultimate solution, except in Mexico, where the British investment is now in government railways, will be found in the sale of these British lines to the governments of the countries in which they are located; and it may be that the same solution can be worked out for the public utility and the port segment of the miscellaneous group.

In the rail and miscellaneous classifications, as in the case of government bonds, the problem is again largely concentrated in the nations listed in table 5, although the Argentine railway problem, so far as the English are concerned, has been practically solved by the recent sale of the major British lines. More than 95 percent of the British capital yielding no income in both these categories, in 1948 as well as in 1939, was invested in the seven countries listed in this table.

The average yield on the British railway investment in six of these seven republics was as follows: Argentina, 1.7 percent in 1939 and nothing in 1948; Brazil, 0.6 percent in 1939 and 0.9 in 1948; Mexico, no returns in either year; Chile, 1.5 percent in 1939 and 1.9 in 1948; Cuba, 0.5 percent in 1939 and 0.3 in 1948; Venezuela, 0.4 percent in 1939 and slightly more than 1 in 1948. The earnings on the Peruvian railways are not available, but they are known to be very small.

Average yields on miscellaneous investments were better, especially in 1948: Argentina, 3.7 percent in 1939 and 3.9 in 1948; Brazil, 1.2 percent in 1939 and 6.7 in 1948; Mexico, 1.1 percent in 1939 and 2.8 in 1948; Chile, 1.6 percent in 1939 and 4 in 1948; Cuba, 3.1 percent in 1939 and 20.7 in 1948; Venezuela, nearly 8.5 percent in 1939 and 11.5 in 1948. Average returns on the British miscellaneous investment in Peru were brought down by including under this heading the capital in the Peruvian Corp., most of which was actually in railroads; the percentages were 1.2 in 1939 and 1.4 in 1948.

Is there anything which the United States might do, by persuasion or investment, to improve the yield of British capital operating, and in some cases practically sunk, in Latin America? There is much talk these days of relieving the dollar shortage in the United Kingdom by pumping United States capital in the underdeveloped areas of the British Empire. Could the same objective be attained in part by employing this or some other means nearer home?

Address by Hon. Emanuel Celler, of New York

EXTENSION OF REMARKS
OF

HON. EDNA F. KELLY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 24, 1950

Mrs. KELLY of New York. Mr. Speaker, under leave to insert my remarks in the RECORD, I include the speech made by our distinguished colleague, the Honorable EMANUEL CELLER, of New York, on May 20, 1950, on the occasion of the first dinner given by the Association for the Help of Retarded Children.

This association is an organization of parents, those with normal children, and those of the pitifully handicapped little ones, the mentally retarded. These are the forgotten children and for them we are trying to make a better life and a better world. The dinner on May 20 was not only to inaugurate a campaign for financial assistance, but also to acquaint the public with the conditions surrounding these children and with our plans to help them.

As cochairman of this organization for Kings County, Brooklyn, I am privileged to ask that you read Congressman CELLER's inspiring address:

It is heartening to know that at long last, the parents of mentally retarded children have reached the point in their travail where it is possible for them to submerge their personal sorrow at the fate thrust upon their offspring and band together with others equally burdened in an effort to bring to the attention of all members of our community the touching, the overwhelming plight of some of our children. When a new-born child is abandoned on a doorstep or under a bush somewhere, we all shudder at the desperation, perhaps the innate cruelty inherent in the act. Our sympathy for a child so victimized by human irresponsibility is instinctive and instantaneous. Fortunately, most mentally retarded children are not thus deprived of the love, the comfort, and the devoted interest of mother and father. But they do suffer the indifference, the neglect, the lack of understanding on the part of the general public.

We have homes for foundlings and a progressive program of care for foster children. Our energies have been directed toward the improvement of the physically handicapped child, who has proved to be considerably enhanced and psychologically sustained by our educational projects. But the problems attendant upon mental deficiency and mental instability, on all levels seem to founder us. While there has been a tremendous improvement in the housing and treatment of such individuals, we still appear to resist coming to grips with these situations. Perhaps it is the vast complexities involved and the inability on the part of the afflicted to give us much cooperation. However, in the field of care for mentally retarded children, we have had, here and there, the ardent pioneers who refused to be licked by the apparent impossibility and the apparent hopelessness of the task. Motivated by a deep-seated sympathy, an unusual insight into the emotional reactions existing in these little souls hold these courageous people to their ideal of trying to establish some standards, some procedures, some techniques with which to aid in rehabilitating and alleviating the condition of backward children. Perhaps the most beneficial result was the dissipation of many of the superstitions, the taboos, surrounding mental incapacity. Pearl Buck, the distinguished author and one of the sponsors of the Association for the Help of Retarded Children, in a recently published article, has written from the depths of a full heart of the anguish she endured in seeking an adequate adjustment for her dear daughter. No one could treat the subject more eloquently. We are tremendously impressed by her inspired and intelligent efforts to seek the most comfort, the most love, that could be found anywhere for her child. As she knows, her child will never know the joys and sorrows of a full life, but Mrs. Buck has achieved, for herself and her child, as much a measure of happiness as is possible under existing conditions. Her great heritage is hope—and I am very much encouraged to know that she joins with us in this movement, as I feel we will all benefit immeasurably from her personal experience.

In casting about for solutions one surveys the programs inaugurated in other countries. In reviewing the English experience one is struck by the fact that a very definite emphasis is placed upon the differences existing between mental deficiency and lunacy. The British Mental Deficiency Act of 1913 was a very ambitious program, but it was almost lost in the exigencies of World War I and mounting costs. The basic act was amended in 1927, but again mounting costs curtailed the plans. Although local educational authorities were empowered to provide special schools, occupation day centers, etc., activities have been run for the most part by voluntary mental welfare associations attempting to supply supervision and control.

Some European countries have a fine record of assistance to the mentally retarded children. The Scandinavian countries, I believe, have a good system of special schools and special institutions, universally recognized. In Brussels there is the famous institute at Gheel. As I understand it, those responsible for the very successful experimental work at Vineland studied closely the methods pursued at Gheel. Before the war Germany, too, had a very fine system of educational and occupational programs for the mentally deficient.

In the United States the care of the mentally deficient children has been relegated entirely to the individual States. In 1940 there were only 61 State institutions throughout the United States for such care. In New York State today there are only six institutions for the care of mentally retarded children and daily applicants are refused for lack of space and trained personnel.

This tragic dearth of facilities is most discouraging to the parents of a child needing such treatment. However, this lack may be due in part to the fact that it has been almost impossible to determine with any degree of exactitude the number of deficient children. Many parents are reluctant to reveal that their child is so afflicted. Many parents do not recognize such an incapacity at an early age or are unaware that such a handicap may be helped by new methods and educational efforts.

The problem is twofold. First, we must establish the over-all need as accurately as possible. Some authorities believe there is basis for the assumption that almost 1 person in every 100 is mentally retarded,

and of these the majority are retarded from noninherited causes. Secondly, we must spark public interest to the point where remedial efforts will gain wide support. To do this, those most concerned must be convinced that something can be done. Parents must be encouraged by the fact that groups such as ours are springing up all over the country; that there is a distinct possibility that their child may be aided to meet the criterion of social adequacy and adapt to the requirements of what we accept as a normal environment. Parents must recognize that psychotherapeutic help is absolutely essential to any solution of this problem. We must not allow ourselves to be hampered by a limited horizon. We must avoid reproducing the mistakes of the past in this field. As we now have something definite to look forward to, we must assume the role of pacemakers. As you may know, scholarships and fellowships for individuals, grants to colleges and industry for basic research, aid for scientists, are to be provided in the future through the new National Science Foundation. This is the first time the Federal Government has ever directed itself to the basic sciences out of which may come the discovery of the causes of and the cures for disease and physical and mental maladjustments. It is, indeed, a great forward step, although the liberals in Congress, like EDNA KELLY, myself included, had to battle against terrific odds to get the bill through. The President has just approved this act creating the National Science Foundation. Five hundred thousand dollars will be available to set up an organization and to start operations. It will be July 1, 1951, however, before cash can begin to flow in any appreciable quantities to individuals and institutions interested in research in basic science. There will be $15,000,000 to spend in the first full operating year and $15,000,000 a year after that. Money will go to aid research in basic sciences as they relate to mathematics, engineering as well as physics, biology, biochemistry, medicine, psychiatry. Almost any individual or institution qualified to carry on research might be in line for a grant from the Science Foundation. At the moment it is assumed that most of the research will be done in universities, with emphasis upon fellowships and scholarships. A university may apply for a grant to carry on a particular line of research, or it will be selected so to do. As to scholarships, the plan is to make cash grants to individuals entirely on the basis of merit and ability. In most instances, however, it is believed that the grants will be given to experienced persons carrying on postgraduate studies or research. It is hoped that out of these inquiries and research may come the cause and cure of the mentally retarded.

I think it is clear to all of us here tonight that we can no longer afford the short cuts. We must have the clinics, the guidance bureaus, the special schools, the research, the educational training, and the occupational training. We must see to it that trained personnel are developed to handle such an ambitious project. We must secure the assistance of scientific investigators to explore the possibilities of the development of psychiatric techniques, both with individuals and with groups. New methods must be devised to cope with the individual, the institutional, and the community problem of the mentally deficient. Too much?

Not at all. It is only the beginning—and the National Science Foundation is the first step in many which should help the Association for the Help of Retarded Children toward its final goal—the elimination, if humanly possible, of all types of congenital and postnatal brain impairment. Not one of us can reach this objective alone. We must all work at it together.

The Delaware River Basin Integrated Water Project

EXTENSION OF REMARKS
OF
HON. F. H. LICHTENWALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 10, 1950

Mr. LICHTENWALTER. Mr. Speaker, under leave to extend my remarks, I desire to place in the RECORD an address given by my friend and coworker in the field of conservation and water resources, Mr. James H. Allen, executive secretary, Interstate Commission on the Delaware River Basin, delivered before the fortieth annual convention of the National Rivers and Harbors Congress, together with an address he delivered before the Lehigh Valley Flood Control Council:

THE DELAWARE RIVER BASIN INTEGRATED WATER PROJECT

Mr. Chairman, ladies and gentlemen, I am going to be somewhat brief in my presentation for the principal reason that I have brought with me a reprint of an address which I made recently, which quite thoroughly explains what the big water problem is in the northeast section of the country, encompassing particularly the States of New York, New Jersey, Pennsylvania, and Delaware.

I was interested in the remarks of the gentleman from Texas in which he told us about the Texas Water Conservation Association and the way that it is planning, and not only planning but executing its water program.

In the section which I represent, the principal problem is the problem of supplying adequate water for domestic and industrial purposes to a section of the country in which resides approximately 10 percent of the entire population of the United States. Here are located the country's largest and third largest cities, New York City being the largest, and the third largest, Philadelphia. Also in this area is a very rapidly growing metropolitan area in northern New Jersey.

Each of these sections, for a long while, has been cognizant of the fact that it must plan carefully to meet future water-supply needs. In each case, they have made numerous surveys to determine how those future demands could best be met and, in every instance, it was found that the most satisfactory source of additional water supply was the Delaware River Basin. But, the Delaware River Basin is an interstate stream and all of the parties making these individual surveys found quickly that, in order to go ahead with an individual project, they had to overcome a lot of interstate implications.

As a consequence, 3 years ago the Interstate Commission on the Delaware River Basin, which was created about 10 years previously, suggested to the States and to these political subdivisions that the time had come when they must abandon looking at this problem on a mind-your-own basis, and unite and find out for once and for all whether the Delaware River Basin could appropriately meet their future demands. As a result of that suggestion, the Legislatures of New York, New Jersey, and Pennsylvania, in 1949, directed the Interstate Commission on the Delaware River Basin to make the necessary engineering surveys.

This work is now in progress. About 3 months ago, we presented to the Governors of the three States a preliminary report setting forth that it was feasible and advisable for the States to join in the future construction of a single integrated water project for their mutual welfare. That project will supply anticipated future additional demands for water supply for New York City and New Jersey in a total aggregate amount of approximately 1,000,000,000 gallons of water a day. It will also provide the city of Philadelphia, if it desires, a new source of water supply amounting to about 500,000,000 gallons a day. Furthermore, the project will provide a very necessary stream regulation advantage.

In the lower reaches of the Delaware River, every time there is a drought, the industries are confronted with a situation that is difficult, damaging, and expensive, that situation being the upstream movement of brackish water. Under this proposed project, it will be possible to release into the Delaware, during times of drought, a quantity of water sufficient to keep that brackish water below any point where it can cause damage to industrial development.

In order to carry this project out, it is proposed that the States negotiate a compact creating a Delaware River Water Commission. To that commission would be delegated the responsibility for financing, constructing, and operating the proposed project. Like the projects in Texas, Mr. Jackson, we believe that this project will be entirely self-liquidating and that it will be unnecessary to call for subsidies on the part of Federal and State Governments. I agree with you that, if we are to make progress in this country, the States and the local governments must face these obligations and be willing to meet their responsibility in financing such programs. Thank you. [Applause.]

THE DELAWARE RIVER BASIN INTEGRATED WATER PROJECT

(By James H. Allen)

I appreciate very much this opportunity to acquaint you with the general features, and more particularly with the significance, of the proposed Delaware River Basin water project which was submitted last Friday to the Governors of Pennsylvania, New Jersey, and New York by the Interstate Commission on the Delaware River Basin.

In all the country's history, probably no incident has arisen which so well dramatizes man's dependency upon a supply of adequate water as the situation which now confronts New York City. The critical water shortage, involving the Nation's largest metropolitan population in a series of bathless Thursdays, focuses national attention upon the Delaware River Valley and a crucial issue awaiting decision regarding its development.

The four States in which this watershed is located now have a glorious opportunity to achieve a high standard in wise government. They must take advantage of this opportunity or it undoubtedly will be lost for all time. It's now or never.

The States—New York, New Jersey, Pennsylvania, and Delaware—are about to wrestle with a problem which is as vexing as it is critical. If solved sensibly they will do themselves a tremendous service, individually and collectively, socially and economically. Of greater significance, they will be setting a new pattern for a national policy concerning control and development of the land and water resources of interstate river regions. One certainly is needed. President Truman's recent appointment of a National Water Resources Commission to study this problem is evidence of the fact.

Will the States meet or muff the challenge? The entire country is profoundly interested in the answer.

Residents of the Lehigh Valley should have more than passing interest in the question,

for yours is a highly industrialized valley and industrial areas throughout the Nation have come to realize that their future expansion is intimately related to ability to develop increased water supplies. This stark fact was strikingly brought home very recently by Mr. Eugene Grace, chairman of the board of Bethlehem Steel Co. On the occasion of a testimonial dinner, tendered by the leading citizenry of Bethlehem, the noted industrialist stated with emphasis that any substantial expansion of the steel company's operations in the Bethlehem region will hinge upon the availability of adequate and satisfactory sources of water supply. I feel quite certain that Mr. Grace would agree that the future of his company will also depend upon the continuance of the principles of free enterprise upon which this country has prospered so well.

BACKGROUND

Most of you know that Incodel has gained the reputation of being quite a prognosticator. In June 1948, well over a year before the streams and reservoirs in this section of the country began to go dry, it suggested that the time had come to find out whether the upper Delaware River Basin should be developed for metropolitan water supplies and other beneficial purposes. I assure you that it was just plain luck, not crystal-gazing, that caused Incodel to advance its proposal well in advance of the period when the rains failed to come.

In any event, the Incodel suggestion was well received and in July of 1949 it began to carry out the reciprocal directive by the States of Pennsylvania, New Jersey, and New York to determine whether it would be advisable for the three States to join in the future construction of a single integrated water project for their mutual benefit and welfare.

Incodel engaged consulting engineers to make the necessary investigations. It received last Thursday a preliminary report covering the results of the first of two steps in the survey. The report confirms what Incodel anticipated, namely, that there is an urgent need for an integrated interstate water project for the development and conservation of the resources of the upper Delaware River Basin.

It is not my purpose this evening to describe the physical aspects of the proposed project in great detail. Rather, I propose to explain briefly the high lights of the project and then to discuss some of its implications, particularly those which concern the question of Federal-State relationships in the development of the water resources of the country.

INCODEL WATER PROJECT

First stage

The first stage of the proposed project is designed to provide the equivalent of 1,000,000,000 gallons of water daily. Of this quantity, it is estimated that about 450,000,000 gallons daily will be needed to meet additional requirements in northern New Jersey and New York City areas during the next 25 to 30 years. The project, in its first stage, will also provide for the storage of sufficient water to maintain a minimum flow in the Delaware River at Trenton of approximately 3,000,000,000 gallons of water per day. This will result in practically doubling dry-weather flows in summer and fall such as existed last year. Periods of low run-off of this type sometimes last as long as 6 to 8 months.

The first-stage project is comprised of the following elements:

1. A storage reservoir on the west branch of the Delaware River at Cannonsville with a total capacity of 118,000,000,000 gallons. This reservoir would be used primarily for the purpose of furnishing water in order to increase low river flows in the entire length of the river.

2. A diversion dam on the main river near Barryville holding about 10,000,000,000 gallons. The major purpose of this dam will be to permit diversion of flood flows for water supply.

3. A storage reservoir with a total capacity of 263,000,000,000 gallons on the lower Neversink River and on Basher Kill extending from Godeffroy to Summitville. The principal function of this reservoir will be to store the flood flows captured at Barryville and transported therefrom by tunnel connection between the two structures.

4. A transmission tunnel from the upper part of Godeffroy Reservoir to New York City's existing main supply tunnels in Brooklyn. From this common transmission tunnel branch connections would be extended to the major water-supply systems of northern New Jersey.

The total storage provided in the first stage of development is 390,000,000,000 gallons, of which at least 78,000,000,000 gallons will remain in the reservoirs to maintain minimum conservation lakes.

No detailed estimates of cost of the first-stage project have yet been made. Preliminary estimates indicate it will amount to about $500,000,000. The project will be largely self-liquidating.

Subsequent stages

The order of subsequent construction stages will depend upon the occurrence of expected future events.

If and when a further additional supply, above the 450,000,000 gallons a day provided by the first stage, is required by northeastern New Jersey and New York City, it will be necessary to build two additional reservoirs; one on Flat Brook in New Jersey, and one at Fishs Eddy on the East Branch of the Delaware in New York. The former would have a storage capacity of 84,000,000,000 gallons, and the latter, 157,000,000,000 gallons.

When Philadelphia, or the Philadelphia and southern New Jersey areas, desire to obtain water from the integrated project, the construction of a large storage reservoir with a total capacity of 121,000,000,000 gallons of the main channel of the Delaware River at Wallpack Bend will be required.

Water can be delivered from Wallpack Bend to these areas in either one of two ways.

The first would be by tunnel and aqueduct to points of delivery. The second method would use the Delaware River to transport water by gravity to a point immediately above Trenton.

The second method is obviously more economical and would provide a good quantity of raw water. It would also result in further augmentation of dry water stream flows.

No extensions to the first-stage project are expected to be necessary for at least 25 years.

Lehigh Valley needs

The survey gave consideration to the probable future requirements of every section of the Delaware Basin and its adjacent regions. It was determined that the demands for water in the Lehigh Valley would probably increase by 100 percent during the next 50 years. These requirements can be best met by the development of the upper Lehigh and its tributaries. It appears that the establishment of a metropolitan water district to meet the future needs of the region may be desirable. This is a problem to which the Lehigh Valley Flood Control Council could advantageously direct its attention.

SIGNIFICANCE OF WATER PROJECT

I would like now to discuss aspects of the proposed integrated water project which, in my mind, have far greater significance than its physical features.

First, I would state that, in Incodel's judgment, the project will be built. The only question is: Who will do the job—and how?

We believe the project—or a reasonable facsimile—will become a reality because it is a public necessity. Both New York City and northeastern New Jersey have to secure additional water supplies. Otherwise, their growth and prosperity will be imperiled. Philadelphia probably will not find it advisable to abandon its present sources in favor of supply from the integrated project for many years. Nevertheless, there is an urgent and immediate need for a program which will iron out the violent fluctuations in stream flows, thereby reducing floods and increasing dry weather flows along the entire length of the Delaware.

It has been well established that projects in the upper Delaware Basin will accomplish these ends. But, in this day and age, developments to meet these requirements can no longer be carried out on a disconnected piecemeal basis. That is why each State should do everything in its power to avoid acting on a mind-your-own-business basis. This would only lead to one result—litigation in the United States Supreme Court. Such procedure would involve bitter and expensive litigation, serious delay, and, most probably, disapproval of any individual project except under conditions which would make it economically unattractive.

Nor can the States procrastinate. The public is now insisting with increasing vehemence that the many uses of water required to meet the demands of modern life must be made available. People are no longer concerned about who will do the job. Results are what they are after. If the States don't move, the Federal Government will. Make no mistake about that.

Federal regional authorities

I'm in a position to know what I'm talking about. The advocates of centralization are a persistent, ambitious lot. Why, last year, as in the several preceding sessions of Congress, they introduced numerous bills designed to blanket the country with federally controlled river valley agencies, patterned after the Tennessee Valley Authority. The same bills are before the present Congress and are being vigorously promoted.

Mind you, I do not say that TVA has not done wonderful things for the Tennessee Valley. However, there is nothing amazing about that. With the faith and credit of the National Treasury behind it, with no obligation to make a complete accounting to the public, when a large part of its cost can be charged off to inflated or dubious benefits from navigation and flood control, it has been no great task to build the grandiose and awe-inspiring structures which made up this huge and complex project.

On the chance that I might be accused of being prejudiced, I refer you to the article by John T. Flynn, in the Reader's Digest of December 1947, entitled "The Hidden Red Ink in TVA's Books." In a foreword by the publisher attention is called to the fact that Mr. Flynn was formerly an advocate of TVA's. But the foreword goes on to state that, after months of investigation, he changed his mind.

Mr. Flynn's main theme has to do with TVA's accounting procedures which, according to him, are obscure, if not deceptive, to say the least. But, to me, Mr. Flynn's most significant observations deal with the question of the fundamental philosophy underlying our constitutional form of government.

Mr. Flynn describes TVA as a Federal corporation cunningly devised to accumulate power and to elude congressional authority. Having pointed out that David E. Lilienthal, its former Chairman, calls TVA democracy on the march, Mr. Flynn observes, "I think it is democracy in retreat, a return to the European system of centrally controlled provincial governors. With TVA as a beginning, the advocates of regionalism are planning, under the guise of flood, navigation, and forestry control and other excuses, to blanket America with this new type of government

which represents a complete revolution in our political system.

Other Federal threats

I, for one, do not want to see such a revolution materialize. Nor do I believe that this threat appeals to the people of the Lehigh Valley. But do not think for a moment that it is the only danger of federalization in this region. Longer established agencies of the Federal Government are licking their chops in anticipation of finding other areas upon which to fatten. One of the most aggressive and ambitious is the Department of the Interior. I would like to inform you that its Assistant Secretary, William Warne, hasn't let the critical water shortage in New York City go by without an attempt to use it as a springboard to win greater power and authority for his bureaucracy.

In an interview with representatives of the press on December 20, he made it clear that the Department is looking forward to the opportunity of assuming control of the rivers in the eastern half of the United States.

Mr. Warne said, "We don't have any new programs formulated yet for river development in the East, but there will be more of them. The present situation is leading inevitably to that. Only through comprehensive development of eastern streams can you solve the problem of water supplies which will become critical."

We of Incodel do not understand where the Department thinks it derives its jurisdiction in the matter of formulating water-project programs in the East. Certainly the Army engineers would not go for that. On the other hand, we are aware of the fact that congressional laws do delegate power to the Interior Department's Bureau of Reclamation in certain Western States with respect to the planning and construction of projects for the irrigation of arid lands. Significantly, we have heard numerous complaints from these areas to the effect that this essential use is being subordinated and penalized economically in favor of an obsession by the Bureau to produce so-called cheap public power.

Hoover Commission findings

And we are also aware of the findings of ex-Gov. Leslie A. Miller, chairman, Natural Resources Committee of the Hoover Commission. In an article in the May 14, 1949, issue of the Saturday Evening Post, he takes the Bureau to task for incredible extravagance resulting from their money-spending contest with other Federal agencies in harnessing western streams.

We in the East, and particularly in the States of New York, New Jersey, Pennsylvania, and Delaware, have always been in the forefront in campaigning for governmental reforms. We certainly do not want any part in extending a system which promises to destroy us. Already we are paying a disproportionately large share of the bill for unduly ambitious schemes now being foisted upon other sections of the Nation by federally controlled river basin development agencies.

A NEW OUTLOOK

We admit that we are now confronted with a critical water situation and will be for years to come. We know that the problems involved are complex. We are convinced that they can be best solved by the application of the principle of wholesome governmental cooperation. We claim we have the capacity to make that principle work.

The Delaware River Basin water project is our challenge. We intend to meet it.

We propose to do so by establishing by compact among the States of New York, New Jersey, Pennsylvania, and probably Delaware, a Delaware River Basin Water Commission which would be empowered to plan, finance, construct, maintain, and operate the recommended water project. We have already taken steps toward the drafting of such a compact. A subcommittee of Incodel is at work on this task.

Under present policies and precedures now being followed in the execution of Federal water projects we would be perfectly justified in asking the Federal Government to finance the entire cost of the Incodel water project. But we do not propose to do this. Rather, we intend to set an example by paying the cost of all of the program which is obviously primarily for our own benefit, and to campaign for the adoption of a comparable policy for the Nation as a whole.

We are convinced that this principle is sound and would be advantageous and equitable to Pennsylvania and its component regions including the Lehigh Valley and also to the other States in the great Northeastern section of the country.

At the same time we recognize there are States and regions in the country that are less fortunate economically than this section and that we have an obligation to assist them in the development of their resources and economy. We should be willing to do this, but not to the extent of footing a grossly disproportionate part of the bill, as we now are doing.

At the present time, something like a billion and one-half dollars a year is being appropriated annually by the Federal Government for Federal land and water development projects. Over 30 percent of this money, or approximately $450,000,000, comes from New York, New Jersey, Pennsylvania, and Delaware. I doubt very much if more than 10 percent of what we pay in, or $45,000,000, is returned to us in the form of facilities and services. The balance goes to our poor country cousins.

Incidentally, one of the principal deficiencies at present in Federal programs for water-resource development is the lack of sound, uniform standards and criteria for the allocation of costs and evaluation of reimbursable features in determining the economic feasibility of multiple-use projects. That is one of the reasons why we in the Northeast are not getting a fair break.

It's time, in my judgment, for the adoption of some new standards. I'm wholeheartedly in favor of economically sound land and water projects, whoever may carry them out. But we have a tremendous job to do right here at home and I think we should have some of our own money to do it with. I suggest, in principle, the adoption of the following policy to accomplish this end.

Let the Congress annually set up a budget for land- and water-development programs, including stream clearance and pollution abatement. Based upon my experience and observations, I believe such programs are usually at least 75 percent for the benefit of the areas in which they are located and not more than 25 percent in the national interest. On the assumption that these ratios are reasonable, I would suggest that the Federal Government return to the States 75 percent of their share of the funds earmarked for land- and water-conservation programs and let the States decide how and where to spend this money on projects for their particular benefit. The balance could be put in a Federal pot to be used where most needed.

Some program of this general nature must be adopted, I believe, if the goal is to establish honest natural resources development programs in keeping with a policy which will put an end to the present type of situation which Governor Miller has described as "the battle that squanders billions."

Your council has definite reason to be interested in and to lend its support to changes that will result in the adoption of a sound national policy for the development of the natural resources of the country. The future of your region's foremost industries, the tax-paying producers of electric power, steel and cement and the railroads, and the future of your local governmental structure, are at stake. No organization is better qualified than your group to understand and cope with the problems involved.

If you are truly concerned about the future welfare and prosperity of your region—and of your country—you should work unceasingly for the wise utilization, conservation and development of the natural resources of the Lehigh River Valley under a system which will preserve the maximum degree of control in the hands of the people in the region directly affected.

Point 4 and the United Nations

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Wednesday, May 24 (legislative day of Wednesday, March 29), 1950

Mr. LEHMAN. Mr. President, the eminent economist, Dr. Mordecai Ezekiel, has written a very informative and illuminating discussion of the relationship between the point 4 program and the economic activities now being carried on by the United Nations. This article was printed in the weekly publication New Republic, in the issue of May 15. I ask unanimous consent to insert this article in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

POINT 4 AND THE UNITED NATIONS

(By Mordecai Ezekiel)

For most of the world's population, the great wartime pledges of freedom from fear and want—for all men everywhere—are still largely a dream. Three-quarters of the world's people live in underdeveloped countries in malnutrition and poverty. They share but little in the dynamic progress of the rest of the world. The war lifted their aspirations toward political independence and economic progress, yet in most cases their food and consumption standards have not yet regained even the low prewar levels.

Meanwhile the economic outlook of a great capital-supplying region—western Europe—grows darker as the years of ECA aid run out.

President Truman's point 4 proposals offered a way to start attacking the problems of economic development in the poorer nations of the world. They also offered western Europe, where substantial progress is under way, an answer to the great economic question: What happens when the Marshall plan ends?

When approved by Congress and implemented by international agreement, the point 4 program will provide technical experts to assist countries to develop their economies. But know-how alone is not enough. Technical services are useless, as President Truman has said, unless they are followed by international investment to make the blueprints function.

In prewar days the underdeveloped countries helped finance a triangular (or multilateral) flow of trade which supported the prosperity of western Europe. The underdeveloped regions (especially in the Tropics) regularly sold to North America far more in raw materials (rubber, copra, petroleum, silk, sugar, jute, copper, coffee, tea, and many others) than they purchased in North American exports. Their surplus dollar earnings

went to western Europe, as profits and interest on investments and as payments for western European industrial products and services. There, in turn, dollars helped western Europe finance its great net imports of goods from America (including purchases of our cotton, tobacco, dried fruits, corn, wheat, bacon and lard, automobiles, office machinery, and heavy electrical equipment).

Today the underdeveloped countries are no longer able to earn a dollar surplus in foreign trade and the increases in self-government and the liquidation of foreign holdings have reduced their obligations to Europe. Instead of receiving a steady current net inflow of dollars from the underdeveloped countries, western Europe has been paying back for wartime contributions, notably in the gradual liquidation of blocked sterling balances.

Western Europe has thus been unable to finance its postwar import needs from America not only because of the war's devastation in Europe, but also because of the havoc in other parts of the world and the consequent disappearance of dollar payments. That is a major reason why, as European industry and agriculture complete their rehabilitation and as Marshall plan payments approach their end, Europe still finds itself faced with a continuing inability to buy and pay for its needed imports from the Americas.

Since western Europe broadly imports raw materials and exports finished products, no amount of integration of its own national economies can solve its over-all dollar problem; nor can the increased cooperation of western European economies with those of other soft-currency areas in Asia, Africa, and Latin America provide Europe with all the raw materials it needs; it must draw on North America, too.

This economic background is essential to an understanding of point 4's broad basic conception: To give underdeveloped nations the know-how and the means to help them help themselves; to raise their production and consumption, their exports and their imports; and to bring about a steady, dynamic increase in the world's economic activity. This increase would simultaneously make markets for the expanding industries of the Americas, Europe, and the underdeveloped countries. But whether the program can contribute to a rapid reestablishment of a multilateral system of world trade, or whether it simply creates direct markets for United States goods which will dry up as soon as our financing slackens, depends on the way in which it is carried out.

The extent of dollar investment abroad needed to enable world trade to function is indicated roughly from past experience. Since the war, the United States and Canada have financed world recovery by loans and grants running from $7,000,000,000 to $8,000,000,000 a year. In 1949 these declined to $6,000,000,000, and 1950 will be lower still. Most of those funds went to western Europe.

To make point 4 really effective in the future, international investment in the underdeveloped countries will be needed eventually in sums of around $5,000,000,000 a year. Later, the nations can pay back these investments from their expanded exports to the United States and other countries. American national income has doubled every 20 years. With continued growth in our economy, even if it is not quite so rapid, we shall need more and more imports in the years ahead, especially of raw materials. Thus we can help to provide expanding export markets for production in backward countries. During the period in which the funds are being advanced, they will provide dollars for the rest of the world to continue to buy American exports. If a considerable part of these dollar investments is spent for European products, increased investment in the underdeveloped countries can also help to restore the triangular flow of world trade. This would support the recovery of western Europe and the continuation of democratic governments, thereby making markets for European industrial products. It would also give Europe the dollars to continue its imports of American goods. Over the longer pull, as the world economy and our own expand together, we then would have time to adjust ourselves to fewer and fewer net exports, instead of having to make the change almost overnight.

If these good results are to follow, three conditions are necessary:

The funds advanced, whether loans or grants, must not be tied to direct expenditure in America.

Europe must produce the largest part of the industrial equipment needed by the underdeveloped countries.

These countries in turn must spend a substantial part of their foreign funds in Europe rather than in the United States.

All of these conditions are germane to the current issue, now hotly debated in Washington, as to whether the United States share of point 4 technical assistance should be provided directly by the United States, or whether a substantial portion should be channeled through the UN and its specialized agencies.

On their side, the manifold departments and agencies of the United States Government rightly stress the fact that they are already in the technical-assistance business. Under Nelson Rockefeller's Office of the Coordinator of Latin American Affairs and its successor agencies in the Office of Foreign Agricultural Relations in the Department of Agriculture, and in parallel activities in other agencies, a steady stream of American experts has gone to many countries, especially in Latin America. Cooperative arrangements with governments have been worked out, joint corporations have been set up to finance economic development, and loans from our Export-Import Bank have backed this development. Since the war, the bank has loaned nearly three times as much to Latin-American countries as to all other underdeveloped countries, in ratio to population. Alone of the backward regions, and in large part because of American aid, Latin America's people are better fed today than they were before the war. In the same way ECA is providing technical assistance to European countries and their colonies and territories. In addition, thousands of men and women throughout the world are receiving practical experience each year in the Bureau of Mines, the Forest Service, the Bureau of Agricultural Economics, the Reclamation Service, the Public Service and other Federal agencies.

Our Government bureaus are already spending millions of dollars a year in technical-assistance activities. They are experienced in choosing personnel, establishing relations with countries, giving practical help on the spot. All they need to do is to expand their present scale of operations. On the other hand, the UN institutions have had little operating experience, and are hampered by multiple controls and international frictions. Also it is easier and simpler for a Government department to get an appropriation from Congress, for use by established Government departments, spend the money directly, and account to Congress on how it is spent, than to follow through on the spending of the money as part of the operations of an international agency drawing funds from many countries. In these circumstances, many Washington officials honestly feel they are best qualified to spend the bulk of the proposed point 4 appropriations, and they reflect this feeling to Congress.

Here, on the other side, are the arguments which favor using the UN and its specialized agencies:

First, if a substantial portion of the United States funds is channeled through the UN, it will stimulate corresponding contributions from other countries. These countries, in addition, have capable technicians in many fields available for foreign service. Why should we in the United States pay the whole cost ourselves when other advanced countries are prepared to share part of the burden with us?

Second, direct assistance from any one nation is feared in many parts of the world. Many of the poorest countries have just succeeded in throwing off foreign control. They are jealous of their hard-won liberties. Their political opposition is quick to attack any move that may suggest new dependence on foreign powers or new concessions to foreign influences. Technical assistance through the UN is on a different plane. Their governments are members and help formulate its policies; they do not endanger their independence, political or financial, in working with the UN.

Third, while the UN is newer to the business than the United States is, it has wider resources of technicians on which to draw. Even if funds are provided, the shortage of trained brains may for a long time be the factor limiting the extent and effectiveness of technical assistance. UN missions use technicians from many countries all over the world, while direct United States technical aid is largely extended through United States citizens. This makes for greater variety of viewpoint and opinion among the UN experts, and probably sounder eventual recommendations, as the editors of the New Republic have pointed out. Further, European experts, in particular, have had long practical experience in dealing with the problems of underdeveloped countries. They understand not only the physical and technical conditions, but the habits of thought and work of the people. Now that colonialism itself is dying, most of these experts are ready to give intelligent and loyal service in helping backward countries increase their output for their own benefit. In many cases these non-American experts may be more realistic and understanding in dealing with the problems of more primitive countries than are American experts. For example, in my own experience abroad, I have found American experts frequently overdisposed to assume that the answer to all problems is to do things just as we do them in the United States. Countries often may be better aided to take the next steps ahead by technicians from countries not so many decades or generations removed from them in economic and social progress. Thus American experts frequently put great emphasis on efficiency, on saving labor, even in countries where for many years to come the problem will be not to save labor but to use productively the labor already idle. Americans find it hard to understand that investment in labor-saving machinery may be wasteful compared to investment in simpler equipment to put more men to work.

A fourth argument in favor of a UN approach is that American technicians tend naturally to specify American equipment. The results were highlighted by the recent Seattle incident, where the low-cost British bid was rejected because it conformed to British instead of American methods of stating specifications. If foreign investments in underdeveloped countries are to be spent in any substantial part for equipment from western Europe, European engineers and technicians will have to help draw up the plans.

A fifth argument is that the UN agencies have much broader technical resources for giving students and workers advanced training outside their own countries. The United States uses its scholarship funds largely to bring students here for advanced technical work) in colleges or professional schools, and for in-service training in public and other institutions. The UN can provide scholarships and in-service training not only in

American institutions, but also in institutions of all the other highly developed countries. In many cases training in English, Dutch, Scandinavian or Swiss technical schools, for example, may better prepare the trainees for practical work in their own countries than would American training adapted to our advanced technology and our enormous mass-production economy. Some international scholarships are already being provided by UNESCO. The tentative point 4 program of the FAO, UNESCO and other agencies as summarized in the UN publication, "Technical Assistance for Economic Development," provides for a great expansion in such internationally sponsored technical training.

Another argument for a UN approach arises from the need for international institutes to provide short courses for qualified students from many countries. These training centers, by adding to the skill of officials already engaged in point 4 work, can produce improved technical skills in months instead of the years that it takes for students sent abroad to return and make a contribution. Such international centers have already been proved both economical and effective in the statistical training centers, sponsored jointly by the FAO, the UN Statistical Office and the host countries. These have been conducted during the last 2 years in Mexico City for Latin America, Cairo for the Near East, Paris for Europe, and New Dehli for the Far East. Reliable facts are the basis for all sound planning and development. And by bringing about material improvement in both census and crop-estimate methods in many underdeveloped countries, these statistical centers have already done a good job. Plans for large-scale expansion of such international training can be put into effect as soon as funds are assured.

The final argument in favor of a UN approach to the point 4 program is the fact that international agencies can conduct activities requiring joint international action far better than individual countries. Many aspects of economic development require this kind of international planning. The steps proposed in each country must be carefully balanced with what's being projected in other countries if some lines are not to be overstressed while others are neglected. One of the UN's major tasks is to study the economic programs of individual countries to see whether they make sense, and then to aid countries to redraft their planning in the light of the prospective world situation, and work out adjustments to make their progams more consistent.

The United States has strongly urged this joint planning as a function of UN agencies. Notable efforts in this field include the work of the UN Economic Commission for Europe, in planning and adjusting European programs of coal, steel, timber, and other products, and of the FAO in developing a worldwide review of advance agricultural programs at its annual conferences, and also more intensive regional reviews at regional conferences. Four of these regional meetings were held last fall—at Quito, Cairo, Rome, and Singapore. I made a round-the-world air trip to help staff the Singapore meeting and to listen in on the meeting in Rome. I found the frank analysis and discussion of the readjustments needed in Asiatic and European agricultural programs most encouraging. Yet this work is just beginning. If billions of dollars are going to be invested in worldwide economic development, the UN's efforts to prevent losses and failure by advance international consultation and planning will need to be greatly expanded.

No country has a monopoly on brains, skill, experience, and imagination. Many of the epochal discoveries—such as that of penicillin in this generation, or of the germ source of diseases and of the steam locomotive in earlier ones—were made outside the United States. Technical assistance through the UN and its agencies can mobilize all the technical skill and know-how of the world, to speed the process of worldwide economic expansion and to reduce the inevitable mistakes along the way.

If the United States places its major reliance on direct technical assistance through its own agencies, other countries, to the extent they provide technical assistance, may similarly expand assistance directly. But they may limit it to their own areas of interest through their own technicians. Such a tendency is evident in the recent arrangements for expanded technical assistance by the members of the British Commonwealth at their recent conference at Colombo, in the programs of other colonial powers, and in the technical activities of the U. S. S. R. which so far have been entirely unilateral. Emphasis on unilateral, rather than international, technical assistance might be a decisive and disruptive force in the world economy, tending further to split it into spheres of influence, rather than draw it closer together through UN activities.

Finally, the United States has been one of the main sponsors of the UN and its agencies, and has repeatedly pledged itself to work through them in international political and economic matters. Raising the standards of living of the peoples of the underdeveloped countries is a primary UN objective. If the United States desires to see the UN's power and prestige grow, it must give the UN a fair chance to carry its share of the operating load in dealing with the world's economic problems.

There are strong arguments for a dual approach of direct aid and aid through the UN. The UN aid would draw on the reserves of trained skill from the great army of experienced technicians in western Europe and Oceania, and the less numerous but still important able men in Latin America, the Near East, and Far East. It would help to bind closer necessary trade connections between Europe, Asia, Africa, and America. The funds needed to carry the plans into action might similarly be provided, partly from the United States and other countries, and partly from international agencies.

But only by emphasis on an international approach can the European recovery program be carried through to successful completion as part of a recovery and expansion program for the world.

Frank A. O'Connor

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 24, 1950

Mr. ADDONIZIO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert the following editorial from the Newark Evening News, paying tribute to an eminent public servant, Mr. Frank A. O'Connor, of West Orange, N. J., who has retired after 56 years of devoted service to the community. I want to join the residents of West Orange in congratulating him upon his distinguished record and wishing him continued health and happiness. As the editorial points out, Mr. O'Connor carries into retirement the satisfying knowledge that his 56 years in elected office bear witness to the trust reposed in him by his neighbors.

AFTER 56 YEARS

Through three wars, changing administrations, in hard times and good, Frank A. O'Connor has served the town of West Orange. For 56 years he has been successively tax assessor, tax collector and, since the introduction of commission government in 1922, a member of the governing body. During his lifetime of civic service, begun while Grover Cleveland was serving his second term in the White House, Mr. O'Connor has been witness to the growth and industrial expansion of north Jersey. He has seen the rising tide of commerce swirl about his town and, for the most part, leave untouched its tree-lined streets, quiet homes, and ordered gardens.

Now, at 82, Mr. O'Connor has retired. One must suppose that for him life has had the usual complement of disappointments and compensations. But into retirement he carries the satisfying knowledge that his 56 years in elected office bear witness to the trust reposed in him by his neighbors. And no small thing it is.

The Frontiers of Freedom Have Widened in 50 Years

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 23, 1950

Mr. KLEIN. Mr. Speaker, under leave I am inserting in the RECORD a remarkable tribute to a remarkable union. This is the regular daily column from today's New York Post and Home News written by Murray Kempton, Post labor editor, paying tribute to the union history written by the ILGWU:

PYGMY IN 1900—GIANT IN 1950

(By Murray Kempton)

ATLANTIC CITY, May 23.—On January 6, 1909, John Dyche, secretary-treasurer of the International Ladies Garment Workers Union, got a letter from one Charles Jacobson, one of that despairing union's few active members in Boston.

Jacobson wanted to know how things were in New York. Dyche told him:

"Things are as bad as can be. Everything is dead here—dead as Queen Anne as they say in England. Locals 9 and 23 had no meetings for the last few weeks * * * (Philadelphia) wants that we should send an organizer from New York and here we have no money to pay the rent.

"The monthly financial report shows a deficit of $92. That means I drew no wages. All things considered it is as rotten as rotten can be. The trade is as bad as the union is * * * I do not in the least exaggerate when I tell you that you will be lucky if you can get a job to earn a dollar a day."

Thus, with typing corrected, an ILG officer wrote 41 years ago.

The International Ladies' Garment Workers Union, in its fiftieth anniversary convention assembled this morning, owned buildings worth $9,000,000. The reserves in its vacation fund alone total $44,000,000. It owns 3 radio stations and 9 health clinics; it has 425,000 members, employs 1,500 officers and annually it collects nearly $2,500,000 in per capita dues.

On July 1, 1890, the Gotham Knife Cutters—a precursor of the ILG—met with the pomp, the circumstance, and the poverty which attended union meetings in those

days and voted to contribute $10 of their small treasury to the striking metal workers.

In the last 3 years the International Ladies' Garment Workers Union has donated $2,100,000 to labor causes and institutions in the United States. The largest sum of all was $100,000 to support the CIO auto union's 100-day strike against Chrysler.

On March 25, 1911, there was a fire in the Triangle Waist Co. in New York. The girls who worked there had a choice of burning to death or jumping from the ninth floor of the tightly barred loft. When it was over 146 of them were dead.

The union set up a relief committee to do what it could for the families of the dead. It surveyed among others the case of A. A., 16 years old, who had earned $5 a week. She had a father, a sister, and a brother who were union members. Since there were four wage earners surviving, it was decided to grant only the death benefit of $150.

This year the ILG will raise each member's death-benefit policy to $1,000. But any ILG member who works in New York will probably retire at 65 with a pension of $65 a month plus social security. A dressmaker today is paid 13 weeks' sick benefits, and surgical and hospital expenses.

The union provides her with free glasses, clinical attention, and $50 a week vacation money. Her children are born at the expense of the union welfare fund and, at work, it takes her less than 3½ hours to earn $5.

On June 3, 1910, the Philadelphia shirt workers went out on strike. One, Sachs, their secretary, sent an appeal to other unions in which he said that the girls were striking for shorter hours because they want the chance to get an English education and free time to use the night schools.

Last year, the ILG spent $322,814 on the education of its members. The dressmaker goes to school by radio and with movies; she takes courses in art, handicrafts, history, and family problems. This year, the union opened its own college for training future officers; in previous years, it had sent some of them to Harvard.

When you joined the ILG in 1903 you had to take an oath to defend freedom of thought by tongue or pen * * * and to strive to elevate the moral and material condition of the working class.

The frontiers of freedom have widened in the last 47 years. The ILG, since 1947, has given $2,500,000 to help unions the world over. Some of that money has gone to the French and Italian and Israeli labor movements, to build orphanges in Italy, and China, to fight Communists in South America and Asia.

The ILGWU held its first convention in a loft on the lower East Side on June 3, 1900. Joseph Barondess, its first president, expressed the prayerful hope that the enterprise would bear good fruit. Five years later, things were so bad that the New York cutters considered seceding from a union with less than 6 months to exist.

This year, 14 men who joined that union 50 years ago will be guests of its convention. As a mark of what the years have done, they will wear special solid gold badges.

Tri-State Spelling Champion Eighth-Grade Girl From Illinois

EXTENSION OF REMARKS
OF
HON. EDWARD H. JENISON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 24, 1950

Mr. JENISON. Mr. Speaker, the National Capital is honored this week by the presence of outstanding young students who have won honors as spelling champions in their respective sections of the country. Under permission granted to me to extend my remarks in the CONGRESSIONAL RECORD, it is my desire to introduce to my colleagues in the House of Representatives a young champion from a three-State area whose home is in the Twenty-third Congressional District of Illinois, which I have the honor to represent.

Our representative in the national spelling bee to be held here this week end is 14-year-old Mary Kathryn Ruth, daughter of Mr. and Mrs. C. F. Ruth, Mount Carmel, Ill., and an eighth-grade student at Mount Carmel Junior High School. After winning her local contest, she was victorious in a tri-State competition held at Evansville, Ind., where she bested champion spellers from 20 junior high schools in the three States of Illinois, Indiana, and Kentucky. With her victory came the trip to Washington, accompanied by her mother. The story of her triumph is told in the Mount Carmel Daily Republican-Register, and is as follows:

Mary Kathryn Ruth, eighth grade pupil in the junior high school, daughter of Mrs. and Mrs. C. F. Ruth, Saturday night won the Tri-State spelling contest held in Evansville.

Twenty junior high school pupils from the 3 States of Illinois, Indiana, and Kentucky participated.

The local speller took first place in a special spell-off session held in the evening, Saturday, at the Evansville YWCA after a previous decision had given her second place.

She defeated Max Eubanks, Washington, Ind., to win tri-State honors and a week's all-expense visit in Washington, D. C., as an entrant in the national spelling bee to be held there May 26. There she will have a chance in prizes involving $3,000 in cash awards.

By winning in Evansville she also was presented with a 19-volume set of world encyclopedia from the educational division of Field Enterprises Inc.

The word on which Mary Kathryn won in the final special spell-off was "livelihood," which the Washington boy spelled "livelyhood." After he had spelled, she asked the pronouncer that he repeat his spelling of the word, and then she spelled it correctly. Then she also spelled the next word on the list, "imbecile," according to the rules of the contest and was proclaimed winner and entrant in the national contest.

An allowance of two spellings caused the spell-off session Saturday night. In the forty-sixth round of the first session Mary Kathyrn spelled "curtsey." The bell rang signifying that it was the wrong spelling and the Washington boy spelled it "curtsy." He was then declared winner.

The local speller and her mother, Charles Weaver, principal of the junior high school and sponsor of the local entrant, together with county superintendent J. A. Gibson, who were interested spectators at the match, considered it was all over and were leaving the building when they were met on the steps going out by arrival of a man who asked, "Is this the girl who was spelled down?"

He was informed that she was.

The man declared that Mary Kathryn had spelled the word right and added, "I have a recording of it and I can prove that her spelling was correct."

Members of the group were a bit startled by this development and asked the man who he was and why his interest in the contest.

He explained that he was Dr. F. W. Werking, professor of modern languages at Evansville College. He had been listening to the contest by radio and had made a recording of it, as he frequently does of programs affecting languages and words, he explained. He declared that Mary Kathryn was not beaten and that he did not like to see her declared so.

Representative of the Press, Evansville sponsor of the match, was found, and this situation explained to him. Judges were recalled separately, after departing, and each agreed that under the circumstances the contest should be continued.

Then it was that the spell-off session was arranged and the final session held in which the local speller won the tri-State championship.

Mary Kathryn, 14, comes of a family of spellers. Her maternal grandfather, C. S. Andrus, was years ago a teacher and spelling was his hobby. Her paternal grandfather, the late L. F. Smith, was a businessman meticulous in his spelling.

Her interest is not confined to spelling and words in general. In school work she plays a flute in the band and also is a Camp Fire Girl, is recorder for Job's Daughters, is a member of the Christian Youth Fellowship, sings in her church's intermediate quartet and the eighth grade sextet. She has stated she wants to be a medical missionary when she grows up.

Mr. Speaker, the national spelling contest makes an important contribution to the educational program of the country. It stimulates study and encourages young students. I am proud to recognize its worth as well as our able young champion from the Twenty-third Congressional District of Illinois.

The Mundt-Ferguson Bills

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 24, 1950

Mr. CELLER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following statement I made at the Brooklyn Academy of Music on May 18, 1950:

THE MUNDT-FERGUSON BILLS

This is a moment in history when every thoughtful person in this country must ask himself: What is this fear that is creeping through the land like a slow paralysis throttling freedom of speech and freedom of assembly? What is this fear that is causing so many of us to look back behind our shoulders, to lower our voices and apologize for holding any unorthodox views? And above all what is this fear in the Halls of our Congress which mocks the strength of our own institution and which has resulted in the circus performance of trying to destroy the Bill of Rights in the guise of maintaining and protecting it?

I say without equivocation the Mundt-Ferguson bills which have been combined into one bill, S. 2311, and reported favorably to the Senate floor is the frankest confession of this fear and cowardness. It says, in effect, that the right to talk must be licensed. It says that guilt is not personal, but derives from association. It says that not the deed, but the thought is punishable. It flies in the face of the constitutional protection

against self-incrimination. The provisions of this bill proclaim to the world that we, the people of the United States, have not grown up, that we are children incapable of mature political judgment, that our common sense is so lacking that it is necessary to put us in a cellophane bag and protect us from every naughty, naughty word. And who, of course, is to say what word is naughty?

Pity our country, indeed, when a sedition law is so written that we, adult and mature as I know we are, are placed in a climate where metaphorically we must sit in a school room with our hands folded in front of us in rigid conformity to what a schoolmaster chooses to call good behavior.

We have gone through wars and economic crises. We have gone through civil war, but never before has so novel a proposition as this Mundt-Ferguson bill been proposed as the law of the land. Surely in the marketplace of ideas the democratic and free way of life need not fear competition with ideas of totalitarian of the right or the left variety.

With Congress so busy protecting us from ourselves, we are threatened with a new kind of paternalism which does not sit well in a society which justly prides itself on the fact that the individual is not subservient to the state. I'd like to ask "What's happened to our sense of humor? What's happened to our self-assurance? What's happened to our pride? Are we to be sheep of one color enclosed in one pasture?"

I was forcibly struck by the statement of Prof. Zechariah Chafee, Jr., noted professor of law at Harvard University, in opposition to this bill. I would like to see every man and woman in the United States read a copy of that statement. I cannot resist the temptation to quote to you one of its choicest parts:

"Let us now turn from the law to the facts. How many Communists are there in the United States? The United Press said 70,000 in 1947, out of a total population of 143,382,000 (World's Almanac, 1949, pp. 544, 164). Thus Communists form one-twentieth of 1 percent of all the people in our country. The odds are 1,999 to 1 in favor of free institutions. Suppose a football stadium holds 40,000 people. The chances are that 20 of them would be Communists and 39,980 would not. Remember, too, that it is not a question of 20 dynamiters or 20 men with concealed weapons, for then they could be arrested at once under the ordinary criminal laws. Just 20 unarmed persons who have not violated any existing Federal or State law or conspired to violate any existing law. But they have learned bad ideas about politics from foreigners and foreign books, they are thinking bad thoughts about these bad ideas, they are telling them to each other and to any outsiders who are willing to listen. What can we do to prevent them from harming the other 99.95 percent of us, who have on our side only the city and State police, almost every newspaper and school teacher and professor and preacher, the Federal Bureau of Investigation, the Army, the Air Force, and the Navy, never forgetting the Marines?

"Such is the clear and present danger inside the United States which (according to sec. 2 (11) of the Ferguson bill) imperils 'the existence of free institutions' and makes it 'necessary' for Congress to pass a new law 30 pages long with unheard of regulations and 10-year prison sentences 'in order * * * to preserve the sovereignty of the United States as an independent nation.' Shades of Valley Forge and Iwo Jima. If we no longer want to be the land of the free, at least let us be the home of the brave."

Now let's turn to a more specific examination of a few of its provisions. There are two basic terms in the bill, "Communist political organization" and "Communist-front organization." Neither is defined with specific precision despite the fact that the courts have held consistently that a criminal statute must be sufficiently definite so that a person may know when he is indulging in criminal acts. Note the term "Communist-front organization" which under the definition of the bill "is primarily operated for the purpose of giving aid and support to a Communist political organization, a Communist foreign government, or the world Communist movement."

What does "giving aid and support to a Communist political organization" mean? Suppose an organization is formed for the purpose of supporting the New Deal; that is, against the provisions of the Taft-Hartley law, for extension of a rent control, for broadening of the Social Security Act, for the civil-rights legislation, etc. It may so happen that the Communist Party likewise supports these measures. Will such an organization then be termed a Communist-front organization because its issues are in accord with some of the issues of the Communist Party? How easy would it be to destroy any liberal organization by identifying it as a Communist-front organization?

The bill provides that no Communist-front organization or Communist political organization shall be entitled to exemption from Federal income tax, nor shall deductions from Federal income taxes be allowed for the contribution to or for the use of any of these organizations. In other words, before you make a contribution to any organization—some organization which you have supported because of its liberal ideas—you will have to run to get information from the Attorney General, information from the Subversive Activities Control Board, or write your Congressman, or call up the editor of your favorite newspaper, or beyond that—ask yourself in the language of the bill: Am I giving "aid and support" to a Communist political organization?

You no longer join or attend a council or a neighborhood community group without first opening every closet door and looking under every bed. You just don't join. But, of course, if you must join a group, there's nothing in this legislation that prevents you from joining the Ku Klux Klan or any Fascist group or any anti-Catholic or anti-Semitic group. If you join these organizations, you don't have to register under penalty of being refused a passport, under penalty of being fined or imprisoned.

You can make hay on every street corner without worrying whether the Attorney General has your name or not, but you must, by any and all costs, avoid joining any concerted act or expression of liberal organizations.

The shadow this bill will cast is a long one, indeed. Now let's see who will determine these things. The bill says that the Subversive Activities Control Board shall, upon application made by the Attorney General, determine whether any organization is a Communist political organization or a Communist-front organization. This is a three-man board to be appointed by the President, by and with the advice and consent of the Senate. Three men shall determine whether your ideology is according to Hoyle. Not your common sense, not your ability to understand political issues, not your maturity, not your own judgment shall prevail. Three human beings subject to all frailty and weaknesses that all mankind is subject to will determine what organizations are good or bad for you and for the country.

It is disgraceful that the temper of the times is such that we must in every public statement say "I am not a Communist. I am not defending communism. I am defending the principles of free speech and liberty." Has it become so necessary that every public speaker must spew forth hatred and contempt of a group in order to clear himself from a shadow? Is this to be the age of the badge, the wearing of the label on every sleeve, the setting of brother against brother in the name of security. Let me repeat the words of Mr. Justice Jackson:

"Freedom to differ is not limited to things that do not matter much. That would be a mere shadow of freedom. The test of its substance is the right to differ as to things that touch the heart of the existing order."

Now let's look at this picture. It is the kind of a bill where you are damned if you do and damned if you don't. If the Subversive Activities Control Board deems the organization subversive, then you must register. If you don't, you are subject to all the penalties of the bill. If you do, I don't have to tell you what happens to you in terms of employment and the threat of social ostracism.

As I said before, to me this appears a distinct violation of the protection against self-incrimination. It must be noted as well that no trial by jury precedes the determination of the Subversive Activities Control Board. All that is left is a right of review.

And keep in mind that no overt action on the part of these organizations or any of these individuals is necessary. Just aid and support. What that aid and support may be neither I nor anybody else at this time can have any possible idea. Of course, the Subversive Activities Control Board can determine that this is not a political-front organization, but by that time the allegation has served its purpose, and as Senator McCARTHY knows very well, it takes a long, long time for the truth to catch up to a charge.

Under existing statutes we have sufficient law directed against any act of espionage, sabotage, etc. If individual laws need strengthening, then let's do that; but we have no law on our books aimed against what a man thinks, and in the name of democracy may that never happen.

I want to add one more thought. No bill now pending before Congress would serve the Communist purposes better. Passage of this bill would be a double triumph for the Communists. One, because it will serve as a most effective propaganda weapon throughout the world. The Communists can point with pride to the fact that they have reduced the powerful United States to this expression of fear and cowardness. They can point to this bill, if enacted into law, as proof of their power and, grossly exaggerate through their usual propaganda channels, the strength of their numbers and effectiveness. And secondly, they know full well that the passage of such a bill will create a climate most favorable to their way of thinking; that is, the suppression of opposition, opinion, and thought.

Let me again say that the strength of American institutions, freedom in our economic, political, and social life—is the one weapon which the Communists cannot match. Let us keep it that way.

Address by the Right Honorable Louis S. St. Laurent, Prime Minister of Canada

EXTENSION OF REMARKS

OF

HON. CHARLES A. EATON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 24, 1950

Mr. EATON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by the Right Honorable Louis S. St. Laurent, Member of Parliament, Prime Minister

of Canada, to the Canadian Society of New York, New York City, February 10, 1950:

I am happy to have this occasion to attend a meeting of the Canadian Society in New York and I am deeply gratified to be made an honorary member of this organization. As such, I will feel more closely associated with the purposes of the Canadian Society. I can assure you they are purposes which I am anxious to support in any way that is possible for someone who is not resident in New York.

I cannot promise to observe all the formal duties normally required of members in a society such as yours.

But I know the aims and objects of the Canadian Society are already well attended to by the company of people I see before me.

To those of you who, though resident in the United States, remain Canadian citizens, or who, by birth or ancestry, are Canadian, I bring greetings from your home country.

These messages of goodwill do not, however, include any element of the sympathy which exiles sometimes expect from visitors from the homeland. It seems to me you are in the fortunate position of enjoying many advantages, with very few of the disadvantages of being away from home.

I can, therefore, only congratulate you on the fact that you have the opportunity to contribute to the life of this community and to enjoy its benefits, and, at the same time, to symbolize the happy and mutually satisfactory character of the relations between Canadian and United States citizens.

I am sure you will expect me at this point to express the appreciation all Canadians feel, whether they live in New York or are merely visitors to this city, of the fine contribution made to those good relations by our former consul general, Mr. Hugh Scully, and by Mrs. Scully.

I have not the slightest doubt that all of you who have met Mr. and Mrs. Greene will have discovered already that they are going to follow in that tradition and to make their contribution to that common fund of goodwill.

Though it is perfectly true that I am happy to be here with you this evening, your president knows I was reluctant to accept the invitation to make my visit this early in 1950.

One reason for my hesitation was that you wanted me to be in New York at just about the time we usually begin our annual session of Parliament. And I know most of you are close enough to Canada to realize what a busy time the opening of a Parliamentary session is for the members of the Government.

At the time your president invited me, we were all preoccupied with our first post-election session of Parliament and I must admit I was frankly apprehensive about undertaking additional commitments when we were so concerned about meeting those we had made during the election campaign.

That is why my first response to your invitation was negative. But shortly afterward Mr. Pearson came home to Ottawa from New York, where he had been attending the Assembly of the United Nations. While he was in Ottawa, he persuaded me to change my mind and to accept your invitation.

You might like to know how he did it.

He said it had become a tradition for the Prime Minister of Canada to speak to the Canadian Society of New York, and that this was a privilege of which I should avail myself at the earliest possible opportunity.

Of course I knew that your society would give me an unequaled opportunity to talk about Canada, and that I could find no more friendly and receptive audience.

But that fact itself was a further reason for my reluctance. I was worried about not having anything new which was worth while saying to you.

A good many years ago it was my privilege to be seated alongside of Lord Dunedin at a dinner which was followed by a lot of speeches.

After listening to several of them, His Lordship turned to me and said: "Young man when you get to be my age"—he was then over 80—"you will realize that it is unwise for anyone to attempt to make a speech unless he really has something to say. And after he has said it, he should sit down."

I told Mr. Pearson last November that I did not know anything new or different which needed to be said about Canadian-American relations at that time. He replied that some question was bound to arise which would provide me with a suitable topic.

Well, I accepted his forecast and your president's invitation. But when I sat down the other evening to prepare some notes for what I might say to you, I realized that Mr. Pearson had been wrong.

Perhaps fortunately for both countries, nothing special has developed in the relations between Canada and the United States significant enough to be made the theme of a speech.

The result is, I have nothing new to talk to you about. The best I can do is to attempt to recall some generalities which are always important in Canada's relations with this country and more particularly in the relations of both these North American nations with the rest of the world.

The first essential factor in our good relations is our mutual respect for each other, and our genuine desire not only to be fair to each other in fact, but to have that fairness obvious and indisputable.

In our day-to-day individual dealings with each other it is not difficult to achieve fairness and to have that fairness accepted as a matter of course.

But the smooth course of these day-to-day individual dealings is dependent upon peace on this continent. And peace on this continent now depends upon much more than the good relations between the people of the United States and the people of Canada.

During the whole of the last century and even the first years of this one, we, in the New World, felt little concern over what went on in other continents.

Even when war broke out in Europe in 1914 there were many who felt that though Canada might have been drawn in as a colony of a great world power, the United States could remain aloof.

Well that turned out to be impossible.

Our side won, but the cost of victory in human lives, in human suffering and in material wealth even on this side of the Atlantic, was immense. The cost was great not only while the war lasted, but also in its after-effects, during the terrible years of the thirties.

For a time after 1918 everyone hoped that men had had enough of war and that the world might look forward to an era of peace.

But, as the hope of peace faded in the decade of the thirties, a great many people in the United States turned again toward the traditional new world policy of isolation.

And many of our people in Canada went a long way with our North American neighbors on the same road.

Canada had emerged from war in 1918 with a deep national consciousness and a place of her own in the comity of nations. But our country was a nation of only 7,000,000, and we did not easily recover from the loss of over 60,000 precious young lives.

All over North America, there was disillusionment with the old world. It is easy now to see that we should have been saying "Let us try to keep war out of the world," but all too many of us were actually saying "Let us try to keep out of war."

In the result war was not kept out of the world, and neither did we keep out of war.

When war came to Europe in 1939, we in Canada, were not in automatically. But our external connections and sympathies were still important.

Reluctantly, but deliberately and unitedly, Canada entered the war by the free decision of our own people in their own parliament.

And, once more, our people put forth a tremendous effort for victory.

Again, in 1939 as in 1914, there were many who hoped and felt that the United States need not be involved. But that also proved to be a vain hope.

And notwithstanding the ultimate unconditional surrender of the nations which had set out to dominate the world, the allied victory again cost untold misery and devastation to all our peoples.

Of course, what we saved is infinitely more than what we had to expend.

And I am still convinced that if we had to do it again, we could and we would do it successfully. But we don't want to have to do it again, and I don't think we need to if we are willing to pay the price of peace.

Nevertheless we all realize—you in the United States and we in Canada—that the people of this continent cannot hope to avoid the catastrophic consequences of war whenever a major war breaks out anywhere in this world.

For many of us in Canada it was difficult to realize that appalling truth.

But when we saw that the people of the United States, with all their might, and the almost complete self-sufficiency of their economy, had to acknowledge that even they were powerless to protect themselves against the calamities of war whenever there was war in the world, we had to face that fact as a fact for us, too.

We now know—at least most of us know—that our only real hope lies in the prevention of war.

Though in 1945, our hopes were not as high as they had been in 1918, I believe there was—and is—a far more resolute determination on this continent, and among all the free nations, to look upon the prevention of another world war as a matter of urgent and grave and constant concern.

That was the spirit in which our Canadian representatives went to San Francisco to take part in the completion of a charter for the United Nations.

The charter we signed at San Francisco was the best instrument on which there was the slightest hope of getting agreement between the great powers. We knew it was far from perfect, but we thought—and still think—it was better than having no agreement at all.

No charter, however, can ensure peace unless it is reinforced by good will and a determination to cooperate on the part of the great powers.

As you know, article 43 of the charter provides for the negotiation of agreements between the members and the Security Council to make available "armed forces, assistance, and facilities, including rights of passage, necessary for the purpose of maintaining international peace and security."

Our Canadian delegations to the United Nations Assemblies made repeated efforts to have such agreements negotiated as soon as possible.

But it was not long till it became evident that one of the great powers had no intention of entering into effective military agreements under the charter to prevent war, and that therefore it was not enough for the nations which really wanted peace to rely for their security on the charter of the United Nations.

After this situation had become apparent the nations of the North Atlantic area, acting in accordance with the provisions of articles 51 and 52 of the charter, negotiated the North Atlantic Treaty.

The purpose of the North Atlantic Treaty, like that of the charter itself, is to prevent war, and to do so by a combination of actual and potential strength and unity sufficient to prevent aggression from being successful.

Of course, that means that if there is aggression against any signatory of the treaty, all the signatories become involved in hostilities. It means that the North Atlantic nations have given up the hope—and the possibility—of staying out of any future major war.

I do not think that represents a serious additional risk. Twice in a generation, it has been demonstrated that there is no real choice for North America when there is a world war. We are all involved sooner or later.

I believe firmly that the smallest risk we can take is to remain united and to remain strong, so long as there is any likelihood of aggression.

Well, now the North Atlantic Treaty organization has been established and we are faced with new problems.

The treaty itself asserts that the North Atlantic community is not just a military alliance; the North Atlantic nations have undertaken to combine their economic, social, and moral strength as well as their military resources.

And if the North Atlantic Treaty is to be an effective deterrent to aggression, that combination of strength must apply in all those spheres.

Of course, the first requirement is sufficient armed strength to prevent any sudden overwhelming blow from destroying all power of effective resistance.

But in these days, when weapons become obsolete so quickly, the North Atlantic nations could probably make no greater mistake than to concentrate on piling up armaments to the point where they become a dead weight on our national economies.

We are accustomed to think of this cold war as a struggle between two ways of life, an ideological struggle.

Of course, it is that.

But there is another way of looking at it. It is also a competition not so much in piling up armaments, as in the development of military potential.

Once we appear to have sufficient strength to prevent a sudden knock-out blow, the calculations of any potential aggressor are apt to turn from arms-in-being to estimates of respective staying power. Important though it may be not to lose the first battle, it is far more important to remain able to win the last one.

And staying power in the final analysis depends on whether we can maintain—not just in the United States, not just in North America, but in the whole North Atlantic community—a healthy, progressive, and dynamic society.

Almost all of us in North America believe that free economies, like ours, can produce greater wealth—and distribute it more fairly—than totalitarian societies.

But the mere conviction will not be enough; we must continue to demonstrate that the facts justify our belief.

Now I am convinced that all the North Atlantic nations signed the treaty in good faith and that all wish to do their part to give it reality.

It is obvious however that European nations, with economies still shaky from the dislocation and devastation of aerial bombardment, prolonged enemy occupation, cannot yet give the same response as the relatively sheltered economies of North America. And the restoration of genuine economic security to the European partners in the North Atlantic alliance is one of the most effective means of achieving military security and ultimately of reducing the burden of providing that security.

Looking no farther than this continent, there is naturally bound to be considerable difference between what a great power like the United States and a nation like Canada, with a much smaller population, can do to give reality to North Atlantic security.

In many ways the two countries are similar; but in many ways they are quite different. And I believe it is quite as important to understand the differences as it is to appreciate the similarities, if we expect to maintain that mutual feeling that we are all of us being absolutely fair to each other.

As the most powerful nation on earth, the United States has world-wide interests and responsibilities that Canada does not share. Moreover, in population the United States is about 150,000,000 to our thirteen and a half; in developed wealth and in annual national income the difference is considerably greater. On the other hand, Canada is physically a larger country than the United States—a good deal larger in square miles.

Now that means we have a very heavy national overhead. Take railways as an example. There are more than twice as many Americans as there are Canadians to provide traffic for each mile of railway in our respective countries.

And while there are, I suppose, at least half a dozen coast-to-coast highways in the United States, we have yet to complete our first transcontinental highway in Canada.

And so it goes all through the Canadian economy. Compared with the United States, we have to use a far larger proportion of our national wealth to maintain those essential services which keep a country going.

As a result, we in Canada have never been able to equal the American standard of living, though by dint of hard work we have kept not too far behind.

Then there is another great difference between Canada and the United States.

The United States, it is true, has vast problems of conservation, but this country has passed the pioneering stage, while with us in Canada a large part of our national estate is still waiting to be opened up.

If Canada is to achieve its highest economic and military potential, the development of new natural resources must be pushed ahead rapidly, and that means heavy capital outlays from our annual production of wealth.

Then there is another big difference. For the United States, with its mature and largely self-sufficient economy, foreign trade is relatively much less important than for Canada, which is at an earlier stage of economic development. We need to attract capital from outside Canada, and because of the nature of our resources we are heavily dependent on external trade. All that means our economy—and our prosperity—are more vulnerable than the economy of the United States.

This dependence of Canada on world trade, and the vulnerability to which it gives rise, are more serious because of another factor in our situation. Canada has a large favorable balance of trade with western Europe and a large unfavorable balance with the United States. And that means for us an exchange problem which the United States does not have.

In the past decade, we have experienced what is almost an industrial revolution in Canada; but by the standards of your nation of 150,000,000 our industry is still on a small scale.

The production of the whole range of modern armaments on a large scale is obviously beyond our capacity. What we must have, if we are to make our most effective contribution to our joint security, is specialization on the manufacture of a limited number of items coupled with the kind of reciprocal arrangement we had with the United States during the war.

Under the so-called Hyde Park declaration of 1941, each country produced for the other those armaments it was best fitted to produce. Each of us paid hard cash for the other's product, but we were better able to pay you because we were able to sell munitions and weapons to you. The Hyde Park arrangement involved no loans, no gifts, no charity—nothing but plain business sense. And we in Canada cannot see why a business arrangement which produced such good results for both countries in war should not produce equally good results in providing security against war.

In maintaining an effective security system there is this kind of a problem the North Atlantic nations are apt to have to face in the next few years:

The more effective the North Atlantic Treaty proves to be in pushing back the menace of aggression, the more difficult it will be to ensure that the people of the free nations will remain willing to pay the insurance premiums necessary for their security.

We shall probably hear, in all the North Atlantic countries, a good deal of grumbling, and perhaps some invidious comparisons about the share of the burden each nation is ready to bear.

I hope none of us is going to be too much worried by such grumbling or even by invidious comparisons. Free debate, after all, is the privilege of free peoples.

By contrast, the unhappy people of Poland, of Czechoslovakia, of Hungary and of Russia, are not permitted even to grumble out loud about having to bear a heavy share of the upkeep of the iron curtain.

To maintain the security of the North Atlantic community, each nation must clearly make the kind of contribution it is best fitted to make by history, by geography, by aptitude, and by resources.

Since economic strength is the essential foundation of genuine military strength, it follows that one of the main objectives of the North Atlantic nations is to keep their economies strong so that they can make their contributions toward maintaining the peace without impairing their ultimate staying power.

I think we all hope and believe that can be done and that international security need not mean any reduction in the economic efficiency of this continent nor even in the North American standard of living.

There has been such a great increase in our productivity on this continent that our material standard of living has continued to rise despite all we have thus far expended on defense or contributed to European recovery.

The massive assistance of the Marshall plan to the economic recovery of Europe has been quite as important a contribution to our common security as the North Atlantic Treaty itself.

And we can understand the emphasis your public men are laying on the importance of removing barriers to the trade of our European allies with each other.

But I do not think we can afford to lose sight of the fact that is even more important to the economic strength of the free world that the European countries and, indeed, all countries suffering from a dollar shortage, should also be able to export as freely as possible to North American markets.

It is, after all, only by accepting imports from other continents that we in North America can hope to reduce the real cost to ourselves of our contribution to the common security of the free world.

And it is only by accepting imports that we can hope to provide stable and profitable markets outside our continent for those agricultural and other surpluses beyond our own needs which both our countries do actually produce.

Canada, in this matter also, is in a somewhat different position than the United States. Though we still export rather more than we import, our over-all exports and imports are not too far from a balance. But,

as I have already said, we in Canada import from the United States far more than we export to this country, and we export to Europe far more than we import from Europe.

That is why Canada, too, has a dollar problem.

We, therefore, have a special interest in freer multilateral trade, and though I am not an economist, that seems to me to mean freer entry to this country both for European exports and for our own.

I would not venture to advocate the reduction of tariff and other trade barriers as any special favor to us. But it does seem to me that such a policy might make a tremendous contribution to the security of the free world generally and the United States in particular.

A century ago England found herself in much the same position the United States has today. England was then the greatest industrial nation, the wealthiest nation, and, therefore, the greatest potential market.

She opened that great market freely to the world and, whether as a result or merely as a coincidence, the world, herself included, enjoyed more than half a century of comparative peace and economic progress.

Might it be possible that history has there a lesson for this continent and this country at the midpoint of the twentieth century?

Be that as it may, in closing—and I must close, because I have already spoken longer than Lord Dunedin would have felt proper—I wish to express sincere and unqualified admiration for the generous and effective leadership given by the United States, its Government and its people, since the end of the war in the great task of rebuilding the economies of the free nations and the morale and confidence of their populations.

May I couple with that tribute the hope that the citizens of this great country, in their mental appraisals of the needs, the capabilities, and the actual contributions of their associates in the North Atlantic Security Pact, will be as understanding about others, and as deeply conscious of their own incomparable position, as they have proved themselves to be in the fact of the tremendous material ruins which had to be, and which to such a large extent, through their understanding and assistance, have been restored.

An American Citizen's Rights and Responsibilities Under the Constitution

EXTENSION OF REMARKS

OF

HON. ROBERT F. RICH

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 23, 1950

Mr. RICH. Mr. Speaker, in connection with their Americanization program each year the American Legion of Marion County, W. Va., sponsors an oratorical contest on some phase of the Constitution. This year the subject of the prepared oration was An American Citizen's Rights and Responsibilities Under the Constitution. Pupils of nine junior high schools in Marion County participated. Miss Patricia Woodruff, ninth-grade pupil of the Miller Junior High School of Fairmont, W. Va., was the successful contestant.

Since it appears that many are drifting into a way of life contrary to those principles set forth in our Constitution, under leave to extend my remarks in the RECORD I include this oration, with the hope that those adults whose thinking has become cluttered with the many "isms," foreign to our principles of American freedom, may profit by knowing how some of our younger set think about this cornerstone of our American liberties.

AN AMERICAN CITIZEN'S RIGHTS AND RESPONSIBILITIES UNDER THE CONSTITUTION

(By Patricia Woodruff)

We do not receive privileges under the Constitution because a privilege is a favor granted to an individual. But we are the possessors of rights, those actions which are justified not only in the Constitution but in the eyes of God and man.

Likewise we are not forced to perform duties because a duty is something which must be done as a result of the pressure of society. We are responsible, however, for doing those things which give meaning and protection to our rights in a free and democratic society.

We American citizens have been endowed with our rights in many ways and over a long period of time. The major ones have been received from God, the others from man-made governments, the national, the State, and the local.

Each is sovereign in some powers without which we would cease to be contributing individuals. All are necessary if we are to fulfill the purpose of our existence, to make the world a better place in which to live.

Our personal rights make it possible for us to develop our talents to the fullest, limited only by our wishes and our desires. Consequently, the citizens of other countries have not been and cannot be as progressive, as well informed, and the possessors of such a high standard of living as we.

Very early the Magna Carta set up some principles of freedom of the individual and his right to property and justice. The English Bill of Rights guaranteed personal freedom and extended the control of Parliament by the will of the people. The Declaration of Independence states that man is endowed by his Creator with the inalienable rights of life, liberty, and the pursuit of happiness.

Inasmuch as it covered only one phase of government, each of these documents was imperfect. However, each fulfilled some need prominent at the time and all have stood the test of time.

The writers of the Constitution realized that each of these contained fundamental rights. Therefore much of the same theory and many similar ideas are incorporated in this great document.

Although the Constitution was patterned after these earlier attempts at governmental structure, the basic principles had never before been tried successfully.

If we are to retain these republican rights, we must think of our Constitution as a living organ—living because, through amendment and appropriate legislation, it is as applicable today as when drawn up, 161 years ago.

As our social, economical, and political philosophy has changed, so, in pace, has this document. Certain rights not definitely stated in the Constitution have evolved from those clauses which imply that individuals have the following rights:

We are entitled to work in any locality of our choice, contract our affairs, start and manage any enterprise, invest in a profit-and-loss system, and buy and sell on a free market. These are but a few of the individual rights which benefit our personal success and development. We may establish our reputation, choose our jobs, join organizations, promote causes or campaigns, or in any other ways enjoy the life of one unhindered by political persecution or the wishes of our Government officials.

The Constitutional Convention was marked by many disputes over the drafting of the actual plan of government, but all agreed that there were certain laws governing personal actions which must exist to support a democracy. It is these fundamental liberties which we must keep alive. This can be done only so long as we do not abridge the rights of others because a right is valuable to us to the extent that we work to retain it for others, as well as for ourselves.

There can be no freedom without self-restraints. When we advocate the seizure of another's property by the Government or endanger it ourselves, we threaten our own freedom. If we admit that our neighbor's property rights may be questioned, we threaten our own because we are equal in the sight of the law.

Freedom of religion would be of little importance to us if we did not worship in some manner. If it were taken away, we would demand it. Because we may exercise this right, we must respect and sympathize with other's viewpoints; we must be tolerant even though we have no convictions of our own.

Protection is provided for us by the maintenance of a militia. However, there is no excuse for us to depend on this institution except in cases of emergency.

Too, we are entitled to a trial by jury. Therefore, we should help to supply one for another either by consenting to serve as jurists or witnesses ourselves. Few of us realize how futile we would feel if we were to be on trial for some reason and none of our neighbors would come to our aid.

Undeniably we have the right to speak our minds and write what we believe. But let us be sure we know what we are writing or talking about. Let us be sure we know the good as well as the evil about controversial subjects so that we will not spread false propaganda or reflect upon our Government.

Assembly is necessary at times, as we are doing today. If we are to retain this freedom, we must conduct ourselves in such a way that we do not encourage mobbing.

A redress of grievances is essential to our personal satisfaction, but this does not justify our making unreasonable demands.

We all realize the need of an intelligent and well-informed electorate. Therefore one of our greatest responsibilities is to develop the faculties of our minds, bodies, and spirits. Since there is no royal road to learning, we must make the most of opportunities to acquire the knowledge necessary to conduct us through life. Only through study, appreciation, and application can we preserve the Constitution, a living organ, for our posterity.

In closing, I would like to say that it does not seem, in daily life, that these rights are so severely challenged, but even in the smallest negligence or abuse of our responsibilities we weaken this heritage which is to pass on to our children. We must leave the Constitution stronger and more effective than we found it.

I thank you.

The People Are Recapturing the Republican Party From Its Present Bondage

EXTENSION OF REMARKS

OF

HON. EUGENE D. O'SULLIVAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 24, 1950

Mr. O'SULLIVAN. Mr. Speaker, for over 18 long years the groping in the dark Republican Party has been na-

tionally under the domination and control of gigantic selfishness and greed.

It is very encouraging indeed to see State by State break the tramp hitch of these men and interests and bring back the discredited remains of the once-great Republican Party to the control of the people, as Abraham Lincoln so wisely intended.

Through lawless and unholy lobbies and by acquisition of daily and weekly newspapers and otherwise, a tremendous effort has been made to bring this Nation under the thought control of this shameless group, but it now looks as if the political sins of these un-American men and interests are slowly but surely losing them all of the ground they have gained. Their lobbyists have fled from the Capitol and their newspapers which served exclusively the limousine trade are going broke, and well-heeled but bad-meaning Republican bosses and politicians are biting the political dust. In surprising order New York, Pennsylvania, and Oregon have given reactionary republicanism a hearty political boot by electing liberals to take the places fondly coveted by blue-nosed conservatives.

The spreaders of the doctrines of divisionism and doubt have failed to fool the American people any longer.

An editorial in the Farm-Labor Press, of Council Bluffs, Iowa, published by George Woodward, Sr., had this to say in part about the reactionary Republican propaganda which for a long time has been spread journalistically:

We perhaps don't often find much to agree with in the daily newspapers but when a columnist whose writings are syndicated nationally through some dailies, recently lumped certain characters together and charged them with following the Commie line and giving outright aid and comfort to bloody Joe Stalin, he was on the right track.

Of course, the modern day Czar of all the Russias and some hapless other countries who used to be independent as well, dearly loves to see men practice the divisionist and doubt program in any country. In fact, that's how Stalin likes to operate. Get a people to doubt their government, get them to doubting each other and before long you have a condition that's ripe and ready for the Kremlin. "Bunk?" It works that way. Just take a look at eastern Europe today.

In another Farm-Labor Press column today, that of the Veterans of Foreign Wars, the opinion is advanced that this great Nation of ours will never be defeated from without, if we ever go down to defeat it will be from internal causes and one can agree with this too. Certainly, the wild accusations, half-truths, untruths, and smears, being tossed around today, do little for internal or external security.

To further show what is taking place in Republican Nebraska, I wish to quote the following from the Omaha Evening World-Herald of Thursday, May 18, 1950, which discloses that liberal Republicans in Nebraska are also revolting against the men now in control whose thinkings and doings have not kept pace with political progress, or the governmental needs of the people:

GOP Is Back to the People—Adams Sees Lesson in Pennsylvania Vote

Tuesday's Republican primary elections in Pennsylvania may have their impact on the Nebraska Republican Party.

At least this is the opinion of Ernest A. Adams, county treasurer and delegate to the last National Republican Convention.

"After many years of old-guard control the Republican Party is at last being returned to the people," Mr. Adams asserted.

Tuesday the Grundy machine was beaten in Pennsylvania with the Republican nomination of Governor James H. Duff for the Senate and John S. Fine for Governor.

Just a little more than a year ago Mr. Adams stirred quite a rumpus in Nebraska Republican ranks with his charges against the old guard. His Wednesday remarks are a renewal of his campaign for a broader base of leadership in the party.

"MAY REALIZE

"The Old Guard has hypnotized the rank and file quite a few years," Mr. Adams said. "The Pennsylvania elections now more or less dispel this.

"The Old Guard has been in control in Nebraska for a number of years. Now the Old Guard may begin to realize it is to their advantage to have all Republicans working in behalf of their party."

Asked to define the Old Guard in the Nebraska party, Mr. Adams said: "They are just a half dozen people or so—everyone knows them—who have been stifling the rest of the party. They have been in control for years."

MAY AFFECT CONVENTION

On the national level, he said, they are the Carroll Reeses, the Harrison Spanglers (former national chairmen), and Joe Grundys "who have their disciples at local levels."

The impact of Governor Duff's victories in Pennsylvania may be first felt in Nebraska in the preprimary convention, Mr. Adams said.

He described the preprimary as "the vehicle of the Old Guard." In the past the word was passed around on what candidates should be favored and that was it, Mr. Adams said.

At this year's preprimary, Mr. Adams said, he looks for more independent thinking from delegates.

A. V. Shotwell, Nebraska's national committeeman, was out of the city until Monday and not available for comment.

Centennial Celebration at Seymour, Conn.

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 24, 1950

Mr. PATTERSON. Mr. Speaker, on June 23, 24, and 25 of this year the town of Seymour, Conn., will celebrate its centennial year.

A community of fine people who have been an integral part of Connecticut's progress, Seymour will leave no stone unturned in the gala affair marking its one hundredth birthday.

The celebration begins on June 22 when Seymour High School graduates speak on topics relating to the growth of the town. On June 23 a block dance will be held, followed by a parade on June 24. Leland Stowe, well-known author and Seymour native, will be the speaker at ceremonies following the parade. In line with the traditions of this wonderful community, special religious observances will be held on Sunday, June 25, with a pageant and tree planting to follow.

This community, which has grown from a population of slightly more than 1,000 to 7,000 over the years, is typical of the finest in New England tradition. May Seymour continue to grow and prosper for many years to come.

As a portion of my remarks, I include a condensed history of Seymour compiled by Katharine Matthies and Mary L. Edwards:

History of Seymour

(By Katharine Matthies and Mary L. Edwards)

Ebenezer Johnson of Derby was the first white man to own land in Seymour when in 1678 he purchased the land near Rock Rimmon from the Pequot Indians. Others, among them being David Wooster, Jeremiah Johnson, and Samuel Riggs, soon followed him. Their relations with the Indians were friendly, which is greatly to the credit of those early settlers. The deeds relating to the purchase of land from the Indians are recorded in Derby.

In 1738 this settlement became known as Chusetown from the Pequot Indian, Joseph Mauwehu, who received the name Chuse from his pronounciation of the word "choose." He owned much land near the falls which he eventually sold to the white men.

The first houses were really little more than huts and the settlers had to make absolutely everything they needed in the way of building materials, tools, and clothing. Their food was raised on their own land. The first grist mill built on Little River in 1747 by George Abbott was followed by one erected there in 1760 by James Pritchard.

In 1804 the name was changed from Chusetown to Humphreysville after General David Humphreys who established the first paper mill in 1805, and a woolen mill in 1806, at the falls of the Naugatuck. It is unfortunate that the old woolen mill is not standing today for it would have been a landmark of great historical interest.

David Humphreys was born in the section of Derby, now Ansonia, in 1752. His father, Rev. Daniel Humphreys, was pastor of the Established Church in Derby for over 50 years. David Humphreys graduated from Yale University in 1771 after which he was principal of the Wethersfield Academy, until he entered the Army in 1778 where he received many promotions and became aide-de-camp, first to Gen. Israel Putnam, and then to General Washington. Washington gave Humphreys the honor of receiving the colors surrendered by Cornwallis at Yorktown and of presenting them to Congress in the name of the Commander in Chief, which he did in Philadelphia on November 3, 1781. Humphreys was met by a troop of horsemen and paraded to the State House where he presented a letter from Washington which read in part: "I have committed them (the flags) to the care of one of my aides, whom for his fidelity and good services I beg leave to recommend to Congress and Your Excellency." This letter was referred to a special committee, which on November 7 voted, "That an elegant sword be presented in the name of the United States in Congress assembled to Colonel Humphreys."

After the close of the Revolution, Humphreys was an intimate member of Washington's family at Mount Vernon and acted as a secretary and major-domo. Humphreys was sent as Minister to Spain in 1797 and returned in 1802 with the first merino sheep to be introduced into this country. These he sold for prices ranging from one hundred to three thousand dollars for a single ram or sheep. He procured a charter and was the first manufacturer of broadcloths in the United States, and Thomas Jefferson, when inaugurated President, was clad in garments the cloth of which was made in Seymour.

Besides being a soldier, diplomat, and manufacturer Humphreys was a poet and belonged to the Hartford Wits. He died in 1818 and was buried in New Haven.

Seymour was incorporated as a town in 1850 by the general assembly, the name being chosen in honor of Thomas H. Seymour, then Governor of Connecticut. The population was 1,677. The first town meeting was held on June 24 of that year, at which time Seymour was the one hundred and forty-eighth town to be recognized in Connecticut and entitled to a representative in the general assembly. Today Seymour has two representatives and a population of about 7,000.

The first school in town was the Great Hill School established in 1843 and followed by other one-room schools all of which are now gone. The Humphreysville Academy was established in 1849 and offered the first opportunity for higher education. Center School came into being in 1884 and was followed in 1914 by the Maple Street School and in 1920 by the high school on Pine Street. The Ridgeley C. Clark auditorium was added to the high school in 1936.

The early inhabitants went to Derby to church until 1759 when 26 persons signed the certificate organizing the First Congregational Church in Seymour, and erected a meeting-house where the present Methodist Episcopal Church is located. Other churches soon followed as accounts given elsewhere in this book show.

The first library in Seymour appears to have been that of the Village Church of the Congregational Society in 1817, followed by two other short-lived libraries. It was in 1892 that the Seymour Free Public Library was established in the old town-hall building on Second Street. It remained there until 1916 when it was moved to its present building on Broad Street. This library was the gift of Henry P. and Edmund Day and endowed by C. B. Wooster.

The wooden covered bridge on Bank Street was built in 1856–57 and was followed by the iron bridge at Broad Street in 1883. The latter bridge is still in use but the covered bridge gave way to progress in 1936 when the new concrete bridge was built.

The first railroad from Bridgeport to Seymour was opened in 1849, and the present railroad station was built in 1898. The electric road, or trolley, began operation in 1901 from Ansonia to Seymour and later was extended to Waterbury. The last trolley went through Seymour on June 19, 1937.

The present Whittenmore Tavern on South Main Street occupies the same building as the tavern of the same name prominent in the days of the American Revolution. Various other taverns have come and gone through the years. One still in existence is the present Dutch Door Inn on Broad Street which opened as the Seymour House in 1824. Here the horses were changed on the stage coaches running from New Haven to Albany.

Most of the old houses are so changed as to be almost unrecognizable, but the Ann Stephens birthplace on West Street still looks much the same, as does the Judge John Humphrey house on the corner of West and West Church Streets. In this house about 1790 lived Samuel Sanford, the first physician in Seymour. The Beach Parsonage on the corner of Pearl and Elm Streets was the home of Rev. Benjamin Beach, the first Congregational minister. Diagonally across Pearl Street is the Deacon E. A. Lum house with a large chimney and an old ballroom.

Seymour had three newspapers, the Independent of 1855, the Times, 1885 to 1888, and the Record, established by W. C. Sharpe in 1871. Mr. Sharpe published the Record as a weekly for over 50 years until his death and Mr. Baker continued its publication until about 1945.

The first town court was established by the legislature in 1925 with Harry F. Mannweiler as the first judge.

A perusal of this book tells the story of Seymour's development as an industrial town giving employment to hundreds of its citizens.

To name the prominent citizens, past and present, of Seymour would take many pages and the writers deem it inadvisable to mention even a few. Suffice it to say that from its earliest days Seymour had its share of noted men and women who met the needs of their times and did their part in the development of the town and the Nation.

Seymour men in large numbers participated in all the wars in which the United States was engaged from the French and Indian Wars to the Second World War. It is impossible to tell of their deeds in this limited space but the town owes a deep debt of gratitude to them.

The Seymour Red Cross did outstanding work during the two World Wars and now as a branch of the Ansonia Chapter provides life-saving training at the Legion pool and first-aid training in the factories. The Junior Red Cross is active in the schools.

The Seymour Public Health Association, established in 1919 with one nurse, now has one part-time and two full-time nurses with headquarters in the town hall, Seymour is a healthier town because of this organization, which provides TB X-rays in the high school each year and in 1949 held a TB X-ray program for all townspeople, among its many activities. The Shady Knoll Convalescent Home was established in the old Gilyard Home on Skokorat Road on January 1, 1948. It can take care of 17 people at one time and usually is filled to capacity.

In 1900 Mr. Carlos French gave the town a part of 14 acres which has been used as an athletic field; for Memorial Day exercises and other festivities. It was dedicated as the Carlos French Memorial Park on October 5, 1935.

Seymour's first post World War II housing project was begun in the fall of 1949 at Smith Acres on Walnut Street. A second project off Emma Street is under development at the present time.

Seymour today is an active, growing community with good homes, good roads, and good schools. Its fire and police departments are excellent as evidenced by the lack of bad fires or serious crimes. The recently purchased town ambulance has proved invaluable. The playground on Broad Street, equipped in 1949, is a definite factor in providing healthful recreation and in keeping the boys and girls off the streets.

And so with these few, brief high lights this chronicle must come to a close, Seymour's record is one of which to be proud. May the achievements of the past be a guide and an inspiration to growth and development in the future.

Compulsory Health Insurance

EXTENSION OF REMARKS
OF
HON. CARL T. DURHAM
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 24, 1950

Mr. DURHAM. Mr. Speaker, under leave to extend my remarks, I submit herewith a resolution against compulsory health insurance unanimously adopted by the Andrew Jackson Unit, No. 87, of the American Legion Auxiliary, in High Point, N. C., on May 11, 1950:

RESOLUTION REGARDING COMPULSORY HEALTH INSURANCE

Whereas the American veteran in two World Wars has defended the American free-enterprise system, which has made possible the development in this country of the highest standards of medical care and the finest medical institutions attained by any major country in the world; and

Whereas having experienced the shortcomings of assembly-line medical care typified in the form of Government-controlled medicine necessary in time of war, the veteran understands the dangers of imposing such a system permanently on the entire population; and

Whereas compulsory health insurance would impose a new payroll tax on the veteran, reducing further his take-home pay and creating new financial burdens which would increase the cost of necessities of life and thus lower the standard of living for veterans and other citizens; and

Whereas compulsion in the guise of social benefits or advancement is repugnant to the American way of life and contrary to our precepts of liberty and freedom for which veterans of two recent wars have fought and died: Now, therefore, be it

Resolved, That the Andrew Jackson Unit of the American Legion Auxiliary, High Point, N. C., does hereby go on record opposing any form of compulsory health insurance or any system of political medicine designed for national bureaucratic control; be it further

Resolved, That a copy of this resolution be forwarded to each Senator from the State of North Carolina, and the Representative from this district, and that said Senators and Representative be and are hereby respectfully requested to use every effort at their command to prevent the enactment of such legislation.

Socialized Medicine's Ills

EXTENSION OF REMARKS
OF
HON. WILLIAM M. McCULLOCH
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 24, 1950

Mr. McCULLOCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Christian Science Monitor of May 22, 1950:

SOCIALIZED MEDICINE'S ILLS

The increase in reported sickness during Great Britain's first full year of socialized medicine has its significance for the United States. Much of the British program is embraced in the proposal of Government medical care insurance which the Truman administration is promoting. This part of British experience with the system will hardly recommend it to Americans.

Sickness among adult Britons rose 8 percent and workdays lost through illness 22 percent, according to a Government-sponsored survey. The increase occurred for the most part among women. The workdays lost by young women climbed 32 percent and by elderly women 41 percent, while the workdays lost by men went up 8 to 9 percent. Officials credit the growth of reported illness mainly to economic reasons—people now getting medical service who previously could not afford it.

But there are additional reasons. In the experience of European countries with compulsory sickness insurance it has long been observed that when workers are taxed for medical care they often claim it unnecessarily. That is the only way that many figure they can get something back for their money. The situation encourages a flood of patients with minor illnesses for which they would not ordinarily seek medical attention. Some doctors are consequently overworked to the point of hasty, careless diagnosis and treatment.

It is also a standard part of the Government insurance system to give weekly cash payments to claimants. The chance to stay at home and live for a while with the aid of state funds frequently militates against a speedy return to work. In many instances the cash benefits delay recovery.

The more workdays lost through illness the smaller the production and the lower the general standard of living.

These and other disadvantages of a national system of government insurance for medical care are getting no publicity from the Truman administration. British experience, however, is bringing out some of the missing facts.

National Poppy Day, May 27, 1950

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 24, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, as part of my remarks, I am including part of an article on Poppy Day written by Mrs. Howard Simmons of Providence, R. I., national poppy chairman of the American Legion Auxiliary, which appears in the May issue of National News, official publication of the American Legion Auxiliary. The article is a timely one in view of the fact that next Saturday is officially Poppy Day. It is hard to believe, Mr. Speaker, that more than 700,000 children, this past year, have received the benefits from this great program and all are children of veterans. I would also call attention, Mr. Speaker, to the fact that the poppies are made by the veterans in the hospitals.

Many years have passed since that First World War spring of 1915 when soldiers' eyes were gladdened by the sight of bright red blossoms breaking out all over the countryside.

These were the hardy poppies springing up to cover hastily dug graves with a blanket of beauty. Each spring for four long, weary years the poppies returned to brighten the dreary western front and to perpetuate their pledge that freedom should never die. Before the war's end, they even covered the grave of Lt. Col. John McCrae, whose poem In Flanders Fields had made them famous.

To the men who returned from the battlefields of France, the poppy had become a symbol of their comrades' sacrifice and they loved its bright red petals.

Each year, as the miracle of spring unfolds, the members of the American Legion Auxiliary prepare for Poppy Day—the day of remembrance. Each little flower worn on Poppy Day will show that an American is thinking and giving for the welfare of men in hospitals and the women and children in fatherless homes—those for whom the war has never ended.

Heads bowed in prayer for God and country are not enough encouragement for disabled veterans. They must never doubt that a grateful America remembers their sacrifices and heartaches. The poppy industry is the backbone of our rehabilitation program, and each year more and more veterans are turning to the American Legion Auxiliary for help and encouragement.

The number of disabled veterans has increased steadily since the end of World War II, as the results of war service have made their effects felt. During the past year more than 400,000 veterans required hospital treatment. Many of these men have become disabled after discharge from service and have been unable to prove service connection for their disabilities and receive no compensation. A majority of these veterans have wives and children who must share the hardships that exist when there is a disabled husband or father.

During the past year more than 700,000 children of veterans were aided by the American Legion and Auxiliary.

President Harry S. Truman received his poppy from the hands of the Auxiliary's national president, Mrs. Norman L. Sheehe, who pinned the poppy on his lapel in ceremonies at the White House. The President's poppy was the first of the 35,000,000 little crepe paper memorial flowers which the Auxiliary will distribute to be worn in honor of the Nation's war dead on Poppy Day.

Honor for the war dead—aid for the disabled and for needy children—these are the purposes of the poppy.

Generoso Pope, Benefactor of Humanity

EXTENSION OF REMARKS
OF
HON. EDWARD J. HART
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 24, 1950

Mr. HART. Mr. Speaker, several days ago there passed away a great American. Mr. Generoso Pope was born in Italy and came to this country as a boy. By diligence, ability, and character he made himself one of the most influential citizens of his day and generation. Because of the greatness of his heart and his love for the people among whom he was born, he will be mourned by countless thousands of his fellow citizens. In extending my remarks, I submit herewith an editorial from the Rubicon, which appeared in its May 1950 number:

Generoso Pope died the morning that this paper went to the printer and he is given the place of honor because he was a benefactor of humanity, not because he was a titan or a captain of industry or an example of the Horatio Alger idea.

Many other immigrants came here from Italy and made fortunes, some of them even greater than that which Generoso Pope amassed during the 59 years of his life, less than 50 of which were spent in this country.

Many other immigrants were as well known in this country as he was. But there were few of them who took the time to interest themselves in the plight of their fellow men.

There are many Americans of Italian origin who have made more money than they could ever use, or that their families could ever use. Nay, if we have the kind of changes which even the welfare state would make in our lives, some of the fortunes which have been thus made may be taxed away.

It would have been better if those pioneers or titans had cast some bread upon the waters during their lives, and used some of their time to help their fellow men by good works, by friendly interest, by espousing good causes.

Some of us had our political differences with Generoso Pope and we did not pull our punches when we disagreed with him. But when we were called to cooperate with him in his philanthropical interests, or when we proposed ideas along those lines, we found that he had a heart that was above the usual desire to obtain reclame in the press or over the air.

We knew Generoso Pope much better than many of his friends did. Indeed, many of his philanthropical projects were aided and encouraged by us. Only last year we had begun to discuss projects by which the Italian community in New York would have had a real Italian educational and social center, an Italian wing in one of the large city hospitals, and similar activities.

But the inexorable Hand took him away.

It is hoped that his widow, Mrs. Catherine Pope, and his three sons, Fortune, Anthony, and Gene, Jr., will carry on where Generoso Pope left off. We trust that they will be guided by his ideals, which were far above his business interests, in shaping the future of those enterprises which he founded and directed. (L. C.)

Aid to Chinese Students

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 24, 1950

Mr. JAVITS. Mr. Speaker, support for the provision in the ECA bill relating to Chinese students comes from the China Institute in America with headquarters in New York City. The officers of the institute include the Honorable Henry R. Stimson and Chang Poling, honorary presidents, and Henry R. Luce, president; and among its trustees are Frank Altschul, Edwin N. Clark, Stephen Duggan, Dr. Raymond B. Fosdick, Mrs. Charles Merz, Thomas J. Watson, Jr., and other distinguished citizens. This organization is incorporated under the University of the State of New York. The resolution adopted by the institute follows:

Whereas the traditional policy of the United States Government has been to encourage Chinese students, trainees, and scholars to come to the United States and to foster educational relations for the mutual benefit of both the American and Chinese peoples;

Whereas at the present time there are about 5,000 Chinese students, trainees, and scholars in the United States;

Whereas nearly one-half of the Chinese students and all trainees and scholars are not eligible for aid under the present Chinese emergency-aid program administered by the Department of State;

Whereas the funds available at present are estimated to be only one-third of the total need;

Whereas these Chinese nationals constitute the greatest potential resource for Chinese-American understanding and cooperation;

Whereas the continued study, training, research, and teaching of Chinese students, trainees, and scholars under democratic auspices is the best way to insure maximum contribution to Chinese-American friendship: Therefore be it

Resolved, That China Institute in America, motivated by a desire to strengthen the democratic forces and to develop cultural relations among the peoples of the world, strongly urge and recommend that Congress appropriate $20,000,000 out of the unexpended China ECA funds to remain available until expended to finance a program of educational and cultural cooperation between the United States and China; and be it further

Resolved, That this program should provide for help to Chinese students now so that this education, grounded in American democratic principles, may aid the United States; and be it further

Resolved, That the institute, as a specialized private agency of nearly a quarter of a century of standing and experience, chartered as an educational corporation under the laws of the University of the State of New York, hereby offers its services to the United States of America to assist, as provided in section 103B of the proposed bill, H. R. 7797 (81st Cong.), in the administration of the funds under the direction of the Secretary of State; and be it further

Resolved, That the officers and trustees of the institute transmit this resolution to the President of the United States, the Secretary of State and the appropriate congressional committees and delegations, and to send copies of this resolution to interested national and local agencies and colleges and universities.

Fate of Some of the Reorganization Plans of the Hoover Commission Submitted to Congress by President Truman

EXTENSION OF REMARKS
OF
HON. EUGENE D. O'SULLIVAN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 24, 1950

Mr. O'SULLIVAN. Mr. Speaker, in view of the fact that so many people have written to me inquiring about what has happened to the reorganization plans submitted by President Truman to the Congress, I take this opportunity to supplement my letters to them by giving them the following information:

Sixteen of the twenty-one reorganization plans which President Truman submitted to Congress 2 months ago become effective Wednesday.

The other five were vetoed by the Senate and do not go into operation.

The plans rejected were:

No. 1, transferring the duties of the Comptroller of the Currency to the Treasury Department;

No. 4, reorganizing the Department of Agriculture;

No. 7, transferring control of the Interstate Commerce Commission to its Chairman;

No. 11, transferring control of the Federal Communications Commission to its Chairman;

No. 12, abolishing the office of independent General Counsel for the NLRB.

The plans which become effective are:

No. 2, Department of Justice;

No. 3, Department of Interior;

No. 5, Department of Commerce;

No. 6, Department of Labor;

No. 8, Federal Trade Commission;

No. 9, Federal Power Commission;

No. 10, Securities and Exchange Commission;

No. 13, Civil Aeronautics Board;

No. 14, transferring labor standards functions to the Labor Department;

No. 15, transferring Alaskan and Virgin Islands public works to the Interior Department;

No. 16, transferring school district and water pollution control to Federal Security Agency;

No. 17, transferring public works advance planning to Housing and Home Finance Administration;

No. 18, transferring building and space management to General Services Administration;

No. 19, transferring employees' compensation functions to the Labor Department;

No. 20, transferring certain record-keeping functions from the State Department to the General Services Administration;

No. 21, transferring Maritime Commission functions to the Department of Commerce.

The recent speech of ex-President Herbert Hoover to the Sales Executives Club in New York City had the effect, I believe, of saving some of these plans from being rejected.

It is hard for me to understand why there would be much opposition to many of them becoming law. They were prepared by a task force of capable persons, at great expense to our Government, and approved by an ex-President and a President, all of whom with sincerity of heart and purpose tried to do a needed task for their country.

I wish to set forth now an editorial appearing in the Lincoln Star, of Lincoln, Nebr., on Saturday, May 20, 1950, which explains perhaps the sources of some of the opposition to certain of these reorganization plans.

MR. HOOVER LOSING PATIENCE

Herbert Hoover said the other day he was near the limit of his tolerance toward vested officials and pressure groups that threaten so many of his recommendations for streamlining the Government's business. He hasn't named names so far, except in a negative way, reminding the public that pressure groups always proclaim their glad support of reforms that affect them, while fighting them from the rear. When or if the full story is told, the people might shed some of their complacence, which has led too many to believe that plans as practical as Mr. Hoover's will just naturally be put into effect.

They won't. Not without public pressure—for which most States, including Nebraska, have voluntary citizen groups at work—and the publicizing of hostile interests that is need to spur the efforts of these.

A day is approaching on which Mr. Hoover might see fit to ask for a show-down. It is May 24, on which the 21 recommendations submitted by the President to Congress 2 months ago will take effect unless thrown out in the meantime. Last year Mr. Truman obtained approval of six of the seven plans he submitted, the seventh proposing to set up a welfare department to unify the health, education and public welfare programs now handled by the Federal Security Agency.

Opposition to quite a few of the 21 is building up inside and outside Congress. Unless taxpayers are sufficiently aroused by the burden of excessive Government costs and remediable extravagance and inefficiency they are carrying, the pressure groups will have things their own way. The outset of political campaigns makes this an ideal time for naming names.

Plywood Tariff

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 24, 1950

Mr. MACK of Washington. Mr. Speaker, our American State Department, which already has given over to the Russians a large slice of the domestic markets for American crab meat, now seems about ready to sacrifice the Douglas fir plywood industry of the Pacific Northwest to Canada and Mexico.

I say this because Secretary Dean Acheson of the State Department recently has announced that our State Department in September at Liverpool will enter into discussions to consider reducing or removing the present tariff rate of 40 percent ad valorem on imports of plywood.

If this plywood tariff is reduced, the United States will be flooded with Canadian and Mexican plywood, with the result that many of our western plywood workers and loggers, who supply the mills with logs, may lose their jobs when the present exceedingly heavy demand for plywood declines.

There are, at the present time, 56 plywood plants in the three Pacific coast States; 29 of them in Washington, 22 in Oregon and 5 in California. These plants employ 18,500 workers and have payrolls of $66,000,000 annually.

Of these 56 plywood plants, 42 are located in small towns where curtailment of their production would seriously affect the entire economic life of the communities. This is too large and too important an industry, affecting the lives of too many people and too many communities, to be sacrificed on the altar of so-called reciprocal trade.

DIFFERENCE IN WAGES

The plywood industry of Oregon, Washington, and California pays an average hourly wage of $1.72½ to its employees compared to a wage average of only $1.22 an hour in Canada. Then, too, the Canadian wages are paid in Canadian dollars which have been depreciated 10 percent. This means that the Canadian plywood worker in terms of American dollars, received a wage of only $1.10 an

hour compared to the American wage of $1.72½. In short, the average pay of American plywood workers is $69 for a 40-hour week compared, if figured in American dollars, to $44.40 paid Canadian plywood workers. This wage differential gives the Canadian plywood industry a big advantage over United States operators and unless this differential is compensated for by a tariff, it stands to reason that Canadian plywood can undersell the similar American product and capture a sizable part of the American market.

Nor is the wage rate the Canadian plywood producers' only advantage. He buys his logs 40 percent cheaper than American mills.

JAPANESE PLYWOOD

If the tariffs on plywood are reduced to permit and encourage more foreign plywood to come into the United States, Japan, also, in time, may be among the nations that will invade our markets.

Japan has upon her own and neighboring islands vast forests. In 1938, she was producing 1,100,000,000 square feet of plywood or almost one-half as much as the United States. In 1939, she exported almost one-third of her production.

In 1949, last year, wages in the Japanese wood production industries was 223.7 to 256.8 yens a day, which in United States dollars means 61 to 81 cents a day. In short, a Japanese woodworker had to labor 2 days to make as much as American workers are paid for 1 hour's work.

Surely, American plywood workers cannot and it should not be expected that they should compete with such wages.

We ought to go slow in overhauling tariffs when the reduction or removal may destroy the jobs and incomes of many thousands of our citizens.

Proposed Memorial at Arlington for Sir John Dill

EXTENSION OF REMARKS
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 24, 1950

Mr. VURSELL. Mr. Speaker, under leave to revise and extend my remarks I am inserting in the RECORD an article by Walter Trohan which appeared in the Washington (D. C.) Times-Herald. This article discusses a proposal which I believe should receive the immediate attention of the Committee on Armed Services or some other appropriate committee of the House.

According to this article it is proposed that an acre of land at Arlington Cemetery be given over to a memorial for Sir John Dill, British field marshal. I do not question that he was a great soldier and that he served his country, and the common cause of freedom with great skill and extraordinary bravery.

But, Mr. Speaker, no such pretentious memorial as is being proposed for Sir John Dill has ever been erected for any one of our own country's great military leaders that are buried in the sacred soil of Arlington Cemetery. No such memorial as is proposed for this British soldier marks the honored grave of Gen. John Pershing who, as commander in chief of all the American forces in World War I held, I believe, the highest rank of any military leader in history. No such pretentious memorial stands over the last resting place of the distinguished Secretary of the Navy Frank Knox, who died while in the service of his country in the last war.

Mr. Speaker, the hallowed ground that is Arlington Cemetery is very limited. To allow an acre of this sacred soil set aside for our honored dead to be used for a memorial for a British Field Marshal seems to me to be beyond all reason. It is my understanding that an acre of land could serve as the last resting place for 300 American soldiers. With all honor to Sir John Dill, for whom the American people have the greatest respect and admiration, I believe that the American people would much prefer to have this land used to honor 300 American soldiers, with the simple markers at their graves, than it all being used for single memorial for a great British soldier. As a great military leader, I am sure that Sir John Dill himself would not wish what is being proposed for him.

I earnestly urge that this matter be looked into promptly by the proper committee before it is too late.

The article follows:

ONE-ACRE MEMORIAL TO BRITON IN ARLINGTON HIT BY VIRGINIA PAPER

(By Walter Trohan)

The Manassas (Va.) Journal yesterday called upon Congress to halt plans to erect a memorial over the grave of Sir John Dill, British field marshal, in Arlington Cemetery.

The Virginia newspaper protested against devoting an acre of the Nation's hallowed burial ground to the honoring of a foreign soldier. It urged that Congress by resolution direct the Army to disinter the remains of Dill and return his body to British soil.

The Veterans of Foreign Wars has been protesting for almost 3 years against the memorial, which the Manassas Journal charges was conceived by General Marshall, wartime Chief of Staff, and now head of the American Red Cross.

SPACE FOR 300 AMERICANS

The publication declared that Marshall browbeat the Army into violating the statutes by turning over an acre of the national cemetery to honor Dill. An acre of the cemetery would accommodate 300 American war dead.

Under Marshall's plan a $35,000 equestrian statue of the general would be raised above the grave. This would be financed by popular subscription by an organization known as the Field Marshal John Dill Memorial committee and the English Speaking Union, which worked to bring the United States into the war on Britain's side.

Marshall and Dill were both members of the highest rank in the exclusive British order of knighthood, the Order of the Bath. The grand cross of the order would make Marshall known as Sir George if he were a British citizen.

The Manassas Journal listed a roll of officers who were reversed by Marshall even after he became Secretary of State when they opposed features of the memorial plan. The paper published copies of documents signed by protesting high-ranking officers.

Marshall, who has a vast array of foreign decorations, is now pushing the Dill project. As head of the Red Cross Marshall gets $22,500 a year and he draws full pay and allowances of a five-star general of almost $20,000 a year for life. Marshall's predecessor, Basil O'Connor, would not accept pay for his services.

Dill, a former chief of the British imperial staff, was head of the British joint staff mission in the United States and was senior British officer on the combined chiefs of staff. Marshall was a member of the combined chiefs group.

CREATED FOR UNION DEAD

Dill died here in November 1944. He had served in the United States for 3 years. At his own request he was buried in Arlington. He is not the first foreign soldier to be buried in Arlington. Among the 71,000 graves—of which 13,000 have been added in the last 3 years—are a number of British, French, and Italian soldiers who died here during World War I. None have pretentious memorials.

The cemetery was created for Union war dead. A number of Confederate soldiers are buried in the area, however. A number of foreigners who served in the American Army were buried in Arlington. Most prominent of these is Pierre L'Enfant, the designer of the city of Washington, who fought in the Revolutionary War.

The Veterans of Foreign Wars has adopted a resolution condemning the Dill memorial on the ground that honors on such a scale are denied great and heroic American dead in the cemetery. Comparatively simple markers denote the graves of such outstanding Americans as General Pershing, General Sheridan, Justice Holmes, and William Howard Taft, President, and chief justice of the Supreme Court.

The Government provides a simple marker for all graves. However, shafts, statuary and tombs are permitted, when provided by private funds. The Dill statue, 20 percent larger than life size, would be the most elaborate and costly.

Newspaper Report on President Truman's Visit to Broken Bow, Nebr., on May 8, 1950

EXTENSION OF REMARKS
OF
HON. EUGENE D. O'SULLIVAN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 24, 1950

Mr. O'SULLIVAN. Mr. Speaker, the Custer County, Nebr., Democratic Committee, the Broken Bow Chamber of Commerce, and the city of Broken Bow, through a three-fourths of a page newspaper advertisement in the Custer County Chief, invited thousands of residents in the area to meet with and listen to our President. West central Nebraska's hospitality was never better displayed.

The following individuals and organizations deserve the thanks of the community, and all of Nebraska too, for making the reception of President Truman at Broken Bow, Nebr., so completely successful: The Merna, Arnold, and Broken Bow Bands; the American Legion

Posts of Merna, Mason City, Arnold, Ansley, and Broken Bow; the VFW of Anselmo and Broken Bow; the Broken Bow VFW Auxiliary; R. G. Fox, county sheriff; Rae L. Simonson, in charge of parade; the Broken Bow City Police; the Nebraska Safety Patrol; Battery C, Five Hundred and Sixty-eighth Field Artillery Battalion, Nebraska National Guard; Broken Bow High School; and the Broken Bow Municipal Utilities.

The following news items appearing in the Custer County Chief, of Broken Bow, Nebr., give the reader an idea of how splendidly President Truman was greeted upon his visit there:

PROGRAM

7 p. m. (central standard time): Assembling, until 7:30 p. m., of bands at city square. Assembling of American Legion, Veterans of Foreign Wars, veterans (in uniforms or caps) at east steps of the Custer County Courthouse.

7:30 to 8 p. m.: Parade from city square to Burlington depot with Broken Bow, Ansley, Merna, Arnold, Callaway, and Sargent bands and color guards from county veterans' organizations, plus uniformed veterans. Rae L. Simmons in charge of parade.

8 to 9:45 p. m.: Assembly of crowd at station. Diversion will be furnished by the playing of the bands alternately.

9:50 to 10 p. m.: Arrival of President Harry S. Truman's special train; release of restraining ropes and fence and overflowing of crowd onto tracks and area surrounding the station.

10 p. m.: Introduction of President Truman by Mayor Harry T. Massie, of Broken Bow. Talk by the President.

About 10:15 p. m.: Leaving of Presidential special.

FAIR WEATHER, GREETING CROWD READY FOR TRUMAN HERE TONIGHT—"HAPPY BIRTHDAY" BOUQUET WILL BE GIVEN HERE

Latest plan for the greeting of President Truman at Broken Bow tonight includes the presentation of a "happy birthday" bouquet to him. Crowds are estimated conservatively at 6,000, but, if the weather is right, they may grow to 10,000.

Arrangements for the greeting of the President and his party have been completed here by P. J. Kelly, chairman of the county Democratic committee, James R. Kelly, chairman of the county young Democratic committee, Mayor Harry T. Massie and L. J. Walker, Jr., secretary of the Broken Bow Chamber of Comerce.

Special protection and policing measures have been taken to assure a safe stay in Broken Bow for the President, Massie reported. The Nebraska Safety Patrol, Custer County sheriff's office, Broken Bow police, and the Custer County National Guard unit.

Massie stated:

"If the weather is fit, this will be a larger crowd than we're accustomed to handle, therefore, we are asking the safety patrol to assist in the direction of traffic, thus leaving Sheriff R. G. Fox and the city police under Chief Harry Brock available for control of the pedestrian traffic."

The National Guard unit, under the command of Capt. Harland C. Raymond, will control the crowd at the station, assisted by the local Boy Scouts, under their leaders, Lyle Van Wormer and Cloyd Cramer.

Secret Service men are in charge of the over-all arrangements.

Chief Brock suggested to the citizens of Broken Bow that it would be worth while for residents to lock their homes and business places and for visitors to lock their cars, because there are always some who follow these crowds with intentions of taking anything they can lay their hands on. He further suggested that the residents of the city leave their cars at home to leave enough parking space for visitors' cars on the city streets.

OVER 10,000 HEAR TRUMAN TALK ON FARM PROGRAM HERE MONDAY—REVIEWS STORY OF REA, OTHER RURAL IMPROVEMENTS

As President Truman walked out to the rear of the train in Broken Bow, he wore an expression of surprise to see such a large crowd. His first words verify this when he said, "Somebody told me that this great city of Broken Bow had 2,800 people in it. It looks to me as if there are 28,000 here tonight."

Reporters from the train estimated from 10,000 to 12,000, the largest crowd since leaving Lincoln.

"I grew up on a farm in Missouri," Truman said, "and know first-hand what it is like. Of course, I am not up to date on the subject. You see, I lived on the farm from 1905 until 1917."

"I used to milk cows by hand," he told a trackside audience. "I used to plow with a four-horse team instead of a tractor. I used to sow wheat with a drill that had only 12 holes on it, and I used to cut wheat on a binder that cut 8 feet wide."

He said he has two nephews on the same farm who get much more out of a farm than he did by using machinery. But, he said, "I don't think that those boys could follow me up a corn row to save their lives."

He said, "We have been doing a lot in recent years to make country life easier and happier. One of the most important things has been to bring electricity to the farms."

"Fifteen years ago, before we started the rural electrification program, only one out of every 10 farm families had electricity. Now 8 out of every 10 of the Nation's farms are electrified."

"I'm glad to see that Congress has now authorized loans to expand rural telephone facilities. That is another step forward."

"I regard Government expenditures for the improvement of rural life as an investment in the future of this great country. The next time," he said, "you hear somebody talk about high Government expenditures, remind him that when we spend money for raising the standard of living on the farm, we are contributing to a greater Nation. And that is the best way to preserve world peace."

"I am coming back now to talk to you and let you look at me and see if you think I have gone 'high hat' on you. I am still working for your welfare and benefit. I am your servant. That is the reason I am taking this trip across the country."

Truman ended his speech by saying he is our "public servant, hired by you in the election of 1948 and hopes most of the people in the United States will understand that I am only working in the public interest and for your benefit and for the peace of the world."

Mrs. Truman and Margaret were introduced by the President, which was followed by the crowd singing Happy Birthday. Truman waited for the bands to play one number and the family waved as the train pulled out.

HOMEY ATMOSPHERE PERVADES TRUMAN'S PRIVATE CAR

Entering the club car Monday evening, a Chief reporter was received by Mrs. Harry Truman and Margaret as if it were the living room of their Independence, Mo., home.

At the first glance plush red chairs could be seen arranged around the windows of the car with a large circular brown-topped table in the center. Blonde Margaret, attired in an attractive aqua-colored after-five dress, was standing at the back and behind the table. Mrs. Truman, wearing a simply styled print dress, stood at the side of the table at her daughter's right. Four men were spaced behind the two ladies, undoubtedly secret service agents and perhaps several were of the President's personal staff.

Mrs. Truman and Margaret were hospitable and gracious as they accepted corsages given by the town of Broken Bow, thanking everyone for a splendid reception. They asked if it had rained earlier in the evening, remarking about the downpour in Lincoln.

Mrs. Truman appeared weary, but said her trip had been very enjoyable up to now (Broken Bow.) Margaret seemed refreshed and appeared as if she were enjoying the trip tremendously. The manner of each was natural, unaffected, and homey. They were very relaxed.

As the train pulled out of the station, Mrs. Truman and Margaret, wearing the two corsages, waved to over 10,000 people standing in the rail yards.

TRUMAN SPEAKS 18 MINUTES AT SENECA

Speaking on the anniversary of D-day in Germany, President Truman delivered an 18-minute informal speech to a crowd estimated at 4,000 at Seneca, Tuesday evening.

Willard Lynch, Thedford, reports that people from Alliance to Dunning and Valentine, including Cherry, Thomas, Hooker, Grant, and Blaine Counties were in the crowd that greeted the President, Mrs. Truman, and their daughter, Margaret.

William McCreath, Valentine; Homer Finney and Seth Hanna, Seneca; were on the welcoming committee. The hosts presented a barbecue for the crowd.

The evening's events were followed with an old-time dance sponsored by the Seneca VFW post.

A very dear friend of mine, James R. Kelly, of the law firm of Kelly & Kelly, at Broken Bow, Nebr., had this to say concerning President Truman's visit:

DEAR GENE: I suppose that you have read in the papers about the visit of President Truman to Broken Bow, Nebr., and have heard that we had an enormous crowd, between 10,000 and 12,000 people here at the depot and that he was generally accepted and even the old tried and true Republicans left after his talk, feeling rather kindly toward him. I think he was wise in stopping in Broken Bow and believe that he has helped himself a great deal in this section of Nebraska.

Buffalo and Chautauqua Deans on Episcopal Committee

EXTENSION OF REMARKS

OF

HON. ANTHONY F. TAURIELLO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 24, 1950

Mr. TAURIELLO. Mr. Speaker, recently, the Episcopal diocese of western New York held its one hundred and thirteenth annual convention in Buffalo, N. Y., which I have the honor to represent.

This was, indeed, a historic occasion, for the Episcopal diocese of western New York has a splendid record of over a century of service to the community and to the country. It has been outstanding in its leadership and has contributed

much to the mutual cooperation enjoyed in religious and civic matters in Buffalo.

I want to extend to the Very Reverend George F. O'Pray and the Very Reverend Leslie F. Chard my heartiest congratulations upon the election to the standing committee of the Episcopal diocese and to offer them my best wishes for continued success. They are the deans of Buffalo and Chautauqua County and both have long records of splendid leadership in the Episcopal Church.

Under leave to extend my remarks, I herewith submit an article from the Buffalo Evening News, setting forth the details in connection with this convention:

BUFFALO AND CHAUTAUQUA DEANS ON EPISCOPAL COMMITTEE

The deans of Chautauqua County and Buffalo today were elected to the standing committee of the Episcopal Diocese of Western New York at its one hundred and thirteenth annual convention in the Church of the Good Shepherd.

The Very Rev. George F. O'Pray, rector of St. Clement's Church and dean of the Buffalo Deanery, was elected for 4 years, and the Very Rev. Leslie F. Chard, rector of St. John's Church, Dunkirk, and dean of Chautauqua County, was elected for a 2-year term. A layman, Wallace J. Stackel of St. James Church, Batavia, was elected for 4 years.

Three clergymen and three laymen elected to the executive council are: Rev. H. Dimmick Baldy, St. Jude's Church; Rev. Lawrence C. Butler, vicar of All Saints Chapel, Lockport and assistant at Grace Church, Lockport; Rev. William G. Woodward, rector of Trinity Church, Lancaster, and registrar of the diocese; Dr. Roland Burton, Trinity Church, Fredonia; Theron Cleveland, St. Stephen's, Olean; Alonzo Waters, St. John's Church, Medina.

ELECTED TRUSTEES

The Very Rev. Ansel R. Morrell and the Rev. Richard B. Townsend were elected diocesan trustees. Dr. Morrell is rector of St. Mathias, East Aurora, and dean of Erie County. Mr. Townsend is rector of St. Mark's Church.

Deputies elected to the provincial synod are:

The Rev. William E. Bowker, rector of the Church of the Holy Communion; Rev. Alexander A. Corti, rector of St. Albans Church, Silver Creek, and rector-elect of St. Mark's Church, North Tonawanda; the Very Rev. John T. Sanborn, rector of St. James Church, Batavia, and dean of the Batavia Deanery; Joseph L. Blaney, Church of the Ascension; Dr. Albert E. Connolly, St. Peter's Church, Niagara Falls; James E. Wells, St. Mark's Church, Orchard Park.

Trustees of DeVeaux School are: John K. Walker, St. Paul's Cathedral; Rev. Joseph Groves, on special assignment; John Bingenheimer, St. Peter's Church, Niagara Falls.

ISLAND WORK DESCRIBED

Two trustees elected for DeLancey Divinity School are: Rev. Douglas M. Stoll, rector of the Church of the Advent, Kenmore, and William Foote, St. Mary's-on-the-Hill.

The Rt. Rev. Charles F. Boynton, newly-elected suffragan bishop of New York, described the work of the church in Puerto Rico and thanked the diocese for its contribution to that work.

Bishop Boynton, who has been serving as bishop of that missionary district, addressed a joint session of the convention and woman's auxiliary in Central Presbyterian Church at noon.

NAMED AFTER BISHOP

He especially thanked the woman's auxiliary for $7,000 it contributed to build a cottage for Mr. and Mrs. Earle Hackett of Dunkirk, who are serving as missionaries and teachers at a newly established agricultural boarding school for boys—the first on the island. The cottage has been named in honor of the late Bishop John C. Ward, one-time rector of Grace Church, Buffalo, and bishop of the diocese of Erie.

Officers of the woman's auxiliary elected this morning are: Second vice president, Mrs. David K. Hamilton, Buffalo; supply secretary, Mrs. Fulton Chamberlin, Buffalo; treasurer, Mrs. Jocelyn K. Brotz, Silver Creek; united thank offering custodian, Mrs. Joseph Goold, Harris Hill.

COMMITTEE HEADS NAMED

Mrs. Harold J. Senior, of Williamsville, president, appointed the following committee heads:

Constitution, Mrs. Welles V. Moot, Mrs. Lauriston L. Scaife; finance, Mrs. Ralph Barber, Westfield; nominating, Mrs. Howard J. Bradley, Cheektowaga, Mrs. R. A. Weise, Mayville.

Two missions were admitted into union with the convention—St. David's, Ebenezer, and St. Andrew's, which serves the Newfane, Burt, and Olcott areas.

The Reverend Kenneth W. Kadey, rector of St. Paul's Chapel, Harris Hill, and diocesan director of youth work, called for "more cooperation from the clergy in the diocesan youth program. He stressed the need for a full-time youth director and said that youth work in the diocese at present is not good.

WHY SCHOOL IS CHANGING

The Reverend William S. Hudson, headmaster at DeVeaux School, explained why the school is changing from a military to a civilian status.

"The military system and the church just don't go along together," he explained. "The military comes into constant collision with the principles of Christ. Boys come out of chapel and are, perhaps, ordered to 'shut up' by some officer if they talk in the halls. In general, if a school has a good military system, it is a poor church school."

The Right Reverend Lauriston L. Scaife summoned all loyal churchmen Monday evening to become active opponents of the forces opposed to Christianity.

"It is high time," the bishop warned, "that churchmen cease to be 'tolerant' and practice more intolerance—intolerance of everything that is opposed to Christianity.

GIFT OF $250,000

"No true, loyal, devoted churchman can tolerate the forces opposed to Christianity. We cannot be missionaries for the spread of Christ's Kingdom * * * without active opposition to the godless indifferences to all religion at large in the world today."

High-lighting the bishop's report on diocesan activities was the announcement that a devoted communicant of the diocese, who desires to remain anonymous, recently donated $250,000.

This extraordinary gift, he said, is to be made available for investment as part of the endowment for the Episcopate.

Noting that the past year has been one of planning, growth, and experimentation, in the diocese, Bishop Scaife said he hoped it will not be many years before we can devote our full time and thought to the attack on the great problems that confront us.

SAYS YOUTH WORK A PROBLEM

One of the chief problems churches must confront, he said, is work among their young people. He expressed the hope that the diocese in 5 years will be spending 10 times what we are now spending for this.

Urging that churchmen insist upon Christian influence in the total life of our youth, he added forcefully:

"We must consider Christian influence upon the media of entertainment which our young people have, for * * * a half-hour on Sunday morning * * * cannot be the limit of Christian education. We must not attempt to compete with other agencies for amusement and recreation."

The church must, however, influence the type of programs and material offered by the radio, motion pictures, and television, so that some evidences of Christianity are to be seen and felt, he asserted.

WOULD CONSOLIDATE GAINS

While emphasizing the importance of encouraging mission congregations which he called "our most critical spots," Bishop Scaife said he does not intend to seek to open any new mission work "until present gains have been thoroughly consolidated."

He reported that in the past year he has confirmed 1,181 candidates. He hailed as "gratifying" the diocese's 1950 pledges or gifts of more than $55,000 in the national church's "One World in Christ" campaign, urging that the remainder of the $72,444 goal be attained during the next year.

PRAISES RETIRING AIDE

He also lauded the woman's auxiliary and its "outstanding group of women under the leadership of Mrs. Senior."

Announcing the retirement of Arthur F. Freeman after 30 years as financial secretary of the diocese, Bishop Scaife praised Mr. Freeman as a "trusted confidant for untold numbers of the clergy and laity." A member and vestryman of the Church of the Ascension, Mr. Freeman will continue as financial consultant. Miss Emma Dupler, of Pittsburgh, has been named to succeed him.

THANK OFFERING ACKNOWLEDGED

Bishop Scaife reported that the Reverend William R. Shannon, rector of St. Paul's Church, Lewiston, has accepted a call to become rector of Christ Church, Clarksburg, W. Va., effective Sunday.

He announced the appointment of Mr. O'Pray as dean to succeed the Reverend Alanson C. Davis, associate rector of Trinity Church, who has accepted a call to become rector of the Church of the Ascension, Bradford, Pa.

The Reverend John E. Knox, priest in charge of St. Mary's Church, Gowanda, will succeed Mr. Davis as chairman of the diocesan department of publicity and promotion.

Bishop Scaife gratefully acknowledged the presentation by the woman's auxiliary of the semiannual "United Thank Offering," totaling $3,932, which will be forwarded to the national church for missionary work. The auxiliary is meeting in conjunction with the convention.

The delegates also commended Mr. Freeman and voted to send greetings to the Diocese of West Missouri, which also is meeting today. The Right Reverend Edward R. Welles, formerly rector of St. Paul's Cathedral, was consecrated bishop of West Missouri last month.

Biggest Story

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 24, 1950

Mrs. ST. GEORGE. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include the thirtieth article by Mr. Frank

C. Waldrop on the infiltration of communism in our country:

BIGGEST STORY

(By Frank C. Waldrop)

The Communists of the United States of America, in the 10 years between 1920 and 1930, discovered two very important things.

First, that revolution in America was very slow business.

Second, that they were not masters in their own house.

And so it was that even as their leader, Lenin, had foretold, the "locomotive of history" roared around the curves and left many a one behind with his face in the dust.

Two such victims can tell the story for all. The witnesses for this account are Benjamin Gitlow and Jay Lovestone.

One of the strangest evenings of my life was spent in their company. It was a dinner attended by 10 or 12 of the most famous exapostles of "scientific socialism" for the United States of America.

Among those present were Isaac Don Levine, now editor of Plain Talk; Eugene Lyons, who went to Communist Russia as to a shrine and came back to devote his life as an author and editor, to its opposite; J. B. Matthews, who once led pilgrimages of Americans to Lenin's tomb and then gave years of penitent labor to researching evidence on communism, fascism, and nazism, for a committee of Congress.

There were others I will not mention, now. Some of this company had been Communists of record, some in the phrase that Matthews invented, "fellow travelers."

All had been worshipful and all were devoting themselves to saving America from that which they had come to know too well. All of them, in one way or another, and without knowing it, disclosed to me the wounds and scars a man suffers when he makes that most terrible of all discoveries, that he is regarded with contempt by one he worships.

Prison would not have driven them from their worship. More than one had done time for communism's sake. Beatings, for the sake of the cause, were satisfying tests of faith. To be outside the law of a society at which they were at open war was natural.

No. It was nothing brought against them by our world that had broken the spell.

They found they would have to choose, either to be Communists or to be men, and they chose to be men.

I am not sure that is altogether clear. Let me try again.

Bravery is actually a common enough article in human affairs. A child can be brave as any soldier on the field of battle, if that child fears a nameless Something upstairs in the dark, and yet goes up to bed without a murmur. In his mind, it is there. And his act of will in daring it to grab and eat him alive—that is courage.

A woman who has that fox in her bosom, whatever it may be, and yet looks her husband in the eye and smiles, she has won her medal of honor, too.

The woman and the child have a bond with the private soldier in the field who, on orders from a man he has been taught to regard as his commander, goes out in the open and risks his life against a gun.

But then if the parent who sent that child upstairs laughs in his face at his fear, if the husband slaps his wife with the other woman's name, and if the officer treats the soldier as a mere animal without human dignity, there is a challenge.

Somebody has to lose. The child loses his self-respect or he loses faith in the parent who ridiculed him. The wife can go to pieces, and lose the rest of her self, too. The soldier—sometimes he just puts a bullet through a back.

Anyhow, nobody can challenge the sense of manhood in anybody else and make the consequence satisfy the victim.

The fact that the revolution in America wasn't coming off as promptly as expected did not destroy the Communist faith of Benjamin Gitlow, Jay Lovestone, and those others.

They could see the reasons all around them. They were prepared to make twists and turns in daily tactics, so long as the basic strategy of a Communist world remained the same.

But the thing that threw them was the discovery not that they might well be sacrificed in the tactics—any soldier may get killed—but that they were being used.

It is one thing to die for the cause. It is another thing to have the cause spit in your face. Stalin spit in their faces. He made it clear that no matter what they might report to Moscow on conditions in America, decision for Communists in America would be made to suit Stalin's personal purposes in Russia and for Russia.

Their fundamental sense of manhood was challenged. So, in their various ways, they jumped off the Moscow Express.

Gitlow and Lovestone actually went to Moscow for a last-ditch encounter with Stalin and were lucky to get away alive. To this day they have not yet told all about how they did it.

Annual Banquet of School of Commerce and Finance of Seattle University

EXTENSION OF REMARKS

OF

HON. HUGH B. MITCHELL

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 23, 1950

Mr. MITCHELL. Mr. Speaker, as one of the sponsoring committee for the annual commerce banquet of the School of Commerce and Finance of Seattle University, it was my privilege to attend this impressive event on May 15, which, as so well stated by the Reverend Albert A. Lemieux, S. J., Ph. D., president of Seattle University, "is only an outward token of the inner growth within the School of Commerce itself."

Mr. Speaker, under unanimous consent, I include in the Appendix of the RECORD the remarks of President Lemieux, which although confined to the Commerce School are indicative of the growth of this largest private university in the State of Washington. I also include the remarks of the Honorable John F. Floberg, Assistant Secretary of the Navy for Air, who was the principal speaker, following those of President Lemieux.

The remarks of President Lemieux are as follows:

This has been a very pleasant evening—a happy reunion of faculty, student, alumni, and friends. It has also been a very stimulating evening with its serious but challenging theme of military defense—a most important theme to us who live on the outer edge of a potential military front.

This is the third year that I have had the privilege to attend the school of commerce banquet. Each year, it is my impression that the banquet is getting larger and finer. For one thing, tonight we have been honored to have as our guest speaker, the distinguished Assistant Secretary of the Navy, Mr. Floberg, Seattle University, as you are aware, is one of the 27 colleges operated by the Jesuit Fathers throughout the United States—Georgetown, Fordham, Holy Cross, St. Louis, Loyola Chicago—are all sister institutions of Seattle University's and part of the same educational tradition. This year these combined colleges will graduate from ten to fifteen thousand graduates. From whatever particular school a graduate may come, we Jesuits throughout the United States consider each graduate as our own Jesuit boy. We take as much pride in the achievements of the graduates of each institution as though they had been graduated in our own particular university or college. Each institution traditionally welcomes the graduates of other sister institutions to its campus as if that campus were their own. It is a great thrill and pleasure to us tonight to be honored by a distinguished graduate of Loyola University—to have one of our own Jesuit boys as our principal speaker.

It is gratifying to note the increased number of businessmen at the banquet tonight. We are always grateful to them for their interest in and cooperation with the school of commerce. They should not forget that their presence and interest is both an inspiration and challenge to every undergraduate in the school of business.

The growth of this banquet, however, is only an outward token of the inner growth within the school of commerce itself. Since its establishment in 1945, the school has steadily grown until it now enrolls some 600 students. Each year under the very capable and efficient leadership of its dean, Dr. Volpe, its programs and staff and techniques are carefully reevaluated and scrutinized. I only hope that we have the financial wherewithal to follow our dean's commendable vision. I have observed the remark that he made tonight that he could not ask for a more loyal student body and industrious faculty. I did not hear him say, however, that he was satisfied with the president and his appropriations.

Perhaps with the interest and cooperation of the businessmen of the community displayed here tonight, some day Seattle University will have a president with ample means to realize the aspirations of our good dean, Dr. Volpe.

ADDRESS BY HON. JOHN F. FLOBERG, ASSISTANT SECRETARY OF THE NAVY FOR AIR

The opportunity which is mine this evening to speak to so distinguished a gathering is deeply appreciated. I feel honored indeed that it fell to my happy lot to bring to the members and guests of the School of Commerce and Finance of Seattle University the greetings and good wishes of the Secretary of the Navy, the Honorable Francis P. Matthews.

It was with the greatest personal regret that Secretary Matthews found himself unable to fulfill his original intention to accept your gracious invitation and to be here this evening. He, like the Navy as a whole, has a deep personal interest in this community, which is the headquarters of the very important Thirteenth Naval District and has long been a favorite region for Navy duty.

In his stead I would like to reassure you of the Navy's gratitude for the contribution freely made by all Americans of this Northwest area in support of our fighting Navy during the war and through the years of precarious peace which have followed. Your shipyards and the nearby naval base of Bremerton built, fitted out, or repaired our ships in record time when numerical preponderance was of the utmost urgency. Your sons and daughters served in all branches of the Armed Forces, always with

the greatest loyalty and sometimes with high distinction. The immeasurable contribution which you made to the Navy's morale by keeping Seattle one of the fine "liberty ports" for our sailors, soldiers, marines, and airmen during the war was a stimulus to the fighting hearts we needed for victory.

Today the Pacific coast is no less important to the purposes of national security than at any time in the recent past. That is why the Navy today maintains and will continue to maintain in the Pacific the finest fighting force which we can afford under the finest leadership which we can mobilize among our senior officers.

We believe that in Admiral Arthur W. Radford, our Commander in Chief of the Pacific Fleet and United States High Commissioner of the Trust Territory of the Pacific Islands, we have a worthy successor to the great naval figures who preceded him at headquarters in Pearl Harbor.

Similarly, in command of the Air Force of the Pacific Fleet, we have Vice Adm. Thomas L. Sprague, a veteran of wide combat experience in this area.

The Western Sea Frontier, which stretches from California to Alaska, is under the able direction of Vice Adm. George D. Murray, who also was in command of our fighting forces in the Pacific during the war. Under him, as commander of the northwest sector, western sea frontier, and as commandant of the Thirteenth Naval District, is our mutual good friend, Rear Adm. Howard H. Good.

The Army and the Air Force have comparable leadership of the highest quality in this important defense area. The Army has Lt. Gen. Albert C. Wedemeyer, wartime commander of the United States forces in the China theater, as commanding general of the Sixth Army with headquarters at the presidio in San Francisco; and Brig. Gen. Robert A. McClure, commanding the northern subarea of the Sixth Army from nearby Vancouver Barracks. Air Force command is in the able hands of Maj. Gen. John E. Upston, commanding general of the Fourth Air Force, whose jurisdiction includes McChord Field in this State.

To name some of these military and naval leaders is not to ignore the great reservoir of strength which resides in our universities and in the business, commercial, industrial, agricultural, and financial life of the Nation and of this section of the Nation. Without the full partnership of these factors of our national economy we would never have been able to produce and distribute the overwhelming material advantages which gave our fighting men the deciding edge over the enemy both in the Pacific and in the other theaters of operation.

We have come to our position of world leadership and preeminent prosperity because from the earliest days of the Republic we have devoted ourselves to integrating capitalism in our economic affairs with democracy in our political life. We have promoted individual enterprise at the same time that we preserved individual freedom. By these same means we have given the widest measure of economic freedom and encouragement to the leaders of business.

This material way of life is what has given us the security and the opportunities necessary for the fuller development of the Christian principle of human dignity and the encouragement of the high cultural achievements characteristic of American life.

We are great not only because we are free and because we are materially strong—but because we are both free and materially strong at the same time. Greece was free but its greatness as a nation was negated by its lack of material resources. Rome was powerful but it never possessed the inner strength of democratic institutions. Napoleon, the Kaiser, and Hitler are modern examples of the eternal principle that power without popular control spells decay. On the other hand we have in our generation seen many an instance of the fact that freedom without strength leads to subservience or slavery. The economic and human burden of keeping the two in balance is heavy, but no American would live where they were not.

Seattle University is the representative of a great tradition in education which was established by a military man more than 400 years ago. Ignatius of Loyola, the founder of the Jesuits, under whose auspices this university operates, was a devoted soldier of his king before he became the spearhead of the vast movement for truth and enlightenment of which this institution is a part.

From its very earliest days the history of this continent in exploration, in discovery, in the development of democratic principles, and in the propagation of the high ideals of the brotherhood of man under the fatherhood of God has been linked closely with the activities of the educational predecessors of the men now in charge of Seattle University.

This rich area was the Eldorado sought by intrepid men of diverse nationalities as they endeavored to unweave the mystery of a Northwest passage. Once gained, it poured a flood of wealth in furs, lumber, and minerals into the economic bloodstream of America. Today the Northwest is the lively, progressive daughter of Columbia, matching its fine manpower to its God-given resources—and enriching the whole Nation with the promise of an ever more bountiful tomorrow. In the fulfillment of this promise your citizens are united, and the sons of Loyola are happy to share.

While collegiate business and commercial education is a comparatively new venture, which but recently celebrated its golden anniversary at New York University, the progress it has made in the past 50 years has been broad in scope and highly productive of good effects in our economic life. Our schools of commerce and finance, such as this one, have provided technically trained and practically schooled men and women for the business and industrial life of the Nation. Their training has made them men and women of independent thought. It has made them see their jobs and their institutions in proper relation to the rest of the country and the rest of the world. It has made them powerful and patriotic proponents of the American system, which is basically that of Christian, democratic capitalism. The greatest insurance that American, capitalistic free enterprise continues to exist is, to my mind, to have more human beings, both at home and abroad, understand it. Animosity for the American way of life, of which the American economic system is the very heart, can be based only on either ignorance or malice.

These men and women, graduates of this university and of hundreds of others throughout the land, who are now scattered in key positions in business and industry, are a dependable bulwark against infiltration by misguided, disloyal, or merely hare-brained ideological theorists who have never come to know the basic realities of American life. Quietly and effectively these men and women are carrying on the battle against Communist adherents in our own household. Viewed from long range, they are as truly a part of our manpower resources in the worldwide "cold war" as the men of our armed forces who are patrolling the seas, walking the barricades, or searching the skies to prevent overt acts of aggression which might lead to armed conflict.

This audience appreciates, as I do, that we are today at a critical point in the campaign for peace which we have pursued since the end of hostilities 5 years ago. The west coast, which was the scene of the organizational meeting of the United Nations, is well aware of every self-sacrificing step we have taken to promote the economic rehabilitation of devastated or underprivileged areas and to stabilize the political conditions under which universal concord might be achieved for a reasonable period of permanency.

At every turn we have been opposed by a new and revolutionary technique in totalitarian imperialism. We have witnessed the degradation of Czechoslovakia and of Austria. We have seen the Balkan countries subservient under the threat of Red battalions and the machinations of the secret police. We have seen the invader crush Manchuria and bring into subjugation large parts of China. In all these areas economic and psychological subversion have preceded political and military means in the process of enslaving one nation after another.

Wherever chaos and confused conditions have created a political vacuum, the forces of communistic imperialism have found an open channel for expansion. They have exploited doubt, dissension, and disunity. On the other hand, wherever we have acted firmly to prevent weakness or wavering we have been successful in staying this type of subversive aggression and conquest.

By taking decisive and timely action in western Europe, Greece, Turkey, Iran, and Korea, we have saved them, our friends, from falling into the orbit of the Kremlin. We are turning the tide, but we are still far away from the goal of global stability and the guarantee of freedom for all.

In recent months there have been disturbing incidents, some of which have directly affected the lives or activities of American citizens. Several countries behind or within the shadow of the iron curtain have closed our consulates or information offices. Our public officials, and at times our military leaders, have been accused or abused by the Soviet propaganda press and radio. The military services have borne their share of the tension between the democracies and the communistic dictatorship. The policing of the occupied areas in Europe and Japan by the Army has not been without casualties. Other brave men of the Navy and Air Force lost their lives in the magnificent airlift effort by which we fed and sustained the western sector of Berlin for many months. Only a few weeks ago 10 naval airmen in a defenseless plane were shot out of the sky over the Baltic, where they had a perfect right to be—an example not only of heroic sacrifice but of continued American forbearance and patience in the face of ruthless and unjustified provocation.

This is but a sketchy résumé of what has happened on the international scene since the close of the war, yet it contains all the reasons why we must continue to maintain not only diplomatic firmness but military strength if the objectives of security and peace are to be attained.

Despite the almost record peacetime expenditures which we are making for the national defense, we have quantitatively the minimum strength which we can safely maintain under present conditions. Happily, in the opinion of those best qualified to judge, the efficiency of all our armed forces is qualitatively at the highest level we have ever achieved in peacetime.

This qualitative standard will continue to improve in the future with the development of new and improved defensive weapons. We are, for example, undertaking the construction of new submarines, including two new types, the fast attack submarine and the antisubmarine submarine. The first vessels of these classes are expected to be completed sometime next year. Similarly we have built a prototype 60-ton experimental patrol plane as part of our research and development program. We are developing new and better jet fighter planes, and we have high hopes for our turbo prop aircraft engine. We are forging ahead toward the

realization of atomic-powered vessels, and we are anticipating the day when a guided-missile combat ship will be added to the fleet. Several ships including a small anti-submarine aircraft carrier, the U. S. S. *Bataan*, will be added to the Pacific Fleet this summer so as to permit increased anti-submarine training with new and ever improving equipment for fleet personnel.

Wherever possible, this increase in essential combat strength is being made without increasing the national defense budget. It is the result of economies and reallocation effectively made by the coordination of activities and facilities of the various armed services under the operation of the Unification Act as administered by Secretary of Defense Johnson. We of the military departments realize fully that the national strength depends as much upon a sound national economy as upon the numerical strength and equipment of our Army divisions, naval fleets, Air Force squadrons, or Marine Corps regiments. That is why heavy emphasis has been put upon the utmost necessity for economy in the operation of all the armed services, and a corollary which I firmly believe is that Americans well founded and well educated in our economic system and understanding it thoroughly are as effective defenders of our American heritage as are our military personnel.

The Navy is exerting every effort to translate that portion allotted to it from the $13,000,000,000 defense budget into maximum fighting strength and mobilization potential. The validity of the principle which calls for it to do so would seem to be self-evident, but economy is only popular when it is away from home. The Navy is certainly not indifferent to the effects which retrenchments in expenditures for the shore establishment have upon local economics, but our basic responsibility is to the country as a whole. By furnishing the maximum possible military effectiveness to the country within the limits of our over-all budget we are fulfilling our first duty of providing military protection to all Americans instead of jobs to a few of them. I cannot believe any fair-minded citizen would want us to do otherwise.

As businessmen or as students of commerce and finance or as experts in related fields of our national economic life, you will appreciate the practical importance of the steps we have taken to make every tax dollar allotted to the Department of Defense purchase 100 cents' worth of security for every American.

We welcome your cooperation, your recommendations, your assistance, and your support. The full and true strength of America today, as in the past, rests upon national unity. Only through the coordination of all segments of American life—of business and industry, labor and agriculture, finance and management, education and patriotic political and civic leadership can we bring to bear the fullness of our greatness upon the perplexing problems of peace which we must solve to survive.

It is comforting to know that the post-war youth upon whom will fall the responsibilities of tomorrow have been trained to know true from false democracy and have come to maturity in a time of crisis. They are serious. They are energetic. They are devoted to American ideals. They are knowing. They are skilled. They are the promise of the brighter tomorrow for which so many men died within this decade and for which as a Nation we shall never cease to strive. I salute this school for its help in fortifying its students with the fundamental principles which will help this country to persevere against those who would destroy it.

With your help and in God's good time may we come to share with all humanity the blessings we enjoy as Americans. The measure of our worthiness will always be the devotion and loyalty with which we continue to serve our fellow citizens and our common country.

Arming of the Arab States

EXTENSION OF REMARKS
OF
HON. CHESTER C. GORSKI
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 24, 1950

Mr. GORSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letters:

BUFFALO HISTADRUT FEDERATION,
Buffalo, N. Y., May 22, 1950.

Hon. CHESTER C. GORSKI,
House of Representatives,
Washington, D. C.

MY DEAR MR. GORSKI: Enclosed, you will find copies of letters to our President.

We feel that it is most important that you know how we feel in this regard and hope for your continued support.

Trusting that you will carry your fight even more aggressively for the maintenance of peace in the Middle East, I remain,

Yours sincerely,
MAYER D. LUDWIG,
Regional Director.

MAY 22, 1950.

President HARRY S. TRUMAN,
The White House,
Washington, D. C.

DEAR MR. PRESIDENT: We have received disturbing information from sources which we consider reliable, that the Arab States, particularly Egypt, are receiving such arms, ammunition, sea and air power which are above and beyond the reasonable needs of their internal security.

We are greatly disturbed, Mr. President, that our State Department is doing little or nothing to prevent another conflagration in the Near East—our fear of another attack against the State of Israel—which may result in another world war.

In order not to disturb the precarious balance of power which has been achieved, Mr. President, we advocate that you use your good offices in expediting the attainment of such defensive arms by Israel, so that this delicate equilibrium will not be disturbed.

Knowing of your love for peace and your efforts in this regard, we respectfully call your attention to the above facts and urge you to use your great influence, together with the State Department to insist that Britain immediately stop the arms shipment to the Arab States, and that we lift the arms embargo, now in effect, against Israel.

We ask this of you in the name of 32 cities in the State of New York, representing the great majority of the Jewry of New York State.

Respectfully yours,
Hon. DAVID DIAMOND,
Honorary Chairman, Buffalo Histadrut Federation.
PHILIP ROTH,
Honorary Chairman, Syracuse Histadrut Federation.
ABRAHAM A. ZEPLOWITZ,
Regional Chairman, New York State Histadrut Federation.
Rabbi PHILIP BERNSTEIN,
Honorary Chairman, Rochester Histadrut Federation.

(Copies to Hon. HERBERT H. LEHMAN, Hon. IRVING M. IVES, Hon. ANTHONY F. TAURIELLO, Hon. CHESTER C. GORSKI, Hon. WILLIAM L. PFEIFFER.)

Tariff on Cotton Textiles

EXTENSION OF REMARKS
OF
HON. JOSEPH R. BRYSON
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 24, 1950

Mr. BRYSON. Mr. Speaker, following my remarks heretofore made regarding the serious threat to our textile industry, I include in the Appendix of the RECORD the attached statement from the press of yesterday:

COTTON TEXTILE INDUSTRY BRIEF SCORES TARIFF CUT—DEVICE FOR CLOSING DOLLAR GAP IS HELD DANGEROUS FALLACY

NEW YORK, May 22.—A policy of tariff cuts as a device for closing the dollar gap is a dangerous fallacy and would invite disaster at home by letting loose a torrent of foreign products from low-wage countries on the American market, the cotton-textile industry charges.

The industry in a brief filed with the Committee for Reciprocity Information warns that exports of American cotton textiles have been wrecked by the combination of devaluation and the rise of low-cost foreign competition. This drop in export trade represents a loss of more than one-half billion dollars and is equivalent to 52,000 textile jobs and millions of wage dollars.

FIRST RIGHTS HERE

"Cooperative efforts of the United States in a world recovery should not be carried to the point of weakening or endangering the American economy," the brief contends. "Our own people have first right to the fruits of the Nation which they have created."

Prepared jointly by the American Cotton Manufacturers Institute, Inc., National Association of Cotton Textile Merchants of New York and Textile Export Association of the United States, in conjunction with other industrial groups, the brief was filed preliminary to tariff hearings scheduled for coming weeks.

Testimony will be presented at these hearings for consideration in tariff negotiations with 23 or more countries in Torquay, England, in September, concerning some 2,000 types of goods directly competitive with products made in at least 500 textile plants from Maine to Texas, the brief discloses.

"In greater part the dollar gap does not even exist," the brief states, "and the present unbalanced condition of foreign trade has resulted from an export contribution of four or five billion dollars a year in the form of donations to Europe's recovery and rehabilitation program."

COMPETITION UNEQUAL

"One of the gravest fears," the brief says, "is that unequal competition with low-wage countries will waste the superior efficiency of the American cotton-textile industry, which is now being used to support the programs of this country's internal economy."

"Free market competition with foreign countries means throwing into the balance our higher wages, which in major part are the measure and substance of our efficiency," the brief asserts.

As for new, improved machinery and modernization of mills, for which the industry has been paying $300,000,000 a year since the end of the war, the brief says "the means of technical progress cannot be acquired where there is a continual erosion of the wage and price structure, and a forced diminution of physical stature from the imports of sub-wage standard countries."

The industry statement also asks that the tariff negotiators consider the vital importance of the textile mills to national defense, demonstrated during the last war when not only were all military and essential civilian requirements met in this country, but those of the allies as well.

Protest of the Bobbin Manufacturers Association Against Tariff Cuts

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 22, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following letter of Mr. Charles D. Brooks, president, United States Bobbin & Shuttle Co., Lawrence, Mass., to the chairman of the Committee for Reciprocity Information:

UNITED STATES BOBBIN & SHUTTLE CO.,
Lawrence, Mass., May 16, 1950.

The CHAIRMAN,
Committee for Reciprocity Information, Tariff Commission Building, Washington, D. C.

DEAR SIR: The Bobbin Manufacturers Association is comprised of the following companies, headquartered at the addresses indicated: American Bobbin Co., Lewiston, Maine; Jas. H. Billington Co., Philadelphia, Pa.; Bowen-Hunter Bobbin Co., East Corinth, Vt.; the David Brown Co., Lawrence, Mass.; the Dana S. Courtney Co., Chicopee, Mass.; H. & P. Spool & Bobbin Co., Lawrence, Mass.; Lowell Shuttle Co., Lowell, Mass.; N. E. Bobbin & Shuttle Co., Nashua, N. H.; W. L. Parker Bobbin & Spool Co., Lowell, Mass.; United States Bobbin & Shuttle Co., Lawrence, Mass.; Vermont Spool & Bobbin Co., Burlington, Vt.

The member companies of this association provide manufacturing employment for several hundred people in the New England States, New York, Pennsylvania, Tennessee, South Carolina, and Minnesota. The member companies produce collectively the bulk of the bobbins and spools in the United States, used by the textile industry for twisting and spinning yarn and weaving cloth.

As head of the largest company in the association I have been appointed by Mr. William Bourassa, American Bobbin Co., president of the Bobbin Manufacturers Association, to present an association statement to your committee for your earnest consideration in the tariff-cut deliberations which are scheduled to get under way May 24, 1950. This letter to you constitutes that statement.

In 1930, under paragraph 412 of the Tariff Act of that year, the duty established on bobbins imported into the United States was 33⅓ percent. In January 1948 this rate was reduced by Treasury Decision No. 51802, amending the duty downward from 33⅓ percent to 16⅔ percent. In January 1948 the bobbin manufacturers in this country were not troubled by foreign competition due to unsettled economic conditions abroad and due to the fact that the nations in the sterling area had not then devalued their currencies. The situation today, however, is different. Here in the eastern United States we have for the past 6 months been suffering from the competition of bobbins produced in Canada. These bobbins are brought into this country and sold to eastern textile mills at rates well below our own price levels. For example, this company produces an automatic loom bobbin which sells, f. o. b. Lawrence, Mass., at $100.78 per thousand. One of our customers in eastern Connecticut was able to buy Canadian automatic loom bobbins equal in quality to our product for $96 per thousand delivered to its mill, duty paid. As another example—this company recently lost an order in Rhode Island amounting to one-quarter of a million automatic loom bobbins. Our list price on this particular bobbin, again f. o. b. Lawrence, Mass., was $76.38; the mill was able to purchase a satisfactory Canadian bobbin delivered into its plant for $71 per thousand, duty paid. These are but two examples which are quoted for your information. Our competitors within the association are finding similar conditions throughout the eastern textile market. Unfortunately United States manufacturers of bobbins do not enjoy the same preferential treatment from the Canadian Government when they attempt to ship bobbins into Canada. Rather, the duty assessed by the Canadian Government against United States bobbins going into the Dominion is 20 percent, a disparity which is grossly unfair, particularly with the United States dollar at a premium in that country.

If you will refer again to the two orders mentioned above, they totaled 350,000 units. The manufacture of each 100,000 units within the total 350,000 bobbins would have provided 117 man-days of work. In other words, the loss of those two orders deprived United States citizens of 409½ man-days of gainful employment.

While our association is deeply concerned over the inroads of this Canadian competition, we are also concerned over threatened competition from Europe. We have it on excellent authority that the Emil Adolff Co., of Germany, is currently negotiating for sales representation in the United States to import German bobbins. The United States Bobbin & Shuttle Co. manufactures a particular type of maple bobbin equipped with a metal ferrule for use in Crompton & Knowles looms. The price of this bobbin is $138 per thousand f. o. b. Lawrence, Mass. The Adolff bobbin can be loaded on cars or other transportation facilities in New York, ocean freight, duty, and selling commission paid, at $113.85 per thousand.

It is obvious that the present tariff protection afforded American bobbin manufactures is totally inadequate to stem such competition. The Bobbin Manufacturers Association, therefore, prays your committee that it not only give up any thought it may have of further reducing bobbin duties but that in its stead the committee see to it that the 33⅓-percent rate originally obtaining in the Tariff Act of 1930 be immediately restored.

In the matter of wooden spools, the original duty established under the 1930 tariff was 33⅓ percent. On November 2, 1936, by Treasury Decision No. 48554, this duty was decreased to the present level of 25 percent. We are informed by the deputy collector of customs of the port of Boston that the Tariff Commission is considering reducing this 25-percent duty to 12½ percent. It takes little imagination to see that if our protection is reduced to this very low level, our spool business will quickly be placed at the mercy of foreign competition.

The manufacturers of spools and bobbins in the United States, both within and without the Bobbin Manufacturers Association, are paying high wages, unemployment insurance, social security, workmen's compensation, accident and health insurance, Federal taxes, State taxes, and local taxes; in short, they are meeting in full all obligations placed upon them, both as corporations and as individuals. They are also carrying out to the last degree their contractual relations with their employees.

In time of peace these companies have a productive capacity greater than is required to keep the entire textile industry in the United States operating around the clock. In time of war or national emergency the manufacturers of spools and bobbins are rated as a vital industry because without them the textile industry in this country would quickly come to a halt. Since it is our Government's policy to keep American vital industries in a going condition, and since imports of foreign bobbins and spools will seriously impair the financial condition of these American companies as well as reduce their ability to provide employment, it is only reasonable to ask that we again be accorded on both product categories the full 33⅓ percent protection which we enjoyed prior to 1948 and 1936.

Respectfully submitted.

CHARLES D. BROOKS,
President.

Henry Morgan Speaks His Piece

EXTENSION OF REMARKS
OF
HON. CHARLES E. POTTER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 24, 1950

Mr. POTTER. Mr. Speaker, with your permission, I am inserting into the RECORD an article by the columnist, John Crosby, which appeared in the Washington Post of May 23, 1950.

Mr. Crosby's article cites a speech made by the comedian Henry Morgan before the New York chapter of Sigma Delta Chi, the national journalistic fraternity. While I am not particularly fond of Morgan as a comedian, the speech cited is a noteworthy commentary of the influence wielded by a free American press and radio.

Mr. Morgan cites in his short speech the completely contradictory positions taken by the press on various issues, and thank God that we in America have a press that can present a variance in views and which is not controlled to a point where all news stories and editorials must follow a party line.

HENRY MORGAN TAKES A LOOK AT THE PRESS
(By John Crosby)

Henry Morgan, a sardonic, sometimes misguided but always honest man, lumbered to his feet before reporters, columnists, editors, and publishers at the annual dinner of the New York chapter of Sigma Delta Chi, the national journalistic fraternity, and delivered a speech. It lasted all of a minute and a half, a fine length for a speech, and it was a fine speech.

In that minute and a half, Morgan, one of the more thoughtful radio comedians, summarized his opinion of the American press.

This is a difficult assignment for a radio comedian. His listeners—reporters, columnists, editors, and publishers—could crucify the man in print if they didn't like what he said. A radio comedian needs the support of the press. He'd have great difficulty existing without it. Still, Henry spoke his mind about us freely, and while there were some barbs in this small essay, it was on the whole a flattering and (I hope) intelligent estimate. I'd like to pass it along.

AVERAGE WARPED MAN

"I was asked here this evening," said Morgan, "mainly because it's common knowledge that I am an authority on this stuff. A number of people here work on newspapers. That isn't nearly as bad as what I do. I have to read them. Some people produce

radio programs. I have it much worse than they do. I work for them—newspapers and radio—the two greatest influences of our time, I figure. You see before you the creature you have made. I am the average warped man.

"Because of you people in this room I believe Owen Lattimore is a Communist. I also believe he is not a Communist. Because of you people I believe F. D. R. was a genius and also that he ruined the country. I believe that there is more crime in this country than ever before and that our police are the best in the world. I believe that Eisenhower would make a great President except that I have read that military men don't make good Presidents and besides he will run if enough pressure is brought, he will not run, he can't run, he refuses to run, he doesn't want the job, you can talk him into it, he's trying very hard to make it look as though he doesn't want it, he's happy at Columbia, he's miserable, he's got a cold, he feels great."

HOW ABOUT A BUREAU

"You have made it possible for me to take 5 cents and buy in one package, a new picture of President Truman, my horoscope for the day, 15 comic strips and the stock market reports. And I've read some terrible things about you. You work for money. Advertising dictates your policy. The deparment stores dictate your editorials. Don't you think you'd be happier with some other system? Wouldn't it be nicer to have a bureau of some kind supervise your work? Then, if the bureau didn't like it, you could adjust or get killed.

"Still in all, it's better than having people point at you and say: 'There's a man who works for money.' Somehow it's getting to be very un-American to work for money. It's also un-American not to work and to live on unemployment insurance. It's un-American to have social security and it's un-American to have such a small amount of social security. I strongly suspect that this is all your fault.

"In short, you people in this room have put me, the average man, in a peculiar position. I now have to make up my mind for myself. As long as you keep doing that, as long as you keep forcing the man in the street to make up his mind for himself, that's as long as we'll have the only working definition of democracy that's worth a damn.

"Thank you."

A Tax Change That Might Boost Free Enterprise a Little

EXTENSION OF REMARKS
OF
HON. STEPHEN M. YOUNG
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 23, 1950

Mr. YOUNG. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the Louisville Times of May 6, 1950:

A TAX CHANGE THAT MIGHT BOOST FREE ENTERPRISE A LITTLE

When you buy a pack of cigarettes, 7 cents of what you pay goes to Uncle Sam. This is true, no matter what the price of the cigarettes happens to be. Here is a fact that has had considerable significance for Louisville. Once upon a time this city was the country's leading producer of so-called economy price cigarettes. Those were the happy days when the economy brands sold at 10 cents a pack and the highly advertised standard brands at 15 cents.

In Louisville were two big factories producing economy brands. Those who remember the depression will remember how these concerns, operating night and day and giving steady employment to hundreds of workers, helped the community to weather the storm. One of these factories is out of business today. The other thrives, still making economy brand cigarettes but fortunately having other brands, too. It probably could double its payroll if the economy brand could get a fair whack.

This does not by any means require a depression. The fact is that the economy brands continued to enjoy favor throughout the 1930's and until approaching war and then war itself changed the tax picture. In 1940 the Federal tax on cigarettes was raised from $3 a thousand to $3.25. In 1942 the Treasury proposed to raise the tax again, but this time recognizing that it was unjust to tax both the economy and the standard brands at the same flat rate.

The Treasury recommended that the excise on the economy brands be increased from $3.25 to $3.50 a thousand and on the standard brands from $3.25 to $4 a thousand. However, Congress compromised and raised the rate to a flat $3.50 on all. That is the rate which prevails today—the 7 cents a pack that you pay to Uncle Sam. It is a rate which, coupled with increased tobacco prices and increased State taxes on cigarettes, compels the economy brand cigarette manufacturer to sell his product at a price so little below the price of the standard brand that the smoker who feels that he cannot afford the standard brand finds that he can hardly afford the economy brand, either. And, generally speaking, it is to the smoker who must economize—roll his own, if necessary—that the economy brand always has appealed.

In this smoker's behalf, the House Ways and Means Committee made a decision the other day. It voted to change the cigarette tax structure. It would leave the present rate of $3.50 a thousand on cigarettes retailing at more than 12 cents a pack. It would reduce the rate to $2.45 a thousand on cigarettes selling at not more than 12 cents a pack. The standard brand smoker and the economy brand smoker would then be each paying about 40 percent of the price of his pack to Uncle Sam. At present the standard brand smoker pays about 40 percent, the economy brand smoker about 50 percent. That is obviously unfair.

The Ways and Means Committee decision was made by a narrow margin—13 votes to 12. It may not stand in Congress. But we hope it does. The tobacco industry, including the manufacture of standard brand cigarettes, is an important contributor to the Louisville economy. The Times would not like to see any part of it hurt. We do not believe the change proposed could hurt any part of it. There is nothing in the tax revision proposed that would prevent any of the standard brand companies from entering also the economy brand field if it wished to.

The only development promised would be possibly a little more competition in cigarette pricing and tobacco buying—hardly an untoward development if we favor free enterprise.

I Am an American Day

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 23, 1950

Mr. TEAGUE. Mr. Speaker, I wish to call the attention of the Members of the House of Representatives to an article by Jesse C. Suter whom many of you already know through his newspaper articles concerning the District of Columbia which have appeared regularly in the Washington Star.

Under leave to extend my remarks in the RECORD, I wish to include his most recent article:

[From the Sunday Star, Washington, D. C., May 21, 1950]

CIVIC PROBLEMS, CIVIC BODIES—THIS IS "I AM AN AMERICAN DAY"; ON BEING A LIMITED AMERICAN

(By Jesse C. Suter)

AMERICAN DAY CELEBRATION COVERS SUNDAY AND MONDAY

By virtue of an act of Congress and proclamation by the President today is set aside and observed as "I Am an American Day." This year the celebration will be extended to include Monday. The observance today is planned to be of a religious character, when in homes and churches Washingtonians will reaffirm their American citizenship.

Monday will feature a more spectacular celebration on the east plaza of the Capitol. These exercises in the afternoon will include band and other music, a recital of the pledge of allegiance, and addresses by Vice President Barkley and others.

Such celebrations of "I Am an American" Day are usually dedicated to those young men and women who have achieved citizenship by reaching the age of 21 years during the past year, and also to those of foreign birth who have become citizens by naturalization during the same period. It is anticipated that speakers will point out to these new Americans that the American citizen, besides acquiring certain rights and privileges as such, is at the same time assuming important, grave responsibilities and duties common to all Americans.

To those new citizens recognized today who are bona fide residents of the District of Columbia, without any right of participation in the Government of the United States, there is a marked difference in the meaning of "I Am an American" from what it means to those who possess legal residence in any one of the 48 States.

Said Woodrow Wilson: "Just what is it that America stands for? If she stands for one thing more than another it is for the sovereignty of self-governing people."

The most important attribute of the American citizen is the right to participate in the Government of the United States, implemented by voting in the national elections for the President and Vice President, and voting for the Senators and Representatives who constitute the Congress.

RIGHTS, OBLIGATIONS, AND PRIVILEGES

To enjoy the rights and privileges of American citizenship and preserve them for ourselves and posterity, there are definite obligations resting upon every citizen. Included among these are rendering unquestioned and exclusive loyalty to the United States, voting in all elections, obedience to the laws, service on juries, payment of all taxes levied by the Government, serving in the Armed Forces of the Union as occasion arises and, finally, in all ways being an alert and active good citizen.

Being a true American is a 24-hour job 7 days in the week and 12 months in the year. Americans must always remember the obligations as well as the privileges of citizenship. These are personal, individual obligations and they cannot be farmed out to others. There is no sidestepping in being an American. Every loyal American should work earnestly to maintain wholesome, clean Government, and should be interested in seeing that all Americans are given equal privilege of enjoying all the fundamental individual rights possessed by other Americans.

This should include giving District of Columbia people those just rights which are now denied.

The preamble to the Constitution should be known intimately and understood thoroughly by all Americans. In reality it is the full ritual of initiation of Americans into this great Union. All Americans, whether native-born or naturalized, must experience a feeling of oneness and partnership as they read the preamble:

"We, the people of the United States, in order to form a more perfect Union, establish justice, insure domestic tranquillity, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity, do ordain and establish this Constitution for the United States of America."

CONFLICTING EMOTIONS

To the voteless and unrepresented American of the District of Columbia, contemplation of this day has a tendency to arouse certain conflicting emotions. When he analyzes the meaning of being an American, it naturally suggests to him that he is one of a great body of people in a National Government created "of the people, by the people, and for the people." On second thought, it may occur to him that he can hardly be a full stockholder in this great enterprise, but only a holder of nonvoting stock, subject to assessment and numerous responsibilities, but with no vote whatever in the selection of the board of directors that governs.

As his mind reverts to the words of the preamble, he wonders why it is that the good Americans who are bona fide residents of the District are not recognized as being a part of "we the people." He recalls that the few Americans scattered over what is now the very populous District of Columbia were represented as citizens of Maryland in the Constitutional Convention in which the Constitution was formulated. So, originally, the residents of the District of Columbia were definitely a part of "we the people" who ordained and established the Constitution and through their representatives helped to ratify that important document.

It has been charged that their action also ratified the seventeenth clause of the eighth section of the first article of the Constitution which gave the Congress the power to exercise exclusive legislation in all cases whatsoever, over the seat of the Government of the United States. They may or may not have known what they were doing, but it is clearly beyond one's wildest imagination that the few who then constituted the District's population realized that the Constitution would be so construed as to deprive them of all participation in the government of their country.

REPRESENTATION AN URGENT NEED

What these voteless and unrepresented people of the District of Columbia need today more than anything else is to have their Americanism rounded out and completed. The Congress should pass and submit to the State legislature for ratification an amendment to the Constitution which will definitely give them a political status. Such amendment would empower Congress to permit all bona fide residents here who are qualified American citizens to vote for Senators to represent them in the Senate, Representatives to represent them in the House, and electors for President and Vice President.

To give "I Am an American Day" its full significance at the National Capital, it should be made to mean to the people here exactly what it means to the full-fledged governing Americans of the 48 States.

When these voteless and unrepresented Americans of the Nation's Capital rededicate themselves today to the ideals of citizenship, they should solemnly resolve to make every earnest and continuous effort to acquire through constitutional amendment and subsequent legislation those rights now denied and thereby become participating Americans in the government of their country.

There is really no practical way to put into operation the ideals of American citizenship except through participation by all of the citizens in the Government. To acquire those fundamental rights now denied to the people of the District, there is need for passage by Congress and ratification by the States of an amendment to the Constitution substantially as follows:

"The Congress shall have power to provide that there shall be in the Congress and among the electors of President and Vice President members elected by the people of the District of Columbia constituting the seat of Government of the United States, in such members and with such powers as the Congress shall determine. All legislation hereunder shall be subject to amendment and repeal."

WASHINGTONIANS HAVE NO PART IN GOVERNING THE UNITED STATES OF AMERICA

The Petworth Citizen, April issue, carries these eloquent patriotic paragraphs of Pearl S. Buck, under the title:

"What America Means to Me

"The only danger to our country is from within, that we forget our own power to be what we want to be. Let no American today take refuge in the willful helplessness which shrugs its shoulders and says, 'What can I do?' We have the right and the power to make our country what we want it to be. We are the kind of people that democracy produces—free, independent in our thought and behavior, fearless, forthright, and kind. I have seen many peoples of the earth, and it is not only patriotism, I think, when I say we possess these qualities to a greater degree than any other people.

"It is not boasting when I say this, either, for like a child born with great gifts, we have these qualities, not by any effort of ours, but bestowed upon us by our ancestors, by those brave men and women who came here from other lands because freedom was essential to them—the freedom to worship God as they willed, the freedom to work and keep themselves and their families from want, the freedom to believe and to speak as they believed, the freedom to live unafraid and at peace, beneath the open sky."

These uplifting sentiments echo in the deep emotions of every civic-minded, patriotic citizen of the District of Columbia. They, however, touch a very sore and tender spot when upon reflection it is noted that of all competent Americans of continental and contiguous United States these District people alone have no part, as members of the American family, in shaping the policies and maintaining such ideals.

The Washingtonian can personally live up to the highest American ideals, but he is denied the fundamental right of an American citizen to participate in the government of his beloved country through his elected representatives in both branches of the Congress and in the election of the Nation's Chief Executive.

The people of the District have the same vital interest in all national legislation, national taxation, national appropriations as Americans in the States. They are as deeply concerned in the great national and international problems as any other people in the country. They have the same earnest desire "to establish justice, insure domestic tranquillity, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and to our posterity" as any other American.

Until an enabling amendment is added to the Constitution and Congress enacts remedial legislation thereunder, the Americans of the District will be unable to be on an equal footing with their fellow Americans of the States. Now they are equal to citizens of the States only in the bearing of burdens; then, by voice, vote, and representation they will have their just share in governing their country.

Americanization Day in Jersey City

EXTENSION OF REMARKS

OF

HON. EDWARD J. HART

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 24, 1950

Mr. HART. Mr. Speaker, on April 30, 1950, the annual Americanization Day celebration sponsored by Capt. C. E. Fisk Post, No. 132, Veterans of Foreign Wars of the United States, took place in Jersey City. This day was first celebrated in that city under the same auspices in 1931. From small beginnings it has gradually grown into the largest demonstration of its kind in the United States. As stated by Mr. Clyde A. Lewis, commander in chief of the Veterans of Foreign Wars, who was the principal guest of honor:

This Americanization Day program in Jersey City is traditional. Since its inception some years ago, it has increased in magnitude. The spirit that prompted it in the beginning has taken root in the Veterans of Foreign Wars, and has spread to other parts of the Nation. This week end, in all the 48 States and in Alaska and Hawaii, Loyalty Day demonstrations will be staged under sponsorship of the VFW.

Captain C. E. Fisk Post, No. 132, is indeed proud, as it has every right to be, of being the originator and continued sponsor of these exercises. And Jersey City is equally proud of having been the city in which this first took place.

The general chairman was again Mr. George A. Thornton, Sr. The honorary chairman was Hon. John V. Kenny, mayor of Jersey City, and the grand marshal of the parade was Master Sgt. Nicholas Oresko, holder of the Congressional Medal of Honor.

Despite the fact that inclement weather prevailed, many thousands of people watched the parade as it swung along the 2½-mile route. The parade terminated at Pershing Field where other thousands were assembled and listened to addresses from National Commander in Chief Clyde A. Lewis, Veterans of Foreign Wars of the United States, who delivered an important address; Hon. William Flanagan, deputy mayor of Jersey City; Hon. Louis J. Messano, a member of the city commission; Mrs. Helen Murphy, past national president, Ladies Auxiliary, Veterans of Foreign Wars of the United States; and myself. Invocation, prayer, and benediction were offered by the reverend representatives of the Catholic, Jewish, and Protestant religions. I append herewith the address delivered on this occasion by Commander in Chief Lewis:

I am enthused with this great demonstration. The thousands who marched in this parade and the other hundreds of thousands who gathered along the line of march as spectators exemplify the spirit of the occasion—Americanism. Those who marched

and those who watched came of their own free will because of an abiding faith in the cause that inspired it. Their willingness to stand up and be counted is truly an inspiration to everyone who loves and believes in the United States and its institutions.

As commander in chief of the Veterans of Foreign Wars, I am gratified to be here and to participate in this heart-warming demonstration. This Americanization Day program in Jersey City is traditional. Since its inception some years ago, it has increased in magnitude. The spirit that prompted it in the beginning has taken root in the Veterans of Foreign Wars, and has spread to other parts of the Nation. This week end, in all the 48 States and in Alaska and Hawaii, loyalty day demonstrations will be staged under sponsorship of the VFW.

The governors of 40 States and of the 2 Territories have issued proclamations calling for loyalty day observances to counter the disloyal and un-American activities long practiced on that day by the Communists. Huge parades, such as this one here today, will be held in major cities throughout the Nation—New York, Brooklyn, Philadelphia, Detroit, San Francisco, Los Angeles, Pittsburgh, Salt Lake City and Ogden, and New Orleans and Baton Rouge.

These demonstrations here, and throughout the Nation, this week end, have a twofold purpose—to reaffirm our faith in America and its institutions, and to serve notice that we will not countenance any subversive efforts to weaken or destroy this Nation, or to nullify any of the fundamental principles embodied in its Constitution, its laws, or its economic, social, and policial structure.

It is doubtful if anything in this world is perfect—and that is applicable to our country itself as well as to every phase of American life. We have our faults, both as individuals and as a government. If we own a home, we don't tear it down just because the roof leaks, or windows are broken. By the same token, we will not destroy the Nation and its institutions and substitute something new and untried, merely because a few defects here and there need correcting.

With all its faults, this is a grand and glorious country that merits the love and respect of all of us. It has served us well by giving us the world's highest standard of living. It has given us freedom of opportunity, of religion, of speech, and press. It has given us the heritage of enlightenment through free education. It has permitted the humblest of us to work, to earn, and to build the kind of lives we want for ourselves and our children.

That love of country—Americanism, we call it—in its true meaning is much more than flag waving and oratory. It is a high and noble principle rooted deep in the hearts and souls of patriots.

But there are those who disagree with our views. While we are gathering here and at other points all over the country to publicly acknowledge our allegiance to America and American ideals, members of a group which dares call itself "American" are marching to symbolize their opposition to America and the American way of life. While Moscow pulls the strings, these puppets of the Kremlin demonstrate their hatred for the free institutions they could enjoy in few other countries in the world today.

What a travesty it is to see them openly defying and vilifying the very Constitution that gives them the right to assemble and demonstrate.

In a speech a few days ago, President Truman characterized communism as a "tyrannical force which does not recognize justice as we know it." He declared further that "wherever this force extends, there is no freedom of speech, no freedom of religion, no freedom even of opinion. The State is the all-powerful arbiter of men's words and acts. Human dignity and human freedom are meaningless."

For many years, the Veterans of Foreign Wars has been outspoken in its opposition to the activities of Communists in this country. We have insisted that the so-called American Communist Party be outlawed, because we contend that no individual, or no group of individuals, advocating the overthrow of the American Government, has the right to call itself American. So far as the VFW is concerned, you must be a Communist, or an American. You cannot be both.

I am gratified to see so many young people participating in this occasion, both in the line of march, and along the parade route. These youngsters of today will make the America of tomorrow. What they make of it will depend on we older men and women of today. If we are willing to stand idly by and let them become inoculated with the poisonous doctrines of communism and other subversive forces, we have no right to expect that they will stand firm for free democracy. In our indifference, we have permitted communism to reach out into our schools and colleges, planting the seeds of doubt, and unrest, and even revolt, in the minds of American youth.

While we stood idly by, these disloyal forces have wormed their way into the inner councils of our Government. You know the tragic story of betrayal by those who professed loyalty to the country, but at the same time were handing over secret information to a potential enemy.

We were gratified to hear the President say that the loyalty program has rid the Government of all employees who were found to be disloyal, and that not a single person who has been adjudged to be a Communist, or otherwise disloyal remains on the Government payroll today. We sincerely hope he is correct.

We, as loyal citizens, can be of help in keeping traitors out of our Government. We can, as the President suggested, advise the Attorney General or the FBI of any known Communists or other disloyal persons occupying positions in our Government. As loyal citizens who have fought in defense of our democracy, the members of the Veterans of Foreign Wars and the other veteran organizations have always been forthright and outspoken in opposing any and all subversive and disloyal activities, whether by individuals or groups. We have been constantly vigilant, and shall continue to be so.

Our stand for forthright Americanism is challenged from another quarter. There are active and vociferous groups which are demanding that we barter our heritage of freedom at the bargain counter of world government or superstatism. They tell us, in effect, that it is old-fashioned to be patriotic, that the United States, as a nation, has outlived its usefulness, that it can no longer stand alone, but must surrender its sovereignty—its national integrity—and become a subordinate element in a dreamed-up, utopian supernation.

They would destroy the house rather than patch the leaks in the roof. They single out and accentuate the weaknesses in our system. They play upon fear of the atom bomb, the hydrogen bomb, or the bacteriological weapons which might be used by an aggressor nation of the future.

Their slogan is there must be world government now—else destruction.

It is regrettable that the legislatures of 22 of our States were taken in by this world federalist pig-in-a-poke scheme. They bought it sight-unseen, but largely through the militant efforts of the VFW and some other patriotic groups, three of them—Georgia, California, and Rhode Island—have found that what they bought was no bargain, and have rescinded their approval.

I am happy to tell you that the Veterans of Foreign Wars' battle on world federalism has just begun. We have set up machinery within our organization to carry on the fight, and we are determined that no resource at our command will be spared in acquainting the American people with the kind of bitter medicine the superstate crowd is brewing for them.

On this Loyalty Day, the Veterans of Foreign Wars, through its one and a quarter million overseas veterans, rededicates itself to the noble task of making democracy a living, virile force, not alone in this country, but throughout the world.

In proclaiming Loyalty Day in the State of New York, Gov. Thomas E. Dewey declared: "For several decades, the first day of May in each year has been preempted by subversive groups dedicated to the destruction of freedom. So far as these groups are concerned, May Day has been virtually disloyalty day."

The Veterans of Foreign Wars, with the support of all who love freedom, is determined that no shameful record of disloyalty shall mar the pages of this Nation's history.

Midcentury White House Conference for Children and Youth

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 24, 1950

Mr. ADDONIZIO. Mr. Speaker, I am pleased that a resident of the Eleventh Congressional District of New Jersey, Mr. Seldon M. Kruger, of Newark, has been named to the advisory council on youth participation for the Midcentury White House Conference on Children and Youth called by the President of the United States for December 3, 1950. Mr. Kruger and Miss Ruth Schaffer, of Columbus, Ohio, who has been named by the President to the national committee of the conference, have written a most interesting paper dealing with the youth participation phase of the conference. This is the first of the conferences in which youth themselves will actively participate. This article is worthy of reading by all citizens, and I am therefore placing it in the RECORD:

MIDCENTURY WHITE HOUSE CONFERENCE FOR CHILDREN AND YOUTH

(By Seldon Kruger, member, Advisory Council on Youth Participation, and Ruth Schaffer, member, National Commission)

President Truman has called a Midcentury White House Conference on Children and Youth. This conference will be the fifth in a series of such conferences under the sponsorship of the President of the United States since the beginning of the century.

The midcentury conference will base its concern for children on the primacy of spiritual values, democratic practice, and the dignity and worth of every individual. Accordingly, the purpose of the conference shall be to consider how we can develop in children the mental, emotional, and spiritual qualities essential to individual happiness and to responsible citizenship.

TO ACHIEVE THESE GOALS

In order to achieve these goals the midcentury White House conference shall—

(a) Bring together in usable form pertinent knowledge related to the development

of children and indicate areas in which further knowledge is needed.

(b) Examine the environment in which children are growing up, with a view to determining its influence upon them.

(c) Study the ways in which the home, the school, the church, the law, welfare agencies and other social institutions, individually and cooperatively, are serving the needs of children.

(d) Formulate through cooperative efforts of laymen and specialists, proposals for the improvement of parental, environmental, and institutional influences on children.

(e) Suggest means whereby these proposals may be communicated to the people and put into action.

COMMITTEES CREATED

Four technical and special committees assume responsibility for specific areas assigned by the national committee. In addition, four advisory councils, including an advisory council on youth participation, through their various channels, in the determination of policy and program for the conference. This structure is utilized also, to disperse information about the conference, and to provide means for meaningful follow-up work.

The national committee has set the date of the conference for December 3, 1950, in Washington, D. C.

ADVISORY COUNCIL ON YOUTH PARTICIPATION

Of particular interest is youth participation in the conference. Since the American Youth Commission report in 1940, no national report on the status, problems, needs of young people has been published. The biggest concern of young people today seems to be that of finding a place in their community and this complex world.

Youth must be prepared to make decisions about education, vocation, marriage, and parenthood; they must choose between many conflicting values in our society; they are concerned about peace, and fear the future. In order to become the kind of adult citizens our world needs they must be mature, stable, responsible individuals. Young people today must have opportunities to learn to take responsibilities, and must be given these responsibilities as they are ready to assume them.

The aim of the Advisory Council on Youth Participation is to achieve the most real and effective participation of school- and out-of-school-age youth in the midcentury White House conference.

In order to achieve this kind of participation five young people have been invited to serve on the national committee and on its subcommittees. These members were chosen from coordinating councils through which they can channel information and knowledge about the White House conference, and from which they can gather youth opinion.

Through the national youth serving organizations young people contribute to the conference.

Youth is represented on most of the State and local committees.

The Advisory Committee on Youth Participation will afford other means by which young people may be represented in the planning and execution of the conference.

On March 23–24, 1950, the advisory council on youth participation met at the Federal Security Agency in Washington, D. C., in order to—

(a) Recommend means for effective participation in the Midcentury White House Conference.

(b) Develop principles for and methods of youth participation in State and local White House Conference committees.

(c) Establish channels for the distribution of youth of high-school and out-of-school ages to the Midcentury White House Conference.

(d) Interpret the significance of joint planning of adults and youth in the areas of mutual concern.

Representatives from 28 national youth membership organizations and youth divisions of national organizations attended. Each organization was permitted to send three youth members in addition to one adult adviser. The youth members were selected by their agency or organization on the following criteria:

1. As a member of the constituency of the agency.

2. Being between 14 and 21 years of age. This age range was intended to include high-school, out-of-school working youth, and college youth.

3. Availability to assume continuing responsibility for the duration of the advisory council.

4. Ability to contribute to the task of the council and ability to represent young people in their agency and community.

5. Of a responsible position within their own youth organization in order to communicate their associates' interests, as well as their own.

The advisers who accompanied the delegates were either a staff member of their particular organization with responsibility for working with youth between the ages of 14 and 21 or a lay member of the organization responsible for youth programs in the agency. The advisers are expected to assume continuing responsibility for the duration of the conference and the follow-up.

As a vital part of the advisory council meeting, the delegates discussed in four groups the following questions:

1. What can high-school and out-of-school youth contribute to the focus on the primacy of spiritual values, democratic practice, and the dignity and worth of every individual?

2. What kind of home, school, church, neighborhood, and leisure time relationships develop mental, emotional, and spiritual qualities essential to individual happiness and responsible citizenship?

3. What recommendations, out of a discussion of questions one and two (above), does this advisory council make for further consideration at the December 3 meeting of the Midcentury White House Conference on Children and Youth?

From these discussions came many suggestions, which were put into the form of recommendations. The recommendations, as approved in general session of the council on youth participation, are that the Midcentury White House Conference—

1. Study and explore ways to stregthen and enrich family life;

2. Place emphasis upon spiritual values as motivation for our actions as individuals and groups in society;

3. Consider the needs of working youth as well as finding ways for their active participation in the conference and its work;

4. Be concerned with those things in life that make for security of individuals;

5. Be concerned with the civil rights as basic to the well-being of the whole American community;

6. Recognize that community life could be greatly improved and enhanced to the degree that there is group cooperation and participation;

7. To explore ways and means of providing sufficient and trained leadership for youth groups;

8. Prepare a document summarizing the changes in relationship between children and youth and adults, and recommend programs and action in light of these changes; and

9. The use of radio, press, and television, and other media be extended to tell of youth's contribution to wholesome community life.

On the basis of experience with the Youth Advisory Council of the Midcentury White House Conference, it was recommended that similar youth advisory councils be established on the local and regional level, so that there will be opportunity for more young people to participate in the Midcentury Conference. In addition, to encourage young people to work together and develop new leadership, the Advisory Council urged the establishment of youth councils. The Advisory Council also endorsed the interdisciplinary approach to problems concerning young people used by Midcentury Conference and urged that it be employed on a regional and local level.

In order that the maximum amount of youth participation be achieved on all levels the council further urged: the stimulation of local youth councils; that young working people be included in the conference; that schools and parent-teachers associations be involved in planning on a local level for the conference; that the conference help develop leadership; and that young people of all cultural backgrounds be involved in the conference.

These recommendations were sent to the National Committee of the Midcentury Conference for consideration. The results of the Midcentury Century White House Conference on Children and Youth will have greater meaning because of the positive involvement of youth. This is the first of the White House Conferences on Youth in which youth themselves will actively participate.

Through participation, young people are given the opportunity to properly function in accordance with their individual capacities. Youth participation enables young people to make a contribution toward the achievement of a goal.

As members of the Advisory Council on Youth Participation, young people are making substantial contributions to the total conference because of their status and experience as youth. On all committees, selection of youth membership was made on the basis of their potential contributions to the particular committee.

Youth is able to offer a unique service by providing first-hand experiences as youth in family, school, job, and leisure-time relationships. The ideas of young people in these areas should then be considered in planning services for youth. Although suggestions of youth should not be isolated, but should be considered along with all other suggestions and recommendations.

By involving youth in the conference not only is the potential fulfillment of the conference greater, but another large segment of millions of people within the population will be reached as contributors to the general welfare. "While the conference itself will take place in Washington, its center of interest and action will extend to every town and village, to every home and farm where children live."

The Housing Program

EXTENSION OF REMARKS

OF

HON. CHASE GOING WOODHOUSE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 24, 1950

Mrs. WOODHOUSE. Mr. Speaker, under leave to extend my remarks, I include an editorial from the Hartford Times, May 13, which commends the Connecticut State housing program.

This program is very similar to the middle income housing program which unfortunately was defeated in the House of Representatives this session:

THE HOUSING PROGRAM

In 1,455 family units built under the State's housing program, approximately 5,800 persons are now living. Many more units are under construction or planned. Today's issue of the Times includes several pages bearing the news of houses recently built by private capital. Connecticut is indeed making progress in relieving the acute shortage of housing accommodations.

A closer look at the efforts of the State housing authority is well worth while because it is to that body that thousands of persons look for solution of their problem. Its records show that nearly 3,000 units are under construction. This month and in June construction of 1,500 more units will begin. The authority also says its books show that of the $65,000,000 made available by legislation to moderate rental housing more than $63,000,000 is now under signed assistance agreements with local housing authorities.

There is also a home ownership program that the State housing authority administers. Certificates of eligibility for State mortgage loans have been issued to nearly 7,500 persons. In 164 cases, loans to individual house purchasers have been approved, and there has been approval of loans to enable builders to start construction of 368 houses. Many applications in these two classifications are now being processed. The authority members have expressed the opinion that building activity is accelerating at such a rate that the $30,000,000 available for State mortgage loans may be entirely committed by midsummer.

In a memorandum from the authority office is the statement that rents paid by families living in moderate rental housing projects and the interest, 1½ percent, paid by the families obtaining State mortgage loans will return with interest, all the money borrowed by the State to finance these programs and to meet the cost of putting the programs into effect.

There is certain to be considerable public discussion of the housing program during the coming campaign and already an attempt to discredit it has begun. Honest and accurate criticism will be a good thing. But two things should be borne in mind. The housing authority operates within limits prescribed by the general assembly from which the program emerged only after a bitter partisan battle. Under the terms of that program there is the essential fact that houses are being built, that the rate of construction is increasing and that a lot of people are finding shelter within their own economic reach.

Armed Forces Day Address by Bonner Fellers, Brigadier General, United States Army, Retired, at Danville, Ill.

EXTENSION OF REMARKS

OF

HON. EDWARD H. JENISON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 25, 1950

Mr. JENISON. Mr. Speaker, in company with other communities across the land, the city of Danville, Ill., staged an impressive observance of the first Armed Forces Day on Saturday, May 20. The speaker was a "native son" who returned home for the occasion after more than 30 years' service to his country in the United States Army. He is Bonner Fellers, born in Ridgefarm, Vermilion County, and at the time of his retirement from the Army a brigadier general who had served his country in the world's battle zones, climaxed by service with General MacArthur from Australia to Tokyo. Because of his experience and his outstanding military career, his address on the occasion of the first Armed Forces Day has more than usual significance. For that reason I am including it in the CONGRESSIONAL RECORD under permission granted by the House.

General Feller's address, delivered prior to a colorful flag ceremony staged by Danville Reserve military units and the drum corps of Curtis G. Redden Post 210, the American Legion, and broadcast by radio station WDAN, could be read with profit by every Member of Congress and by thoughtful citizens everywhere. It follows:

Commander Horneman, Mayor Hicks, my comrade in the Pacific war, Representative Jenison, and friends of Vermilion County, it is wonderful to be home again. I have not lived in Illinois for 36 years. Yet, I believe it is true, that I have thought of home every day since I have been away.

During World War II it fell my lot to see considerable fighting. For 2 years I shared the fortunes of the British forces in the Middle East. There some seven different nationalities were locked in combat against the German and Italian desert forces. Following this assignment I served in the Pacific where Americans, Filipinos, and Australians engaged the Japs in the jungle, on the sea, and in the sky.

I have seen the Thirty-third Division fight in the Philippines. It is my fixed opinion that there are no better soldiers in the world than the men from Illinois. This magnificent patriotic demonstration here today is typical.

During the first year I was with General MacArthur in the Pacific, I was in charge of GHQ planning. On my staff were Navy, Air Force, marine, and Army officers. The problem of unification never occurred to any of us because among us cooperation was complete. In their intense eagerness to get on with the war, members of the planning group forgot the services to which they belonged. Our operations involved use of air, ground, and sea forces in closely knitted teams. The success of each of the services—Army, Navy, Air Force—depended upon the cooperation of the other two. There was never one single instance in which the cooperation was lacking. Each arm endeavored to outdo the other in perfecting its assignment.

What then is this problem of unification and why do we hear so much about its being difficult to effect? Unification is sound in principle. Why is it not working as well as we had hoped?

The truth is, in my judgment, the trouble lies at the very top. Today the Army, Navy, and Air Force civilian and military chiefs are permitted to plan our national security without an over-all concept of how we must fight the next war. Each of the three arms—Army, Navy, and Air Force—therefore, is planning to fight the next war by playing the major role.

The Army is planning to fight it out on the ground in Europe by engaging the full weight of the Red army. This requires terrific peacetime expenditures to get ready—some twelve to fifteen billion dollars annually—for men, tanks, artillery, transportation, supply, and related activities. The Army also looks to the Navy and to the Air Force for support in combat.

Likewise, the Navy is permitted to plan for the next war, envisaging itself in the leading role. The Navy dreams of engaging the Red air forces and of bombing the war installations of the enemy from planes based on supercarriers. This requires a number of supercarriers—worth a quarter billion dollars each—in order to create the necessary sea-air team which is essential if the Navy is to retrieve its former role as our first line of defense. To fulfill this role the Navy needs some $10,000,000,000 annually.

The Air Force also is permitted to plan to play the lead should war come. It must do strategic bombing to knock out Russia's war potential. It must provide tactical air support for Allied troops in Europe, lest they be destroyed by the Red air force. It must defend Allied air bases beyond the continental limits of the United States. It must defend Alaska. As you know, since Russia has the atomic bomb and long-range bombers of the B–29 type, our cities are now threatened with destruction for the first time since 1812. If the next war comes, we shall be bombed here at home. We could have the best Army and Navy in the world and they would be powerless to defend us from air attack. Only air power can do this.

As a result of this Army, Navy, and Air Force planning in which each intends to play the major role, the cost of national defense has skyrocketed. The last national defense budget submitted was $32,000,000,000 before it was pared down to less than half this amount.

It is the policy to split the budget almost equally three ways so that the Army, Navy, and Air Force have about the same amount of money to spend. This arbitrary division has become known as the balancing of our forces.

But does this dollar balance give true combat balance? Would it not be more effective to balance our forces against our potential enemy? Russia is immeasurably strong on the ground. We can't defeat her in Europe any more than Napoleon and Hitler could defeat her. We know that Napoleon lost half a million men and Hitler lost 5,000,000 men against Russia and that both failed. Why, then, should we not avoid ground combat with the Red army and plan to defeat Russia by another means?

We have the best Navy in the world. It is essential that we keep it the best. So long as we have the Navy the Red army can never be brought to our shores. But the Navy cannot deliver the knock-out blow against Russia because deep within Russia's borders she has all the resources needed for modern war. From the sea Russia is unblockadeable. Since neither the ground nor the sea forces can win, we must strengthen our air power in time of peace so that, if war comes, we shall have mastery of the air. Russia's eternal allies of distance, winter, and manpower are impotent against air power.

The question arises: Can we defeat Russia by air assault? I am convinced that we can. We have the example of Japan. The doughboy and the marine and the sailor and the air men all played heroic parts in the last war. Credit for our brilliant victories is fairly evenly divided. It was a well-integrated team which gave us success.

But if you ask a Jap why Japan surrendered, he will tell you that 52 Japanese cities had been destroyed by air attack before the atomic bombs were dropped. He will tell you that he surrendered because his people were sick of bombing and preferred surrender to total destruction from air strikes. If this was true in Japan, is it not logical to conclude that Russia might surrender for the same reason?

To the unbiased student, therefore, it is clear our only hope of victory against Russia

lies in a peacetime Air Force capable of achieving immediate mastery of the air should war come. Once we build this air power, the likelihood of war is, indeed, remote. Yet our Government is spending more than $14,000,000,000 this year and we are not getting true military security. This is an especially dangerous situation in view of our aggressive foreign policy.

Our program in Europe cannot possibly prevent the Red army from overruning France. This fact is well known among top military leaders. We should content ourselves with sufficient equipment for our allies to prevent civil war. We can't afford the assistance we have promised Europe and we should adjust our present policy so as to save a billion dollars this year. Something like thirty to fifty billion dollars can be saved from our entire European program if we do the sound thing militarily and abandon it.

As things now stand, we are headed for trouble in Europe. Since our Army can't win against Russia on the ground and our Navy cannot deliver the knock-out blow, we should pare down our appropriations for the Army and Navy and thereby make sufficient money available for the Air Force—and I am a ground officer making this recommendation.

True unification cannot be effected until we adopt an over-all strategic concept which will be effective in deterring war and enable us to win should it come. This formula is very simple. It is: The best air force in the world supported by an adequate army and navy. It's the phrase "supported by" which our leaders refuse to insert into the concept. But until this is done unification cannot be achieved and true national defense will be lacking.

I want to repeat that unification is not held up by the GI nor by the officers under whom he serves. Rather it is held up because our very top leadership has failed to prescribe the correct strategy for our national security. It is high time this tragic situation is corrected. Until it is corrected the danger of war is very great. Until it is corrected we cannot solve our national economy. It's a problem which will not be resolved until the American people make known their will to our leaders.

Senatorial Battles

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Thursday, May 25 (legislative day of Wednesday, March 29), 1950

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Mr. Charles Parmer, well known Washington correspondent. Mr. Parmer's comments concerning our distinguished colleague, the senior Senator from Utah [Mr. THOMAS], represent a well-earned and merited tribute to a great American and an honored statesman.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PARMER FROM WASHINGTON
(By Charles Parmer)

The senatorial battles—even more than the House fights—this year show a striking trend both within the parties and between the parties: a trend toward liberalism.

Most significant were two primary results within the past fortnight; in States where the Republican Party is powerful, and the reactionary element is supposed to rule, yet liberalism won out over reactionaryism.

James Duff was given little chance to win the Republican senatorial nomination over Grundy's machine candidate in Pennsylvania, yet he did it nicely.

In Oregon eastern money was poured in "by the ton" to beat the forward-thinking WAYNE MORSE. He defeated his Republican reactionary foe by 3 to 1, for the senatorial nomination.

Those two were interparty fights; each man now will face a Democrat in the elections, but the results, in two such widely separated States, show a decided liberal trend.

The next big battle looms in Utah. The fight will be to reelect one of the Nation's outstanding statesmen: Senator ELBERT D. THOMAS—"THOMAS of Utah," as he's known here and abroad. (At the moment he has no Democratic opponent in the primary.)

Big eastern interests make no bones about it—they wish an ultraconservative reactionary, and for 2 years and more those interests have been building up one Wallace Bennett. He is a former president of the National Association of Manufacturers—a group never noted for liberal thought. Mr. Bennett, I understand, is against sin.

Senator THOMAS is against sin, too; likewise he stands for and fights for legislation which places human rights above massed property. He knows that the strength of a nation is based on the welfare of its multitude of individuals.

For three terms in the United States Senate—from 1932 onward—he has fought with all his great intellectual power to make this Nation a leader—to provide conditions of living and working which will bring forth a strong, healthy, educated citizenry.

He is the Nation's authority on Thomas Jefferson—whose precepts he finds so sound that he would transplant them into today's needed legislation. During war days he was chairman of the Senate Military Affairs Committee—he saw to it that this Nation's military was the world's best. After it was all over—when the public began to forget—it was THOMAS of Utah who battled for the rights of the GI's—the right to an education, the right to his old job, if he wished it. ELBERT D. THOMAS made it embarrassing for certain interests that would forget what the men and women in uniform sacrified for the United States of America, understand their opposition?

The story can't be told yet—in full: it is still wrapped in military secrecy—I refer to his personal services in giving of his knowledge of Japan to the military (in his younger days he had been a missionary there). Top brass sought him out for advice and counsel. He it was who initiated OWI's devastating broadcasts to Japan—taking the leadership in the propaganda warfare that was so effective. Senator THOMAS, in his official capacity, saw that others got the ribbons and the medals—his reward was the satisfaction of serving well his native land.

He's served as Amercan delegate on more foreign missions, I'd say, than any living official * * * abroad he ranks as one of the world's statesmen.

At this critical hour we must keep at the wheel of Government, individuals with world outlook and practical experience in global affairs—as well as with a realistic grasp of problems on our domestic front.

THOMAS of Utah typifies the highest type of public service—free from self-interest, fearless in standing for what he holds is right—here in Washington—where his value is known—the prayer is for Utah to send back to the United States Senate ELBERT D. THOMAS—American statesman.

The Road Back to America

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 25, 1950

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the St. Louis Post-Dispatch:

AN APPEAL RENEWED

Under the heading, "The road back to America," the Washington Post—one of the most vigilant and constructive of American newspapers—has presented its readers with an analysis and proposal concerning the "evil atmosphere" which has descended on this country. "For weeks," says the Washington newspaper, the National Capital "has been seized and convulsed by a terror."

The Washington Post's proposal to get the country back on the right road is for the appointment of a "Commission on National Security." This Commission, which would lift the issues above partisan politics, "would elevate the current debate" and "catalyze the decencies of America."

The Post-Dispatch is glad to call attention to the Washington Post's editorial. As many of our readers will remember, the Post-Dispatch proposed the appointment of just such a national commission nearly a year ago. Our editorial, America's Grave Need, which was accompanied by a cartoon entitled "Reckless Winds," appeared Sunday, June 26, 1949. Deploring the wild abandon with which epithets such as "Red," "disloyal," "spy," and "traitor" were being thrown around, we said:

"The gravest single need in the United States today is for a national evaluation of this tangled problem—a coldly factual evaluation without favor and without bias.

"To this end, the Post-Dispatch proposes that the President appoint a commission of outstanding, qualified citizens to make an early report to the American people on the confusing elements of Communist activities and the means of combating them.

"Such a report by such a commission could perform a brilliant, patriotic service. It might well decide how the United States is to preserve its historic reliance in the great freedoms that have been ours from the Declaration of Independence to this day."

Although the commission we proposed was not appointed, extracts of our editorial were reprinted in the Christian Science Monitor and other newspapers at the time. Thus, the idea at least gained currency. But if the proposal was sound then, it is even better now, after the damage done by the McCarthy performance.

We applaud the Washington Post for its efforts to bring about the appointment of a national commission and herewith renew our own appeal to the President to meet this grave need.

Racial Discrimination in Bowling

EXTENSION OF REMARKS
OF
HON. MATTHEW M. NEELY
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Thursday, May 25 (legislative day of Wednesday, March 29), 1950

Mr. NEELY. Mr. President, I ask unanimous consent to have printed in the

RECORD an editorial entitled "Victory for Fair Play in Bowling and Democracy," which appeared in the Minneapolis Spokesman on Friday, May 19, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

VICTORY FOR FAIR PLAY IN BOWLING AND DEMOCRACY

Decision of the American Bowling Congress last week to eliminate the "whites only" clause from its bylaws was a victory for right and justice. It was also a victory for various groups and organizations which, spearheaded by the United Auto Workers union, aroused public opinion so greatly that the ABC had no other logical course to take, except to end its discriminatory policy.

Minnesota may well be proud of the part it played in bringing about the new policy. It furnished courageous, far-sighted Senator HUBERT H. HUMPHREY, who as mayor and later Senator, served as cochairman of the National Committee for Fair Play in Bowling. It supplied the Minnesota State NAACP whose appeal to attorney-general J. A. A. Eurnquist brought about a threat to obtain an injunction against the holding of the 1951 tournament in St. Paul. Its two human rights groups, the St. Paul Council on Human Relations and the Minneapolis Mayor's Council, helped organize two of the first chapters on Fair Play in Bowling, the group which has spearheaded the attack on ABC policy.

Minnesota furnished many examples, such as the Minneapolis Jaycees who not only furnished the local leader for the Committee on Fair Play in Charles Hvass, but changed its bylaws so that bowling under ABC auspices was impossible.

Minnesota contributed also the results of the Minneapolis Star and Tribune's Minnesota Poll which gave strong evidence that Minnesotans by and large were in favor of abolition of the un-American rule in the ABC. These results along with the threat of the State attorney-general's office to take court action may have been the straw that broke the ABC camel's back.

Minnesota furnished Pat Whelan, whose union of bowling alley pin setters was loud in denunciation of the ABC "whites only" law. This group would have been a key group to make the ABC see the light in event the offensive bylaw was not erased.

It is of course impossible to recount all of the manifestations which brought about ABC capitulation but no comment would be correct unless organized labor as represented by the United Auto Workers was given top credit. The UAW first challenged the ABC policy openly in Buffalo several years ago when Negro members of its bowling teams were barred from participation in the ABC national tournament.

A large majority of the white bowlers in Minneapolis and St. Paul who belonged to ABC were in favor of cleaning up the bylaws. The Minneapolis NAACP in cooperation with the Minnesota Bowling Association urged four Negro bowlers to enter the Tribune classic as a test case. The men entered the tournament by mail and when they appeared for play those in charge were flabbergasted but the entrants were allowed to participate. Johnson, the paper's sports editor, when queried, said something to the effect that if the ABC didn't like it they could "lump" it.

Way out in Spokane, Wash., bowlers in the typographic union, particularly those working on the daily paper back in October, disassociated themselves from the ABC because of the objectionable clause.

At the Buffalo tournament the UAW placed pickets around the building in which the play was held. This was the first time that a large segment of the daily press and many of the ABC members themselves were aware that the organization was committed to a whites-only program.

The first big blow to ABC came when the State of New York through its attorney general took action to bar the ABC from the Empire State because of its discriminatory rules. The second blow came when Illinois State followed suit. Another body blow came when the New York American, Hearst paper, in dramatic fashion, canceled its annual bowling tournament with 8,000 entrants because by ABC rules Joe Louis, Jim Thorpe, or Duke Kahanamoku would not be eligible to bowl.

Bill Corum, sports editor of the New York daily, made this point in announcing cancellation of his paper's annual tournament:

"Any championship not designed to produce the true champion is not, and cannot be, a true championship. For that is the basic assumption, the keystone, on which all sports are founded. So that when any potential contestant is barred by reason of creed, race, color, or bias, they are not true sports events, either. And, most certainly, they are not truly American.

"What American, once he came to think about it, would want to be the champion of any sport where a better man was barred from competition?"

Almost immediately after the New York America's action, its sister Hearst paper in Chicago, the Herald-Examiner, canceled its tourney. Action of these two newspapers focused the world's attention on the ABC.

Prior to the Hearst papers' action in late February a straw in the wind was the comment of Charles Johnson, executive sports editor of the Minneapolis Star and Tribune, who predicted in the February 5 edition of the Sunday Tribune:

"Officials of the American Bowling Association might as well make up their minds now, that eventually, sooner than they think, they'll lose the argument on discrimination in their entries.

"The campaign to eliminate the color line on entrants is coming to a head all over the country. One State after another is enacting laws that will outlaw practices such as prevail in the ABC.

"Already local governing bodies are refusing use of municipal buildings for this gigantic tournament.

"The sooner restrictions are lifted in this sport the faster will be its progress throughout the United States and the world."

An Illinois judge fined the ABC $2,500 for discrimination, suggesting that it could with profit change its racial policies.

The only religious group represented, even unofficially, in the fight was the Catholic Church. Rev. Charles T. Carow, of Brooklyn, N. Y., fought the biased ruling for 6 years in the councils of the ABC. No story of the victory over race prejudice in the bowling sport would be complete without mention of Father Carow who was really the pioneer voice crying in the ABC wilderness.

This newspaper considers the new ABC ruling a credit to the sense of fairness which dwells in the breasts of most Americans. For it was not overlong after millions of Americans had the facts in the situation that the ABC went on the defensive and victory was finally achieved. Such evidences of final justice and fair play give strength to democracy.

Thus the wave of sentiment for fair play supplemented by direct action as in the case of the court action, helped the ABC make a very wise decision.

Things like this more than any words which can be spoken makes America great and will keep her great. In no other country that we know of does public opinion force changes in such dramatic fashion for the protection of minorities. The ABC change is just another indication that America is coming of age, and many changes which must come will weld a new unity among all its people and prepare it for any challenge from without.

The Knauff Case

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 24, 1950

Mr. CELLER. Mr. Speaker, I have a great respect for Attorney General McGrath and for that reason I am at a loss to understand the attitude of the Department of Justice concerning the case of Ellen Knauff. He has made an exemplary record as head of the Department of Justice and I am sure upon reflection he will change the attitude of his Department anent this Knauff case. I do not agree with all the criticism against the Department of Justice as indicated in the editorial hereinafter attached. It does, however, despite its severity, reflect public opinion on this case.

The House Judiciary Committee unanimously passed the bill offered by my distinguished colleague Representative FRANCIS WALTER, of Pennsylvania, permitting Ellen Knauff to remain in this country. She is the wife of a GI. The House unanimously passed the bill, and it is now being considered by the Senate Judiciary Committee.

Despite this action, efforts are being made to exclude Ellen Knauff and to dispatch her summarily to Germany. Only a decision by Justice Jackson of the Supreme Court saved her from enforced deportation at the eleventh hour.

It is hoped that our very able Attorney General in his wisdom and human sympathy will force reconsideration of this case by the Department of Justice.

The case of Ellen Knauff has created widespread publicity as well as bad public relations for the Department. Editorials like the one I include below from the St. Louis Post-Dispatch are appearing in our newspapers:

Who owns the Department of Justice?

Does it belong to the officials who staff it? Or does it belong to the American people?

Whom is the Department of Justice supposed to serve? Is it supposed to serve the employees who are hired to conduct its business? Or is it supposed to serve the employers who pay the bill—some 150,000,000 citizens?

These are not idle questions. These questions are gravely pertinent because of the incredible case of Ellen Knauff. Mrs. Knauff, as readers of the Post-Dispatch know, is the war bride of a combat veteran, who has been barred by the Department of Justice as a so-called "security risk" without ever being told why.

Consider only the latest developments in this astonishing case.

Late Tuesday afternoon, the United States Attorney in New York, acting for the Immigration Service, asked authority in the Federal court of appeals for immediate deportation of Mrs. Knauff. This request was

refused by Judge Augustus Hand. Judge Hand said any proceedings could wait on arrival of the court decision in due course—some 15 days.

With this, the Immigration Service—a unit of the Department of Justice—decided to set itself above the ruling of Judge Hand. It ordered Mrs. Knauff to Idlewild airport for return to Germany the next morning. The reservation on the plane was marked "no publicity."

If this was not in contempt of court, it was at the very least flagrantly contemptuous of Judge Hand. But it was also already flagrantly contemptuous of Congress. A House Judiciary subcommittee had held a hearing to which it had brought Mrs. Knauff from Ellis Island under subpena—the only way it could get to talk with her. After that the Judiciary Committee recommended unanimously the bill to admit her, sponsored by Representative WALTER, of Pennsylvania, a Democratic veteran of the House with 18 years of service. Then the House, on May 2, passed Mr. WALTER's bill unanimously.

Only Justice Jackson's last-minute Supreme Court stay order saved Mrs. Knauff from this second "lynch law" deportation which the Immigration Service tried to ram through. Whatever the security case may be against this little survivor of Hitler's persecution of the Jews, it cannot possibly justify the star-chamber record of Department of Justice. It cannot justify vindictiveness. It cannot justify stealth.

There is no question that vindictiveness was at the bottom of the "no publicity" overnight order to the airport for rush deportation. The Director of Immigration at New York, Edward J. Shaughnessy, gave it all away. When Justice Jackson's stay reached him by telephone, Mr. Shaughnessy said, "I was afraid of that."

What was the Department of Justice afraid of? Was it afraid to permit the processes of justice to work? Was it afraid of the reaction of citizens who believe in fair dealing for all? Was it afraid that it could not get away with this Fascistlike scheme in the light of duty?

We venture to predict that no more tricks of this sort will be tried by the Department of Justice in the Knauff case. After the blistering it got from Justice Jackson—a former Attorney General—the Department of Justice doubtless will pay closer attention to historic rules and procedures for appeals to the Supreme Court.

The scene now moves to the Senate, where several Knauff bills are pending. The subcommittee consists of Senators DONNELL, of Missouri, and MCCARRAN, of Nevada. They can and should help remove this blot from America's case before the world by a prompt recommendation to the Judiciary Committee.

Meantime, Attorney General McGrath ought to ask himself how satisfied he is with the record in the Knauff case.

Maintenance of Peace in the Near East

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 24, 1950

Mr. MULTER. Mr. Speaker, now that the President's statement on the question of maintenance of peace in the Near East has been released for publication, I desire to place in the RECORD a letter written to me by Assistant Secretary of State Jack K. McFall, dated May 24, 1950, together with enclosure mentioned therein:

DEPARTMENT OF STATE,
Washington, May 24, 1950.

The Honorable ABRAHAM J. MULTER,
House of Representatives.

MY DEAR REPRESENTATIVE MULTER: In view of the interest you have expressed in the question of the maintenance of peace in the Near East, I know you will be interested to learn that the President will release from the White House on Thursday, May 25, at 11 a. m., the text of a declaration being issued simultaneously by the Governments of the United States, the United Kingdom, and France relating to the near-eastern security situation. An advance copy of this declaration is enclosed for your personal information.

It is the belief of the United States Government that this declaration will tend to increase stability in the Near East. This Government is deeply interested in the establishment and maintenance of peace in the area, and, together with the Governments of France and the United Kingdom, has sought through the attached declaration to make a contribution to this end.

Sincerely yours,

JACK K. MCFALL,
Assistant Secretary.

DECLARATION BY THE GOVERNMENTS OF THE UNITED STATES, THE UNITED KINGDOM, AND FRANCE, REGARDING SECURITY IN THE NEAR EAST

The Governments of the United Kingdom, France, and the United States, having had occasion during the recent Foreign Ministers' meeting in London to review certain questions affecting the peace and stability of the Arab states and of Israel, and particularly that of the supply of arms and war material to these states, have resolved to make the following statements:

1. The three Governments recognize that the Arab states and Israel all need to maintain a certain level of armed forces for the purposes of assuring their internal security and their legitimate self-defense and to permit them to play their part in the defense of the area as a whole. All applications for arms or war material for these countries will be considered in the light of these principles. In this connection the three Governments wish to recall and reaffirm the terms of the statements made by their representatives on the Security Council on August 4, 1949, in which they declared their opposition to the development of an arms race between the Arab states and Israel.

2. The three Governments declare that assurances have been received from all the states in question, to which they permit arms to be supplied from their countries, that the purchasing state does not intend to undertake any act of aggression against any other state. Similar assurances will be requested from any other state in the area to which they permit arms to be supplied in the future.

3. The three Governments take this opportunity of declaring their deep interest in and their desire to promote the establishment and maintenance of peace and stability in the area and their unalterable opposition to the use of force or threat of force between any of the states in that area. The three Governments, should they find that any of these states was preparing to violate frontiers or armistice lines, would, consistently with their obligations as members of the United Nations, immediately take action, both within and outside the United Nations, to prevent such violation.

Upper Savannah Soil Conservation District

EXTENSION OF REMARKS
OF
HON. JAMES B. HARE
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 25, 1950

Mr. HARE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech recently delivered by me at a meeting of the Upper Savannah Conservation District, held at Six Mile, S. C., on Tuesday, May 23, 1950:

I am indeed honored and extremely grateful for your very thoughtful and considerate invitation to be with you today and to take part in this very important occasion. I well remember the fall of 1948 when I had the pleasure of presenting prizes to the winners in the pasture contest sponsored by the upper Savannah River Soil Conservation District in cooperation with various businessmen and agricultural workers. This particular event took place on the farm of Mr. Jim Shirley which is a few miles east of the city of Anderson. Upon receiving a copy of today's program, it was with particular interest that I noticed that a number of those who received prizes in 1948 in the pasture contest are today receiving certificates of merit for continued good soil conservation farming.

The annual program of the upper Savannah Conservation District in cooperation with the Bankers Association to award certificates of merit to farmers who have done an outstanding job in conserving their soil and water resources is indeed worthy. It calls the attention of the world to the fact that here are farmers who are not only producing quality food for the dinner tables and fiber for the clothing on our backs, but who are also keeping the machinery of our food and fiber-producing plant in excellent condition for any eventuality—for peace or for the defense of our Nation. By practicing soil conservation, we are safeguarding the future of our children, our people, and our Nation by working hand in hand with the laws of nature and as long as we have prudent husbandry of our soil and water resources we can always be assured that there will be no agricultural tombstones of a better day having passed because that better day will always be in the future.

At this point I wish to commend the Bankers Association and businessmen for their realization of the necessity of soil-conservation practices by their cooperation in this program. The united and determined efforts of all will build a strong America. Events as the present one which recognize farmer accomplishments in conservation farming must indeed warm the hearts of all conservation leaders and especially the district supervisors of the Upper Savannah Soil Conservation District. The supervisors of this district are fellow farmers who have been duly elected by interested farmers in this district. The supervisors have given unselfishly of their time, energy, and in many cases of their money to help fellow farmers achieve a better living and a better life for themselves, their families, and the people of our Nation. The Board of Supervisors for the Upper Savannah District is composed of men who are outstanding leaders in the field of farming: Mr. J. B. Douthit of Anderson County, chairman, and who is also president of the South Carolina District Supervisors Association; and his fellow supervisors are Mr. W. Hugh McGee of Anderson County,

Mr. J. R. Nicholson and Mr. R. A. Reeves of Oconee County, and Mr. L. P. Thomas of Pickens County. All of them are to be commended for their faithful service to community, State, and Nation.

The Upper Savannah Soil Conservation District holds a unique and enviable place in the Nation's conservation activities. It was about 13 years ago that the farmers of Pickens, Oconee, and Anderson Counties organized the Upper Savannah District. It was the first in the State of South Carolina and the second in the United States. At that time knowledge of effective soil and water conservation was very limited. Consequently, such an organizational move to encourage fellow farmers to do something about the expensive loss in crop-producing soils and to locally take charge of a program to control this devastation must have indeed challenged the imagination of not only the leaders in that movement but also of those who merely went along out of curiosity. At this point, I am sure that it will be interesting to observe that Mr. J. B. Douthit, now chairman of the Board of Supervisors, is the oldest of more than 11,000 other supervisors throughout the Nation's 2,300 soil-conservation districts who have followed your leadership in this program. It is further interesting to note that Mr. J. R. Nicholson is the third oldest supervisor in our Nation.

I would be remiss in any remarks that I have to make today if I failed to note that there are some who substantially and energetically gave of their efforts in the establishment of this district and the promulgation of its program but who are unfortunately not with us today. I particularly recall a late friend and leading conservationist, Mr. Frank Merck, who with others foresaw that the real key to successful agriculture is conservation farming and not ruthless exploitation of the soil.

It is not difficult to see the beautiful scene or picture of agricultural security that has been painted by the craftsmanlike work of the conservation farmers in the Upper Savannah Soil Conservation District. As I drove here today it was obvious that almost every other acre is now in either small grain, hay, pasture, or grass crops. The strip rotations, flanked by many other soil and water conserving measures stood out as barriers against the loss of food and fiber producing resources. Even the world renowned five acres on the E. M. Duncan farm which held the world's cotton-production record has now joined ranks with many other acres in producing grass and clover. However, there is still present the scars of gullies and other erosion which cut cancerous growths in the face of mother earth. This is particularly true because of the two-crop system of cotton and corn which we have adhered to for many generations. But, by careful work and conservation farming these scars can be erased and agricultural security built in their place.

We are not alone in our reverence to soil and water conservation because it is of prime importance to our national life. More and more of our people are awakening to the realization that productive soil is a life-giving and life-sustaining resource—that food doesn't grow in tin cans on the shelf of the grocery store or behind the counter of a restaurant as many have supposed. People are realizing too that good food and food at a reasonable price doesn't come from fields eroded of productive soil nor does it come from fields riddled with gullies. Many are coming to appreciate that good food comes only from farms whose farmers are taking care of their land, farming efficiently, and who are holding on to their productive soil.

In practically all cases, these are farmers who are actively supporting local conservation programs—their soil conservation district program which uses the technical help of the soil conservation service and the PMA conservation program. They are farmers who are cooperating with the other agencies in the agricultural field which help farmers to achieve more efficient and better production such as the Extension Service, the Farmers Home Administration, Vocational Agricultural Program, and other agricultural agencies. I know of no better way to form a synchronized team of agricultural workers than to do so under the direction and guidance of local soil conservation district supervisors, PMA committees, and Extension Service specialists. In this way greater emphasis can be placed on the job of conserving soil and water resources.

It is time for more and more of our people to give support and recognize that productive soil and water are our most important resources because without them we could not live. Further, without productive soil our standard of living would be infinitesimal to what it is today. We must remember that it is only by the fact that our farmers are able to produce food for more than themselves that others of us can devote our labor to manufacturing, distribution, and other services for all of our people.

The necessity for more and more support for soil conservation work is well emphasized by a few statistics which I shall mention. In fact, the statistics are in themselves alone sufficient justification for the enlargement of our local, State, and Federal programs for soil conservation. In 1790, just 160 years ago, a very short time in the span of life of the world, the population of these United States was 3,129,000 people. Within 70 years the War Between the States occurred and at that time the population was in excess of 31,000,000 people, an increase of eight times the original figure. Forty years later, in the year 1900, the turn of the century, a date prior to which many of you were born, the population had increased to almost 76,000,000. In other words, the population of our country had more than doubled within a period of 40 years. The amazing feature is that in the present year of 1950 the population of our country is estimated to be in excess of 150,000,000 and the census reports indicate that such is true.

Consequently, in the lifetime of many of us the population has again doubled. If we can rely on the statistics and history of growth of our population, we may reasonably expect our population to almost double itself within the next 50 years. If that proves to be true, we are going to have to almost double our production of food for our mouths and fiber for our clothing. How can we do it if we permit our soil to be depleted. I am not an alarmist, but scientists and those who have made a study of our soils tell us that the topsoil of our country has been reduced from approximately 9 inches to about 5 inches within the past two or three hundred years. If that is true, and if we permit that to continue, then we may reasonably expect our great Nation to be a land of poverty within the next 100 years unless greater emphasis is placed on soil conservation and the conservation efforts of all farmers obtained.

If there is any doubt regarding the value of productive soil in helping us to create a higher standard of living, which provides a greater income for the farmer, the textile worker, the filling-station operator, and the businessman, we need but look to any of the many research results which show the difference in production between topsoil and subsoil.

A few years ago an experiment station in the State of Ohio removed all of the topsoil from a test plot and began using huge applications of fertilizer, manure, lime, plus excellent rotations in an effort to see what could be produced. At the same time the identical treatment was given to an adjoining plot on which the topsoil had been left and another plot on which an extra layer of topsoil had been added. The subsoil, unfortunately for the experiment, was of the best 15 percent that we have in this country. After a number of years of heavy application of fertilizer to the subsoil it was possible to build up a yield of corn to 85 bushels an acre. During the same period the plot on which topsoil had not been removed yielded 125 bushels of corn per acre, and the plot on which an extra layer of topsoil had been added yielded 141 bushels per acre. On a dollar basis the acre of subsoil produced crops worth only $337 as compared with the crops worth $698 per acre on the single-topsoil-layer plot.

It is mere folly to inquire which piece of land you would rather have or which one would give you the best yield, the best profit, or which would allow you to buy more of the better things in life for your family.

Besides being profitable for the farmer and the consumer, effective soil and water conservation holds an additionally important place in our national agricultural affairs. I wonder how many of you have given thought to the fact that if every acre of our cropland was being used for the purpose it is best suited, what changes would take place in the agricultural production picture and what would be the case of our present crop surplus problems?

Suppose we take the 1948 production year as an example and look at the effect just one soil conservation practice would have had—the practice of good rotation. In 1948 if every acre of cropland in this country had been used in a minimum soil-conservation rotation we would have had 43,500,000 less acres of row crops such as cotton and corn, and 28,500,000 less acres of small grain such as wheat and oats. That land would have been in hay and pasture crops, and the forage would have been used to feed more livestock for which there is a great demand. The most important fact is that we would not have had a surplus problem anything like we have today in corn, cotton, potatoes, and other crops. Consequently, without such surplus there would have been no necessity for acreage allotments and marketing quotas.

The more we study the effects of a good soil-conservation program the more obvious it becomes that such a program is one of the greatest things that has ever happened in our Nation. Effective soil and water conservation does much more than just protect our soil and water resources although that is very worth while and necessary. It encourages and makes possible diversified production which will result in less production of the crops now causing our surplus problems and which will eventually lead to lower farmer income.

A survey conducted on 216 South Carolina farms whose farmers are cooperating with the soil-conservation districts show exactly what happens when conservation farming is used. These farms average about 300 acres each. Before conservation farming, these farms had about 10,000 acres planted to corn and about 10,500 acres planted to cotton. After the conservation programs got underway, the acreage of corn was reduced to 7,000 and the acreage to cotton to about 8,000 acres. A reduction of approximately 18 to 20 percent in each case. With this reduction the production of the number of bushels and the number of bales remained just about the same. But, the cost of production of each bushel and each bale was greatly reduced, and consequently, resulted in greater profit to the farmer. At the same time, the acreage planted to hay and pasture crops increased by 72 percent and the number of dairy cows increased 50 percent and that of beef cows 150 percent. That is the type of land use changes taking place in all of the 33 soil conservation districts in South Carolina.

Consequently, there is no question why the Nation looks favorably upon its soil conservation districts and the job they are doing as well as all of the other governmental agencies interested in soil conservation. That is

why in the face of the tremendous national debt of more than $256,000,000,000 that the House of Representatives recognized the great need and importance to appropriate sufficient money to help farmers conserve their productive soil and water. Even in view of the necessity to cut governmental expenditures the Congress increased the appropriation for the Soil Conservation Service and other governmental services engaged in a similar enterprise in order to continue to give technical help to the farmers for the preservation of our greatest natural resource. The Congress recognized the value of the PMA conservation payment program, the Farmers Home Administration, the Extension Service, and other services by retarding many stalwart attempts to drastically reduce their appropriation. This is the case because the Congress realizes that the Nation's agriculture is its No. 1 industry and should not become subservient to any other industry whatsoever. The Congress is frequently criticized by opponents of a strong agriculture and much of the criticism centers around the cost of the present price-support program. These opponents fail to recognize that during the war the farmers did their part in expanding their facilities and production to meet wartime needs. To do this, farmers had to invest in additional machinery and make other changes that were costly and just as necessary as many of the alterations and changes that industry had to make for the production of tanks and guns. After the war, while industry could make its shift to peacetime production schedule, agriculture was compelled to continue its wartime type of production in order to feed the peoples of the world until their own agricultural plants could be put back in order. Agriculture is now in a period of readjustment from wartime production to peacetime production—some half decade after the war. Congress recognizes that this late shift is not the fault of the farmer who followed his Government's program in the fight for a democratic way of life.

Yet, there are many who criticize the few dollars that the Nation must spend in helping farmers in this shift. They forget that when industry made its shift to peacetime production that the Federal Government spent about $7,000,000,000 to aid in the conversion, together with a great reduction in excess-profits taxes for industry. Helping industry to reconvert was a good thing because it helped to maintain high industrial employment and thereby permitting the purchase of food and fiber produced by the farmers of our country. But helping agriculture in this conversion period is just as necessary and equally as wise. The Nation cannot afford not to help agriculture during this crucial period, a period which finds the income of the farmer lowering drastically fast, while the prices for machinery, seed, and fertilizer are not lowering in comparison.

There are a great many things the individual farmer can do for himself to help stabilize his income. One of the best is conservation programs being sponsored by various governmental agencies which help to cut the cost of production, use every acre efficiently, and conserve the productiveness of each acre. A few weeks ago I had an opportunity to study some figures on what the one practice of contour farming alone would do to help farmers reduce their cost of production. I was amazed to learn that contour farming alone saves up to 29 percent of the operation time and at least 23 percent of tractor fuel. This saving in power, fuel, and time can only result in affording the farmer a greater profit in the crops which he produces. Consequently, with this one illustration I am sure that each of you can anticipate what the savings might be if conservation programs are practiced in an entire farming operation.

I know that all of you are interested in the flood-control program which has been recommended for the watersheds of the Savannah River and which will be handled through your local soil-conservation district. Once started, this program will mean much to the farmers along the Seneca, the Tugaloo, and Chauga Rivers, as well as the other tributaries in our area. Many of you who own bottom land along these rivers have found it very unprofitable to use them for crops because of the hazardous floods. These floods do not originate in this immediate area, but are the result of runoffs which occur and which are unchecked in the mountainous areas above us. It is surprising to realize that the mountain region just to the north of us has the highest annual rainfall of any section in the continental United States with the exception of the coastal area of the Pacific Northwest.

We hear a great deal about damage caused by floods and according to the news stories it would appear that the greatest damage and costs occur along the big streams and to the residents of our larger cities. However, the reverse of this is true. It has been reliably established that 75 percent of all flood damage occurs in areas such as Oconee, Pickens, and Anderson Counties. The only way that this flood damage can be controlled or prevented is by proper soil-conservation practices by all of the people in any community.

A fitting illustration of the foregoing statement is quite apparent as we look off from this mountain today and see the soil-conservation farming being done by Charlie Maudlin, LeRoy Parrott, Roy LeMance, Jim Holliday, and on the farm of the late Frank Merck. When noticing their practices it is easy to see why the Soil Conservation Service has noted a marked decrease in the land siltation in Lake Isaqueena. It looked at one time as if Lake Isaqueena would be a muddy lake. I am told that due to the conservation farming being done in this community, the life expectancy of the lake promises to be many times longer than would have been dreamed of a few years ago. The preservation of the soil and water from infiltrating into Lake Isaqueena can only mean that the soil, seed, and fertilizer are remaining in the production area of its watershed and thereby resulting in a saving to the farmers in this area.

The benefits of effective soil and water conservation are never-ending. The progressive program of the Upper Savannah Soil Conservation District helps bring this fact to life. The 60-odd school teachers from this district who attended Clemson College for a period of 3 weeks last summer studying conservation recognize this and they are preparing to do their part in teaching our youth, our future farmers, that an appreciation of the soil is fundamental to success.

To insure the posterity of our Nation it is mandatory and incumbent upon all of us and the churches, the business houses, the newspapers, magazines, civic and social organizations, to accept the Biblical directive and challenge to preserve our soil because it is a Christian directive to each of us to protect God's good earth. In this challenge we must not fail.

American Policy in the Middle East

EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Thursday, May 25 (legislative day of Wednesday, March 29), 1950

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "What Are We Up to in the Middle East?" which appeared in the Salt Lake Tribune, published in Salt Lake City, Utah.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHAT ARE WE UP TO IN THE MIDDLE EAST?

On the twenty-fifth anniversary of the founding of the great Hebrew University just outside of Jerusalem, President Weismann, of the State of Israel, expressed hopes that someday "the Jewish and Arab nations will to their mutual benefit contribute to the establishment of a belt of flourishing countries * * * where the people of Israel and of the Arab countries will cooperate in harmony."

No doubt Hebrew University, a growing center of learning on Mount Scopus, can foster the spirit of the Middle East about which Dr. Weismann spoke so glowingly.

There are discouraging obstacles at present, however, and many of them are related to the blindly selfish policies of Great Britain, sanctioned by the United States State Department.

Since the lifting of the United Nations Security Council embargo on shipment of arms to the Middle East last August, Britain has been shipping planes, tanks, artillery, and other matériel to the Arab nations. Many observers in the unhappy region are convinced that the Arab reluctance to make final peace with Israel grows in proportion to the arms received regularly from Britain.

An Israeli request for war matériel has been rejected by the United States on grounds this country does not have enough due to treaty arrangements with other countries.

Defending American approval of British action recently, Secretary Acheson said that the arms being furnished the Arabs were solely for keeping internal order. He went on to say that the Arab states must be armed to resist aggression in the Middle East. Aggression from what source? If action is expected from Russia, why is it not equally important to arm Israel?

Resumption of hostilities between the Arab states and Israel is feared as soon as the Arabs feel strong enough. Is this what Britain and the United States want? The American Government boasts of its sympathy and assistance to democracies threatened by other powers. Yet, in the case of Israel, Washington is evasive and uncooperative.

Indecision and often hyprocisy have marked the United States policy toward Israel. This has helped to tie the hands of the United Nations. Behind the "silken curtain" of policy in the Middle East is one word, "oil." Justice and fair play get secondary consideration while the dickering and dealing goes on for that commodity.

West Losing Good Friend in Florida Congressman

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 25, 1950

Mr. MANSFIELD. Mr. Speaker, under leave to extend my remarks, I am inserting a story which appeared in the Great Falls (Mont.) Tribune of May 21,

1950, about the chairman of the Public Lands Committee.

The West has had a tried a true friend in Chairman PETERSON and I want to express to him my sincere thanks for the many courtesies he has extended to the Montana and Rocky Mountain Representatives in Congress and to assure him of our deep appreciation for his efforts in helping to build up our part of the country.

We will miss Pete, but we will always remember him for the gentleman and statesman he is. The latchstring will always be out whenever he comes to see us—which we hope will be soon and often.

The article follows:

WEST LOSING GOOD FRIEND IN FLORIDA CONGRESSMAN

WASHINGTON, May 21.—The West is losing one of its best friends from Congress, a southerner, this year.

Representative J. HARDIN PETERSON is going back to his beloved Florida to stay.

For most of the last 2 years PETERSON has been chairman of the House Public Lands Committee, which deals mainly with western problems, such as mining, reclamation, Indian affairs, and public lands.

Few of the committee's bills directly affect his own State but colleagues do not believe PETERSON could be more sympathetic toward the legislation if each one was tagged "Florida special."

The Public Lands Committee generally handles more bills than any other House committee, except that on judiciary. That means work, and the committee, or subcommittees, meet almost daily when Congress is in session, with PETERSON constantly hurrying to get measures before the House.

An indication of the volume of work is shown by the RECORD.

Since the beginning of this session, in January 1949, the Public Lands Committee has received 650 bills. Of this number, 254 have been reported, and 130 have passed Congress and are now law.

PETERSON prefers to let the westerners on the committee decide for themselves what new legislation they want. But, having decided, he backs them to the limit. On several occasions, when the powerful Rules Committee refused to clear measures for House action, he used his own authority as a committee chairman to call them up on the floor.

Both the Alaska and Hawaii statehood bills won House passage in this fashion.

Politics probably never can be entirely eliminated from a congressional committee. PETERSON is a Democrat, but under his leadership the Public Lands Committee is one of the most nonpolitical in Congress.

Recently when a group of North Dakota Indians passed a resolution expressing appreciation of the work of Representative LEMKE, Republican, of North Dakota, a Democrat, Representative MORRIS, of Oklahoma, took the lead in saying nice things about LEMKE at a committee hearing.

When PETERSON quits Congress this year, he intends to go home to Lakeland, Fla., to practice law and spend more time classifying his collection of rocks.

He has tons of rock samples stored away, from all parts of the world. One of his chief pleasures is to drive out of Washington on a Sunday afternoon and add to his collection. An Indian tribe once gave him a name which means "rock hound."

Even this hobby had its roots in the committee work. Earlier in his congressional career PETERSON was chairman of the old Mines and Mining Committee. He started bringing rock samples to meetings to add to the interest of Members who weren't too familiar with mining. From that beginning, he couldn't stop.

The westerners, and the West, are going to miss PETERSON.

Mobilization of Morale

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 25, 1950

Mr. DONOHUE. Mr. Speaker, under leave to extend my remarks, I should like to include a very timely editorial entitled "Mobilization of Morale," which appeared in the May 23, 1950, issue of the Christian Science Monitor.

The article follows:

MOBILIZATION OF MORALE

Armed Services Day is one visible achievement of the military unification program. We question whether everything is as cozy as Defense Secretary Johnson indicates. Much of the supposed saving from ending duplication is illusory. But eliminating separate days each year for each service is a genuine gain.

Among the speeches made to mark the day, Gen. Omar Bradley's merited special notice. Recognizing the damage that the 1946 demobilization of American power did. General Bradley is endeavoring to get the United States into a posture of alert but calm preparedness. Opposing both appeasement at the Elbe and a preventive war, he urges Americans to base their diplomatic and military policy on a recognition that western Europe must be a part of the free world.

General Bradley was the first of American military leaders to show that he understood how vital an American resolve to help hold western Europe was to the mobilization of morale among the free peoples. For several months he has been combating the defeatist belief that the Continent would have to be abandoned. He insists that Europe must be made reasonably secure from the danger of being quickly overrun and that it not be abandoned to atomic blackmail by the Soviet.

But the most notable feature of his speech was an appeal for stand-by plans for quick mobilization of our entire civilian economy. This looks like a direct response to Bernard Baruch's declaration a few days ago that to advocate selective service without including plans for a wartime draft of labor and industry was an immoral proposal. General Bradley pointed out that legislation to give emergency powers to the President would be necessary. So long as Congress would have to declare war before such authority became effective, such legislation should cause no great uneasiness.

Many Americans were convinced by the last war's experience that the freezing of wages and profits would have made mobilization speedier, fairer, and less costly. If there should be another war the United States would have far less time to complete such defense arrangements. To provide for them ahead of time is as necessary as training soldiers and making arms. It would prove that Americans not only see what would be required but do not flinch from any necessary measures.

By mobilizing morale both at home and abroad such a step could deter aggression and strengthen the defenses of peace.

Plymouth Local Fights Sam Sweet's Deportation

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 25, 1950

Mr. SADOWSKI. Mr. Speaker, another victim of this wave of hysteria is Sam Sweet, one of our leading and most active trade-unionists in Detroit. Sam Sweet is Plymouth Local No. 51, UAW-CIO, director of education and compensation. He is also editor of the union paper and chairman of the strike welfare committee.

He is charged with alleged naturalization irregularities and the Justice Department is trying to deport him to Poland. I do not know all the facts in the case, but I do know that he is the father of two American-born children, Louise, 10, and Fred, 7 years of age. Sam is well liked and highly respected by the members of Plymouth Local No. 51. His greatest offense seems to be that he has worked and fought too hard for the welfare of the members of his union.

I am glad to see that a defense committee has been formed to fight these charges and I wish them every success. I feel confident that Sam will be cleared of these charges. I would not be surprised if some of the bosses have a hand in this persecution.

I wish to include an article which appeared in the Detroit edition of the Pittsburgh Courier on May 13, 1950, as follows:

PLYMOUTH LOCAL FIGHTS SAM SWEET'S DEPORTATION

Members of Plymouth Local 51, UAW-CIO, recently reported the organization of a Sam Sweet defense committee whose function it is to fight the proposed deportation of Sam Sweet, director of the local's education and compensation department, editor of its local union newspaper, and chairman of its strike welfare committee.

The Department of Justice, local union spokesmen report, has requested the cancellation of Sweet's citizenship for alleged naturalization irregularities. Sweet became a United States citizen 4 years ago, they said, and is the father of two American-born children, Fred, 7, and Louise, 10. His case is pending in Federal court in Detroit.

Members of the defense committee are Olen Manley, chairman; Robert Elliott, secretary; Nelson Perry, Dorothy Knight, and Stanley Bartnicki, financial secretary of local 51. In a resolution deploring the Justice Department's action, member of Plymouth local said:

"Whereas it is individuals like Sam Sweet who, because of loyalty to labor's cause, are always picked as a target by employers and their stoolpigeons; and now Sam Sweet needs our support more than ever to defend himself from the attack of the Justice Department, which is no doubt instigated by the Chrysler Corp.: Therefore be it

"*Resolved*, That local 51, UAW-CIO, go on record reiterating our position and now we give support in full defense of Sam Sweet and condemn the Justice Department for its intimidation."

The committee further pointed out that "We have known Sweet since 1937 and the only crime he has committed has been to

serve the interest of labor, and not the bosses. He has lived in Detroit since 1930 and has been respected everywhere.

"We believe that an attack against individuals like Sam Sweet represents a threat to every one of us. If they succeed in their attempt to revoke his citizenship papers and possibly deport him, not one of the militant and courageous union leaders in this country who are naturalized citizens will be safe from persecutions of this nature."

Armed Forces Day at Rapid City

EXTENSION OF REMARKS
OF

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 25, 1950

Mr. CASE of South Dakota. Mr. Speaker, under leave to extend my remarks, I place in the RECORD an address by Maj. Gen. Thomas D. White, of the United States Air Force, delivered at the Rapid City Air Force Base, Rapid City, S. Dak., on May 20, 1950.

The occasion dedicated the new monolithic hangar that will house B–36 planes, the largest hangar of its kind in the world.

The significance of the occasion was recognized in the area for a crowd estimated at 75,000 people were on hand. A check by military police showed that 22,000 cars went through the gates. In an area where the largest city within 350 miles has a population of 25,000, it is at once evident that such an attendance was nothing less than phenomenal.

Such an attendance gave double significance to what the speaker of the day, Maj. Gen. Thomas D. White, of the United States Air Force said, about the place of the people in the defense organization of the United States.

General White's address follows:

REMARKS BY MAJ. GEN. THOMAS D. WHITE AT THE ARMED FORCES DAY OBSERVANCE, RAPID CITY AIR FORCE BASE, RAPID CITY, S. DAK., MAY 20, 1950

The invitation to speak at the dedication of this new hangar and at your observance of Armed Forces Day is one for which I am most grateful.

Mr. Symington, as Secretary of the Air Force, had accepted the invitation to speak on this occasion, and had been looking forward to it. When his services were required as Chairman of the National Security Resources Board, he asked to be excused from this engagement, both because he is no longer Secretary of the Air Force and because the heavy responsibilities of his new job have required him to cancel all speaking engagements for the present.

Mr. Finletter, who is Mr. Symington's successor as Secretary of the Air Force, was unable to come in his place today because the responsibilities of his own new job have so far kept him from accepting any speaking engagements.

Both Mr. Symington and Mr. Finletter, however, have asked me to express their regrets and to bring you their greetings. The importance of Rapid City Air Force Base is such that they felt as honored as I to be invited here. And anyone connected with the Air Force, or actively interested in strengthening American air power, must welcome the opportunity to see this new hangar that is being dedicated today, the largest hangar in the United States and large enough to house two of our giant intercontinental B–36 bombers.

This occasion is important for another reason also. Today is the first Armed Forces Day in our history. Looking back in later years, we will be able to say with pride that we were here, that we witnessed the dedication of this enormous hangar—360 by 340 feet—and that we commemorated, with today's observance, the unification of our Armed Forces. I am sure the significance of this occasion will not be lost on any of us.

Among the many distinguished people who are gathered here, among the many friends of the Armed Forces, are two who have a very special interest in this hangar and in this occasion. Senator GURNEY and Congressman CASE serve on the Appropriations Committees of their respective Houses of Congress, and Senator GURNEY is on the Armed Services Committee as well.

Both Senator GURNEY and Congressman CASE have played important parts in passing the legislation that supports the Armed Forces and that has permitted the construction of this hangar, as well as other buildings and installations of the Armed Forces. They are interested, naturally, in seeing what the Air Force and each of the other of the services is doing with funds appropriated to it. They are interested, as all of us are, in observing the state of readiness of our Armed Forces.

Because of their interest, and the interest of all of you, the Air Force is grateful for this occasion to call attention to its role as a member of the national defense team. And I take this opportunity to speak in behalf of the United States Air Force, on what it is doing to justify the trust the American people have placed in it.

I sometimes wonder if you, voters and taxpayers, are as conscious of the fact as we of the armed forces, that each of the armed forces—Army, Navy, and Air Force—is your organization. Ultimately you control it. The Air Force is, for instance, your Air Force, not ours, though we wear its uniform. You vote for the Senators and Congressmen who determine the scope and the size and the budget of the Air Force. You may not realize it, but through them you control the military strategy of the United States; for by the size of appropriations and other laws, Congress, which is your national voice, determines definitely the limits within which strategic plans must be made.

It is obvious that American taxpayers, and all of us, in uniform or not, are taxpayers, cannot afford to spend all the money all three services want in order to set up an ideal Army, Navy, and Air Force. There has to be a limit somewhere, and there must be economy everywhere. In the interest of economy and efficiency and increased defense, Congress passed and the President signed the National Security Act of 1947, which brought all the armed forces into a single Defense Establishment. Last year, the Secretary of Defense, Mr. Louis Johnson, ordered that henceforth we would not celebrate Air Force Day or Navy Day, or Army Day, but that there would be one day of observance to pay tribute to all the armed forces on the same day. That day is today, the 20th of May. Thus we have a new day of observance springing from the new concept of national security that has been developed since World War II. That concept is one of unification into a single defense team of all the armed forces without loss of identify by any of them. The motto chosen for this day, "Teamed For Defense," expresses that concept beautifully. It expresses, militarily, the same concept expressed politically in the motto of the United States, "E Pluribus Unum"—one out of many.

We are one Nation today, and only one. But that Nation has grown from 13 colonies along the Atlantic seaboard to 48 States stretching across the continent, plus a number of territories, notably Hawaii and Alaska, that are separated geographically, though not in democratic ideals or political aspirations, from the 48 States. No Army, Navy, or Air Force alone can defend this great continental expanse which is ours. Only a coordinated team of Army, Navy, and Air Force, of Regular Establishment and Reserve components, can guarantee our security in this air-atomic age.

In order that you may understand the requirements and obligations of the Air Force, as a member of this unified military defense team, it is essential that you be generally familiar with the roles and missions—the job, if you will—assigned the Air Force by the Joint Chiefs of Staff.

The Air Force is today our country's basic strategic force.

As such, and as outlined in the basic plans of the Joint Chiefs of Staff, the Air Force is responsible for the protection of our territory against air attack. It is responsible for supplying the Army with required tactical air support. And it is responsible for launching the counteroffensive against the heart of an aggressor nation to crush his industrial potential and to destroy his capacity to continue his attack upon us.

The Air Force will receive full cooperation and support from both the Army and the Navy in accomplishing its mission. But the responsibility for strategic bombing is basically ours, and our budget, our training, our procurement, and our strategic plans are predicated upon this principle. The Air Force accepts the responsibility impcsed by its mission and our structure-in-being is prepared to discharge our responsibility in a manner that will reflect credit on us.

The wartime accomplishments of our strategic Air Force in Europe and in the Pacific are well known. Since the end of the war we have increased considerably the range of our striking capacity and the destructiveness of our weapons.

The B–36 heavy bomber, some of which you see here now, and which this new hangar will house, is itself both the means and the symbol of that increase in range and in destructiveness. With the development of the B–36 speedy intercontinental warfare became possible for the first time; but with methods of in-flight refueling developed since the B–36, even older and smaller planes, such as the B–29 and the B–50, can be given range that will permit intercontinental use.

I am sure you will all recall the round-the-world, nonstop flight in March 1949 of the B–50 Lucky Lady II, a feat made possible by four air-to-air in-flight refuelings. Certainly, the flight of the Lucky Lady II, as well as routine flights of the B–36, demonstrate our ability to carry initial retaliatory offensive blows sufficiently far as to reach within the heartland of any possible enemy.

Not only the range, but also the speed of aircraft has increased several times in recent years.

A year and a half ago a standard Air Force combat fighter, and F–86 jet, four of which are here today, with its six machine guns and a full load of ammunition, set a new official world's speed record for all types of aircraft by flying over 670 miles per hour—over 11 miles a minute.

Only 14 months ago a six-engine B–47 jet bomber flew from Moses Lake, Wash., to Washington, D. C., a distance of 2,300 miles across the continent, in 3 hours 46 minutes, at an average speed of 607 miles per hour. But the experimental X–1 has been flown not once but many times hundreds of miles per hour faster than the speed of sound.

That means that not once, but many times, our pilots have exceeded 760 miles per hour under standard conditions of temperature and altitude.

I think these achievements—and I could name many more—indicate that the Air Force is facing, and solving, the problems presented by the changed geographic and strategic situation in which we find ourselves in this air-age world.

Our country has the scientific and technical ability to develop and produce the best Air Force in the world. Most Americans believe we should have such an Air Force. But let me voice a word of warning. To have such an Air Force will require a degree of sacrifice by all of us.

In the Strategic Air Command, of which Rapid City is one base, that need of sacrifice is particularly great, and the sense of it must be appreciated.

Strategic air operations, aimed at the destruction and dislocation of the enemy's military, industrial, political, and economic systems, and the undermining of the morale of the enemy's people, are world-wide in nature.

The units of the Strategic Air Command must not only be ready, like all military units, to defend themselves, and us, when attacked; they must be ready to counterattack immediately after an aggressive attack is made. And since that act of aggression that could precipitate us into another war, might come from any direction, across any geographic barrier, it follows that units of the Strategic Air Command must train in all sorts of climates, under all sorts of conditions, and take long operational training flights into many different parts of the world.

The training of combat crews is a never-ending task which must be pursued with vigor and consistency, because in the last analysis, when the bomber is airborne and on the way to the enemy target, the skill, determination, teamwork and morale of the crew will in large measure determine the success or failure of the mission.

And here we come to a point where conditions on the ground, right here at Rapid City, for instance, can influence combat operations.

Several years ago, the Air Force determined, by analysis of reenlistments and by actual polls, that the effect of inadequate housing on Air Force morale and effectiveness is serious indeed. Service personnel whose families either are not adequately quartered or who are required to pay exorbitant prices for moderate off-base accommodations cannot reasonably be expected to work at top efficiency or to achieve satisfactory productivity. Airmen who give prime consideration to adequate housing for their dependents are in general the kind of stable, dependable men we most need. They represent a human investment which must be protected. To retain them, to protect the investment we have in their knowledge and specialized training, their experience and their capabilities, we must give them adequate family housing.

With this in mind, the Air Force helped in sponsoring legislation that would permit the construction of adequate family housing on or near permanent Armed Forces installations. This legislation was passed by the present Congress, and signed by President Truman on August 8, 1949, as an amendment to the National Housing Act of 1934. It is popularly known as the Wherry Act because it was introduced in the Senate by Senator WHERRY of your neighboring State of Nebraska.

No legislation of recent times is so important to the morale and welfare of military personnel as this recently enacted amendment adding title VIII to the National Housing Act. It is not concerned in any way with barracks on a base, but it does make possible with Government aid, the construction of adequate family housing, with modern conveniences and modern comfort, at a reasonable rental military personnel can afford to pay. It relieves pressure on the civilian housing shortage by placing service personnel in housing reserved especially for them. Thus, it works in two ways, to strengthen the National Military Establishment and the national security and to benefit the civilian community which the Department of Defense is set up to protect.

The housing situation has been particularly bad in respect to Air Force bases because most of the Air Force bases are new, and because of the tremendous growth in the size of the Air Force between 1939 and 1950. Other services have some old and well-established bases. Most of the Air Force bases which have been constructed were built during the war when it was more important to provide operating facilities than it was to provide family housing, and in the postwar period private enterprise has not been able to provide the living quarters that the Air Force has itself been unauthorized to provide. What the Wherry Act makes possible is the insurance by the Federal Government of mortgages on rental family housing units, built by private enterprise, and the chance for such private enterprise to make proper profits out of their activity. It is all good, sound business. It is private enterprise of the sort we expect and encourage in the United States.

But one thing is required of the Air Force before such construction is undertaken, or the corporation to construct it can be set up. That is a certification, by the Secretary of Defense or his designee, that the Air Force base, for which the housing will be constructed, is deemed a permanent base. I think you will be interested if I tell you what the chances are of having Rapid City Air Force Base given this certificate of permanency, and of having a housing project initiated here.

A group of public-spirited citizens in this community, working through your chamber of commerce, have provided 65 acres of land, adjacent to the base, suitable for the sort of housing project the Air Force needs and which would be a credit to your progressive community. Negotiations are now under way for the planning, design, and construction of such a project.

Five factors must be considered before any Air Force base can be designated a permanent installation in the ordinary sense of the word. These factors are:

1. The condition of the runways. Rapid City Air Force Base has the sort of runways required for Strategic Air Command operations off this base.

2. The construction of the base itself. It is satisfactory.

3. The facilities provided, both on the base and in the adjacent community. No cause for complaint.

4. The type of construction. Look around you. The type is good. So far as the Air Force is concerned, these four factors are excellent at Rapid City Air Force Base.

Now for the fifth factor: Adequate housing.

We anticipate that our negotiations with a construction company will be successful, and as soon as they are we will execute a certificate of permanency with the Federal Housing Administration, indicating that this base is part of our permanent military installations.

So, for all planning purposes, Rapid City is a permanent base of the regular Air Force; and though we cannot say that it is such officially until we have a permanent housing project under way, I know no reason to anticipate failure in our planning.

Apparently you want us here, and we want to stay here. But I can also say that when the housing is provided, we can expect an even higher degree of morale on the part of the personnel stationed here. And nothing could be more important for the success of Air Force operations than the maintenance of this morale at its peak.

Secretary of Defense Louis Johnson has recently spelled out his definition of national security. "National security," he said, "is not just the strength of our arms. It is the sum of all our strength—our political, economic, moral, and military strength—and the strength of all the other peaceful nations of the world."

Our political, economic, and moral strengths determine what our military strength should be. They lend themselves to no ready appraisal in comparison with armaments in the hands of some enemy nation, but their value for our defense cannot be denied.

Our moral strength as part of our total defense potential is vital, though it is impossible to estimate it in terms of men and munitions. It is the strength of happy, contented families, enjoying life and democratic liberties in such a community as this. It is the strength of freemen serving willingly to preserve that freedom.

Today's observance is one evidence of that moral strength. You have come here to participate in this observance of Armed Forces Day because you believe in the United States, and you believe in democracy. You believe in peace, and you hate war. And you believe in democracy and in the United States to the extent that you are willing to fight for both and—if necessary—to die for both. You are willing to make sacrifices, to pay taxes, to serve in the armed forces, to train with the Reserves, and in other ways to support the Military Establishment we must maintain.

With this observance we honor all members of the Armed Forces, both past and present, and we pay respect especially to the memory of all who have given their lives in war. We also reexamine our responsibilities—whether we are in one of the services or in civilian life—to the Nation and to our democratic way of life.

The Air Force is convinced that the military security of our Nation and the preservation of our way of life depends upon the teamwork developed within the components of the Department of Defense. No one service can do the job alone. All services must be teamed for defense, and ready to defend the United States against aggression in any form.

But if air power is to be a decisive element in our national strength, we must have air power adequate for the purpose. And that we can have with the support of you who have come here today, and the millions of others like you in other communities and other States throughout these United States that are one Nation.

Such support is the greatest assurance that, teamed together, we can reach our common objectives—peace and security for the United States and for peace-loving people throughout the world.

Lesson in Semantics—Phrases "Iron Curtain" and "Cold War" Have Created Grim State of Mind

---

EXTENSION OF REMARKS

OF

HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 25, 1950

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article by

Thomas L. Stokes, which appeared in the Washington Evening Star of May 24, 1950:

LESSON IN SEMANTICS—PHRASES "IRON CURTAIN" AND "COLD WAR" HAVE CREATED GRIM STATE OF MIND

(By Thomas L. Stokes)

It is about time now to look at a couple of phrases composed of ordinary Anglo-Saxon words from the standpoint of semantics. That big hunk of word is defined as "the science of meaning" and "that science dealing with the relations between symbols (signs) and what they refer to and with human behavior in reaction to symbols, including unconscious attitudes," and so on.

There is first, then, "iron curtain." Winston Churchill coined it in his Fulton (Mo.) speech 5 years ago and thus lowered a barrier figuratively across eastern Europe. Cartoonists illustrated it for us. All of us on this side of it became righteous folks and all on the other side became unrighteous. That was the first division of one world into two worlds—by semantics. We long have accepted the phrase and it has become an ominous fact.

AFFECTED OUR THINKING

Then along came another "cold war." That, too, has affected our thinking and behavior. It has created a state of mind, a rather grim one. Unfortunate and unhealthy is the constant repetition of the word "war."

If you traveled eastward across Europe, you would not see an iron curtain, of course. What would you see? You'd see people working in the fields, trying to raise something to eat and something over to sell, and the country and the people would look about the way they do in Iowa or Nebraska, and if you could speak the language you'd find their daily problems about the same as those of folks over here. Some of them would be grumbling about the government, just as we do, and lots of them, you'd find, would detest communism just as much as we do.

You'd travel also through cities like Des Moines and Lincoln or bigger ones like Pittsburgh and Cleveland and you'd find people there going about their jobs, just as we do here, trying to make a living and make ends meet.

In city and on farms, also, you'd find them worrying about another war—they know what it's like too—just as we worry.

OUT TO DESTROY ILLUSION

One bold man with vision recently has begun to destroy the iron-curtain illusion. Trygve Lie, Secretary-General of the United Nations, flew right through it, went to Moscow and sat down with Joe Stalin. As a result he is pursuing his talks with the French and the British and soon again with us in an effort to get us all about the UN table once more and there to try to eliminate those phrases "iron curtain" and "cold war" from our language.

It is a happy circumstance that President Truman has reasserted our faith in the United Nations in submitting to Congress the 1949 report of the UN's work, and has pointed to its success in settling disputes in Indonesia, Palestine, and Kashmir, thus moving such conflicts indoors—from battlegrounds to conference tables, and emphasized the fine work it is doing in social, economic, and humanitarian fields through the specialized agencies recently discussed in a series of columns here, and some of it behind the iron curtain.

Very properly he rebuked Russia for her willful flouting of the UN in current walkouts, and at the same time emphasized the common-sense attitude of the UN, in the face of this display, of proceeding with its business as usual. Here he gave effective answer to Herbert Hoover's proposal to reorganize UN without Russia.

Through making the UN work we can get rid of our semantic troubles—"iron curtain" and "cold war."

How to Help the Small-Business Man

EXTENSION OF REMARKS

OF

HON. WILLIAM M. McCULLOCH

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 25, 1950

Mr. McCULLOCH. Mr. Speaker, the Lima (Ohio) News in an editorial of May 28, 1950, has clearly and logically pointed out the way to help the small-business man. In accordance with permission granted by the House, the editorial follows:

HOW TO HELP HIM

There is a great Fair Deal drive on to help the small-business man. The planners in Washington are beating their breasts in agony for his welfare and are denouncing the giant concentrations that are stifling him. They propose measures to liberalize and to extend his credit.

All of this is designed, of course, to win the gratitude of the small-business man and add his vote to the dependable Fair Deal reservoir.

One California businessman got to thinking and turned in a list of some of the governmental liabilities that are hindering him. These are:

City license tax, city sales tax, city income tax, State sales tax, State corporation income tax, State corporate franchise tax, State use tax on materials for his products, State unemployment insurance tax, property taxes, Federal social-security tax, Federal corporation income tax and (if his business is still good) both Federal and State income taxes on personal income. It is estimated his Federal taxes would be doubled if the Truman program were adopted in toto.

What is it that is most troubling the small-business man? Scan that list (it varies only slightly by States) and the answer is as plain as the vote-bait ghost written into a Truman speech.

Dr. Townsend's Contribution to Social Legislation

EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 25, 1950

Mr. MURRAY of Wisconsin. Mr. Speaker, before becoming a Member of Congress and since I have been a Member of Congress I have been interested in the problem of our elderly people. An ever-increasing number of them have been forced into retirement without any resources or means of support. Adverse economic conditions have increased the problems.

While social security has been in existence for 15 years, it has not been extended to take in the large percentage of our population, especially the rural people. The Social Security Act that is under consideration at this time was brought into the House of Representatives under a gag rule, which means that it could not be amended so as to include many, many groups that are entitled to consideration. From present indications the Senate will broaden this base, but still other millions of Americans are going to be excluded. The rural people are to be the large group that will not be included. Most people agree that labor is labor, and that all Americans are entitled to the benefits of the same social legislation.

In many industries adequate provisions are being made, but great numbers of our citizens are not the beneficiaries of any private or governmental security agency. In other words, the millions of Americans who are among the elderly group at this time still have to depend upon welfare or relief funds.

The movement sponsored originally by Dr. Francis E. Townsend has been severely criticized. The facts are that much of the social legislation that has been passed is a result of the spadework that has been done by Dr. Townsend and his group. Although the Townsend movement itself may not have had the legislative consideration that it deserved, the fact remains that if it had not been for the spadework done by this organization the elderly people of this country would not have the legislative consideration that they have had. It has always been my purpose and always will be to support legislation that gives equal consideration for every individual and every group, with the hopes that ultimately every American will have the same social security, the same benefits of unemployment insurance, and the same benefits under any social legislation that is to be considered by the Congress.

A gradual improvement in the attitude of the industrial leaders, as well as the public thinking on these important issues, leads one to believe that steady although slow progress has been made, and that the time will come when these elderly people will enjoy the benefits of an across-the-board program that will be fair to all.

Seattle's Ed Guthman—Pulitzer Prize Winner—A Job Well Done

EXTENSION OF REMARKS

OF

HON. HUGH B. MITCHELL

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 25, 1950

Mr. MITCHELL. Mr. Speaker, a Pulitzer prize for outstanding journalism was awarded to Mr. Ed Guthman, a reporter on the Seattle Times. Seattle is proud of the honor bestowed on one of her sons—proud not only because this was a newspaper job well done, but because it vindicated a man wrongfully accused of being a Communist.

In these days of tension and fear, to call a man a Communist without solid evidence to back up the charge, is to jeopardize his livelihood, to besmirch his reputation, to expose his family and himself to bodily harm. We know that from sad and repeated experience. Here in the Nation's Capital we have seen unscrupulous persons indulge in smear campaigns; we have heard them fling charges of communism recklessly about, causing damage and suffering, not only to individuals, but to the Nation itself.

Certain ex-Communists have made for themselves a profession as stand-by witnesses before investigating committees. They have wandered carelessly in their chosen field, not hesitating to smear the innocent with their venom, while they are supposed to identify the Communist conspirators with whom they once engaged in their nefarious and subversive work.

In the State of Washington we had a committee investigating people's loyalty, and one of these ex-Communists, Hewitt by name, was imported into the State to tell what he knew, according to the usual procedure. Hewitt testified that Dr. Melvin Rader, of the university, was a Communist, making allegations of fact which turned out finally to be false.

Mr. Guthman, of the Seattle Times, undertook to run down these charges. By painstaking investigation, encouraged by Dr. Raymond Allen, president of the University of Washington, Guthman gathered the evidence that proved Dr. Rader to be innocent, and Hewitt in effect a perjurer. Unfortunately, a New York court had prevented Hewitt from being sent back to Washington to stand trial for perjury. It was only because a Washington newspaper reporter, interested solely in the truth, devoted himself to this case that justice was finally done to the man wrongfully accused.

Under leave to extend my remarks, I include an editorial from the Bremerton (Wash.) Sun of May 17, 1950, concerning Mr. Guthman's fine work:

TRUTH, A FREE NEWSPAPER, AND THE PULITZER PRIZE

The recent honor that came to a member of the Washington State press and a good reporter—the Seattle Times and its Ed Guthman—is worthy of more than passing attention. In winning a Pulitzer prize for high journalistic endeavor, young Mr. Guthman has directed public attention anew upon the vital role of a free and unfettered press as a cornerstone of democracy.

The Pulitzer prizes for journalism reflect the platform which the late Joseph Pulitzer evolved for his St. Louis Post-Dispatch.

It is a platform that any good newspaper strives to fulfill in serving its readers: "Fight for progress and reform, never tolerate injustice or corruption, always fight demagogues of all parties, never belong to any party, always oppose privileged classes and public plunderers, never lack sympathy with the poor, always remain devoted to the public welfare; never be satisfied with merely printing the news; always be drastically independent; never be afraid to attack wrong, whether by predatory plutocracy or predatory poverty."

In the case of Mr. Guthman, the Pulitzer award was made for a series of well-documented articles which he wrote for the Times to vindicate Dr. Melvin Rader of the University of Washington, who had been labeled a Communist. The newspaper and reporter had no prior convictions in the matter; they merely sought out the truth, and the truth was—as it always is—sufficient.

In an era when the truth is often besmirched in other lands, and issues clouded beyond honest recognition, it is satisfying to observe its bright light in American newspapers.

Mr. Guthman's own story of the Rader case is an absorbing one. This is the way he tells it:

"The Times didn't get interested actively in the Rader-Hewitt dispute until after the New York judge, Aaron Levy, refused to send Hewitt back here to stand trial for perjury. Judge Levy inferred that the courts here were controlled by Communists and that if Hewitt returned he would be facing slaughter. Levy wondered what the civilization of this State really was like.

"We wondered how a judge could make such irrational statements. That was one factor in motivating our entry into the case. We were curious about the judge and decided to find out what evidence prompted him to render that decision.

"The other reason was that the judge's decision left the case unsettled, and there was little likelihood that it ever would be settled. Russell McGrath and Henry MacLeod (managing and city editors) felt that the question of who told the truth was of great interest and importance. Not only was the reputation of a university professor in doubt, but the reputation of the (Canwell) committee and Hewitt—who had figured as an important witness for the Government in immigration cases—also were at stake. Their only instructions to me were to see if I could find out the truth.

"First thing I did was to have the Associated Press get us photostatic copies of the evidence and testimony of the New York hearing. Meanwhile, I began talking to all individuals who could be counted upon—or so I thought—to be interested but neutral.

"The evidence presented to Judge Levy showed that the case had been completely one-sided and contained four misstatements of fact which were harmful to Rader. That caused us to look deeper into the case.

"From the so-called neutral sources, the only encouragement I got was from Dr. Allen (president of the University of Washington). Others took the attitude that Rader was a Communist or a fellow traveler and therefore, even though a mistake may have been made, nothing should have been done to help him.

" 'After all, he's only one man and presuming you do find he's right, you'll be upsetting the work of the committee,' one man told me.

"Then I went to Rader and told him we wanted to check his story. He was glad and was very cooperative. His story checked out. Meanwhile, I also questioned most of the ex-Commies I knew in town. None of them could put Rader in the party.

"We kept turning up evidence and affidavits which further supported Rader's case. Finally it was overwhelming in the eyes of every fair-minded person who has taken the time to study it."

This demonstration of the industry and vigilance of a newspaper and a reporter has deep significance. Dr. Rader was the principal figure in the case at hand—but it could have been you, or your neighbor, or your best friend.

A free press, with courage, sets the record straight when others were unwilling, or negligent, in their duty to do so. Dr. Rader's dignity was restored and a damaging inference against our State courts was labeled a lie.

All because a newspaper, and a reporter, sought out the truth in the best tradition of their business.

Curtailment of Postal Service

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 25, 1950

Mr. ADDONIZIO. Mr. Speaker, as sponsor of H. R. 8205, to rescind the order of the Postmaster General curtailing certain postal services, I was pleased to receive the following resolution adopted by the City Council of the City of East Orange, N. J., on May 8, 1950:

Whereas it is the judgment of the city council that the plan of the United States Post Office Department to reduce the number of mail deliveries and to effect other curtailment of mail service is not warranted; and

Whereas numerous objections have been received from the citizens of East Orange to any reduction of mail service: Be it

Resolved, That the City Council of the City of East Orange does hereby express its opposition to the plan of the United States Post Office Department to curtail the mail service in the city of East Orange and respectfully urges the Members of Congress of this State to oppose such plan; and be it further

Resolved, That a copy of this resolution be forwarded to the Senators and Congressmen from this State and that a copy be forwarded to the Postmaster General.

Tariff Reduction Program

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 25, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement made before the committee for reciprocity information of the United States Interdepartmental Trade Agreement Organization, May 24, 1950, Washington, D. C.:

Greetings. The President's Council of Economic Advisers points with pride to the drop in unemployment, which, Nation-wide, is down to an average of 5½ percent.

This is a most encouraging improvement from a general viewpoint.

There are several soft spots in the picture, however.

On close scrutiny they do not show up so favorably.

One of them is New England, where the average percentage of people who cannot find employment is up to 12 out of each 100 workers. Roughly speaking, 1 out of every 8 employable persons is jobless.

This is a serious situation.

It will become worse instead of better if the State Department is permitted to open the gates to a flood of foreign imports that will undersell the woolen and worsted industries of New England—even in New England.

Because the labor costs of foreign manufacturers who are engaged in similar work are from 4 to 20 times lower than our own.

There is not one person at this hearing who dares to suggest that we slash the pays of our own textile workers and reduce their standard of living to a bare subsistence level

in order to offset such starvation competition.

Foreign textile manufacturers are doing well, in a financial sense, even though it is at the expense of their underpaid workers. They have many other markets throughout the world where they are selling their goods without hurting the countries to which they export.

In fact, we do not need their woolen and worsted goods, because we have adequate production facilities to supply our own wants. Why, then, should the State Department encourage them to send their products here, when the immediate result would be a solar plexus blow to our own depressed textile industry?

It makes sense to help these other nations and ourselves by importing those raw materials and manufactures which we do not have or produce. But why open up the whole of the United States to all imports, when such a policy would surely harm our established industries?

Our problem is to expand rather than contract in order to provide job opportunities for our growing labor force. We cannot take care of our own workers and foreign workers at the same time when both are producing the same type of goods for the American home market under conditions that penalize the American manufacturer and the American worker.

Instead of this sacrificial policy I think the State Department would do better to advocate a point 4 program for those foreign nations to follow in their colonial holdings which they have failed to build up as markets over the years. Africa and the Orient offer tremendous opportunities for England, France, Italy, and other textile-manufacturing nations, if they would only pay some attention to the need for increasing the purchasing power of those substandard areas. Such a policy would open up additional markets in places where people need textile goods but do not have the facilities to produce them. In turn, it would help to raise the wage rates and living standards of European textile workers.

But no, the State Department is so eager to please foreign nations that it hesitates to tell them the adjustments which these nations themselves must make to meet the realities of the mid-twentieth century. Instead, it invites them to come into the overcrowded American market and just take, to the detriment of our own people. Perhaps the trouble lies in the fact that the State Department is so concerned with foreign affairs that it has alienated itself completely from the United States and its domestic problems.

You will notice that the European nations with disarming coyness are not pushing this tariff-reduction program.

That is what I fear.

They do not wish to arouse the suspicions of the American people before the gullible State Department commits this Nation to a policy that once in effect cannot be remedied.

Then they will drop the pretense and really move into the American textile market with a trade blitz against which there will be no protective barriers.

Foreseeing this, we are here to oppose it.

And I do not think that we are presumptuous in speaking up beforehand when the economic survival of basic New England industries is at stake.

Suppose we put the shoe on the other foot, just to see how reciprocal or fair, this whole business is.

Sylvan I. Strook, a leader in American textile manufacturing, had this revealing experience when his company tried to sell some woolen goods to England. The price of the cloth was $15.50 per yard. On top of this, the British Government added import duties and purchase taxes to the amount of $19.20 per yard, totaling 123 percent more than the cost of the goods themselves. It seems that the door to the textile market over there is closed, locked, and barred.

Spokesmen for the State Department and the ECA in hinting at the advisability of training textile workers for other jobs, are admitting that if their pet tariff reduction program is carried through, still more New England men and women will be thrown out of work.

In view of the administration's concern over the number of people who are out of work in the Northeastern States, it is a shocking contradiction to find two major agencies of the Government obstinately resolved to follow a plan that will increase such unemployment.

We hear much about Europe's dollar shortage, but it's Hush, Hush, when anyone happens to observe the scanty supply of same in the pocketbooks of displaced workers in our own American communities.

Could it be, gentlemen, that New England is chosen to be the humble and uncomplaining sacrifice on the altar of free trade so that other American industries may win concessions that will permit them to enjoy the double advantage of both home and foreign markets?

Mr. Paul Hoffman, Economic Cooperation Administrator, tries to make us accept the dim prospects with resignation by the following sophistry. New England textiles should not be afraid to meet this competition because I, as an automobile manufacturer on leave, do not fear competition from European manufacturers of motorcars. Mr. Hoffman goes on to say that he personally favors the abolition of tariffs on automobile imports.

Now all this sounds very logical, if not generous. But how would it work out? Our automobile production is rolling at such a record-breaking pace that supply is bound to pass demand before many months have passed.

Then what? Will Mr. Reuther, of the automotive workers union, go along with Mr. Hoffman and say: "Sure; we're not afraid. Let low-priced foreign cars come in, the more the better. It promotes international understanding."

Somehow, I do not believe that Mr. Reuther will be enthusiastic about the idea, for many members of his union will then be out of work.

At least the members will not be happy about it.

Because a man who is having difficulty in providing for his own family in the United States is not disposed to cheer on those high-policy programs that give away his job.

But to get back to New England, its textile industry, and what some call its semidepression.

In your consideration of proposed tariff reductions, never forget that your first responsibility is to work for a system of free trade that will not evict American workers from their trades.

Too many have lost them already in New England.

Visitor's Effort Unrecognized

EXTENSION OF REMARKS

OF

HON. EDWARD H. REES

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 25, 1950

Mr. REES. Mr. Speaker, under unanimous consent granted by the House I am enclosing an interesting article from the Wichita Eagle of Wichita, Kans., of March 10. The article is entitled "Eight Million Acres Restored for Public Domain." It is a fascinating story of T. C. Elliot, who retired after 33 years of Federal service, most of which was in Washington.

The story concerns the restoration of 8,000,000 acres of land for public domain that came about through the efforts of Mr. Elliot.

Here is a case where a Federal employee rendered unusual service, even though his efforts have gone unrecognized:

VISITOR'S EFFORT UNRECOGNIZED—EIGHT MILLION ACRES RESTORED FOR PUBLIC DOMAIN

Eight million acres of land have been returned to the public domain thanks to the efforts of a former Government clerk, but the part he played in the vast transaction never has been fully told.

This is the story of T. C. Elliot, 74, retired after 33 years of Federal service, in Wichita this week visiting relatives.

Elliot has two letters, one signed by the President of the United States, and the other written by a Senator from Texas, proving almost conclusively that it was he who fathered the idea for the huge land transfer, but the irony of it is he has never received any real recognition for the act.

Elliot was a subordinate in the General Accounting Office at Washington, auditing transportation vouchers, and nearing his time for retirement, when the plan took shape in his mind.

As one close to the transportation field, Elliot knew, he recounted Tuesday, that land-grant railroads long had been lobbying in Congress to have removed from their charters the stipulation that Government supplies must be carried over their lines at reduced freight rates.

He also was aware that millions of acres of land, left over from the some 152 millions granted the railroads by the United States during the development of the West, remained unused.

Placing these facts side by side, Elliot evolved his scheme: Why not a barter arrangement, where the Government would voluntarily withdraw its right to lower rates if the railroads would return to Federal control that portion of the land grants they had not put to productive use?

A Government underling can dream up grandiose plans but obtaining a hearing is often another matter. That is where Elliot's large acquaintanceship in Washington stood him in good stead, he said.

Drafting his plan in a 12-page memorandum, he discarded the idea of submitting it through channels, electing instead to take it to a good friend, the late Senator Morris Sheppard of Texas. This was in the summer of 1939.

"Senator Sheppard looked over the papers and hesitated over whom to send the memorandum to," Elliot narrated. "So I suggested, 'Why not go to the top?' "

Thus the memorandum was forwarded to President Franklin D. Roosevelt, and soon a reply was received from the White House reporting that the matter had been submitted to the Secretaries of Interior and Justice for further action.

It is that letter, signed in the President's hand, in effect acknowledging the suggestion as Elliot's that the veteran employee always keeps on his person. The other letter is written by the Senator, and it further substantiates his claim.

Elliot left the Government service in 1944, but it was not long after, in late 1945 or early 1946, he does not exactly recall which, that a bill incorporating his idea became law. The initial statute removed the restrictive

rate clause with respect to nonmilitary supplies. An amendment which Elliot says was adopted last year included military items as well. Thus one of the biggest domestic land swaps in modern times came about.

Now a resident of Daytona Beach, Fla., Elliot plans to remain here another week with his brother, B. W. (Bee) Elliot, and sisters, Mrs. Flora Taylor, 702 South Topeka, and Mrs. Bertha Neal, 118 East Kellogg.

Who Is Competent To Decide Which News Is Slanted?

EXTENSION OF REMARKS
OF
HON. ANTHONY F. TAURIELLO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 25, 1950

Mr. TAURIELLO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Saturday Evening Post of May 27, 1950:

WHO IS COMPETENT TO DECIDE WHICH NEWS IS SLANTED?

People who are on the alert for the beginnings of censorship in this country are taking a second squint at the proceedings brought by the Federal Communications Commission against Mr. G. A. Richards, who operates three radio stations: in Cleveland, Detroit, and Los Angeles. In February 1948, Mr. Richards, who makes things as hard for himself as possible by holding strong anti-Fair Deal opinions, was the subject of a complaint by three former employees of his Los Angeles station, who stated that he frequently ordered newscasts to be slanted in a manner unfavorable to minority groups, the Truman administration, and the depressed and despised of the earth in general. On the basis of these statements, James Roosevelt wrote to the Commission suggesting an investigation of all three of Mr. Richards' stations. Inasmuch as any attempt to control slanting runs into the touchy issue of censorship, the charges appear to rest mainly on the clause in the communications law which gives the Commission authority to pass on the character of proprietors of radio stations.

Ordinary understanding of this requirement is that by character is meant the degree of responsibility—moral, financial, or other—which might be expected of a man who enjoys the limited monopoly which operation of a radio station confers. The notion that failure to appreciate James Roosevelt implies deficiency in character would probably not have occurred to the framers of the communications law; nor would it have occurred to them that discussions or orders behind the scenes in a broadcasting studio or the proprietor's private views about certain politicians would be seriously considered as grounds on which to challenge a man's fitness to operate a radio station—particularly when there seems to have been no complaint of the fairness or impartiality of the actual programing. If a Government commission is to inquire into the opinions, prejudices, or social connections of radio proprietors, we are nearing the point of no return, as far as arbitrary censorship is concerned.

The Washington Post aptly challenges the FCC on its claim to deny radio licenses even on the ground that news was actually slanted. "We do not believe," says the Post, "that the Commission has any standards that would be a safe guide in such a venture. Every decision as to what shall go on the air and how it shall be 'played' is likely to be influenced by the broadcaster's or the newscaster's prejudices. We doubt that the FCC can apply stricter policies in the regulation of broadcasting than the press generally applies without taking upon itself the unmanageable problem of censorship." A Government bureau, permitted to decide whether prejudice or news judgment or lack of time or mere whim accounted for this or that alleged distortion, would be an important instrument of tyranny.

The argument has been that the natural limits imposed on the number of stations which can operate justified a stricter censorship than would be permissible over the press. New technological developments like FM, however, have greatly increased the opportunities for competition in broadcasting.

The Richards case sounds suspiciously like one of those "alarms in the night" which free men fail to heed at their peril.

Tribute to the Late Samuel Gompers

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, May 19, 1950

Mr. PHILBIN. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include the enclosed tribute which I recently paid to the late and much lamented Mr. Samuel Gompers, former president of the American Federation of Labor, on the occasion of a memorial ceremony honoring him held by the Massachusetts Federation of Labor at Boston:

MAY 9, 1950.

Mr. FRANCIS E. LAVIGNE,
Director, Massachusetts Federation of Labor, Boston, Mass.

DEAR FRANCIS: I more than appreciated your kind invitation to be with you on May 13 at the Samuel Gompers centennial dinner.

I fear that my official engagements here will not permit me to attend and I very reluctantly must send my regrets. However, please let me compliment you upon the honor and tribute you are paying to one of the truly great Americans of the century.

Samuel Gompers stood out as a man, as a labor leader, and as a friend of the inarticulate and the helpless. But, most of all, he stood out as a devoted patriot imbued with great courage, possessed of clear vision, gifted with inspiring zeal. In his time and generation, he made outstanding contributions to the preservation of our free American institutions. The clarity of his opinions, the soundness of his judgment, the moderation of his approach, and the unyielding quality of his loyalty were exceeded only by his devotion to the toiling masses, who form the enduring fabric of the Nation.

You have honored me greatly in so generously inviting me to join you in honoring him and I am proud and privileged to pay my own humble tribute to the memory of this great man, who learned early in life that, in the words of William Osler, "We are here not to get all we can out of life for ourselves, but to try to make the lives of others happier."

Wishing you a most successful occasion and with greetings and best wishes to all, I am

Sincerely yours,

PHILIP J. PHILBIN.

Free Labor Against Communism

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 24, 1950

Mr. MULTER. Mr. Speaker, a most unusually informative article has just come to my attention. It is written by David Dubinsky, the well-known labor leader and president of the International Ladies' Garment Workers' Union, A. F. of L., and was published in the April 1950 issue of the quarterly magazine Foreign Affairs. Mr. Dubinsky's article, World Labor's New Weapon, deals with the new international labor alliance which was organized recently in London and with the role of free labor throughout the world as a dynamic force in the struggle against communism. I earnestly urge all my colleagues to read this very important article:

WORLD LABOR'S NEW WEAPON
(By David Dubinsky)

Students of international affairs were quick to recognize the establishment of the International Confederation of Free Trade Unions (ICFTU), at London during the first week of December 1949, as "an event of historic importance, in many respects the most significant development in the struggle for a free world."

The ICFTU is not the first attempt at world labor organization. About 85 years ago, the International Workingmen's Association was founded by Karl Marx; it succumbed to the Bakunin-Marx feud and the differences caused by the Franco-Prussian War. The Second (Social Democratic) International was established in 1889, but could not weather the crisis of World War I. Its economic counterpart—the International Federation of Trade Unions (IFTU)—founded in 1901, managed to survive the war, but soon thereafter faced the ruthless assaults of the Third (Communist) International and its trade-union auxiliary, the Red International of Labor Unions (Profintern), which were set up by the Bolsheviks after they seized power in Russia. Not even the blows of the Nazis could entirely wipe out the IFTU, however, and it struggled on through World War II while Stalin was, for diplomatic reasons, officially "liquidating" his Comintern.

Despite determined opposition from the American Federation of Labor, the IFTU decided to merge with the World Federation of Trade Unions (WFTU), which had been established in January 1945 and included the Communist-controlled "trade-union" organization of Russia as well as the Congress of Industrial Organization (CIO), which hitherto had had no international affiliation. This marriage turned out to be a quarrelsome and miserable affair, for the Kremlin persisted in exploiting the WFTU as an instrument of its imperialist foreign policy. After about 4 years, the British Trades Union Congress, the CIO, and other free trade-unions withdrew.

Meanwhile, a realinement of profound importance was maturing in the ranks of world labor, and in June 1949 there was held at Geneva a preliminary conference of the free world labor organizations which set up the preparatory machinery for the recent London conference. It would be false, however, to conclude that the creation of the ICFTU was merely the results of the disintegration of the WFTU.

II

First of all, the new international is a product of a marked growth of unionism. Since 1933, American trade-unionism has expanded enormously, so that there are now 16,000,000 Americans in its ranks, and the dynamic unity demonstrated by the A. F. of L. and the CIO at the London congress raised the prestige and strength of all American labor. Across the Atlantic, the British trade-unions have not only survived a terrible total war but have risen to new heights of power. The free trade-unions of democratic Europe have revived, despite the cruel havoc wrought by the Nazis; in western Germany alone, the restored free-trade-union federation now has more than 5,000,000 members. In Latin America, labor has grown in numbers and maturity in the face of severe difficulties. In Japan there are today about 6,000,000 in the trade-unions. And in India and in the underdeveloped colonial areas, unionization has also made notable headway.

Secondly, the new international represents a fundamental departure from the pattern of all its predecessors. European trade-union aims and actions, though very important, are not its main wellspring. The present and potential strength of the new organization stem in large measure from the strength of labor in the Western Hemisphere and from the rising trade-union movements of Asia and Africa. At the London congress the representatives of the young trade-union movements of Asia and the colonial countries were vigorously independent. Here was no staging of a puppet show of colored folks, as is done—supposedly in the name of racial equality—at Communist-controlled conferences. That there was genuine cooperation on a basis of equality was demonstrated when 8 of the 19 members of the executive committee were chosen from organizations outside Europe and North America, where the great bulk of the present membership is to be found—3 from Asia and the Middle East, 2 from Latin America, 1 each from Africa, Australia-New Zealand and the West Indies. One of the most encouraging features of the London congress was the absence of great power domination. The president, Paul Finet, of Belgium; and the general secretary, J. H. Oldenbroek, of Holland; are representatives of small countries; and in order to avoid even the appearance of control by any one big power in the trade-union world, Brussels was chosen as the headquarters.

How profound a departure this is from the old game of power politics in world-labor affairs is strikingly confirmed by a comparison with the attitude of the Russian unions in 1938. The British TUC, desperately seeking to bolster the forces that were supposed to be in opposition to Nazi Germany, sought at that time to have the Soviet unions affiliate with the IFTU. But the Russians agreed to consider affiliation only on the condition that the IFTU first amend its constitution so as to provide for two presidents and two general secretaries with separate but equal authority—one president and one secretary to be selected exclusively by the Russian trade unions and the other president and secretary to be elected by a general vote of the IFTU congress, with the Russian delegates participating. The Russian unions also stipulated that no dues paid by them were to be used in any way that might be construed as hostile to the Soviet labor organization, the Communist Party of Russia, and the Soviet Government. At the same time, the Soviet trade-unions were to be assured the freedom to act as they pleased toward all other labor movements and governments.

The democratic structure of the ICFTU is anchored in the complete equality of rights of all its affiliates, regardless of the size of the country in which they function. No affiliate, no matter how small its membership, is compelled to accept the viewpoint of any other national trade-union center and the constitution provides effective democratic machinery for ascertaining common aspirations and for meeting common needs.

This principle of autonomy for national affiliates runs like a steel rod through the constitution and structure of the new organization. The prospects for full collaboration by the international trade secretariats—which are organizations for worldwide cooperation of affiliated unions in specific trades or industries—are much enhanced by the acceptance of the principle of autonomy. The IFTU and especially the WFTU could never reconcile themselves to the insistence of the international trade secretariats that their autonomy be maintained. Prior to the First World War, German trade-unionism, with its high degree of centralism, was predominant in the IFTU, and this militated against a full understanding with the trade secretariats. After World War II, the supercentralized Russian trade-unions dominated the WFTU and sought to turn these trade secretariats into mere departments of the international center. In its unrelenting counteroffensive, the A. F. of L. relied heavily on the trade secretariats and championed their autonomy.

Experience has taught the free-trade unionists the dangers of overcentralization. Hence the constitution of the ICFTU provides that: "With a view to giving special attention to problems affecting the workers in special areas or regions, in order to seek to further the aims and objects of the confederation, regional machinery shall be established for such continents or areas as may be determined by the congress or general council." The foundation for such regional machinery is already at hand in the Western Hemisphere through the Inter-American Confederation of Labor, and steps have recently been taken to consolidate effective regional machinery in Asia.

III

A third factor that made possible the formation of the new international is that in recent years there has been much rethinking of fundamentals in the ranks of free labor. Even before the London congress got under way some people prophesied that its sessions would be torn by a conflict between the non-Socialist American trade-unionists and their Socialist-minded colleagues from other lands. These prophets were wrong. On more than one occasion, when there was a difference of opinion, the delegates of the A. F. of L., CIO, and the United Mine Workers were actively supported by trade unions with a Socialist tradition and orientation. The congress steadfastly adhered to the policy of opposing communism by defending the democratic form of government. It consistently avoided becoming involved in disputes over the question of so-called free enterprise, which would divide its ranks unnecessarily. Neither British labor, the free labor organizations on the European Continent, nor some of the Asiatic unions, are advocates of free enterprise. Yet no one can question the vigor or reliability of their defense of democracy in their respective countries.

More and more American labor has come to realize that the vital line of demarcation dividing mankind today, within every nation as well as among the nations, is drawn not between those who would have the government own some industries and those who would have such industries remain under private enterprise, but between those who have contempt for the dignity of human life and those to whom human values, rights, and liberties are paramount. Last year American labor rallied to the support of the British Labor Government while it was under heavy attack in the United States and in Britain as a welfare state. This new approach represents the highest common denominator of agreement ever attained among the trade-unionists of Europe, Asia, Africa, and the Americas. Free labor everywhere recognizes the essential identity of nazism, fascism, falangism, and communism, and holds that free trade unions and governmentally controlled labor fronts are as incompatible as are democracy and dictatorship. Adhering to this principle, the London Congress rejected the Thailand and Dominican delegations because they did not represent bona fide unions.

The London declarations breathe a spirit of self-reliance, rather than a reliance on the state. The ICFTU declarations of policy have very little Socialist phraseology in them and are refreshingly free from the clichés of the past. The word "socialism" has lost much of its luster in the eyes of labor as a result of national socialism in Germany and the "Socialist paradise" in the Soviet Empire. There is a widespread and growing feeling that though Marx is buried in London, Marxism is buried in Moscow. In its Manifesto and Declaration of Basic Social and Economic Demands, the ICFTU does not rule out competitive enterprise. Neither does it rule out public or government ownership; but in both public and private enterprise, the ICFTU insists that the workers shall enjoy certain basic rights and have an adequate voice in the economic life of their country. It is dedicated to the maintenance and expansion of democracy. In his significant address to the London Congress, President William Green of the A. F. of L., won hearty approval when he extended the concept of citizenship and democracy from the realm of political relations to the field of economy. The Manifesto of the London congress reads:

"We assert that economic and political democracy are inseparable. We demand full participation by worker organizations in economic decisions affecting planning, production, and distribution. Where vested economic interests block the road to human progress, private planning for profit must yield to public planning for the people."

In the light of the triumphant counterrevolution in Russia and the emergence of communism's offspring, Nazi-Fascist totalitarianism, an increasing number of people in the European labor movement have begun to doubt that state control is the panacea for social ills. As this doubt grows, there is a growing confidence in the usefulness of independent trade-unionism. In nearly every European country, the organization of labor into a political party preceded and, indeed, inspired the trade-union movement. The result was that political ideology greatly influenced the policies of the trade-unions. But since the war, trade-unionism even in Germany, where this development had appeared in its classical form, has undergone a profound change. In western Germany the trade-unions are bona fide and free, and are now separate from the Social Democratic Party, which is still generally recognized as the political party of labor.

The British Trades Union Congress, which has been the backbone of all British labor governments, is not immune to this process of change, and much hard thinking about basic principles is going on in its ranks. This has been especially stimulated by the fact that in Britain the trade-union movement is at one and the same time the backbone of the Government and the guardian of the prerogatives of its working-class membership. Experience has taught British labor that it is much easier to embrace a general program than to execute a particular policy.

In sum, all the free trade-unions of the Old World, while still largely continuing to advocate Socialist measures, have become aware of the dangers of bureaucratization of economic life and the growth of the octopus state. Even unions with the strongest Socialist leanings now realize the necessity of safeguarding the independence of their organizations in nationalized industries.

IV

The insistence that free labor and democracy are inseparable is at the very heart of the unequivocal opposition of the new international to all types of totalitarianism, the autocracy of Franco Spain or of Latin American dictatorships no less than the totalitarianism of Communist Russia and her satellites. With the defeat of Nazi Germany, Moscow-directed communism has, however, become the main danger to democracy and world peace. It is much more difficult to combat communism than it was to fight nazism and fascism, since communism pretends to be the champion of labor and poses as a higher form of democracy, to which it tirelessly pays homage. This is calculated hypocrisy, yet it is because of this pretense that the Communist fifth columns, with their numerous fronts, have so much more influence than the Nazi-Fascist outfits.

The defense of democracy against the Communist effort of world domination must include military measures. But military security alone is not enough. The ICFTU insists that political liberty, social justice, and economic security together form the life stream of every free nation. Economic help for the underdeveloped countries, and full national freedom for the dependent peoples at the earliest possible moment, are both essential for the defeat of totalitarianism. The paramount prerequisite in the defense of world democracy against communism or any other species of totalitarianism is not piecemeal or temporary recovery, but the integration of the economic life of the free countries into a balanced and sound world economy. The new international considers that the European recovery program and President Truman's point 4 are sound, effective policies leading to economic integration on a continental and world-wide scale.

Plainly, American trade-unionism, occupying a major place in the strongest sector of world economy, has a major part to play in this world-wide campaign. Perhaps it has something to teach its friends abroad. The standing which American trade-unionism enjoys today in the eyes of world labor is due above all to the benefits which labor organizations have won for the working people of the United States. Foreign trade-unionists are impressed by the high standard of living in the United States, and by the fact that organized labor in the United States enjoys greater recognition and more rights than in most other countries; and they have come to realize that, though American labor has a different and less radical-sounding philosophy than their own, the labor movement in the United States has in practice been very successful in defending and expanding the workers' interests.

Moreover, trade-unionists abroad have begun to perceive that, contrary to the old assumption, American labor does not limit its activities to questions of hours, wages, and working conditions, but takes an increasingly effective part in community problems and in international affairs. The traditional independence of American labor from all political parties, its critical attitude toward the state, and its inveterate and unceasing hostility to all species of totalitarianism have, nonetheless, been maintained. The success of this policy has aroused new interest abroad.

American labor has much more to offer the international free-trade-union movement than material aid. In its structure American trade-unionism provides the practical way of building a democratic labor movement free from denominational limitations. The American labor movement recognizes that the common struggle against the totalitarian menace demands that all democratic free trade-unions—Socialist, Catholic, Protestant, and the so-called pure and simple type—must unite their ranks on an international scale.

The unity of American labor at London was the decisive factor in building the first international bridge between the Christian- and Socialist-minded trade-unionists. American trade-unionism is, in principle, opposed to the organization of labor along denominational lines. In Germany, Austria, Switzerland, and Italy, American labor spokesmen, who are not Socialist-minded, minced no words in condemning all attempts to organize trade-unions on denominational lines which would only divide the ranks of free trade-unionism. Because of its resolute opposition to the organization of Christian trade-unions, American labor has gained considerable confidence among the Socialist-minded trade-unionists in their relations with the Catholic labor organizations.

At the same time it must be noted that American labor has within its leadership and membership a substantial number of adherents to the Catholic faith. Yet there are no separate Catholic trade-unions in the United States. There is not even any serious call for the creation of such labor unions. American trade-unionism has demonstrated in practice that there can be room aplenty for Catholic workers in the membership and leadership of a bona fide free trade-union movement organized on nondenominational lines. This obvious fact has convinced the overseas Catholic trade-unionists of the soundness of American labor practices.

In Europe some of the Christian trade-union organizations have been in existence for decades. In some countries they fought side by side with trade-unions whose leadership is largely Socialist-minded. The mere affiliation with the ICFTU by both of these types of unions in any one country should not be taken to mean their organic unification at an early date. Even in the United States, where no denominational differences enter into the picture, the A. F. of L. and CIO are both affiliated to the ICFTU as distinct bodies; no immediate organic unification has followed from such international affiliation. But in other countries, as in the United States, the affiliation with a common international trade-union center makes for closer coordination and cooperation among the various labor bodies. Furthermore, the common affiliation of the Christian- and the Socialist-minded free trade-unions in the ICFTU will tend to reduce the old suspicions and prejudices which have developed over the years between the two types of bona fide labor unionism.

As an active member of the ICFTU, the American trade-union movement, which is free from the antipathies and grudges rooted in the nineteenth century European conflicts between lay and clerical forces, will certainly play a prominent role in helping to overcome such diverse influences among the democratic trade-union movements. In London American labor made its first significant contribution in this direction, when Socialist trade-unionists voted to enlarge the executive committee of the ICFTU by adding the Italian Catholic trade-union leader, Giulio Pastore. Mr. Pastore was nominated by an Italian Socialist trade-unionist as the unanimous choice of the Catholic and non-Catholic democratic labor organizations in Italy.

At the same time American labor has been learning many things, and has been reorienting itself, quietly, steadily, and profoundly. After World War I foreign relations really seemed "foreign" to the American trade-union movement. Today the situation is completely reversed. American labor's complete break with isolationism first revealed itself after the destruction of the free trade-union movement in Germany and Austria, and the common struggle against nazism and fascism ushered in a new era for American labor. The change of mood of course reflected the changing attitude of the United States Government and of the American people as a whole. In 1934 the convention of the A. F. of L. considered the resolution of the International Ladies' Garment Workers' Union delegation "to instruct the executive council to take steps for affiliation with the IFTU"; and after some hesitation and negotiation, the A. F. of L. reaffiliated with the IFTU. It was actively associated with the International for only about 4 years; during the period 1919–39, however, for the A. F. of L. feared that the preoccupation of the IFTU with political problems would open the door to communism. United States labor did not yet realize how fundamentally antagonistic democratic socialism is to totalitarian communism; the CIO and the British TUC believed until quite recently that they could cooperate with Communist-dominated unions.

Today, the A. F. of L., the CIO, and American labor organizations outside both national federations share with Socialist-minded European unions and all other free trade-unions a common hostility to Communist despotism, and to its tools and agencies. The A. F. of L., which foreign labor once considered a conservative organization, is firmest of all in its insistence that the international trade-union movement shall continuously and energetically concern itself with such general political issues as human rights, political discrimination, genocide, the crisis in China, the national freedom and territorial integrity of weaker peoples, and the rising menace of forced labor. How far the wheel has turned is illustrated by the fact that today it is precisely the A. F. of L. which is most insistent that organized labor occupy itself with such problems. It does so because it has learned that only thus can the door be shut to communism. More and more the forces of free labor throughout the world are facing the complex problems of our difficult era in an undogmatic way; more and more they are freeing themselves from rubber-stamp phrases and absolutist philosophies, to seek practical, realistic solutions for present-day problems.

V

America was born in a revolutionary struggle for national independence, and the American people and the organized labor movement have a time-honored tradition of opposition to all forms of colonialism. The rising trade-union movements of the underdeveloped countries count on American labor to bring them powerful support in their struggles for national independence.

American labor can in turn immensely strengthen the world position of the United States if it assumes its full obligations in the ICFTU. Judging by the fantastic notions that some people abroad hold about our country, a darker and more forbidding Atlantic now hides America from the rest of the world than in the days of the first voyage of Columbus. By full participation in the international free trade-union movement, American unionism can make a major contribution toward the rediscovery of America—the real America—by the people of the Old World.

The London Congress is thus a landmark in world labor history. The road before the ICFTU will not be smooth nor will the course be easy to steer, even though a map has been provided. A basic unity of purpose and plan was achieved at London, but there are obstacles ahead and inner strains and stresses among the affiliates. Years of antagonisms will not be dissipated overnight. Much will depend on the energy and extent of American labor participation in the work of the new international. Indeed, American labor carries a doubled responsibility, for it must not only support the work of the ICFTU, but must be no less resolute in keeping the foreign policy of the United

States Government consistently and vigorously democratic. Vacillating policies, such as the one recently proposed by our State Department toward Franco Spain, can create grave misunderstandings of the American purposes among the laboring forces of Europe and Asia.

Moreover, the conflict between the ICFTU and the WFTU is bound to grow in intensity and bitterness. Both organizations are fighting for the biggest stakes in the world—the hearts and souls and minds of many millions of working people in scores of countries. Neither organization can sidetrack or soft pedal. Moscow could not possibly impose totalitarian communism on the rest of the world without first getting a stranglehold on the remaining free-labor organizations. That would entail the destruction of the ICFTU, now the head and heart of international democratic labor. The new international fully realizes the seriousness of the threat. The battle is all the more difficult because the WFTU is permitted full freedom to operate against free trade-unions in democratic lands, while the road is heavily barred to the ICFTU in all iron-curtain countries.

What is more, in France, Italy, and sections of Africa and Asia the WFTU still holds formidable positions, which the Communists won by infiltration during the 4 years when their association with the free unions covered them with a mantle of respectability. It will be a primary task for the ICFTU to unmask these organizations dominated by the WFTU and to liberate the workers from their influence. The challenge and threat of totalitarian communism to labor is worldwide. It can be met and defeated by free labor only on a world-wide basis. No trade-union movement struggling against totalitarianism in any country should be left to battle alone against an international menace promoted and supported by a gigantic totalitarian world power. A democratic world labor international is now a vital necessity for the preservation and growth of human freedom and social progress. The reality of this new internationalism was demonstrated at the London Congress, where all were allies, welded in a common cause against the threat of totalitarianism and reaction. German and Japanese free trade-union representatives are in the top leadership of the ICFTU on a basis of equality.

The new international is not based on alliances among various powers, and unlike the WFTU will not be a political instrument for any nation or combination of powers. But though it will be entirely independent of the governments of the countries where its affiliates are located, it cannot and will not be neutral in the historic struggle now going on between the democratic and totalitarian countries. No organization dedicated to the struggle for human rights and social justice can be above the battle when freedom and peace are so gravely endangered.

It is precisely because the role of free labor is so dynamic that the Communist attacks on the ICFTU are so full of fury. The establishment of the ICFTU is a categorical repudiation of the myth that Soviet totalitarianism is a progressive idea, or that the Communist system offers anything that will advance the interests of the international working class. Delegates representing 50,000,000 workers in more than 50 countries have now branded bolshevism the archenemy of labor. This may well turn out to be the blow that destroys the pretense under which bolshevism has for several decades made most of its gains—the supposition that it is a friend of the workers of the world. The international free-trade-union movement is a powerful weapon in the struggle for a society in which all human beings and institutions can strive to fulfill their aspirations in a civilized manner and under the guaranties of freedom.

Address of Louis Nizer, of the New York Bar

EXTENSION OF REMARKS
OF
HON. LOUIS B. HELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 11, 1950

Mr. HELLER. Mr. Speaker, Louis Nizer is a brilliant young man who practices law in New York City. He also finds time to do a little writing, and has authored the following books: New Courts of Industry, 1935; Thinking on Your Feet, 1940; What To Do With Germany, 1944; Between You and Me, 1948.

He is in great demand as an after-dinner speaker, and as a toastmaster he is without peer. At the fiftieth anniversary dinner of the Municipal Court of the city of New York, held at the Hotel Commodore, New York City, on December 5, 1949, he delivered an address which I am pleased to commend to the reading of my colleagues:

May it please Your Honors, may it please the distinguished guests on these daises, and may it please the highest court of all on this occasion—you ladies and gentlemen: Judge Lyman's words were not merely an introduction. They were a diploma—and I accept it even though I have never attended the school of virtues which it betokens. I am particularly grateful to him for presenting it with generosity cum laude.

A lawyer is the eager youth of a judge, and a judge is the mellowed ascetic age of the lawyer. It is good on such an occasion as this, all too rare, to fuse the two into one unity of professional comradeship devoted to the noblest of all causes—the cause of doing justice. I am mindful of the distinction which you have conferred upon me to represent the bar amongst such a galaxy of learned judges. But I am not unaware of the fact that this distinction is ringed with some hazards, and I intend to summon up all the resources of tact which every lawyer has a goodly supply of until he becomes a judge.

A young British naval student was examined by an admiral who had made a surprise visit to his academy. He was asked who the three greatest admirals in British history were. The young student replied, "Drake, Nelson, and I beg your pardon, sir, I didn't catch your name."

If any lawyer in this gathering doesn't know the name of every judge who bejewels this dais, I am authorized to say on his behalf that we still include those judges among the most distinguished of our day. Indeed, I am ready to make another concession to tact. We lawyers are ready this evening to obliterate from our minds those decisions which were rendered against us unjustly. I refer, of course, to all adverse decisions. We are ready to take the position which a lawyer took when he told the appellate court: "Your honors decided a case identical to this a year ago for the plaintiff. Six months ago, Your Honors reversed yourselves and in an identical case decided for the defendant. And, may I say, Your Honors, in both cases most admirably." For we lawyers are like Shakespeare's character—we take our pleasures with sadness and our troubles with a smile.

If you look upon these tiers of judicial weight (and if there are any amongst you who are not lawyers, I hope you don't misunderstand the upper tier to represent the highest court) you will see that there is room for one more dais. I should like to imagine that there is such an additional dais, peopled with the great law givers of the past.

Perhaps Socrates sits on that imaginary dais, with his long white beard, his rude nose, thick lips, and his bald pate—not a very appealing man, until he speaks. If he were called upon, I think he would say to you: "The law is not always wise, but it is wiser than those who administer it. It expresses the will and the reason of the body politic and claims by that title to overrule the will and reason of the judge and those of private men. To seek to be wiser than the laws is the very thing which is by good laws forbidden."

I should like to imagine that next to him sits rotund Lord Brougham. He says to you in a deep basso voice: "A judge can boast of his achievements only when he can say that he found the law dear and left it cheap; that he found it a sealed book and left it a living letter; that he found it the patrimony of the rich and left it the inheritance of the poor; that he found it a two-edged sword of craft and opposition, and left it the staff of honesty and the shield of innocence."

I imagine that next to him sits our own great John Marshall. If you had met John Marshall in the anteroom of this ballroom where all the judges were having cocktails before this event, you would probably have seen a man of tousled hair, unkempt suit, and mud still on his shoes from the unpaved sidewalks of Washington. He would have been convivial and informal. He might have said to you what he once did say: "The acme of judicial distinction is the ability to look a lawyer straight in the eyes for 2 hours and not hear a damned word he says."

And if you were encouraged by the informality of the occasion and the fact that at least your cocktail glass was on a plane with his, you might recall to him what Lord Hewitt once said about the failure of judges to listen: "The only impartiality possible to the human mind is that which arises from an understanding of neither side of the case."

If Judge Marshall had been inspired by the light mood, he might have told you his favorite ancedote about the time he told his brethren on the United States Supreme Court that they must no longer sip wine during the discussions of cases, except on rainy days. On one occasion he asked his Associate Justice, brother Justice Storey—to whom, incidentally, he usually turned and said, "This is the law. Now go out and find me a precedent"—he asked Judge Storey to go to the window to see whether it was raining. Judge Storey reported lugubriously that the sun was dazzlingly bright. Judge Marshall, with the resourcefulness which was later to be reflected in his constitutional opinions, said: "Well, our jurisdiction extends over so wide a territory, that under the doctrine of chance, it is very likely that it is raining some place, so we shall have Madeira."

But if Judge Marshall had ascended this imaginary dais, then you would have seen six feet two of majesty and authority, and if he would have spoken to you he might well have said: "A constitutional government is as good as its courts, no better and no worse. Its laws are only its promises. It keeps its promises or it breaks its promises in its courts."

Next to him, I should like to imagine sits William Murray, better known to you as Lord Mansfield. It was he who was responsible for the maxim of the great seal of the United States, which reads "Fiat justitia ruat coelum"—"Let justice be done though the heavens fall." He had a sensitive eye and heart. He once said: "Law and equity are two things which God hath joined together but which man has put asunder. It is the weak and the poor who need most the safeguard of a strong and independent judiciary. One cannot be sure always of running

with the pack. He may find himself the pursued rabbit."

On Lord Mansfield's left, I should like to imagine sits Judge Cardozo. Some of us feel we have been touched with greatness by knowing him. Here was a man who combined genius with saintliness. Are there any lesser words to do him justice? At a gathering such as this of lawyers and judges, in which he delighted, he would combine his wit with his judgment, like brushwood with timber, to make a bright fire.

I remember his description of that rarity, an arrogant judge, whom he described with his customary felicity, as "a judge who had a suspicious familiarity with those sections of the Civil Practice Act under the title 'contempt.'"

He delighted in telling the story of the fledgling lawyer who appeared before the highest court and proceeded with great elaboration to expatiate on very elementary principles of law. The chief judge leaned down very benignly, and in a friendly manner apologized for his interruption and said, "I trust that counsel will give this court credit for knowing the fundamentals of the common law." The young lawyer replied, "Oh, no, sir; that is the mistake I made in the lower court."

Finally, Judge Cardozo might well have drawn upon his great fund of aphorisms to tell you that in a London gallery there is a famous painting by Champaigne showing Cardinal Richelieu in three poses—one of the front of his face and two profiles facing the center. He would have told you that that is the way justice looks—both lawyers present the profiles, and only the judge in the center looks the truth directly and fully in the face.

At the end of this imaginary dais sits Judge Roger Taney. He had deep, sunken eyes and a high forehead which accentuated his ill health. He was a man of ardent temperament and iron will, and when he reviewed the changes in jurisprudence he used to tell of the old English judge who exulted in giving harsh judgments. "Whenever the facts were nicely balanced, he seemed to be friendly to injustice. The kind of judge," he would say, "who would indict you for blowing your nose and then quash the indictment because it didn't describe which hand blew it." He demonstrated the high mission of the judge who affects all eternity because he can never tell where his influence stops.

From this imaginary dais, ladies and gentlemen, and from the live dais beneath of distinguished judges, we learn, I think, the great service of our judiciary.

In the Netherlands, there are stonecutters who live in obscure little huts and each day they weigh on their scales jewels so precious, that any one of them would suffice to take them out of their poverty forever. But at the end of the day, when they have returned the jewels to their anxious owners, they sit down serenely to dinner. On the same table where they weighed another's treasure without envy, they spread their frugal meal. So lives the judge. He decides enormous issues involving other men's treasures, and even their lives, but after he has polished his opinions so that they will reflect the brilliance of his wisdom, he retires to a simple life of learning and serenity.

Tonight, we celebrate the fiftieth anniversary of the municipal court, the court of the poor who are most in need of justice; the poor who understand that justice should be the highest expediency; that justice is the bread of the nation and that the nation hungers for it. If there were 50 candles here tonight on a birthday cake, they would throw a symbolic light across the Nation. For those who govern lead the blind, but those who administer justice give light to their eyes.

And now I have finished, and I know from experience as a lawyer that there is one moment in every trial when, no matter how much the lawyer has taxed the court's patience, he is forgiven. Love flows down from the bench to him. A smile embraces him and, for a moment, the lawyer feels that he is the most popular man in the courtroom. All this is occasioned by a few words which the lawyer utters. It always happens when he says, "Your Honor, we rest." Ladies and gentlemen, I rest.

Transportation of the Mails

EXTENSION OF REMARKS
OF

HON. JOHN R. WALSH

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 25, 1950

Mr. WALSH. Mr. Speaker, there has been a great deal of discussion in the House of Representatives pertaining to the recent order of the Postmaster General curtailing mail service.

I recently addressed the House regarding the serious situation existing in the postal service, as it pertains to the transportation of the mail by the railroads of this country, and I pointed out at that time that the Post Office Department takes nearly 50 percent of what we are paying for in the transportation of the mail for empty railroad cars.

Ever since the Railway Mail Pay Act of 1916 the railroads of this Nation have collected millions and millions of dollars from the Post Office Department for the carrying of these empty mail cars, and I recently introduced House Resolution 547 calling for a complete investigation of the situation, and I wish to call to the attention of the House of Representatives, an editorial that appears in the Aviation Week, the leading aviation magazine in the United States. The editorial is as follows:

THE GREAT TRAIN ROBBERY OR OUR SELF-SUPPORTING RAILROADS

We have before us the Southern Railway's System's new advertisement in Business Week for May 6. The rails have been pretty noisy for a long time about subsidies and how they don't have any. This ad is typical.

It says that of all the forms of intercity commercial transportation, only the railroads are self-supporting. "They don't leave it to George," says the Southern.

George is you, Mr. Taxpayer.

"The railroads pay their own way. * * * It isn't easy, especially when we have to compete for business with subsidized carriers. But it's easier on you and your pocketbook, George."

Frankly, to the contrary, it does look pretty easy to us, but if what we read in the stuffy CONGRESSIONAL RECORD is true, it definitely isn't easy on us tax-paying "Georges."

For we started reading the fine print in the Appendix of the RECORD and after we got through some of the complaints of a certain Indiana Congressman we could practically feel you railroads snitching our wallets.

It certainly smashed a lot of illusions we Georges had built up in our minds from reading all those ads and press releases about how only you in the transportation world got none of those juicy subsidies.

Because Representative JOHN R. WALSH contends that ever since the Railway Mail Pay Act of 1916 was passed your railroads have pocketed millions and millions of our dollars which the Post Office Department allows you for carrying empty mail cars all over the biggest railway system in the world.

One big reason, it seems, that you railroads can be so self-supporting is that we Georges paid you in 1946, for example, for carrying 580,462,152,219 cubic-foot-miles on nonlocal surface mails, and yet you really carried only 323,677,344,195 cubic-foot-miles. That means that in 1946, 44.24 percent of the space we tax-paying Georges paid for was not used. Even now, Mr. WALSH says, the Government—meaning us Georges—pays about $250,000,000 annually to you railroads for transporting mail, but we receive only half this service we pay for. This is because—as you fellows knew all along, you jokesters—the 1916 act requires the same rate for the return of a mail-storage car as was paid for its full outbound movement, provided the car is not used by the railroad for other traffic on the return run.

In dramatic fashion, Mr. WALSH introduces testimony in Postmaster General Donaldson's own words before the House Committee on Post Office and Civil Service:

"Yes * * * there is a difference in pay to railroads. * * * I think what you are talking about is space purchased by full cars or storage cars or what-not. That is different from the regular RPO lines, the lines in which railway postal clerks operate. Now with reference to the space for transporting mails by full carlots or by 15 feet or 30 feet or 45 feet or what-not, I think that our investigation indicated that we used about half of the space that we paid for. Under the law, if we transport a carload of mail from New York City to San Francisco we pay for that so much per foot per mile, so to speak, and then we pay for the return movement of the car, whether we use it or not. There is far more mail moving west than there is mail moving back."

After reading this, the rest of you Georges may like to know what the General Accounting Office told the Senate Post Office Committee about this particular manner in which the railroads self-support themselves out of our pockets. After its own study of the so-called round-trip provision of the act, it told the Senators:

"The study has indicated that cars carrying full pay loads out do not return promptly, but are often directed to other use for the carrier's convenience and substitute cars are returned, making it possible for the railroads to realize a greater income. The propriety of this practice is a possible question since the act does not appear to anticipate such substitution. * * * Many substitute cars are returned in freight trains and the trip is paid for at passenger rates.

"The operation of the round-trip provisions has resulted in numerous complex agreements, which assure the railroads full payment for all returned deadhead cars and empty space. In some instances the return movement is in advance of the out-bound loaded movement."

This last idea is ingenious. This wrinkle extracts our money to buy empty space on the return portion of a round trip that hasn't started yet. How self-supporting can you be?

And C. B. Allen, a very capable news hawk, finds interest in the GAO's comment: "In practically all instances, the carrier is paid more by the Post Office for the return of a car empty than if the car was carrying a payload of a private shipper. Returning a car empty is to the railroad's advantage." (Especially if it can get paid for the return trip before it starts out.)

Two years ago, Mr. Allen reported in the New York Herald Tribune, the railroad post

office practice reached the proportions of a minor wartime scandal when it was charged in Government circles that the railroads had been operating empty cars back and forth across the country, despite an acute shortage of shipping space, to collect the higher mail pay rate.

Mr. Walsh, in a final word, says "The Post Office Department has permitted the railroads to abuse this provision of law in such a way as to increase greatly the amount of empty space paid for. While some empty returns must, under the law, be paid for, this has been turned into a racket by the railroads with Post Office Department approval."

So ends today's lesson on how America's self-supporting railroads are the only form of intercity commercial transportation who don't still rely on help from the people's tax dollars. That's how the railroads are easier on you and your pocketbook.

Civil Government for Guam

EXTENSION OF REMARKS
OF

HON. JAY LeFEVRE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 23, 1950

Mr. LeFEVRE. Mr. Speaker, as a Member of the House Committee on Public Lands, I am very happy that today the House acted favorably on H. R. 7273, a bill to provide civil government for Guam, and for other purposes.

The people of Guam have been Americans for over 50 years. They are nationals of the United States. Some have gained citizenship, but citizenship has been only open to the few. None are aliens. Politically, economically, socially, linguistically these people are Americans.

Let us look at these people on whom we are considering bestowing the greatest privilege in this world today. The original Guamanians are known as Chamorros, who inhabited all the Mariana Islands in which Guam lies. They were large handsome people, perhaps kin to the native Polynesians of Hawaii. But no full-blood Chamorro now survives. Chamorro is the basic stock with which Spanish, Filipino, Mexican, Chinese, Japanese, and American have mixed to form the present Guamanian people. This intermixture began over 250 years ago. The Filipino and Spanish blood have been the strongest. During the years of Spanish rule the estimated population living in 1521, the year of Magellan's discovery of Guam, was 35,000. When officers of the United States Navy took the first census, the population had been reduced to 9,676.

The Chamorro were almost reduced to extinction. The surviving Guamanians had long since been Christianized, thoroughly imbued with the influences of western civilization and citizens of Spain. Since the American regime began following the Treaty of Paris in 1898, American influences have been strongest and further racial intermixture has been slight. Only 15 Japanese were found on the island in 1901 and only 39 lived there in 1940. The number of Filipinos residing among the Guamanians have decreased, until only 32 remained in 1940. The American period has been one of racial consolidation and increase. The once mixed population has merged into a Guamanian people. By 1940 they had increased to 23,067 in number.

The Guamanians have continued to increase in spite of the deaths and privations suffered at the hands of the Japanese for 2½ years during World War II. They number over 26,700 and half this population is under 16 years of age. All indications point to a future population of 50,000.

These people have not only merged and increased during 50 years of American rule, but, what is more important, they have also become Americans in habit, thinking, and language. English is spoken everywhere except by the very old, although the Chamorro tongue is still the language of the homes. Eighty-five percent of the people over 10 years of age are literate. Today almost the entire school-age population of 8,460 students are enrolled in schools. The village schools and high school run on two shifts to take care of all the pupils. Education is demanded as strongly in Guam as it is here in the United States. Guamanians have come to the United States to college and professional schools. They are coming now in greater numbers to train for the work of doctors, lawyers, engineers, businessmen, and Government administrators that are needed on their island.

One cannot be among the Guamanians but a short while before being forcibly struck with their American ways. The men and women who appeared before the hearings of the House Committee on Public Lands in November 1949, revealed a thorough grasp of the meaning of citizenship and of an organic act, and understood and presented their problems in a way that would do credit to any American community. No interpretations were needed there. They were articulate in their English presentations, clear and precise in their thinking.

A trip down the business district of the capital and adjoining villages, rebuilt since the war, show Guamanians in the business of any small American city. Two young members of the Guam Congress have a construction company and import prefabricated houses. Another is building a large modern laundry. Department stores carry well-known brands of American clothing, shoes, and dry goods. Guamanians are the owners, the bookkeepers and the clerks. The familiar sign of American famous brands, insurance agencies, shipping lines, sporting goods stores, lawyers' shingles, restaurants, hamburger stands, pool halls, and taxi companies give an index of how American the Guamanians have become.

A walk through the administration building shows all offices staffed with Guamanian clerks. In a visit to the houses of the Guam government meeting in their beautiful, mahogany-paneled, modern building, one hears earnest men and women discussing intelligently and with great dignity the problems and needs of their people in a typically American manner. Across the street is a modern police station, with latest radio equipment, record systems, investigation devices, and mobile crime laboratory. A staff of 275 alert Guamanians man the force that polices the entire island, outside the military reservations. They have the responsibility of law and order for a population of 75,000 now residing in Guam. Guamanians preside over the Guam courts except for the court handling Federal business and the court of appeals.

One meets Guamanians as priests of the church, the superintendent and teachers of the schools, the island postmaster, and staff of the agriculture department.

The people for whom this legislation is proposed have been long in contact with the Western World and the American way of life. These are an educated and sophisticated people in search of local self-government and a permanent government by law. I was struck during my recent visit in Guam by the completely American character of these people. These Guamanians are no South Sea natives dressed in cotton wrap-arounds and living leisurely from the fruit of their island. Nothing could be further from pictures drawn by fiction of the South Sea people than the Guamanians. They are called Guamanians, but they are truly Americans. I found farmers tilling the soil and raising cattle, businessmen importing American manufactures and retailing goods in impressively sized department stores, young men teaching in the schools, trained lawyers sitting in the legislature and the bench of the island courts, young men and women dressed as young men and women are dressed in the offices of Washington, performing the duties of clerks and minor administrators. Cars, radios, juke boxes, soft-drink dispensers, attractive frame cottages, athletic teams, and church socials are as characteristic of their lives as any American small town.

In the past 50 years the Guamanians have become Americans. In the postwar years the influence of up to 60,000 Americans in their island has intensified the Americanism of the Guamanians. Many of them have become American citizens under the laws existing in the 1920's, when a Guamanian child could inherit citizenship if either parent were an American citizen. Hundreds of veterans who served in our armed forces became citizens in 1946 under the authority of the Naturalization Act of 1940. Many more would follow suit if there were available courts or if the naturalization law had been extended beyond 1946.

The Guamanians now live as proven Americans in custom and in loyalty, part citizens and part noncitizens. They live with American citizens all about them. Their every wish is to become citizens and gain the recognition which they highly deserve.

American Taxpayers Have Sent Nearly $100,000,000,000 to Foreign Countries

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 24, 1950

Mr. VAN ZANDT. Mr. Speaker, with Congress giving final approval to Marshall plan funds for the fiscal year 1951 of more than $3,000,000,000, our foreign-aid program, including $15,000,000,000 of World War I debts, is rapidly nearing $100,000,000,000.

This huge sum of money represents the aftermath of both World Wars to which has been added a part of the stupendous cost of the present cold war.

My purpose in calling attention to our foreign expenditures is to emphasize the part American taxpayers are playing in an effort to promote a permanent world peace by aiding friendly nations.

The $100,000,000,000 of foreign aid does not include the vast sums of money spent on our own national defense and which are also a part of the over-all cost of the cold war.

The following tables compiled at my request by the Clearing Office for Foreign Transactions, Office of Business Economics, Department of Commerce, summarize the foreign transactions of the United States Government and reveal the huge cost of our foreign-aid programs through December 31, 1949:

TABLE 1.—*Summary of foreign grants and credits utilized and capital investment in the International Bank and Monetary Fund—By program: World War II and postwar periods, through Dec. 31, 1949*

[In dollars, rounded to nearest million]

Total	78,048,000,000
International Monetary Fund	2,750,000,000
International Bank for Reconstruction and Development	635,000,000
Grants and credits utilized	74,663,000,000
Grants	63,186,000,000
Lend-lease	47,286,000,000
Civilian supplies	4,983,000,000
European recovery	5,132,000,000
UNRRA	2,660,000,000
Post-UNRRA	300,000,000
Interim aid	557,000,000
Chinese stabilization	500,000,000
Chinese military aid	116,000,000
Chinese aid	160,000,000
Greek-Turkish aid	594,000,000
Philippine rehabilitation	452,000,000
Korean aid	29,000,000
Refugee assistance	214,000,000
International Children's Emergency Fund	45,000,000
Inter-American aid	84,000,000
American Red Cross	73,000,000
Credits	11,477,000,000
Special British loan	3,750,000,000
Export-Import Bank loans	3,022,000,000
European recovery	902,000,000
Surplus property	1,363,000,000
Lend-lease	1,672,000,000
Other	768,000,000

President Truman's Speeches at Various Points in the West

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Thursday, May 25 (legislative day of Wednesday, March 29), 1950

Mr. MAGNUSON. Mr. President, the President of the United States recently took a trip to the west coast. On that trip he made several stops throughout the country, at which he made several statements and speeches. There has been some controversy because of reports of those speeches and answers to the speeches, made by our Republican friends. In order that the RECORD may be clear, Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD, separately, each speech made by the President, at Grand Coulee Dam, at Wallula, Oreg.; at Pendleton, Oreg.; Umatilla, Oreg.; La Grande, Oreg.; Baker, Oreg.; Ontario, Oreg.; Huntington, Oreg.; Pasco, Wash.; Wilbur, Wash.; and at Gonzaga University, Spokane, Wash.

I commend these speeches which were made at so-called whistle stops as being good reading not only for all Americans, but particularly for Republican critics of the President of the United States.

There being no objection, the speeches were ordered to be printed in the RECORD, as follows:

ADDRESS OF THE PRESIDENT DELIVERED AT THE DEDICATION CEREMONIES OF GRAND COULEE DAM, THURSDAY, MAY 11, 1950

This is an inspiring occasion. We have come here to dedicate Grand Coulee Dam—one of the mightiest structures man has ever built.

With this dam, man's ingenuity and perseverance have dramatically transformed the

energy of a mighty river into a great new source of national strength.

At the foot of this dam is the world's largest power plant. It is already generating more low-cost electric energy than any other plant in the world.

Behind this dam is a reservoir which extends 151 miles to the Canadian border. The water in that reservoir not only generates electricity, it helps prevent floods. And soon, it will pour forth to irrigate thousands of acres of land which are now desert.

Grand Coulee Dam—with its tremendous power and irrigation benefits—is an instrument of our democracy, forged to contribute to a better life for ourselves and our children.

This dam was not built by accident. It is here because men with vision and determination fought for its construction. Men in the State of Washington—many of whom are here today—saw what this dam could mean to the Northwest and to the Nation. President Franklin Roosevelt, whose name honors the reservoir behind the dam, transformed their vision into reality.

This dam had to be fought for. It had to be built over furious opposition. You remember what its opponents said. One Congressman said: "Up in the Grand Coulee country there is no one to sell power to except the coyotes and jack rabbits, and there never will be." Other opponents of Grand Coulee said it would be a "white elephant." They said it would be of no more value than the Pyramids.

We can laugh today at such foolishness. Right now, the generators at this dam are being run at overcapacity, straining to meet the soaring demands for power. All about us in the Pacific Northwest—in this land that was called the land of "coyotes and jack rabbits"—new jobs, new industries, new opportunities have been created.

Today those who opposed Grand Coulee are trying to cover their tracks. They are trying to jump on the band wagon.

But they can't erase the record. They did not understand then, and they do not understand now, the progressive steps that are necessary to keep our democracy strong, and confident, and moving forward.

The fundamental error of those who opposed Grand Coulee was their failure to understand that the United States is a growing, dynamic country. They saw no need to plan and work for a greater future. The way things were, was good enough for them.

But the American people have never been satisfied with the way things have been in the past. Our whole history is a record of eager striving to make things better.

One hundred years ago, out here in the Northwest, men and women were opening up new frontiers along the Oregon Trail. They struggled and fought to create farms and cities out of the wilderness.

The opponents of progress would have you believe that the frontiers are closed. They think we should now relax and struggle no more. Those are the men of little faith.

I say to you that the American spirit which blazed the Oregon Trail is not dead. Here in the Northwest you are still pushing back frontiers.

There is no better example of that than this great dam. Less than 15 years ago, the energy of the Columbia River poured unused into the Pacific Ocean. It flowed past cities which were hampered by lack of power, and past farm lands which had been abandoned for lack of water.

In those days, the people of the Northwest made their living primarily from timber and farming. They exported raw materials and imported finished goods. They lacked the power needed to process and manufacture their own raw materials.

Yet, through the heart of their rich country flowed the greatest potential source of hydroelectric power in the Nation—the Columbia River system. This area, tremendously rich in natural resources, was stifled, its future was limited, because it was unable to tap its own native source of power.

Today, we are well on the way to harnessing that power. The imagination and vigor of freemen have put the Columbia to work.

The results are clear. The Northwest is no longer a backward colony. It is now one of the fastest-growing parts of the country. In the past 10 years, the population of Washington and Oregon has increased more than 30 percent.

Jobs—permanent, productive jobs—have been available in new industries that have been established to use the Columbia's low-cost power. In the past 12 years, 11 new plants alone have paid more than $135,000,000 in wages and nearly $50,000,000 in taxes.

Power from the Columbia has not only served industry. It has made life easier in homes and on farms. The use of electricity on homes and farms in the State of Washington is more than twice the national average.

When Grand Coulee was being built, some thought it would hurt other parts of the country by drawing plants and industries from them. Of course, that has not happened.

The plants that have sprung up here were not moved from other States. They are new enterprises, adding to the productive capacity of the whole country.

The growing payrolls of the Northwest have made bigger markets for producers in every State. The products turned out here are needed elsewhere. Nearly half the aluminum of the United States is produced along the banks of the Columbia. This aluminum is used everywhere in the country. A single rolling mill 90 miles from here—at Spokane—is providing basic materials for 600 factories, from Boston to San Diego.

What has happened here is what happens in the case of underdeveloped areas everywhere—in our country and the world. Sound, productive investment always makes bigger markets and more jobs.

Not only is Grand Coulee contributing to the growth and strength of the Nation. It is also a paying proposition from the standpoint of the taxpayers.

When the dam was being built it was attacked as a colossal waste of public funds. Well, that was a colossal misstatement. The investment in the power facilities of Grand Coulee is being repaid right now, and with interest. And in a broader sense, the entire investment has already been repaid several times over in the increased national wealth it has brought.

We are not stopping our work at this point. The Grand Coulee project itself is not finished. More power generators are being added. And over the next several years we shall begin to put water on the land below here. Thousands of family-size farms will replace the present sagebrush.

Elsewhere in the Northwest work on other dams is proceeding. Hungry Horse Dam in Montana, Chief Joseph Dam just down the Columbia from here, and McNary Dam on the Oregon-Washington border, are all under construction. These and other dams are part of the great work that must be done to produce power, promote inland navigation, reclaim land for cultivation, and prevent destructive floods.

But even more than this is involved in the development of the resources of this area for solid growth. Forests and grasslands should be placed on a permanent, sustained-yield basis. Soil should be conserved and improved. Fisheries should be protected and enhanced. Mineral resources should be opened up and developed.

All this work can and should go forward together. Resources that occur together in nature must be developed and improved together.

This is the goal we are working toward here in the Northwest. It is the same goal for which we are working in other parts of the country.

In the Central Valley of California we are developing great power resources. With the help of that power we are redirecting the available water of the Sacramento and San Joaquin Rivers to bring about the most productive agricultural use.

In the Colorado River Basin we are working to achieve the most sensible uses of the very limited water supply, and to expand the power supply throughout the basin.

Down in the Texas, Oklahoma, and Arkansas area a number of dams are producing power, and others are being built. In that area also, as in the lower Mississippi Valley, soil conservation, flood control, drainage, and navigation work is going forward.

In the Southeastern States we are moving ahead with the construction of flood-control and power dams on the Savannah River, the Roanoke, and other streams. In that area, also, it is necessary to shift land uses to conservation farming and to restore the pine forests.

The northeastern part of the country has great possibilities for the development of additional hydroelectric power resources. Power from the redevelopment of Niagara Falls and from the St. Lawrence project will be nearly as cheap as the power out here in the Northwest. It is badly needed. We should construct these projects as soon as possible. And there are also power sites on the rivers of New England which should be developed soon.

In the Ohio Valley, and around the Great Lakes, the principal work that is being done is on flood control, navigation, and soil conservation. There is also much need for reforestation.

The Missouri River Basin is so large that it requires consideration of all aspects of resource development. From the high plains in the West to the humid areas of the lower Missouri, this basin presents perhaps the most complex problem of all. The work that is necessary includes extensive development of flood control, irrigation, and power works, as well as increased conservation efforts on crop and range land.

I have left till last mention of the Tennessee Valley. In that valley we have made more progress than in any other. There the idea of coordinated planning for all resources was first worked out and most completely applied. The Tennessee Valley Authority has been outstandingly successful in its area.

We have worked out a set of recommendations for a Columbia Valley Administration which builds on that successful experience but recognizes the different circumstances out here. Take one simple example. In this area, a farmer's right to the use of water is vital to his livelihood, and is protected by State laws. That is the way it should be, and the Columbia Valley Administration I have recommended would have no power to tamper with anyone's water rights.

The private power lobby, and other people who have selfish interests to maintain, say the Columbia Valley Administration would be a superstate. Of course, that is not true. Ask the people in the Tennessee Valley. Ask the mayors of the cities and the governors of the States in that valley whether State and local governments are stronger or weaker as a result of the progress the TVA has brought. Ask them whether they have more or less influence on what happens in their valley with an agency that has its headquarters right there where they deal with it at first hand.

They will tell you that the TVA is the greatest thing that ever happened in their part of the country.

I believe the Columbia Valley Administration is a necessary next step in the sensible, democratic development of the resources of the Northwest. I believe the people of this area think so, too. And when they make their voices heard, I am sure the Columbia Valley Administration will be established.

We have embarked, all over the country, on the task of fully developing our resources for all the people. This is a job that will take many years to complete. It will require sound and careful planning.

But it is a work that fires the imagination. We are undertaking to use the resources we have so that they will grow, and not diminish, over the years. We intend that our children, and their children, shall live in a more productive and more beautiful land than we do.

We shall not get the job done, however, by sitting still. We must continue to take positive action. And we shall have to continue to overcome the opposition of those who do not understand the greatness of our goal, or who fear some impairment of their selfish interests.

We will meet opposition from the private power groups. Many of them—there are, of course, honorable exceptions—do not want the energy of our rivers put to use as power and sold to the people at cost.

We have already met this opposition in building Federal projects. And the people have met the same opposition in localities where they wanted to establish local public power agencies, such as public utility districts and REA co-ops.

This opposition of the private power companies is wrong. It would deny the people the benefits of low-cost power they themselves have brought about through public investment.

I am sure we will continue to overcome this opposition, just as we already have done in building Grand Coulee—just as the people already have in Nebraska, in large parts of Washington and Oregon, and in other sections of the country, where they have decided to distribute power through public bodies and cooperatives.

The benefits of public investment must be passed on to the people whose tax money is being used. Those benefits must not be diverted for private profit. We will continue to fight—and win—for that principle.

No doubt we shall also have to fight those who think expenditures for resource development are a waste of public funds. They should have disqualified themselves by now. Their fantastic claims about Grand Coulee prov that they can't tell the difference between a waste of funds and a sensible investment.

Finally, we will still have to fight those who imagine that every progressive action is another step down that famous "last mile to socialism." The facts continue to make that claim ridiculous. They called Bonneville and Grand Coulee steps to socialism. Now, I ask you—is private enterprise in the Pacific Northwest stronger or weaker as a result of those dams? Have you lost or gained industries and jobs? Do the people out here have less or more freedom? The answers are perfectly obvious.

It is clear that we must go ahead in every part of the country with our resource development work. And proceed we shall. We shall not be stopped by those who are timid or short-sighted or selfish. We shall not be stopped by discredited claims or by tattered slogans.

Our whole future depends on the wisdom and maturity we bring to bear on our national problems. We are engaged in a great struggle to achieve peace in a world beset with danger and threatened by Communist imperialism. We shall be engaged in the struggle for peace for years to come.

If we are to be successful, we must display the adventurous spirit and the firm courage of our pioneering fathers. We shall not succeed if we follow the advice of those who look backward, sighing for the fancied security of an earlier time. We must have strong minds, ready to accept the facts as they are, and to make bold, new plans based on the facts.

We shall need the same kind of vision that saw Grand Coulee Dam when there was nothing here but desert.

We shall need the same kind of steady perseverance that built this mighty dam over the opposition of men with narrow minds and faint hearts.

With that kind of vision and determination we can build a world in which men can be free under laws of their own making and can live at peace with one another.

REMARKS OF THE PRESIDENT, WALLULA, OREG., MAY 10, 1950

It certainly is a pleasure to see you here tonight, and I am more than happy to be here.

I am sorry that we are 10 minutes behind schedule, and I can't stay with you as long as I had anticipated staying.

We have had a grand day today. Everybody has enjoyed it. I hope the rest of the evening is going to be as good as the day has been.

Thank you very much for coming out.

REMARKS OF THE PRESIDENT, UMATILLA, OREG., MAY 10, 1950

I am very glad to have this opportunity to visit Umatilla. I am very much interested in the McNary Dam which is being built just a short distance from here on the Columbia River.

I was well acquainted with Senator McNary. He was leader of the minority while I was in the Senate, and one of the finest men I ever met, and I am very happy that this dam, named in his honor, is going to be completed one of these days.

It will bring power and improve navigation to this region. McNary Dam is an important unit in a series of giant projects which will harness the energy of the Columbia River for the benefit of the people.

The development of this river is one of the most magnificent undertakings the world has ever known. It is a tribute to the vision and determination of the people of the Pacific Northwest. It is also an outstanding example of how the people of the Nation can achieve great goals by using the resources of the Federal Government.

The fact is that these big dams on the Columbia River would not have been built unless the Federal Government had built them.

There are some people, I think, who would rather that they had never been built. There are some people who no matter what the Government starts out to do are against it.

I have heard so much clap-trap lately from people who are against progress that I did a little research on what these same people have been saying about new programs for the last 17 years. For the last 17 years, believe me, they have been against almost everything that was proposed. And the fact that none of their dire predictions have come true does not stop them for a minute. They just keep on predicting disaster and hope that some day disaster will overtake us so they can say, "I told you so."

Here is an example that will be of interest here in Umatilla. Back in 1937—I was in the Senate then—we passed a housing law to help the cities build low-rent public housing. At that time one of these Congressmen who was against everything said, and this is what he said: "By the passage of this bill you speed the day when your mayors will become obsolete, when your governors will be simply ornaments." Well, now, that day has not arrived yet, has it? Nothing of the kind happened. What did happen was that we got some good housing built, and during the war it came in very handy.

Then, after the war, we wanted to revive this kind of housing legislation to help relieve the acute housing shortage, and what happened—we heard the same old hue and cry.

Finally, we overcame this opposition to get a public housing law in the first session of the Eighty-first Congress last year. And we are going to get some more low-rent public housing.

(A voice in the crowd: You hope.)

Yes, we hope, and if you work hard enough, you can help me to get it. That is what I am out here for.

Some of it is going to be right here in Umatilla County. I have a report right here describing one of those housing projects, and I am very glad that you are going to get it. I am sure that the people of this community are not going to be frightened or fooled by a campaign of scare words any more than I am. I am hard to scare, as you know. We are going right on working for prosperity and peace, and if we keep up that sort of program, if we keep right at it, there isn't anything in the world can stop us from getting the kind of a peace that we want, there isn't anything can stop us from getting the proper development for this part of the world and all the rest of the United States.

I can't tell you how much I appreciate this most cordial reception for me. It has been wonderful. I have been across Iowa and Nebraska and Wyoming and Idaho and a corner of the State of Oregon, and I don't think I ever had a more cordial reception or a grander time since I have been in public service, and that has been 30 years.

I was riding around this part of the world in 1948, making a bid for your votes, and I am out here now to make a report to you as President of the United States on what I am trying to do and what I want you to help me do for the welfare and benefit of this country.

It has been a very great pleasure to be here, and I appreciate your cordiality and your kindness in receiving me this way.

Thank you very much.

REMARKS OF THE PRESIDENT, LA GRANDE, OREG., MAY 10, 1950

Thank you very much. It looks to me like everybody in this part of Oregon is here. I see three high-school bands, I believe, one of them just performed for me and did it well—just like it ought to be.

As I came into La Grande, it is easy to see why my good friend, Justice Douglas, spends so much of his time in the Wallowa Mountains. I am glad to hear that it will take a lot more than a set of broken ribs to keep him from returning to this part of the country.

Here in this area, and throughout the whole Northwest, one of your greatest assets is timber. More people in this State make their living from lumbering than from any other industry. That is important to everybody in Oregon. When the lumber industry is in good shape, that means more jobs, bigger payrolls, and better markets for farmers and businessmen.

Here in Oregon you saw what a slump in the lumber industry could mean. Last fall and winter a lot of people lost their jobs temporarily, and a lot of logging companies were in trouble for a while.

Things are back on the upgrade now. And we have got to keep the lumber industry, and our whole economy, moving upward.

One of the big reasons the lumber industry is running full blast again is that housing construction all over the country is at high levels. A great share of the credit for that belongs to the housing programs of the Federal Government. For the last 17 years we have been developing housing legislation that is helping people right now to build and buy houses.

That is important to the people who want homes. And it is important to the lumber industry here in the Northwest. Last year 11,500,000,000 board feet of lumber were produced and sold in Washington and Oregon. That is a market worth keeping. And I am glad to know that more and more processing plants are being built out here, to turn raw lumber into plywood and other finished products.

But there are other things that need to be done if the lumber industry is to stay healthy. There was a time, in the not too distant past, when it was common practice to skim off the cream of the forests in a rush to gain quick profits.

Here in the center of the ponderosa pine region, you have learned that the management and harvesting of timber must be on a sustained yield basis. That is the way to assure a permanent lumber industry.

Another thing we must do is to make sure that our public forest resources are made available to everybody on a fair and equal basis. We must not allow any monopolistic exploitation of these resources.

Over in the western part of the State the Secretary of the Interior has just issued new access road and sales regulations for some of the public forest lands. These regulations will provide the small timber operator with access to Government timber on equal terms with the large operator. Small and large operators are now cooperating with the Federal Government in making these regulations work.

I think it is a fair way to treat the use of all our natural resources: for the benefit of everybody.

A third step we need to take is to protect the forests better against fire, and to reforest cut-over and burned-over areas. I am glad to hear that the State of Oregon is making progress in replanting timber in some of the big burned-over areas. This is a tremendous task, but I hope it will be carried out vigorously.

All this work will take a considerable investment of money in a careful, long-range program. Some people seem to think it is wasteful to invest public funds in roads, and fire protection, and reforestation. That is a very short-sighted view, and I don't go along with them, because these investments will pay off tremendously in better forests in the future.

It is the same way with the expenditures we are making in our effort to keep peace in the world. It is a hard struggle, and the costs of national security are by far the largest part of the budget. But the cost in dollars and cents is nothing compared to the terrible cost of another war.

We must remain strong economically, strong in arms and strong in spirit. We must cooperate with the other free nations. Those are the surest ways to preserve the peace.

It has been a grand thing to see you here today. I appreciate very much your coming out. I have had a most cordial welcome in the great State of Oregon. It looks to me like everybody in this end of the State has at least had a chance to take a look at me, and that is what I want you to do.

I know that the people of your State, while some of them call themselves Republicans, they usually vote with the Democrats on every issue that counts. And I appreciate that very much—I appreciate that very much.

REMARKS OF THE PRESIDENT, BAKER, OREG., MAY 10, 1950

Thank you very much. You are very kind to give me a reception like this, in this great town of Baker, and I want to tell you how much I appreciate it.

You know, I know something about the gentleman for whom this city was named. He was a most remarkable man. He was the first Senator from Oregon, and he had been a Congressman in Illinois, and had helped write the Constitution of the State of California, and he came up here to make a speech for Abraham Lincoln, and they elected him to be United States Senator from Oregon in 1859.

When the Civil War broke out in 1861, he went over into Pennsylvania, and believe it or not he organized a volunteer regiment which he called the First California, and there wasn't a Californian in it.

They went down with Baker to Ball's Bluff and he got himself killed. I went to see General Marshall who lives in Leesburg, Va., on part of the old Ball farm for which Ball's Bluff was named, and the general and I took a walk over the Ball's Bluff battlefield, and we found a little plaque in the cemetery there, about 40 by 60, with 21 unknown dead buried in it. And we couldn't find Baker's grave so we took a walk about a hundred yards down in the woods and we found a little stone marker which said "Col. Edwin Dickerson was killed here." General Marshall and I didn't know whether he was buried there or not, so we got hold of your Senator from Oregon, WAYNE MORSE, to come up there and point out the place and suggest erection of a monument to that great Mr. Baker. We found out afterward that Mr. Baker was buried in San Francisco in a cemetery which he himself had promoted and made a fortune out of. So I don't know what we can do about it.

But he was a great man and I would like to see the great State of Oregon erect a marker—a decent marker—at the place where he fell. If you will read your history, you will find out something about him that will make you proud.

He was a real politician, and you know they are hard to find.

Your city, like all of the great State of Oregon, has been growing fast in recent years. That is splendid, and I hope that you keep right on growing. To do that, however, there must be continued development of the natural resources of the Northwest.

You know that there are many obstacles in the way of sensible development of your resources. You saw an example of those obstacles a few weeks ago, when the authorization for Hell's Canyon Dam—which you are advertising here today—and other projects was defeated in the Senate.

About 3 years ago, I directed the Army engineers and the Bureau of Reclamation to get together and bring in a sensible, coordinated plan for the work of those two agencies.

This was the program that was before the Senate last month. I had a logical schedule of dam construction—I spell that d-a-m—and it had a basin account to permit uniform, low-power rates. That was obviously a good program, as far as it went.

But look what happened to that program. Hell's Canyon Dam was knocked out. The basin account was knocked out. A number of other projects were knocked out, and when the bill passed the Senate, it contained only a lopsided set of projects for one agency.

That is no way to proceed. It throws the entire program out of balance. We need to have equal consideration of all resource needs—soil conservation, reclamation, the generation of power, flood control, and everything else.

I am sure we will get Hell's Canyon Dam before we quit. We have got to have it. It will add close to a million kilowatts of power to this section of the country. It will help control floodwaters, it will help bring a higher standard of living to this entire region.

We can't go on with an unbalanced approach to river basin development. We are wasting precious time and precious resources.

That is why I have recommended the one sure way to realize unified development of all the natural resources of this region, and that is through the creation of a Columbia Valley Administration.

The Columbia Valley Administration can present a single plan for the whole area, giving the proper balance to all sections and all resource needs. And the Columbia Valley Administration would be run by men from this area, living in this area, who can work with the States and localities and present to the Congress the whole picture, not just bits and pieces of it—to be done halfway or not done at all. That is sensible. It is economical. And it is the right way to proceed.

I hope that by the time I visit Baker again—and I hope that won't be too long—we will have Hell's Canyon Dam authorized and a Columbia Valley Administration set up.

Then we will be on the right road to a full, unified, and coordinated development of the rich natural resources of the Northwest. That will help us build the kind of prosperity here in the Pacific Northwest that all of us want. Prosperity here will mean greater prosperity and greater strength for the whole United States.

And I am strong for the opportunity to develop all of the sections of the United States, not just one section but all sections. They are all necessary to keep this country the greatest republic that the sun has ever shone upon. They are all necessary to give us an economic preponderance which will cause us to get a peace in the world that will last. I am working for lasting peace. I am working for a continued prosperous economy in this country, a balanced economy which will be good for farmers, be good for businessmen, be good for laboring men, and that is the only way you can have a successful government.

I want to show these totalitarian fellows that democracy—honest-to-goodness democracy is just what the word means—can work for the benefit of all the people, and not for just the benefit of a few.

I came out here so that you could understand what I am trying to do, so that you could see me and find out if I have gone high hat since you elected me in 1948.

I want you to know that I am working for you, trying my best to carry out the things which I told you I wanted to do, and in which you showed you had confidence in me when you elected me. I am trying to do the job. I am trying to do the job for the whole Nation. I am your President. You elected me. I am working as your public servant, and I am working to the best of my ability in the public interest for all concerned.

I can't tell you how much I appreciate this wonderful gathering in this town named after the first Senator of Oregon—a great man and a great orator.

Thank you very much.

REMARKS OF THE PRESIDENT, HUNTINGTON, OREG., MAY 10, 1950

Thank you very much for this cordial reception. On this trip across the country, I have been passing through some very interesting scenery along the route of the old Oregon Trail. I have been glad to see the signs of increasing industrialization in eastern Oregon, because I know that the more diversified your economy is, the better off you will be.

One matter in Oregon that concerns me is your farm situation. Since 1948, there has been a decline in farm income in Oregon, and there has been a decline in farm income all over the Nation. This decline has been nothing like the disastrous drop in farm prices which occurred after the First World War, because our farm program has cushioned the downward trend.

The laws we have passed since 1933 have kept this decline in farm prices from turning into a farm depression. There is a floor under farm prices. Our farm program has kept the markets reasonably steady, and completely free of panic.

We have farm-credit institutions to prevent the drying up of credit which farmers must have.

The rural-electrification program has helped to make farming more efficient, and farm living much more pleasant. But there are still some serious inadequacies in our farm laws. We must take positive steps to reverse the downward trend in farm incomes.

We should add some perishables to the priority list along with the other basic commodities. That is especially important in Oregon, where you produce many perishable commodities for which there is no adequate price support at present.

Obviously, we can't store up meat, milk, fruit, and things like that, as we store up wheat and cotton. Loans and purchases work fine for wheat, but they don't work well for perishables. That is why we should use the method of production payments to support perishables.

I feel now that it is high time to pay more attention to farm income, instead of merely concentrating on prices—and to pay more attention to the perishable commodities.

In this way we can move toward a greater prosperity for both the farmer and the city dweller, for their interests are interdependent.

I am just as interested in improving the situation in the cities as on the farms. I shall keep on fighting for better schools, more adequate social-security laws, and a national health program. All these measures will build up a stronger economy here at home. In securing a stronger economy we are strengthening democracy.

That is the way to peace, and that is what I am most interested in attaining.

You people here in Huntington have given me a fine welcome and a fine greeting, just as every other city I have been through has. I appreciate it more than I can tell you. It has been a most happy trip across the country. People seem to be interested in their Government. They seem to be just as interested in seeing their President as when he was running for office. I am just out here to report to you on conditions as I see them and to ask your cooperation and support in carrying through the program which I think is for the welfare of this country and for the welfare of the whole world.

REMARKS OF THE PRESIDENT, PASCO, WASH., MAY 10, 1950

I understand that this Elks lodge here was organized July 14, 1947, under the sponsorship of the Walla Walla Lodge. It started with nothing in the treasury. It now has 700 members and a $100,000. Isn't that something? I think I'll put him in charge of the Budget of the United States Government.

You know that the Elks have four cardinal principles: Charity, justice, brotherly love, and fidelity. The purpose of an Elks lodge is to make the community in the Nation a better place in which to live. I am most happy to have a part in the dedication of their new home. They have done a remarkable job here, and I congratulate them.

I am more than happy to be with you here in Pasco this evening, to help dedicate this new Elks Building. Every time I come back to the State of Washington I get a new feeling of the vast resources which this Nation possesses. As long as I am President, I will do everything in my power to use our resources in an effort to keep peace in the world.

Early this morning, over in Pocatello, Idaho, I talked about the work which the Atomic Energy Commission is planning at Arco, Idaho, for possible future industrial uses of atomic energy.

Just across the river from here, over at Hanford, there are other atomic energy works, where we are producing the ingredients of destruction. Our wartime investment at Hanford ran to $600,000,000, and we are now spending another $100,000,000 to expand and improve the plants constructed during the wartime.

Hanford typifies the strategic importance of the vast regional arsenal we have built in the Pacific Northwest. No other section of the United States is more important to the security of this country.

Not only is the Northwest important in itself, it is also the gateway to Alaska, and we hope soon that Alaska will enter the Union as a new State along with Hawaii.

We recognize the strategic importance of the Pacific Northwest. For this reason, the Navy's largest shipyard is located at Bremerton.

In the mountains to the north, the Navy has located its new $7,000,000 radio transmitter to direct its ships at sea.

Fort Lewis is the strongest Army post west of the Mississippi.

This month, two squadrons of the Eighty-first Fighter Interceptor Wing will move into Moses Lake Air Base. The latest type jet fighters will strengthen air defenses already concentrated at Spokane, Moses Lake, and McChord Airfields. On Whidby Island in Puget Sound we have one of the biggest and most important naval air stations in the Pacific.

Now I am giving you just these few examples to show you the importance we attach to this section of the country in our whole defense picture. There has been a lot of wild talk about the Northwest and about Alaska, and about what this Government expected to do with this section of the country.

This section of the country, as I told you to begin with, is considered a key position so far as the national defense of the Western Hemisphere is concerned. You need not worry about being abandoned. We have no such intention. We never had any such intention. Those rumors were put out because your President was going to pay you a visit, and they thought maybe they could make it uncomfortable for him by putting out such foolishness. You know better than that.

Installations like these cost money. It is easy for foolish people to say that we ought to slash national expenditures by cutting defenses. As long as I have anything to say about it, I do not intend to weaken the defenses of this country to meet any short-sighted cry of economy.

The money we are spending at Hanford is also one of the soundest investments this Nation can make. At the present time and in the immediate future, it is providing the United States with a means for defense while international conditions remain unsettled.

We hope the world will come to an agreement on international control of atomic energy. We have been working hard to get such an agreement for 4 years. When we finally do obtain a stable, peaceful world, the material produced at Hanford can all be turned to peacetime uses. That is what we all hope for.

You know, there have been many engines of destruction invented in the history of the world, and nearly every one of them has turned out to be of great use in peacetime.

I have always hoped, and I still hope, that this discovery which we made under the pressure of the greatest war in history will turn out to be the greatest benefactor and the greatest help to the welfare of the world that has ever come into existence. And I am just as sure as I stand here that it will.

I hope that in the not too far distant future, the full power of this great discovery can be used for lighting homes, supplying power for factories, improving land, driving ships and airplanes about the globe in peaceful trade.

Meanwhile, our national atomic energy program serves as one of the bulwarks of the free world against aggression. It is part of our whole effort to increase the strength and effectiveness of free and democratic nations, so that communism cannot succeed in its attempt to overrun the world.

I can't tell you how very much I appreciate the privilege of being here tonight. In 1948 I tried to get here, but the Columbia River and the Snake River were both on a rampage at that time and it was not possible to get to this town. I hope that won't happen again.

If we get these great projects of the Columbia and Snake Rivers constructed as they should be, we will be in a position to control floods, to furnish power, and to make this one of the greatest parts of the United States.

You know, I have a view of the future on power. This section of the world—this part of the United States—will be one of the greatest power reservoirs in the country.

I want to see the St. Lawrence River developed in the manner in which it should be developed, and the Bay of Fundy and the New England power set-up integrated something like we have here. In the Southeast we have the Tennessee Valley Authority. We are making developments in South Carolina and Georgia which will make a power development there commensurate with that section of the country. Then the southwest power development on the Colorado River, which you all know about.

If we can get the proper development of the Missouri Valley, the Mississippi Valley, and the Ohio Valley between Pittsburgh and Denver, we will have this country with a network of power that will give us a chance to develop resources unheard of in the history of the world.

Now, that is what we are working for.

Had it not been for the development of the Tennessee Valley and the development of the Columbia River, it would have taken us much longer and cost us many more lives to win the war.

I made many an investigation out here while I was in the Senate, along with Mon Wallgren, who was a United States Senator with me on that committee which made those investigations. And we learned an immense amount about the necessity for the proper development of the Columbia Valley.

I have been out here all day preaching the Columbia Valley Authority, to make this development integrated so that it will work for the benefit and welfare of the whole northwest corner of the United States. I hope you will support me in that program.

It will be a great thing for every State that tributaries the Columbia River—Oregon, Washington, Idaho, Montana. It will be for their welfare. They will like it if they ever get it done.

You have a lot of old fogies who never want to do anything progressive. That is not true of the majority of the people in this part of the world. This part of the world is always looking forward. Your ancestors who came out here and settled this part of the world had to look forward in order to make this country great.

We must keep up that spirit. That is what I am working for. I am out here to make a report to you as President of the United States on what I hope to accomplish, as I told you in 1948 I would make the attempt to do. I am not running for anything. I am just out here to make a report to you.

I may come back later and talk a little differently.

Thank you very much.

REMARKS OF THE PRESIDENT, COULEE CITY, WASH., MAY 11, 1950

Senator Magnuson, Governor Langlie, Governor Bonner, and other distinguished guests, I have two Cabinet members with me this morning, the Secretary of the Interior and the Secretary of Agriculture, so maybe we'll hold a meeting.

I appreciate most highly the cordiality with which I have been received in all these wonderful places in the States through which I have been. I am going up to Grand Coulee this morning to discuss some things in which you are vitally interested, and to explain to you how hard it is to get things like Grand Coulee done, and also to explain to you why it is that some people don't want CVA. I think the people want it—that sign says so, anyway.

Somebody told me a story about Coulee City. Some fellow in the times gone by, when they had a branch-line railroad here and a stage that ran through Bridgeport—I heard this story about several other places, so I guess it will fit Coulee, too.

This gentleman was complaining very bitterly in his diary that he never did get here on a jerk-water train in time to catch the stagecoach, and coming back he never did get back in time on the stage to catch the train, and he finally came to the conclusion that the hotel man in Coulee had made a deal with the stage and the railroads so the stage and the train never would meet. That happens in a lot of places, but doesn't happen any more. The hotel fellows these days have to put out something good because the fellow in the car can just get in and go on to the next one if he doesn't treat him right.

I want you to understand that I am enjoying this trip. I appreciate very much the fact that the people are interested in the welfare of the country, they are interested in seeing their President, they are interested in trying to find out what he stands for, and what he is trying to do.

Some 2 or 3 years ago I was out here traveling around all over the State of Washington asking for votes. I am not asking for anything now. I am here to explain to you just exactly what I am trying to do, and I am trying to give it to you so that you will understand it, without its being garbled by anybody. You are getting it first-hand from the President himself.

I want to thank you very much for the cordiality with which we have been received all over the country, through Iowa and Nebraska, Wyoming, Oregon, and Idaho; and now we are making a start in the State of Washington here this morning. I know I am going to have the same thing to say when I get out of Washington.

Thank you very much.

REMARKS OF THE PRESIDENT, WILBUR, WASH., MAY 11, 1940

Thank you, Senator Magnuson. I am very glad to be able to stop for a few minutes this afternoon in Wilbur. I have just had a most enjoyable and inspiring experience, and that was the dedication of the Grand Coulee Dam, one of the biggest projects ever undertaken by man.

One of the very greatest benefits that is coming from Grand Coulee is electric power. That power has been bringing new industries to this area, and it has beer making a better life possible for everybody around here, both in the cities and on the farms. Farmers, especially, have been helped by power brought to them by the Rural Electrification Administration.

You know, it is hard to believe but we have only had the Rural Electrification Administration for 15 years. The REA has done tremendous things for farms all over the country, and I think it is appropriate that I helped celebrate REA's fifteenth birthday today, May 11, by telling a little of its history.

Of course, I don't need to tell you how the REA operates—right here in Wilbur you have the advantage of one of the lowest power rates in the entire country. Your electric cooperative is financed by REA.

When the rural electrification program got under way 15 years ago, only 1 out of every 10 families had electricity—every 10 farm families. Now, 83 percent of the Nation's farms are electrified.

The record here in the State of Washington is even more remarkable. Over 96 percent of the farms in this State have electricity. I wish we could do that well in Missouri.

I remember very well when I first went down to the United States Senate back in 1935, how the power lobbies and the other special interests were fighting against rural electrification. I was on the special committee that investigated the public utility holding companies, and that was one of the most remarkable hearings that ever I had anything to do with. We could make it cheaper than the holding companies and the special interests said we were going to put everybody out of business, but we did not. There are more in business now than ever, and they are working in the public interest and not for some private individual.

They said that electricity was a luxury which only the rich could afford. They said that rural electrification would never be profitable. But the argument they used the most back in those days was that rural electrification was socialism. Believe me, times never change for some people.

On the floor of the House of Representatives, one Congressman said REA would produce—and these are his words—"a bureaucratic and socialistic state." Has that happened in Washington, where you have got 96 percent of your farms electrified? I don't believe you are a Socialist State. Doesn't that have a familiar ring. Some people just never learn. They are still calling projects that would help every one of us socialism.

That is why I am making this trip. I am out to tell the people the facts. You are never going to be fooled by fancy scare words.

I am more than happy to have a chance to pay this little tribute to REA on its fifteenth birthday, and I am glad to do it right here in the great State of Washington, which has taken advantage of it better than nearly every other State in the Union.

I think one of the reasons you have been able to do that is on account of the project like this one right here we dedicated this morning.

I want to thank you all very much for this cordial welcome. I appreciate it very much.

ADDRESS OF THE PRESIDENT DELIVERED AT GONZAGA UNIVERSITY, SPOKANE, WASH., THURSDAY, MAY 11, 1950

I am very glad to be here today at Gonzaga University. I appreciate very much your cordial welcome and the certificate of merit you have given me.

I have just come from dedicating Grand Coulee Dam, a magnificent structure which will bring untold benefits for generations to come to the citizens of the Pacific Northwest.

Grand Coulee Dam is an example of how we are developing and using our natural resources to create richer, fuller lives for our fellow citizens.

I often wish that creating new wealth from our natural resources was all we had to do to create a better life for our people. But a good society requires far more than progress in material things.

The good society we are seeking is based on order and peaceful cooperation, among men who share common ideals of freedom and justice. And these things are not easy to attain.

For a society is made up of men, who are often weak, and selfish, and quarrelsome. And yet, men are the children of God. Men have within them the divine spark that can lead them to truth, and unselfishness, and courage to do the right.

Men can build a good society, if they follow the will of the Lord.

Our great Nation was founded in this faith.

Our Constitution, and all our finest traditions, rest on a moral basis.

We believe in the dignity and the rights of each individual. We believe that no person—and no group of people—has an inherent right to rule over any other person or any other group. Our Government was established to secure individual rights, and to provide a means by which men working together, under laws of their own making, could promote the welfare of all.

Throughout our history, we have moved toward these ideals. In economic life, in political life, in social life, we have gone forward. We have demonstrated that men can govern themselves, individually and as a group, and can advance their common welfare.

We are continuing to move forward every day toward greater freedom and equal opportunity for all citizens. This is a purpose each of us must strive to achieve, in his daily life, and in his own community. It is a purpose which, in some cases, requires collective action, through our elected representatives in local, State, and Federal Governments.

One case that requires collective action is engaging our attention now in the national legislature. This is the problem of preventing discrimination in our country because of religion, color, or national origin. Such discrimination violates the basic moral principles of our society and our Government.

I sincerely hope that the Congress will enact legislation at this session to protect the rights of all citizens, to reduce discrimination based upon prejudice, and to insure that every citizen can participate equally in our national life.

The same moral principles that underlie our national life govern our relations with all other nations and peoples in the world.

We have built our own Nation not by trying to wipe out differences in religion, or in tradition, or customs among us, not by attempting to conceal our political and economic conflicts, but instead by holding to a belief which rises above all such differences and conflicts.

This belief is that all men are equal before God.

With this belief in our hearts, we can achieve unity without eliminating differences—we can advance the common welfare without harming the dissenting minority.

Just as that belief has enabled us to build a great Nation, so it can serve as the foundation of world peace.

Nations can live together peacefully, working for their common welfare, just as we do in our country, if they believe in the brotherhood of man, under God. Millions and millions of people, all over the world, know that in their hearts.

But many of them are oppressed by disease and poverty. And many are under the control of tyrants. These people are prevented from expressing, in their daily lives and through their governments, their belief in the brotherhood of man.

The great problem before us in the world today is how to break through the barriers

of ignorance and poverty—through the barriers of tyanny—and let the common people of the world combine their will for peace. The greatest obstacle to peace is a modern tyranny led by a small group who have abandoned their faith in God. These tyrants have forsaken ethical and moral beliefs. They believe that only force makes right. They are aggressively seeking to expand the area of their domination.

Our effort to resist and overcome this tyranny is essentially a moral effort.

Those of us who believe in God, and who are fortunate enough to live under conditions where we can practice our faith, cannot be content to live for ourselves alone, in selfish isolation. We must work constantly to wipe out injustice and inequality, and to create a world order consistent with the faith that governs us.

That is why—even if our own existence were not at stake—we would have the obligation of working abroad as well as at home to bring about the conditions in which all those who share our beliefs can work with us for lasting peace.

We must strive to defend human rights abroad as vigorously as we work for them at home. The Declaration of Human Rights, drawn up in the United Nations, is a landmark in the long struggle to protect the rights of people too defenseless to protect themselves.

We must continue the great work we have so successfully begun of getting the world's economy back on a sound basis, of helping the underdeveloped countries of the world improve their standards of living, and of establishing a system of world trade under which all nations exchange their goods and services with mutual profit.

So long as aggression threatens, we must keep our own defenses strong, and provide strong support to other like-minded nations who wish to build up their defenses.

For these are the practical, immediate ways to protect our moral values, and to expand the ability of others to put those values into effect.

In the face of aggressive tyranny, the economic, political, and military strength of freemen is a necessity. But we are not increasing our strength for its own sake.

We must be strong if we are to expand freedom. We must be strong if freemen are to be able to satisfy their moral aspirations.

It is the moral and religious beliefs of mankind which alone give our strength meaning and purpose.

The struggle for peace is a struggle for moral and ethical principles. These principles unite us with religious people in every land, who are striving, as we are striving, for brotherhood among men.

In everything we do, at home and abroad, we must demonstrate our clear purpose, and our firm will, to build a world order in which men everywhere can walk upright and unafraid, and do the work of God.

Owen Lattimore, Architect of China Policy

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 24, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, I am including as part of my remarks a very interesting article by Mr. Victor Lasky which appeared in the New York World-Telegram and Sun on Saturday, May 20, 1950. Mr. Lasky appraises the record of Owen Lattimore and points out some facts that heretofore have not been brought to light. I commend it to the attention of the membership.

The article follows:

OWEN LATTIMORE: APPRAISAL OF A CONTROVERSIAL FIGURE—THE RECORD OF HIS VIEWS ADDS FUEL TO THE DEBATE

(By Victor Lasky)

The heated controversy that Prof. Owen Lattimore is a "top Soviet spy" has served to obscure the Far Eastern expert's role in publicizing the differences between the Kuomintang and Red China.

Mr. Lattimore has never made any secret of his views, termed by Time magazine as possibly "more dangerous than a carload of spies." But he denies his voluminous writings and varied activities follow any Communist line.

He contends that any associations he may have had with Communists were in the nature of a scholar looking for facts, just as a newspaperman does.

OFFICER OF PRO-COMMUNIST GROUP

However, he has not yet explained his current association with the American Committee in Aid of Chinese Industrial Cooperatives. This group, also known as Indusco, Inc., of 439 Fourth Avenue, raises funds for Red China. It is run by pro-Communists.

Mr. Lattimore is listed as an honorary vice president. A member of the advisory board happens to be Philip Jaffe, the mysterious figure in the Amerasia case, who pleaded guilty to possessing secret Government documents. * * *

As director of the Walter Hines Page School of International Relations at Johns Hopkins University, Mr. Lattimore has helped train many of our diplomats. He has advised two Presidents. He has been consulted by the State Department.

PRESIDENTIAL INFLUENCE?

But was he the architect of this Nation's far eastern policies which critics say led to the loss of China?

Secretary of State Dean Acheson and three predecessors have stated Mr. Lattimore never influenced them. Still, Mr. Lattimore may have had some influence on Presidents Roosevelt and Truman.

In 1944 Mr. Roosevelt sent Vice President Henry Wallace to China on a good-will mission. Mr. Lattimore went along as an adviser.

Mr. Wallace has since reported that Mr. Roosevelt "urged me to take Owen Lattimore with me" because he was "one of the world's great experts on the problems involving Chinese-Russian relationships."

At that time Mr. Lattimore had been urging the formation of a coalition government in China, composed of Nationalist and Communist elements.

This was what Mr. Wallace proposed to Mr. Roosevelt on his return. What influence Mr. Lattimore may have had on Mr. Wallace has never been disclosed.

HULL IGNORED ON APPOINTMENT

By late 1946 the coalition policy was adopted by the United States, and critics maintain it did much to sell China to the Reds.

Who brought Mr. Lattimore to Mr. Roosevelt's attention?

The facts are still obscure. But in 1941 Mr. Roosevelt named Mr. Lattimore as American political adviser to Chiang Kai-shek. Cordell Hull, then Secretary of State, apparently was not consulted; neither was Marshal Chiang nor the American Ambassador to his Government.

Mr. Lattimore has testified since that he received a call from Lauchlin Currie, one of the President's "anonymous" assistants, to report to the White House.

"I don't know who suggested my name to Mr. Currie or to the President," Mr. Lattimore has testified.

Mr. Currie was an adviser to the President on Far East problems. Named by Elizabeth Bentley as a source of information for a Soviet spy ring, Mr. Currie vigorously denied the charge. Recently, Earl Browder testified he was taken to meet Sumner Welles, then Under Secretary of State, by Mr. Currie to discuss the United States Communist stand on China.

In 1946 President Truman named Mr. Lattimore to the United States Reparations Commission in Japan. When Mr. Truman announced the Japanese surrender, reporters noticed that one of two books on the Presidents' desk was Mr. Lattimore's Solution in Asia.

URGED RECRUITMENT FROM PRO-RED STAFF

From 1942 to 1944, Mr. Lattimore worked closely with the State Department as a deputy director of the Office of War Information's Pacific operations. When in Washington he used a State Department desk, according to a former OWI colleague.

On June 15, 1943, Mr. Lattimore wrote a confidential letter to OWI's acting manager, Joseph Barnes, in which he urged the recruiting of Chinese-American personnel from the staff of the New China Daily News. This New York publication supported the Chinese Reds.

Only last year Mr. Lattimore was asked by the State Department to submit his views on Far East problems. The memorandum, a portion of which the New York Times editorially called quite shocking, suggested:

The United States should get out of Korea immediately, even if it means that nation's capture by the Russians; the United States should sever all ties with Britain, France, and Netherlands in the Far East; the United States should recognize Red China immediately.

Mr. Lattimore insisted that these policies were in the "best interests" of the United States. Asked for comment, President Syngman Rhee, of Korea, snapped:

"Lattimore has no use for Korea and China as long as Korea and China are fighting communism. Anything the Soviet Union does not like would be a liability in the view of Lattimore."

But perhaps Mr. Lattimore's influence was greatest as the undisputed spearhead of the thinking of a large group of professors, writers, and lower-echelon State Department officials, particularly in the Far East Section.

TERMED COMMUNISTS CHINA'S PEACE PARTY

This group, for varying reasons, not necessarily Communist, believed in the inevitability—some in the desirability—of a Red China and, now that it exists, in the necessity of United States recognition of that regime.

They believed all through the civil war that the Nationalists were primarily responsible for China's troubles. As Mr. Lattimore put it on October 18, 1946:

"The Communists are the peace party in China. * * * They survive only because they have the support of millions of people who are not Communists. * * * The Kuomintang are the war party in China."

That Mr. Lattimore is in accord with the Communist line, particularly on Far East problems, as apparent from his record. But Mr. Lattimore claims that is not so. He points out he supported the Marshall plan, hardly anything a Red would favor.

But his support of the Marshall plan was hedged by the same reservations held by Henry Wallace. He believed that European aid should be administered through the United Nations and that it should be made available to the Soviet satellites. And he was bitterly opposed to the Truman doctrine.

Mr. Lattimore also pointed out he was in favor of Finland during the Soviet invasion.

Asked for dates of financial contributions and speeches Mr. Lattimore made for Finland, his attorney said the February 20, 1940, minutes of a Baltimore group called Fighting

Funds for Finland show that Mr. Lattimore was one of 19 persons who "have consented to serve on the committee."

MOSCOW PURGE TRIALS LIKE DEMOCRACY

But nowhere in his record can there be found published criticism of Soviet moves during the Hitler-Stalin pact. He was the editor of Pacific Affairs, organ of the Institute of Pacific Relations, and one of the editors of Amerasia at this time.

In 1938 he wrote in Pacific Affairs that the results of the Moscow purge trials "sound to me like democracy." And he has admitted publishing articles by many left wingers and Communists.

"Throughout this period there was nothing reprehensible about the occasional publication of significant left-wing views," Mr. Lattimore said.

Amerasia, a magazine espousing Soviet aspirations in the Far East which Mr. Lattimore helped found, was edited by a Communist, Philip Jaffe, who in 1945 was arrested with five others in a case involving the theft of Government documents.

The night before the arrests two of the defendants visited Mr. Lattimore's Maryland home. Mr. Lattimore said they came to discuss a forthcoming book by one of them.

But Mr. Lattimore denies any connection with the so-called Amerasia case. He said he hadn't seen Mr. Jaffe since 1941, although both are connected with Indusco. He said he first met Mr. Jaffe in 1937 when they traveled to the almost inaccessible Yenan, then the Red Chinese stronghold, to interview leading Chinese Reds.

However, Mr. Lattimore testified under cross-examination that in the summer of 1936 his secretary was Harriet Levine, wife of Ch'ao-ting Chi, a Comintern agent whom Red China is trying at present to seat in the United Nations.

Miss Levine is Mr. Jaffe's niece.

SUPPORTED ACTIVITIES OF PRO-RED GENERAL

Mr. Lattimore also sponsored the activities of Feng Yu-hsiang, China's so-called Christian General, who perished in a fire aboard a ship bound for Russia.

General Feng, who in 1947 rejected Chiang's demand he return to China, became a pet speaker at pro-Communist rallies here, at which he denounced Marshal Chiang as a "reactionary dictator, whose rule must be overthrown."

Although Mr. Lattimore claims to have been the constant butt of Communist attacks, the record shows that his friend, Frederick Vanderbilt Field, the millionaire Communist, praised him in 1946.

The Daily Worker has referred to Mr. Lattimore's writings as "stimulating." And Soviet Russia Today, foremost pro-Soviet publication in the United States, reviewing his Solution in Asia, declared:

"It is interesting to note that Trud, the Soviet trade-union newspaper, has given Solution in Asia a long review and has quoted extensively from it.

"It must be a pleasure to the Russians to read an American book about Asia which recognizes the solid basis for Soviet prestige there."

Secretary of Defense Louis Johnson

EXTENSION OF REMARKS

OF

HON. HARLEY M. KILGORE

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, May 25 (legislative day of Wednesday, March 29), 1950

Mr. KILGORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Louis Johnson: Bulldog of United States Defense," by Tris Coffin, published in the June 1950 issue of Coronet magazine.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LOUIS JOHNSON: BULLDOG OF UNITED STATES DEFENSE

(By Tris Coffin)

United States Secretary of Defense Louis Johnson, a big restless American with enough vitality and endurance for a dozen men, has finally landed the job he sought for years. The job is to make sure you and I are not destroyed in a sudden attack by an enemy equipped with the hideous weapons that modern science has produced.

As a result, Johnson is the second most powerful man in Washington, a top architect of Allied policy, and an administrator described by Herbert Hoover as the best in the Truman administration.

However, the Gridiron Club, famed group of newspapermen in Washington, recently described Johnson's work in a parody of the popular song, A Wonderful Guy: "All by myself I am the whole Army; I'm the Navy, and Air Force, too. I nod my head and the Congress plays dead, and now I have the White House in view."

The Secretary, who is called Louie or Colonel Johnson by friends, is tall and well built, has eyes that look out shrewdly and directly, and a voice which is surprisingly soft. Like an old-time Army top sergeant, he sums up men and events swiftly, and makes blunt decisions.

Such traits are not recently acquired; all his life, Johnson has led the fight himself, rather than give orders from the side lines. As corporation lawyer, American Legion politician, Assistant Secretary of War, and Democratic Party fund raiser, the present chief of United States defenses has thrived on hard work and conflict.

Today in Washington, the world capital where sneak plays and hidden-ball tricks are accepted strategy, Johnson is the rare exception. He prefers the old-fashioned, head-down, line buck. An intimate summed it up good-naturedly when he said, "Louis would rather try to kick his way through a brick wall than climb over it."

Most of Washington's bureaucratic generals never enter a battle without elaborate feeling-out tactics. These might include a planted story in a Washington column, a remark dropped at a cocktail party, or an attempt to gain a rival's confidence by profuse friendship. But not Johnson. He has no cultivated friends among the press; he does not go to cocktail parties.

Another significant clue to his personality is a casual remark he made during the recent bitter attack on him by Navy admirals and their adherents. A friend asked: "How can you be so calm? Congress is after your hide. Newspapers and radio commentators are demanding your resignation."

The Secretary said quietly, "You forget. I was vaccinated in Washington before."

This is an understatement. Johnson went through a cruel ordeal as Assistant Secretary of War from 1937 until the summer of 1940. During that period, President Roosevelt felt he needed in the "Little Cabinet" a figure to represent the growing clamor among veterans' groups for rearmament and to balance the isolationist tenor of some leading New Dealers.

So Roosevelt selected Johnson, ex-National Commander of the Legion, and a minor figure in Democratic politics. Johnson was supposed to sit quietly, take orders, and keep the Legion off the administration's back. In this job Johnson failed gloriously, as witness this story, never told before:

Early in 1940, a memo was submitted to Assistant Secretary Johnson by Col. James H. Burns, today a major general and Johnson's geopolitician. The report said war with Germany and Japan was inevitable, and that the United States would need a million-man army and some $9,000,000,000 for arms.

Johnson read the report carefully, turned to Burns, and said, "This is good. Take it down to the general staff and tell them I want it approved in half an hour."

The program was initialed within half an hour and Johnson bore it triumphantly to the White House for an historic meeting. He outlined the plan while Roosevelt puffed thoughtfully on a cigarette. Harry Hopkins sat in a corner. Gen. George C. Marshall, Chief of Staff, listened intently. William S. Knudsen, the automobile production wizard and later codirector of the Office of Production Management, nodded at each recommendation.

When Johnson finished speaking, the President said: "I think in big terms, but this is too big. The American people will say I am leading them to war."

Knudsen, who had been primed by Johnson, spoke up in a voice heavy with the accent of his native Denmark: "Mr. President, do you want planes?"

"Yes, Bill; but not $9,000,000,000 worth."

Knudsen kept on stubbornly: "You want planes. I need money."

Sighing, Roosevelt said: "All right. I'll accept the plan as far as planes are concerned."

The industrialist plunged on: "Mr. President, do you want tanks?"

Roosevelt looked quizzically at Johnson. Then he said: "I approve your program in toto. But let me start with a smaller figure. You make this less than five billion, and I can sell that to the public."

All during the prewar era Johnson was persuaded by Roosevelt to play an unhappy game of deception. The President feared the vigorous intervention policies of Johnson would injure him politically if he openly supported the Assistant Secretary. Also, Roosevelt was loath to fire Secretary of War Harry Woodring. So the President told Johnson to report directly to him, but to come in the side door. Meanwhile, key administration officials concerned with preparedness were told to cooperate with Johnson.

A sample of Johnson's technique was the way he got American arms to the British after the bitter defeat at Dunkirk. The Assistant Secretary insisted that a large quantity of American Army rifles be declared surplus and sold to Britain. Woodring refused to approve the deal.

The Assistant Secretary waited until Woodring was out of town. Then he declared the rifles surplus and ordered them sold to Britain. With this off his chest, he went to the White House, reported what he had done, and said, in jest: "Mr. President, if I have violated the law, I would like your promise of a pardon—in writing."

Roosevelt wrote a chit, "Louis, if you go to jail, I'll go with you."

The President, however, did not always back up his hard-driving Assistant Secretary of War so solidly. This was due to a curious combination of Johnson's own ambitions and the President's faculty for appearing to promise the moon with green cheese. The moon, to Johnson, was to get the title of Secretary of War. Roosevelt later added the green cheese by suggesting in an impulsive moment that Johnson would make an ideal Vice President for the 1940 ticket.

Johnson took both these promises seriously. His first jolt was at the Democratic National Convention in July. Cheerful and expectant, he strode into the hotel room where Hopkins and the city bosses were

picking a Vice President. The men looked up with glazed, weary eyes, and one is reported to have said, "Oh, my God, another hopeful."

The left wing of the New Deal feared Johnson, whom they glibly labeled an American Legion conservative. They cut his throat politically, and Henry A. Wallace was nominated for Vice President.

But this was only a warm-up for the big disillusionment, the one which so toughened Johnson that he can now say calmly, "I've been vaccinated in Washington before."

A few days after the convention, Johnson was called to the White House, presumably to be appointed Secretary of War. It was a tense gathering. Steve Early, the White House press secretary and Johnson's one steady friend in the inner circle, looked glum. Roosevelt was too friendly.

Felix Frankfurter, a New Deal idea man before he became a Supreme Court Justice, had sold a great thought to the President. If Roosevelt, he argued, appointed Republicans as Secretaries of War and Navy, the GOP would be seriously weakened in the campaign.

The news was broken to Johnson at this White House meeting. Anger flashed in his eyes, his fists knotted. Bernard Baruch went to him and said gently, "Son, don't do anything you will regret later. Keep your temper."

On July 25, Johnson handed in his resignation. Then, bitter and lonely, he left Washington on a train for the West. He was followed by his friend Early, who said soothingly that no one would blame Johnson if he rocked Washington by revealing the indignities he had suffered. But he would be a bigger man if he took his disappointment in silence.

Johnson accepted the wise counsel. But from that day, he worked to be, ultimately, boss of the American Defense Establishment.

Actually, the tough job of Secretary of Defense is almost tailor-made for Johnson. As a heavyweight boxer at the University of Virginia, he could outfight any man, and did. At 26 and a young lawyer, he was a hustling Democratic floor leader and committee chairman in the West Virginia Legislature. A year later, he was fighting through the Meuse-Argonne offensive of World War I.

Returning home as a colonel, he helped organize the Legion and rose to be commander in 1932. Off and on, Roosevelt brought him to Washington for public and political chores. His longest stretch was as Assistant Secretary of War from 1937 to 1940. His last mission for Roosevelt was to India as the President's personal representative. Johnson brought home the friendship of India's Gandhi and Nehru.

In the 1948 political campaign, Johnson pitched in and raised money for what many thought was a hopeless cause, the reelection of Harry Truman. He was rewarded by nomination for Secretary of Defense on March 3, 1949.

Johnson has done a remarkable job in two fields—military strategy and administration. He has also acquired more enemies than all the rest of the Cabinet combined.

When Johnson came to the Pentagon Building last year, the Joint Chiefs of Staff were deadlocked on strategy. The Air Force was preaching that an armada of B-36 bombers, capable of striking any target in the world, could win a war. The Navy retorted that giant aircraft carriers, surrounded by protective warships, were the secret to victory. Meanwhile, the Army insisted that foot troops were needed to win objectives and hold them.

Bluntly, Johnson told the Joint Chiefs: "We are not going to dissipate our strength by having two or three different strategies. That will eat up money we can't afford to waste." Then he laid down the law.

The B-36, or any later model of long-range bomber, would be the global striking force to retaliate against surprise Soviet blows. (The hydrogen bomb, which Johnson argued for in the recent wrangle within the administration, could burn Moscow to the ground.)

Ground troops of our European allies should be equipped and trained to hold against Russian tanks, infantry, and bombers. We should be willing to accept as allies any nation without aggressive aims, regardless of its politics. This would include both Communist Yugoslavia and Fascist Spain.

The American Army should be kept alerted, so that it could be enlarged, equipped, and sent to vital points in the shortest possible time. The role of the Navy was to convoy troops and supplies, and keep the seas free of enemy submarines.

To make sure there was no backsliding, Johnson halted construction of the Navy's super-aircraft carrier. He stood stonily and calmly while being excoriated by the admirals and their friends. He defied the wily chairman of the House Armed Services Committee, CARL VINSON. The only concession Johnson made was to allow the Marines to remain as a separate elite force.

The other side of his shield, the administrative side, has earned Johnson both applause and epithets. The Secretary cut $1,200,000,000 from the defense budget, and lopped 141,300 civilian employees from the payroll. The mere thought of such mayhem would make most politicians shudder, since each of the 141,300 has a Congressman or relatives who are loyal party workers.

Characteristically, the Secretary announced his reforms at an open meeting, to which he had invited all Senators and Congressmen whose districts would be affected by economies. They came with fire in their eyes. He outlined the cuts and said firmly, "I personally will tolerate no WPA in defense."

Johnson could not have carried his economy program through without a well-knit team of assistants. His chief advisers include Under Secretary Early, the master diplomat who has saved the blunt Secretary from many a blunder, and Louis Renfrow, a jovial Reserve officer and friend of President Truman for more than 30 years.

But even with Renfrow browsing around the White House, the palace guard slyly plants stories that Johnson is on the President's black list. The reason for these rumors is the suspicion, which Truman takes with a grain of salt, that the Secretary of Defense is running all out for the Presidency. To a friend who recently asked him point-blank whether he was a candidate, Johnson replied candidly: "When I am through with this job, I couldn't run for dog catcher!"

Johnson is a realist. He would like, of course, to sit in the White House. But in his heart the Secretary knows the chances are dim. He has enemies in every hotel lobby, every cocktail salon, every politicians' stag party in Washington. He is a conservative in an administration that proudly invites the label of "welfare state."

Although Johnson's name appears daily in the newspapers, the door is firmly closed on his private life. He does not drink with "the boys," and he avoids Washington society. Every week end, weather permitting, he flies into a different life at his home in Clarksburg, W. Va.

His first act at home is to walk alone beneath the trees. The gardens are full of wild flowers, and orchids flourish in the greenhouse.

An acquaintance, seeing the blooms for the first time, asked Johnson curiously, "How long have you gardened?"

The aloof mood left him, replaced by a boyish grin. "From childhood. The first money I ever made was from selling beans I'd grown."

A photograph in Johnson's office gives another glimpse beneath the surface. It is the sensitive face of a philosopher, Pandit Nehru, Prime Minister of India. The inscription is "To Louis, in friendship."

At the end of a day, in the early evening, Johnson will walk to his office window. There he will stand quietly, looking at the Jefferson Memorial across the Potomac River. Then, cheerfully, he will stride into the outer office where secretaries are locking up their desks and say heartily, "Can I give anyone a lift over the bridge to Washington?"

Pass the Atlantic Union Resolution Now

EXTENSION OF REMARKS

OF

HON. JOHN R. WALSH

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 25, 1950

Mr. WALSH. Mr. Speaker, the Members of this House are gratified I am sure at the recent success of the Secretary of State in London. It has resulted in definite steps toward increasing the security of the Atlantic area. Twelve nations cannot effectively build a collective defense unless their efforts are under the guidance of some permanent body equipped to coordinate their efforts. Such a body is now to be created, consisting of the deputies of the foreign ministers and charged with considering forces and their costs "as one and not separate problems."

Twelve nations cannot economically build a collective defense if each of them maintains balanced forces. That leads to wasteful duplications which the Atlantic democracies cannot now afford. For efficiency in defense, as in business, specialization is necessary. The Atlantic Council has now reached an agreement on the necessity for "balanced collective forces" instead of balanced national forces, which is another step forward in defense of the area which is the heart of our modern civilization.

These are steps in the right direction, toward integration of the defense and the power of the Atlantic area. But, Mr. Speaker, they are only steps, steps which are actually dwarfed by the needs and the dangers we face. It is well to be gratified by the fact that they are being taken. But it would be folly to believe that they are enough.

There is not much time left before the threat to the Western World will become much more acute than it is now. Competent observers have pointed out in the press that Russia's military preparations will be completed by 1952 or 1953. By 1952 it must be expected that Russia will have enough atomic bombs to inflict devastating damage on the cities and war industries of the West. In this same year, 1952, the Marshall plan will end and our own country will be engaged in a presidential election. At that time it will be particularly vulnerable to Soviet propaganda and cold-war offensives.

There appears little possibility, indeed, that the steps taken at London and their further implementation by diplomatic methods will produce adequate defense for security by 1952. Something more, something broader, more comprehensive, and more conclusive is needed if we are to surmount the developing crisis of the Western World.

To appreciate this, Mr. Speaker, it is necessary to outline briefly some of the things which the policies agreed upon at London, and even their further implication, will not achieve.

These policies are essentially military, geared to the hope of forestalling a hot war. They do not meet the pressing problem of the cold war. The Secretary of State himself has warned us that we are in a situation where we could lose without ever firing a shot. Furthermore, because these policies are primarily military, they play into the hands of those groups in Europe who are advocating even more vehemently withdrawal into a neutral position as regards Russia and the United States. To this extent, these steps may tend toward disruption of the Atlantic community.

These policies, morever, do not rebuild the economic strength of western Europe; at the best they will reduce the drain on European economic strength caused by rearmament. Yet, until the people of western Europe, who are more numerous than we Americans, have regained economic strength, the United States must carry a disproportionate share of the total burden of Atlantic defense.

These policies, furthermore, do not appear likely to bring about more than a partial integration of Atlantic defense during the next 2 years. It is most unlikely that unity of command, full unification of forces, and complete standardization of weapons and procurement can be achieved by diplomatic methods during this short period.

If, then, policies are inadequate to safeguard our security and deal effectively with the cold war, what policy would be adequate? Mr. Speaker, there is one policy open to us now which would provide an over-all and comprehensive answer to these problems. It is a policy of democracy rather than diplomacy, set forth in companion resolutions which were introduced into the House on July 26, 1949.

This resolution, which has been given extensive hearings by the Foreign Affairs Committee, would explore the possibilities of integrating the Atlantic democracies into an Atlantic union. The resolving clause reads as follows:

Resolved by the House of Representatives (the Senate concurring), That the President is requested to invite the democracies which sponsored the North Atlantic Treaty to name delegates, representing their principal political parties, to meet this year with delegates of the United States in a Federal Convention to explore how far their peoples, and the peoples of such other democracies as the convention may invite to send delegates, can apply among them, within the framework of the United Nations, the principles of free federal union.

An Atlantic union would more than repair the deficiencies of our existing diplomatic policies which I have outlined above. It could bring about rapidly and completely unity of command, unification of forces, standardization of weapons and procurement, and a maximum of specialization. All these results would lead to extensive savings in defense costs.

Creation of an Atlantic union, moreover, would rapidly lead to the rebuilding of the economic strength of western Europe. The establishment of one huge economic area of more than 300,000,000 people would provide Europeans with a huge new outlet for industrial production. It would open the way to a mighty flood of private capital to modernize and increase their productive capacity, as former Under Secretary of State Will Clayton has testified. As a result western Europe would become able to bear its proper share of the union's defense.

Such a union would greatly decrease, and perhaps eliminate, existing fears of a third world war. The union would be too strong to be defeated by war, so strong that it need not fear attack, as former Secretary of War Robert P. Patterson has stated. It would, moreover, increase its strength and expand the frontiers of freedom as it included additional free peoples by common consent.

The union's strength, increasing prosperity and the expansion of freedom it brought about, would rapidly turn the tide in the cold war. It would win the minds of men everywhere by affording them a hope of ultimate participation. Communists within it would shrink to an insignificant minority while Communist propaganda beyond the iron curtain would lose its present appeal. The democracies would obtain and keep the initiative as they spread freedom over the face of the earth, as peoples outside the Atlantic area sought to create freer institutions in order to become eligible for membership and turned to the union more and more for markets and investments. Soviet Russia, unable to attack the union, would be compelled to devote more and more of its energies to maintaining its grip on the restive populations it now controls.

At the same time, the influential European movement toward neutrality would recede. This movement is based on military fears; its participants aspire to economic unity. The union would be political and economic as well as military, affording them what they seek and removing the existing basis for their fears. Finally, the union could furnish an enduring solution to the problem of Germany by including the western Germans among its peoples at a relatively early date. This would terminate the danger of another German dictatorship and enlist German strength and skills permanently on the side of the west.

Mr. Speaker, Atlantic union is the policy which the developing world crisis makes urgently necessary. Nothing less is adequate to meet the problems with which we are faced. Anything less means growing danger from the cold war, growing risk of a third world war, and a growing menace to the cities of our country and of western Europe. Anything less is likely to be too little and too late.

Some Members of this House may ask, "Is it not already too late? Is it not too late today to form an Atlantic union?"

Mr. Speaker, the fact that such a question can be asked is in itself a compelling reason for early action, for passage of the Atlantic union resolution at this session. If we do that, we shall not be too late.

Passage of the resolution at this session would enable the President to convoke the convention it proposes, either by the end of this year or early in 1951. By the end of 1951, it is true, the convention might still be in session, for its task will be exceedingly complex. But by that time it will at least have completed much of its spadework and be well on its way to concrete proposals for union.

By the end of 1951, accordingly, if not before, the fears and frustration of the free world will have been replaced by hope and confidence, and the eyes of the rest of the non-Communist world will be focused upon the convention. These results alone can turn the tide in the cold war. Epoch-making events cast their shadows ahead.

Communism everywhere will be forced upon the defensive. Its leaders in the Kremlin will no longer be able to hope that they can split the Atlantic community, since peoples engaged in discussing union will stand together under threat or even attack. For this reason, the convention alone will reduce the danger of war. It is likely also to modify the political warfare which the men in the Kremlin are waging against us, since they will realize that the more aggressively they act, the more they will impel the democracies toward union.

We must not overlook, moreover, the beneficial effects which the convention will have upon our foreign policy. All further steps toward Atlantic integration by diplomatic means will be easier to carry out if the Atlantic democracies are exploring union. Constructive action is promoted by an atmosphere of hope. And all other governments outside the iron curtain will be more open to the views of our diplomatic representatives if they see the United States and the other democracies exploring a union which would transform the destiny of mankind.

I wish to stress here that passage of this resolution, House Concurrent Resolutions 107–111, would not obstruct our foreign policy. The Marshall plan, the implementation of the Atlantic Pact, and our manifold diplomatic activities in all parts of the world would continue. For the reasons I have outlined above, passage of the resolution would facilitate our foreign policy besides providing our Government with an electrifying idea with which to win the minds of men.

Passage of this resolution would not commit the Congress or the American people to do anything more than to explore Atlantic union. If the convention should, as I believe it would, report

out concrete proposals for union, these would, of course, require the acceptance of the Congress and the American people in accordance with our constitutional procedures.

Finally, Mr. Speaker, the voice of the people, the people we represent, is beginning to call for this action. Far-seeing editors of some of our leading newspapers have during recent months called for exploration of Atlantic union. The Gallup poll, released today, provides some very striking figures on this growing trend of public opinion. According to this poll, 72 percent believed it a good or fair idea for the Atlantic Pact countries to work out a closer relationship or union, while only 14 percent thought it a poor idea. Furthermore, 44 percent of the public believed it a good or fair idea for the United States to join with these other countries in a federal union—that is something like the way the 48 States in this country are joined together, whereas only 41 percent throught it a poor idea.

If 44 percent, comprising 52 percent of those expressing an opinion, favor joining a federal union comparable to our closely integrated United States, how many more would favor passage of a resolution merely to explore the possibilities of creating a union likely to be far less closely integrated than the United States?

Mr. Speaker, in passing this resolution we have nothing to lose and a world to win—a world of peace, prosperity, and expanding freedom. We, the Congress, cannot escape history and we should not evade our responsibility to the American people. If we fail to pass the Atlantic union resolution at this session, we will be turning our backs on our responsibility, taking a chance with the destiny of our country and leaving the American people to rely for their safety upon diplomatic methods which have proved inadequate. We must pass this resolution now. We will then have done our part, as representatives of the people, to safeguard our country and to guide it onto a broad open way leading to ever-increasing welfare, happiness, and freedom.

Rent Control

EXTENSION OF REMARKS
OF
HON. BRENT SPENCE
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 25, 1950

Mr. SPENCE. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial which appeared in the Louisville (Ky.) Courier-Journal of May 20, 1950:

A SENSIBLE COMPROMISE ON RENT CONTROL

BRENT SPENCE'S record on rent control is such that one is inclined to take at full value his current analysis of the subject. Compromise, he says, is the order of the day—and a compromise rent-control bill is the only one that has a chance of being passed by Congress.

The compromise endorsed by the House Banking Committee and its chairman seems a reasonable one. Its local-option provisions would put squarely up to individual city governments the question of ending all controls June 30, 1950, when the present act expires, or of extending them for 6 months beyond December 31, 1950, when, under the new measure, all controls would end unless the people or the governing bodies of individual cities voted for a further 6-month extension. In the meantime, of course, if the economic or political reaction warranted, Congress would have time to think again.

In putting rent control into the hands of local officials and local voters, the new bill is a grass-roots improvement over the present arrangement whereby cities must obtain permission of the State government to decontrol. In some cities, beyond doubt, controls would be dropped precipitately. In others, where the lack of rental housing for low-income groups is great enough to produce tangible ballot-box pressure, they would be retained.

From the lobbying activities of their mayors and union leaders, it seems likely that most big cities would retain controls. The extent of Louisville's shortage has long been disputed, but we suspect that it is still great enough to deter the board of aldermen from any precipitate action in removing the Federal ceilings. Experience in cities which already have decontrolled indicates that rent increases would be highest for those least able to pay, and since low-income groups here of necessity have long been bypassing the boasted abundance of quarters available at $75 to $100 a month, aldermanic action could scarcely be justified before a factual survey showed that there was indeed no longer a shortage of low-rent housing available for those thousands of Louisvillians making $50 a week or less.

There is still some doubt, of course, whether even a compromise rent-control bill will be approved by Congress. Some landlords admittedly have suffered economic injustice under rent control before remedial steps were provided by law, and almost all object, understandably, to having their business singled out for price regulation while others are free to charge whatever they think the traffic will bear. But the whole principle of rent control resulted from a war-caused shortage in which the old element of competition for renters had disappeared completely. Until that element is restored there will remain not only the social and economic necessity but also the political wisdom of controls.

That nonpartisan belief, though often attacked as socialistic, was ringingly reaffirmed by the Republican Legislature of New York this spring, and Gov. Thomas E. Dewey, not an unambitious man, took open pride in the fact that the Republican act was much more stringent than the formula offered by his Democratic opposition. Most Congressmen in this election year, we suspect, will be moved at least toward local-option compromise by this example of grass-roots republicanism.

Expenditure of Public Money

EXTENSION OF REMARKS
OF
HON. HUGH BUTLER
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Thursday, May 25 (legislative day of Wednesday, March 29), 1950

Mr. BUTLER. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an editorial entitled "State Spenders Are Active," published in the Omaha Daily Journal-Stockman on May 22, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

STATE SPENDERS ARE ACTIVE

Figures recently released by the Census Bureau indicate that the spending bug does not confine its nibblings to the Washington bureaucrats, politicians, and free riders, but rather finds equally lush pickings under the domes of our State capitols. The 48 State governments spent $791,000,000 more than they took in during the last fiscal year. The total spending figure, around $11,782,000,000 for all States, constituted a 13-percent gain over the preceding year and close to a whopping 97 percent more than in 1945. With the exception of bonus payments to veterans, which dropped off somewhat in 1949, every major component of State expenditure showed an increase, the Bureau reports. The many functions lumped under the vague heading of "State operating expenses" accounted for nearly half of the total amount spent and exceeded the previous year by 14 percent.

Seven of the forty-eight States, however, did not follow the pack into the throes of debt and deficit. Rather, they managed to keep their financial legs on solid footing and stay within their incomes. These included Illinois, Nebraska, Michigan, Connecticut, New Jersey, New York, and Rhode Island.

While the spenders in Washington make the collective States look like amateurs by comparison, it is quite obvious that easy-money policies at the public's expense are in force all up and down the Government line. As any family head knows, running into debt is at best a very poor temporary solution to financial problems, and invites bankruptcy when continued in times of prosperity. It is little wonder that the remote Federal Government gets away with slipshod finance when the States, which are much closer to the voter and taxpayer, are permitted to continue such lavish spending beyond income.

New GI Bill Housing-Loan Provisions Are Revealed—VA May Make Loans

EXTENSION OF REMARKS
OF
HON. EUGENE D. O'SULLIVAN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 25, 1950

Mr. O'SULLIVAN. Mr. Speaker, the following interesting news item was taken from the Broken Bow Chief, of Broken Bow, Nebr., and I believe presents some information which is of value to veterans throughout the Nation, as well as lawyers and other people who want to be regarded as well-informed persons; it should receive wider publicity than it has received heretofore:

LINCOLN.—More than 105,000 World War II veterans in Nebraska who have not yet availed themselves of loan-guaranty rights provided in the GI bill will find their home-loan benefits greatly enhanced by provisions contained in the Housing Act of 1950, a law recently signed by the President.

Some of the important changes in the GI home-loan program which will result from the new law were outlined today by Ashley

Westmoreland, Lincoln regional office manager. Westmoreland said the regulations and procedures necessary to place the new provisions into effect are now being drafted by the VA, and will be issued as soon as possible.

The VA official said principal changes in the GI home-loan program include:

1. Increasing the amount of the VA's guaranty on an eligible veteran's home loan to 60 percent of the loan up to a maximum guaranty of $7,500. Previously, the VA could guarantee 50 percent of the loan up to a maximum of $4,000.

2. Making unremarried widows of veterans who died in service or from service-connected causes after discharge, eligible for the GI loan benefits to which their husbands would have been entitled.

3. Combination Federal Housing Administration-GI loans to veterans—which currently represent about one-third of the volume in veterans' loans—will be eliminated after next October 20.

4. The maximum period of time over which home loans may be made repayable is extended from 25 years to 30 years, thus providing lower monthly payments.

5. Effective in mid-July, the VA is authorized to make direct Government loans at 4 percent to eligible veterans in certain areas where 4 percent home financing is not available from other sources. A total of $150,000,000 was made available until July 1, 1951, for direct-loan purposes. No direct loan may exceed $10,000 and veterans must meet all the qualifications for a regular GI loan, including credit and income requirements.

Westmoreland said the law also grants the VA authority to establish certain minimum construction requirements for new construction; permits the VA in certain circumstances to restore loan-guaranty rights to veterans who used their entitlement to purchase property which later is taken through condemnation or is destroyed by fire or other natural hazard; directs the agency to issue regulations limiting fees and other charges which may be made against builders and veterans in connection with the construction and sale of GI loan-financed homes, and includes provisions to make GI loans for farm dwellings easier to obtain.

Since the GI-loan program started in late 1944, more than 14,500 veterans in Nebraska had been granted GI loans for home, farm, or business purposes. The loans approved totaled $60,414,820.

The VA official said the deadline for most veterans in applying for GI loans is July 25, 1957.

United and Positive Policy in the Struggle Against Commmunism

EXTENSION OF REMARKS
OF
HON. IRVING M. IVES
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Thursday, May 25 (legislative day of Wednesday, March 29), 1950

Mr. IVES. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an important excerpt from the address by the Reverend Laurence J. McGinley, S. J., president of Fordham University, on the evening of Wednesday, May 24, at the annual meeting of the New Jersey Club of the Fordham University Alumni Association in Newark, in which Father McGinley makes a strong plea for an end to petty recrimination and partisan maneuvering in favor of a united and positive policy in the struggle against communism.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

There is an hour, in which to each nation is offered its time of greatness. For our country that time is now. In a few short years history will judge all of us for the steps we took, and the steps we did not take, in this world crisis. The complications and excitements that bewilder us now will be seen in proper perspective then. To see them now with that same clarity, to disregard now the minor irritations and to foster the ideas and actions and attitudes which will save the world—this is our challenge. If we meet it, we will have had our finest hour.

Any hour of crisis, even the greatest, is made of many smaller crises. One such recently was of concern to Fordham. I was convinced and I remain convinced that it was necessary to defend Professor Budenz as a sincere and a courageous man. I do not wish to prolong that issue, however, nor do I intend my defense of the personal character of Louis Budenz to be used by anyone for partisan advantage or political profit.

Rather I am concerned with the far more important fact that if ever there was a challenge which should carry us above the interest of any party, which should make us disregard economic advantage, which should even extend our vision beyond strategic military position, it is the challenge of the world today. In such an hour it seems to me that the attitudes demanded of all of us are: The spirit of unity, a positive approach, and a spirit of generosity. In particular, I would voice a plea for a really international mentality, positive, large-minded and bipartisan in the sense that it is truly nonpartisan.

Only if such an attitude is profoundly shared in our policy toward other countries can we afford the divisions of partisanship on our own home scene. And only then will these divisions maintain their proper perspective. Division in a crisis is the most serious disease that can attack us. Our need now is not for consuming fear and suspicion, but for those great and liberal decisions which will alone give spiritual focus and energy to a people. Our need is for respect toward those of all parties who have the responsibility to make these decisions.

All will agree, though with various measures of alarm, that communism is a most serious threat to our Nation and the world. The question is, how best to fight it? The answer calls for vision and perspective. Certainly the Christian conscience, borne down by the weight of the tasks to be done—both the good things to be built up and the evils to be cured—will place the positive side of the struggle in the forefront. The unity of our people, the unification of Europe and its continued economic rehabilitation, the Marshall plan, the point 4 program for undeveloped countries, the United Nations prudent measures of defense, presentation of a positive spiritual idea which will appeal to the whole world because it solves and transcends purely politico-economic problems—these are some of the great things to be done.

Anything else, though it may have its place, must never overshadow such a united attitude, generous and positive. Investigations and trials may and at times must have their place in the picture. They should never obstruct the serious international ideals and work of government. Even the difficulty of China should be kept proportionate to the whole vast crisis of which it is only a part. It should be faced on the level of the crisis itself, as a national responsibility, not a partisan adventure. It would be tragic indeed if we allowed excessive concern for the elements of any one failure to render us incapable of the far greater achievements which still remain before us. Our obligation is to total wisdom and it is a grave obligation on the conscience of all men of good will.

As far as the political attitude of the Catholic Church is concerned, no single man or group is entitled to speak for her. Therefore, neither do I. She is above the political order and is nonpartisan in the most spiritual sense of the word. She belongs neither to the right nor to the left. Neither is she conservative. The church will always exercise the judgments of God on events and programs, so far as they touch the world of faith and morals. She is compelled only by her own program, which forces her to be interested in the common good of all nations.

The individual Catholic is free to choose in the political order and no one dictates to him. But he is not free to leave behind him the large and positive spirituality of the Christian. He should know instinctively that it is not enough to be anti-Communist. He will always be interested in the poor because there are so many of them. He will be concerned with justice. He will criticize boldly—but he must always be more than a critic.

If our Nation is to accept the opportunity for leadership we have before us now, we must realize that the risks are frightening. But we must also realize that what is at stake is not the protection of one or even many interests in many nations. All over the world men are becoming aware of their potentialities as men. They are struggling to realize these potentialities in new forms of political and social life. This struggle is strong in the West and it is doubly strong among the peoples of the East. What is at stake in our moment of greatness is man himself: the dignity and perfection of the human person.

In such an hour, we as Americans and Catholics have a double obligation, of patriotism and religion, to keep our vision clear. It is my own sincere belief that we as American Catholics are obliged to do all in our power, by prayer and act, to further an unselfish, positive, and united international policy on the part of our Government as the sole hope for world order and world peace. This is no time for petty recrimination. Neither the cajolery of our seeming friends nor a natural antipathy for our traditional opponents must thrust us into the separatist and divisive postion of a Catholic bloc. The temptation to permit this now is great. It is imperative that we resist it. No minor crises, no partisan maneuvering must be allowed to distract our purpose or divide our loyalties at such an hour as this.

Green Frontiers

EXTENSION OF REMARKS
OF
HON. CLIFFORD R. HOPE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 25, 1950

Mr. HOPE. Mr. Speaker, at the fifteenth annual National Farm Chemurgic Convention held in Washington last March a notable address on the value and importance of agricultural research was delivered by Wheeler McMillen, president of the council and editor in chief of the Farm Journal.

I believe that this address which is entitled "Green Frontiers" and which

graphically and eloquently describes the possibilities of agricultural research will be of interest to every Member of Congress. For that reason, under permission to extend my remarks, I include this address. It follows:

GREEN FRONTIERS

The photograph which I hold up for your view is a picture of a buggy. For those of you who do not know this object from experience, I might explain that a buggy is a horse-drawn vehicle which was used for the transportation of human beings in those days of antiquity which preceded the motor age.

The market for buggies began to decline when low-priced automobiles became available to the general public. The manufacturers in the industry discovered that they had a buggy problem. They could make more buggies than the public demanded. In those medieval times there was no such thing as parity for buggies. There was no Government system of buggy price supports, flexible or nonflexible.

Some of the buggy manufacturers went into the automobile business where they made a great deal of money and created large numbers of new jobs. The automobile was better than the buggy. Vast new stores of purchasing power were created by the enterprise which supplied the demand. Consequently, today a higher proportion of American families enjoy automobiles than ever owned buggies.

The object I now hold in my hand is a potato. The potato is agriculture's 1950 model buggy. The potato manufacturers are producing more of this model than the public demands.

This situation has arisen at a juncture in time when people have been let to expect impossible things from the Government. The administration of Government has been bitterly and raucously criticized for what it has done about potatoes. Much of this criticism has been entirely unjustified and nearly all of it has completely missed its proper mark. Government should not be criticized only for having engaged in an effort which has proved less than successful. Government can fairly be criticized for having attempted to do something entirely beyond the capacity of Government to accomplish.

GIRAFFES CANNOT DRIVE

You could give a giraffe a license to drive an automobile. You could give the giraffe permission to take your car onto the highways. Neither the license nor the permission would enable him to drive the car. Such a performance would be entirely beyond his capacity. No giraffe was ever cut out by nature to become a chauffeur.

Neither is it within the capabilities of Government to direct the planting of crops or to determine the price at which they shall be sold. Every such attempt in history has come to an unsuccessful end, usually to the accompaniment of disaster.

The potato growers of the United States do not have available a new crop to plant in the sense that the buggy manufacturers of 50 years ago found a new industry awaiting their enterprise. If they did now have a new crop to which to turn, which promised equal or better profits, they would take it up. Potato growers are good farmers. They have thoroughly demonstrated their ability to adapt themselves to new methods and new circumstances. In fact, their adaptability has contributed to the embarrassment of the Government.

If the potato men could now turn to a new crop, not more than 10 or 20 percent of them would need to go into the new business in order to prevent the recurrence of potato surpluses. Some such percentage would prevent the troublesome portion of the crop from being produced, and would therefore eliminate, probably permanently, the situation which has tempted Government to reach into the taxpayer's purse.

Incidentally, this endeavor in behalf of potato farmers since the end of the war has cost the people of the United States about $429,000,000 in taxes. Handling the 1948 crop cost about $224,000,000. Indications are that the outlay for the 1949 crop will be $80,000,000. That will make more than $300,000,000 potato outlay for the 1948 and 1949 crops—three times as much for potatoes as for all the agricultural research, including market and statistical research.

That sum of $300,000,000 approximately equals the Government receipts for 2 years from all the "nuisance taxes" collected from levies on luggage, handbags, wallets, toilet preparations, sporting goods, photographic apparatus, radio receiving sets, phonographs, phonograph records, and musical instruments.

In other words, without the potato expenditure the excise taxes on that list of items could have been repealed, and the Federal deficit would have remained about the same. The money did not settle the potato question.

I remind you that I am not voicing a criticism of Government nor of the present administration. Government has simply responded to what has been presumed to be a public demand that it undertake to do some good. If it has made mistakes, its mistakes have been made because Government has been urged to attempt a feat beyond the capacity of giraffes or governments to perform. Government cannot repeal the laws of nature nor the laws of human nature.

GOVERNMENT CAN HELP RESEARCH

The potato problem can be solved. It can be solved permanently. It can be solved in full obedience to the laws of nature. All that is necessary is to find enough facts. If an alternative crop that is sufficiently attractive can be found, the recurrence of the problem can be prevented. If, as may be less likely, sufficiently profitable new uses could be found for potatoes, the problem might be cured.

The search for facts and the search for new crops are entirely within the capacity and within the proper province of government. Private industrial initiative cannot undertake all the broad research needed for the general welfare. It has accomplished many great gains for agriculture, but certain kinds of scientific research have to be begun by government. Some scientific research is being done by government, but not nearly enough.

The idea that new crops be found to prevent recurrent agricultural surpluses is neither imaginative nor theoretical. It is thoroughly established by experience. The potato itself was once a new crop in Europe and became a new crop in what is now the United States. Wheat, cotton, oats, barley, rye—in fact, all but a few of our common plants came to this territory since the first arrival of the white man. Rubber is a new crop in the East Indies. Soybeans are a new crop in the United States; a new crop returning some $300,000,000 annually to farmers and many millions of added value from processing.

A fact well known to students of chemurgy, still new to many others, is that the modern sciences of organic chemistry, plant genetics, and agricultural engineering are very little older than the twentieth century. Time enough has not yet elapsed, during a half century punctuated by wars, for modern science to explore the mysteries of the plant kingdom. And, believe me, the plant kingdom is full of mysteries. Our ignorance of the vegetable world is supercolossal.

American agriculture utilizes fewer than 200 species of plants as crops. Neither farmers nor scientists have yet found out enough about the 15,000 species of plants which are native to United States and Canada to know whether or not one of those species might for some farmers be more profitable than potatoes, wheat, or cotton. No one has done more than to name and describe most of the 300,000 species of plants known by botanists to grow somewhere on earth.

INEXHAUSTIBLE, RENEWABLE RAW MATERIALS

These are the green frontiers. They are green with promise, rich with prospect, inexhaustibly stored with hope for human kind.

American industry each year finds itself drilling more deeply for oil and going farther afield for iron. No act of Government, no ingenuity of man, and apparently not even the power of God can reproduce minerals once they are destroyed.

Beyond the green frontiers lies ever-renewable wealth. Raw materials for industry can be supplied in quantities inexhaustible, because with every round of the seasons the annual growth can be re-created. The poverty which mankind has suffered through countless centuries can, I am confident, literally be ended whenever the leaders of men penetrate far enough into these frontiers of green to develop the rich values which can be turned to human account.

Modern science has penetrated the kernel of corn and emerged with 200 objects useful to the human race. This amazing bounty has been revealed even though the molecular structure of the starch in corn remains a mystery. Let that mystery be solved and the values will be multiplied.

Modern science has dipped into the soybean and laid before human kind more than 200 useful objects derived from that single plant. These two plants, out of the 300,000 species botanists have described, are virtually the only two which science has explored with any degree of thoroughness.

A century ago the only uses for rubber were to erase mistakes made with a pencil and to make bouncing balls and water-tight garments. Today no civilized family lives without rubber; and almost only yesterday a new use was devised which is expected to consume as much rubber as do automobile tires.

That is the new use of airfoam rubber in pillows. Sleep is one of the commonest practices of human beings. One may presume that the human race has sought comfort in sleep since the night of creation, yet it has been possible within recent months for modern science and modern ingenuity to derive from among the green frontiers of the plant kingdom an important and new device for improving the restfulness of the "sleep that knits up the ravell'd sleeve of care."

Andrew Jackson could never have imagined the countless profitable uses to which rubber has been put. Neither can we here today envision the things which in the future will become necessities for human comfort and luxuries for human delight.

WANTS YET UNFULFILLED

Nevertheless, we can now imagine some of the good things which the vegetable kingdom may be able to supply. Seven million victims of arthritis in the United States can readily imagine the relief which will be granted to them should a plentiful vegetable source of cortisone be established. You will hear from others tomorrow night about that practicable possibility.

You can imagine the desirability of a cure for the common cold. Anyone can imagine cheaper and better road-building materials; cheaper and better construction materials; more abundant sources of cellulose; more generous supplies of protein.

Man's few timid and tentative ventures over the green frontiers have been astoundingly productive. Chemurgic industrial processes last year provided markets for $1,250,000,000 worth of farm crops. Oranges and grapefruit and lemons, once new crops in California, return to that golden State every year wealth greater than the value of all the gold ever extracted from the California earth. The gold we miser away in the dungeons of Fort Knox. The citrus fruits we enjoy as they are harvested, and then grow again another year.

Industry and Government alike rest forever uneasy in apprehension of depression. Agriculture today shudders in the fear of accumulating surpluses.

Give industry an ever-expanding economy and it will not fear depression. Give Government a sufficiently expanding economy and it can pay its debts out of production. Give agriculture enough new crops and enough new uses for its products and surpluses will not reappear. Remove the specter of surpluses from agriculture and an ever-expanding economy will give us ever-expanding industry and a first class chance to save American freedom for future generations.

Over a period of 20 years Government has expanded substantially $20,000,000,000 in its efforts to meet the agricultural surplus problem. During the year while it was spending $200,000,000 to perpetuate the potato surplus, Government spent $69,000 in search of new uses for potatoes. In the same year Government spent $113,000 toward the search for new crops which it found would forever prevent the need for subsidies. And this week committees of Congress are engaged in whittling down the appropriation for agricultural research.

MANHATTAN PROJECT FOR PLANT RESEARCH

No one has yet quite voiced such a slogan as "billions for subsidies, chicken feed for research." I shall, however, venture to propose its reverse—"billions for research and eventually not one cent for subsidies."

Taxpayers have been called upon for nearly 10 times as many billions for agricultural subsidies—subsidies which have not cured the surplus problem—10 times as many as the two billions which the fabulous Manhattan project required to research and develop the atomic bomb.

What more splendid economy could be proposed than a Manhattan project for the kind of creative research that experience has soundly proved could prevent agricultural surpluses, abolish the need for agricultural subsidies, and add the blessings of new wealth, new comforts, new abundance, and new hopes for all mankind?

I propose this with the utmost earnestness. I propose it for the benefit of American farmers, American workers, American taxpayers, and American consumers. I propose it in the name of all who are hungry or needy in any country in the world. If the magnificent concept by President Truman in his point 4 proposal is to bear full fruit and is to provide the fullest advantages for the aspiring nations of other continents, a bold new program of research must be organized into the undisclosed reaches behind all the green frontiers. After all, the countries which we most wish to help to help themselves are agricultural countries. They need new crops and new industries based on their farm materials.

The horse-and-buggy days have receded into the past. Let us search beyond these limitless green frontiers in order that we may leave behind us the years of the blue potato.

Congress can pass no law that will repeal or thwart any law of nature. But it can pass appropriations that will enable science to learn how to obey the laws of nature and to uncover the beneficent facts of nature.

For far less than the twenty billions that have perpetuated surpluses, for far less than the two billions that unloosed the atomic destroyer, we can send men across the plains of the planet, up the mountains and down the valleys. They will bring in the seeds and roots and stalks of every promising plant that greens the soils. In our great laboratories the scientists will find, in some of these plants, new blessings for the people. New crops will bloom in the fields and they will yield Government supports instead of demanding price supports.

Senate Set To Vote on Aid for Europe

EXTENSION OF REMARKS
OF
HON. GEORGE W. MALONE
OF NEVADA
IN THE SENATE OF THE UNITED STATES
Thursday, May 25 (legislative day of Wednesday, March 29), 1950

Mr. MALONE. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a press dispatch appearing in the New York Journal of Commerce of May 25, entitled "Senate Set To Vote on Aid for Europe."

There being no objection, the dispatch was ordered to be printed in the RECORD, as follows:

SENATE SET TO VOTE ON AID FOR EUROPE—TAFT ATTACKS POINT 4 AS PERMANENT DRAIN ON UNITED STATES

WASHINGTON, May 24.—The Senate today agreed to vote at 3:30 p. m. tomorrow in the final showdown on a bill authorizing $3,120,550,000 in economic aid to western Europe and other non-Communist areas.

The measure passed the House yesterday, 247 to 88. Senate passage would send it to the White House for President Truman's signature.

POINT 4 UNDER FIRE

The agreement to end debate came as Republican Senators pressed an attack on a section of the bill authorizing $35,000,000 for the administration's point 4 program to aid backward areas of the world.

Senator TAFT, Republican, Ohio, denounced the point 4 provision as the opening wedge for pouring American dollars overseas "for all time to come."

Other Republicans—including Senators MALONE, Nevada, JENNER, Indiana and BRIDGES, New Hampshire—took the same tack in an attempt to send the bill back to a Senate-House conference for further consideration.

Although the Republicans poured on a heavy fire of criticism, there was no objection when Senator CONNALLY, Democrat, Texas, proposed that the Chamber vote on the huge global aid bill tomorrow afternoon.

The Senate will meet at 10 a. m. and begin voting after five and a half hours of debate.

The bill passed the House yesterday, 247 to 88.

MALONE and TAFT both hammered on the theme that the point 4 program is designed to carry on after the European recovery program expires—without any limit on time or funds.

FUNDS FOR RUSSIA?

MALONE said that under the wording of the bill, American funds could be used even to develop Russia.

"Or any of the Communist countries," TAFT amended.

Chairman CONNALLY, Democrat, Texas, of the Senate Foreign Relations Committee has insisted that the administration has no desire or intention to help Communist nations through the point 4 program.

But TAFT said the way the legislation is worded, United States aid would be wide open to all countries, and he declared:

CALLED ENDLESS PROGRAM

"It marks a substantial change from the European recovery program in that it would be a permanent program for all time to come."

TAFT noted that the foreign aid bill, as originally passed by the Senate, put a 5-year limit on the point 4 program, but he said it had been struck out in the Senate-House conference report on the measure.

When the Senate first voted on the measure administration forces barely succeeded in keeping the point 4 section in the big aid bill. The vote then was 37 to 36.

Senator BRIDGES, Republican, New Hampshire, asked MALONE if he felt that the point 4 project—named after the fourth point in President Truman's 1947 inaugural address—was intended to be the vehicle for use beyond the ECA to continue American foreign aid.

"There is no question about it," MALONE replied.

NO LIMIT ON PROJECT

MALONE said the project is neither limited as to time, nor as to the amount of money to be spent.

"The cost," he said, "will depend only on how much the State Department can soften up Congress for future appropriations."

The Nevada Senator went on to attack the point 4 project as an open and above-board admission for the first time of the administration's plans for continuing foreign aid indefinitely.

MALONE said it was all part of a program starting with lend-lease, the British loan, the United Nations Relief and Rehabilitation Administration (UNRRA) and the Marshall plan, that was intended to be permanent from the beginning.

Newspaper Report on President Truman's Visit to Ravenna, Nebr., on May 8, 1950

EXTENSION OF REMARKS
OF
HON. EUGENE D. O'SULLIVAN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 25, 1950

Mr. O'SULLIVAN. Mr. Speaker, through the kind offices of Mr. L. P. Cash, publisher of the Ravenna News of Ravenna, Nebr., there was furnished to me copies of the issues of his splendid Ravenna newspaper for May 4, May 11, and May 18, 1950.

I am proud to put them in the CONGRESSIONAL RECORD for two very good reasons, and they are to show to some of the vicious and unmannerly persons of this Nation how a President should be respected and treated always, and to give a correct newspaper report to a waiting public who wants to know the truth, and have been denied so often such journalistic opportunity.

I am indeed grateful to Mr. Cash and his newspaper force for the privilege of reading and using his fine newspaper copy and know that all of my readers will enjoy perusing these items also, unless they are abnormal Americans.

The following is from the May 4 issue:

EVERYTHING SET FOR PRESIDENT'S VISIT—STATION AREA TO BE FLOODLIGHTED AND SPECIALLY DECORATED FOR THE OCCASION; TWO BANDS ON HAND ALSO—REGULATIONS FOR PRESIDENT'S VISIT

The Secret Service department, which has charge of the President's personal safety, has outlined the following regulations relative to Mr. Truman's Ravenna stop. The public is asked to keep these in mind:

The President's car will stop west of the overpass.

No cars will be allowed to park in this immediate area, and no moving vehicle will be allowed.

No one will be permitted on the overpass, embankments, lumber piles, or above the ground level.

All traffic on the overpass will be stopped on arrival of the train for duration of the visit.

Rope barriers will be provided to direct the traffic, and the public will not be allowed to go beyond these.

The train will arrive here at 8:45 p. m., and will leave at 8:55 p. m. It will be on time.

The president of the chamber of commerce asks all business houses to display their welcome flags all day—for the Omaha Goodwillers in the morning and for the President in the evening.

Members of the veterans' organizations, and members of the fire department, in uniform, are asked to turn out in the evening, to assist with the job of policing and keep the public gathering in order.

About 1,000 people are expected here next Monday evening to participate in the greeting for President Truman, whose special train will stop in Ravenna for 10 minutes.

Mayor E. F. Kozel will introduce the President, who will address the audience briefly from the rear platform of his special car.

The special train will arrive here at 8:45 p. m. on Monday, May 8, but a short street program featuring the Loup City and Ravenna school bands has been arranged to commence at 8 p. m. The bands will then lead the crowd to the station in time for the arrival of the train. A dance will be held at the auditorium later in the evening.

Special floodlighting of the station area and other decorations are being planned by the Ravenna Chamber of Commerce committee, honoring the first personal appearance of a President in the town's history.

The President's train will stop for 30 minutes in Lincoln, and at Grand Island, Ravenna, Seneca, and Alliance for 10 minutes each.

Mr. Truman's special car is equipped with a public-address system, also specially lighted, so there will be plenty of opportunity for all to see and hear. Amateur photographers are invited to take pictures, providing they do not break security regulations.

A reception committee, which will be allowed to enter the train and meet the President personally has been appointed. The Ravenna people will include the mayor, Mr. Kozel, J. C. Flesch, and Malcolm Fisher, of the chamber of commerce, L. V. Kozel, postmaster, Senator W. J. Williams, Hugh Linn, superintendent of schools, Allard Rowbotham, representing local railroad men, Kelly Hankins, representing local farmers, and Lyman Cass, local chairman.

Democratic county committee representatives from Buffalo, Sherman, and Dawson counties will also be present, and two women, Thelma Lang of Litchfield and Grace Barmore of Cozad, members of the State central democratic organization.

Besides these, there will be other dignitaries on the train, railroad officials, etc.

The Secret Service men are expected in town several days in advance of the visit. They will determine the location for the train's stop, and check on other security matters. On the night of the President's visit, the Secret Service will be present on duty, and will be assisted by men from the county sheriff's office and the State highway patrol. Although no trouble of any kind is expected, the officers take no chances.

Mr. Truman has listed his tour of the western States as nonpolitical in nature, and his remarks are expected to be of this type. Upon completion of his western trip he will stop in Chicago for an address which he has stated will be political.

This editorial also appeared in the May 4 issue:

TRUMAN'S VISIT

The visit of President Truman next Monday evening will be a memorable occasion in Ravenna's history. This will be especially true of the small group who will be privileged to get on the train and meet the President personally. The names of the persons on this committee have been submitted to Washington in advance, where they must undergo rigid checking for security purposes.

The President is making several other stops in the State, but it appears there will be no lack of dignitaries here at Ravenna. Besides the important Government personages on the train, there will be important officers of the Democratic organization—State, district, and county—Burlington Railroad officials, and perhaps others.

The Presidential visits always have political significance, and the fact that Nebraska has been a strong Republican State in recent years doubtless has been a factor in the decision to make five stops in Nebraska. And since Buffalo County has been in the Republican column almost without exception, perhaps is a reason why Ravenna was selected as one stopping place.

In fact, what few Democrats there are in Buffalo County are located up here in this corner around Ravenna. But even then the number isn't too great.

As one of the Democratic brethren put it the other day: "If only the Democrats turn out to see the President, we'll have to go some to fill up the depot platform. Guess we will have to borrow a lot of Republicans to make the occasion a success."

The following appeared in the May 11 issue:

TRUMAN ADDRESSES AUDIENCE OF 2,500—CROWD ORDERLY, EVERYTHING ON SCHEDULE AT PRESIDENT'S VISIT MONDAY EVENING; TALKED ABOUT FARMING, CONSERVATION

President Harry Truman spoke to 2,500 rain-drenched people at Ravenna Monday night, a crowd that far exceeded expectations.

The special train arrived in Ravenna on time and was greeted with a cheer from the crowd which had been standing half an hour in a May shower.

Introduced by Mayor Kozel, the President spoke of farming and soil conservation, and said he was reporting to this farming country as a "hired hand."

He told of the advance of soil-conservation practices and the big job under way so the Nation never again would have a Dust Bowl.

He said the whole Nation was enjoying prosperity now and it was his duty to keep it that way. He said the Nation's prosperity was reaching down to every individual, the chief asset in keeping the Nation strong. By keeping it strong, he said, is the best way to keep it peaceful.

The President declared that if the Nation remains strong Soviet Russia will not attack us militarily and that the United States does not want to attack anybody.

The President looked healthy and strong and carried a big smile. He seemed well pleased at the reception here.

Mrs. Truman and Margaret made a brief appearance on the rear platform also. When Margaret appeared someone in the crowd yelled "Let's have a song." Margaret smiled broadly and waved, but seemed to enjoy the jest.

Many people here seemed to think the President looked like Albert Skochodopole, the local real-estate man. He is shorter in stature than most expected him to be.

A reception committee was on hand to shake hands with Mr. Truman, which included Democratic dignitaries from Buffalo, Sherman, and Dawson Counties. Kelly Hankins, one of the committee, who was introduced as "a wheat farmer," stopped the show. The President stopped for a short chat, asked about the crops here and about the farmers. Kelly told him the wheat didn't look very good.

Fred Wallace, of Gibbon, another of the committee, knew the Trumans when he was once chief of the AAA in Washington. He was invited into the President's parlors to say "hello" to the ladies. Emil Kozel, after introducing the President, also stepped inside the bulletproof lavish special car.

The Ravenna and Loup City bands were on hand to furnish music, but couldn't perform very well because their music got wet. But there was music, anyway. After the introductions the crowd broke into the strains of Happy Birthday, honoring the President's sixty-sixth birthday on that day.

The President got a birthday present, too. It was a fly rod and fishing flies, hand-made by Jack Krotz, of Ravenna, so he could go fishing at Grand Coulee. Pictures of Jack, and a brief account of his battle to overcome his polio handicap accompanied the gift. But the gift could not be presented publicly, as it had not been cleared in Washington. It was given to him later, after a Secret Service inspection.

A small crowd of police were on hand to keep order, but no incident occurred except one heckler who stood near the front row. The young man was a stranger to Ravenna. The aides didn't muffle him and the President didn't seem to mind, in fact retaliated to some of the sallies.

Besides a gang of Secret Service men and aides, the railroad had four special agents here, the county sheriff and his force, the State patrol force, the local police force, and a group of local Legion, VFW, and firemen who were employed in keeping the crowd orderly behind the ropes.

Special floodlights had been put up to light the station area and a big 30-foot banner which carried the words "Welcome President Truman." The President noticed it with a gesture. After the program was over, souvenir hunters got the banner. During the program, two of the floodlights went out. The hot bulbs were hit by raindrops.

Leaving Ravenna, the President's train was in the hands of a Ravenna crew. B. F. Wallace was the engineer, Max Manasil the fireman, and Claude Foerst was the conductor. The brakemen were Hutchinson and Merritt, two Alliance men, working out of Ravenna at present.

The May 18 issue contained the following:

TRUMAN'S VISIT HIT THE HEADLINES

The News is in receipt of a copy of the Los Angeles Examiner, sent by an unnamed donor, which shows that President Truman's visit in Ravenna made the headlines.

Under an eight-column banner head, the text of Mr. Truman's speech appears under a Ravenna (Nebr.) date line.

The International News Service correspondent, who was on the train and wrote the story, estimated the Ravenna crowd at several thousand.

In describing his Ravenna appearance, the correspondent wrote: "The President was bareheaded and himself was pelted by the downpour. Loudspeakers carried his voice to the crowd, but at several points his talk was barely audible. Lightning flashed intermittently in the sky."

The reason for the big headline was the President's statement that Soviet Russia will not attack this country militarily and that the United States does not want to attack anybody.

The account, which went out to all papers in the Nation, appeared on Tuesday morning, May 9, after the President's appearance here May 8.

The May 18 issue contained the following editorial:

President Truman has completed his western tour, and is back home again. The crowds which met his train were large everywhere, the papers report. We were glad that Ravenna made a fine showing in this regard, despite the rain.

Mayor Kozel got a big kick out of introducing the President and meeting the First Family. He says he is now charging his friends 25 cents to shake the hand which shook the President's hand.

Jesse H. Jones, a Real Texan and Friend of the A. & M. College of Texas

---

EXTENSION OF REMARKS

OF

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 23, 1950

Mr. TEAGUE. Mr. Speaker, the Association of Former Students of the A. & M. College of Texas is honoring Jesse H. Jones, of Houston, by devoting an entire issue of the Texas Aggie newspaper to the life story of this great Texan. I am inclined to believe that Mr. Jones selected the A. & M. College of Texas as the recipient of his many gifts because he has seen the product of the school with its outstanding leaders in the military, agricultural, and business fields.

At the present time there are 28 young men at Texas A. & M. on scholarships provided by Mr. Jones, and this one donor is furthering the work of the ex-student association, for its members support the opportunity award scholarships for deserving young men who could not otherwise attend college. The first Jesse Jones scholarships were for young men studying agriculture and related subjects and since then these scholarships have been supplemented by the "Jesse H. Jones military scholarships" to provide for the development of future generals in our military forces.

We ex-students of the A. & M. College of Texas are grateful to Mr. Jones for his generosity in providing scholarships for so many young men, and we are proud to be a part of the school that is recognized for providing the thousands of officers who served in World Wars I and II and for recognizing this school that has taken boys and graduated men.

Under leave to extend my remarks in the RECORD, I wish to include one of the articles appearing in the Texas Aggie regarding Mr. Jesse Jones:

LEGEND IN SPITE OF HIMSELF, JESSE JONES STILL HARD AT WORK, BUILDING FOR FUTURE

Jesse H. Jones has become a legend in his own time, in spite of himself. In the public mind he has become a remote and shadowy figure of tremendous power who mysteriously pulls the strings which cause unbelievable things to happen in financial and governmental circles. Many stories are told about this man which could not possibly be true, and the tellers feel no restraint because to them he is not quite real.

This is probably the penalty of having in 76 years accomplished more in a wide range of fields than most of us are able to believe one man can accomplish in an ordinary lifetime by understandable methods. The fact that he has worked quietly, and has never seemed particularly impressed by his own success has resulted in surprisingly little being written about him.

There is nothing remote or shadowy about the man when you meet him. He is big; 6 feet, 2; around 200 pounds. He is well-built, carries himself with ease and assurance. You immediately get an impression of power, completely controlled. His unhurried manner, apparent relaxation and soft speech put you at ease, while the intent look with which his gray eyes hold yours as you talk keeps you reminded of the power underneath.

Mr. Jones doesn't waste words. Before answering a question he thinks it over and his reply is simple and direct. His questions are questions of fact, easy to answer if you know your business; disconcerting if you don't. There is nothing vague about his conversation any more than there is about his thinking.

One of the man's outstanding characteristics is his complete assurance. He acquired this early, when his father sent him to a nearby town and put him in charge of a tobacco factory at the age of 14. He learned then to use his own judgment and to trust it.

He is a complete individualist, making his own decisions and taking full responsibility for them. He has never had a partner in any of his many businesses. When he has a decision to make, in business or otherwise, he gets all of the information possible, thinks the thing through and takes the necessary action. "Every person born into the world," he once told a group graduating from college, "has an uncharted destiny. Each must meet life and life's problems for himself, and solve them in his own way. No one can do it for him."

He is a man of deep loyalties. To the people who influenced him most—his father; his Aunt Nancy, who mothered him after his mother died; Royal A. Ferris, the Dallas banker who gave him his first financial backing; and Woodrow Wilson, who showed him how political idealism must fit into a world of hard practicality—he gave a deep devotion.

This loyalty extends to his family, his party, his church, his native State of Tennessee, and to his adopted State, Texas. In his business organizations everyone works hard; he sets a fast pace and expects those around him to keep up. At the same time, loyalty begets loyalty. Few people ever quit his organizations and many of the men around him have been with him for 30 or 40 years.

At 76, Jesse Jones has a profound faith in the younger generation and in the future of his country. He had rather spend an hour talking with a youngster, especially one from the country, than visiting with some man of high position. He has never for a moment believed that the country was going to the dogs.

"I believe in my country," he wrote not long ago, "and have always operated accordingly."

Some idea of the success of these operations may be gained from the following:

JESSE H. JONES MILESTONES

1874: Born April 5, on a tobacco farm in Robertson County, Tenn., son of William Hasque and Anne Holman Jones.

1878: Upon the death of his mother, his father's sister, Aunt Nancy, a widow with two children, became a mother to both families. Until her death, some 20 years ago, Aunt Nancy was one of the strongest influences in his life.

1884: First lived in Texas when his father moved to Dallas to become associated with a younger brother, M. T. Jones, in the lumber business. Attended grammar school in Dallas 2 years, until his father moved back to farm in Tennessee.

1888: At 14, he received his first executive business experience when his father put him in charge of a tobacco factory in a neighboring town, buying, grading, prizing in hogsheads, and shipping for export, the tobacco raised by farmers in that area, and bought by his father and a partner. This first experience on his own, taught him to have confidence in his own judgment at an early age. It was necessary, since he had no one to appeal to for advice.

1890: His father brought the family back to Dallas, where Jesse went to grade school again and attended a business college. After graduating from the business college, he taught in the college for a few months, then traveled on the road as a salesman for a while, but did not make a success of it.

1891: He took a job in a lumber yard in Hillsboro, Tex., owned by his uncle, M. T. Jones, doing both manual labor and keeping books. His salary was $25 per month, then $40, then $60. A year and a half later, his father died, and Jesse went back to the farm in Tennessee to live with his family and raise his last crop of tobacco. From his father's estate he inherited $2,000 but used it to pay debts on the farm which went to his sister.

1894: He returned to Dallas and took a job with the M. T. Jones Lumber Co. at $65 a month, and in less than a year he was manager of the yard at $100 a month.

1898: On the death of his uncle he moved to Houston as general manager of the company, operating a number of sawmills and lumber yards.

1902: He started on his own by organizing the South Texas Lumber Co. with a capital stock of $20,000, $15,000 of which he owned, continuing as general manager of the M. T. Jones Lumber Co. for a half dozen years until that company was liquidated.

1905: He first entered the banking field as a director of the Union Bank & Trust Co., now the Union National Bank, and later became its largest stockholder and vice president, selling his stock in 1917.

1907. He helped to organize and was a vice president of the Lumberman's National Bank at Houston, now the Second National.

1908: Following the panic of 1907, he acquired control of the National City Bank in Houston, and later merged it with the Lumberman's National Bank. He also entered the field of building, owning and operating major business buildings. During the first year he built three 10-story office buildings in Houston. He entered the newspaper field as half owner of the Houston Chronicle.

1909: He bought control of the Merchants National Bank and merged it with the Union Bank & Trust Co. Organized Texas Trust Co., owning a majority of its stock, and was its president; later consolidated with Bankers Trust Co., which finally became Bankers

Mortgage Co., of which he is now the principal owner.

1912: Organized Houston Hotel Association and built the 1,000-room Rice Hotel, being the principal owner.

1913: He was appointed chairman of the Houston Harbor Board by the then mayor of Houston, Ben Campbell, and installed Houston's first harbor. Became part owner of the National Bank of Commerce, later to become one of the major financial powers of the Nation.

1917: Appointed by President Woodrow Wilson as director general of the Department of Military Relief of the American Red Cross, in which position he served throughout World War I, starting his long career of service in the National Government.

1918: Appointed member of Red Cross War Council. During this period his close association with President Woodrow Wilson made a lasting impression on him; one that has greatly influenced his life.

1919: Served as an American delegate to the Red Cross conferences at Cannes, France, and Geneva, Switzerland, which organized the International League of Red Cross societies. Served as a director of the Phelps Stokes Educational Commission which planned an educational system for the natives of Africa, for which he was honored by the British Government in London in 1925.

1920: Married Mary Gibbs, daughter of Dr. Jasper Gibbs, a prominent Mexia physician.

1922: Became president of National Bank of Commerce.

1923: Entered New York building field, organizing and heading Houston Properties Corp., of New York, which built and operates the Mayfair House, three large office buildings, a hospital, and numerous other buildings.

1924: Became director of finance for the Democratic National Committee, turned a deficit into a surplus for the 1928 campaign, and brought the National Convention to Houston.

1925: Received his first honorary degree, doctor of laws, at Southwestern University, Georgetown. Since then he has received 10 other such degrees: Southern Methodist University (1927), Texas A. and M. (1936), New York University (1937), Temple University (1937), John Brown University (1938), Oglethorpe University (1941), Washington and Jefferson College (1941), Lafayette College (1942), St. Louis University (1942), Northwestern University (1942). He was also awarded a regency in the field of finance by the Association of Arts and Sciences (1935).

1926: Named director general Texas Centennial Celebration to be held in 1936. In addition to heading this State-wide celebration, he conceived the idea, suggested the design, and headed the fund drive to erect the San Jacinto monument. In this same year he became the sole owner of the Houston Chronicle. In a few years he acquired the Houston Post, but later sold it to former Gov. W. P. Hobby.

1928: Unanimously endorsed by Texas delegation for Democratic nomination for President of the United States.

1932: Named a director of Reconstruction Finance Corporation by President Herbert Hoover.

1933: Named Chairman of Reconstruction Finance Corporation by President Franklin D. Roosevelt, beginning one of the most spectacular periods of national public service the country has ever seen. In 1935, 1937, and 1939, reappointed Chairman of the RFC by President Roosevelt. Later in 1939, appointed Administrator of the newly created Federal Loan Administration in charge of RFC, Export-Import Bank, Federal Housing Authority, and Home Owners Loan Corporation.

1937: Mr. and Mrs. Jones created Houston Endowment, Inc., and endowed it with a substantial portion of their estate. Through Houston Endowment they have aided hundreds of young men and women throughout the Nation to secure college educations. In addition to this principal activity, in 1945 they established and endowed the Woodrow Wilson School of Foreign Affairs at the University of Virginia.

1939: Appointed Administrator of the Federal Lending Agency; United States Senate suspended its rules in order to confirm this appointment on the day it was approved by committee.

1940: Appointed Secretary of Commerce by President Roosevelt; Congress passed a special resolution to allow him to serve as member of the President's Cabinet and Federal Loan Administrator at the same time.

1941: Appointed member of the National Emergency Council.

1942: Served on National Board of Economic Warfare, War Production Board, and Economic Stabilization Board, in addition to other governmental duties.

1945: Resigned as Secretary of Commerce and Federal Loan Administrator and returned to private life in Houston, after 15 years of Government service during two wars and a major depression.

1947: Organized Commercial & Industrial Life Insurance Co., of which he is chairman of the board.

1948: Through Houston Endowment, Inc., Mr. and Mrs. Jones gave Hedgecroft Corp. a hospital in Houston for the treatment of polio.

1949: They built a library at Mexia, Tex., honoring Mrs. Jones' parents, Dr. Jasper Gibbs, and his wife, Sallie Chandler Gibbs.

1950: Launched major building project in downtown Houston area, in block occupied by his National Bank of Commerce and Gulf buildings.

Fair Employment Practice Legislation

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, May 25 (legislative day of Wednesday, March 29), 1950

Mr. JOHNSON of Texas. Mr. President, there recently appeared an editorial in the El Paso Herald-Post about the subject of the Senate's recent debate on fair employment practice legislation.

The editorial was written by Mr. Ed Pooley. Mr. Pooley is a progressive editor who pulls no punches. I ask unanimous consent to include this editorial in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FILIBUSTER

The recurring filibuster against what is miscalled the Fair Employment Practice Commission bill is on again in the Senate. The southerners, plus a few allies, have rallied again to keep this thing out of the law. We hope they win. The bill is a phony, which will help no American.

It has become somewhat fashionable of late years to decry the filibuster as an outrage against democracy. The Communists do it, along with other leftwingers and the bleeding hearts whose pet measures are threatened with asphyxiation by senatorial gas.

We rather like the Senate filibuster. We think it is a pretty good institution in a Government such as ours. We can be quite calm at the sound of the scream that "the will of the majority is being defeated" with the realization that the rights of the minority are being protected.

The FEPC was conceived in political iniquity and born in political sin. It was never intended to aid anyone but its proponents in office. It is a vote catcher, brought up again and again for no other purpose.

There is no evidence that the will of the majority is being defeated. The majority of the Senate, perhaps, where its influence on some voters in doubtful States is well known. But not the majority of the people. Except from the Communists, the leftists, the practical politicians, and those who live by promoting "causes," we have never heard any outcry when the FEPC has been defeated. Anybody, even a pro-FEPC Senator, can see that the country gained nothing when it was in effect as a wartime measure, lost nothing when it expired, has not been hurt since, and doesn't need it now.

But those who would trade some people's rights for other people's votes pay no attention to that.

The filibuster is all that stands between them and the enactment of this odious bill. We wish for the filibusterers strong voices and great endurance. May their vocal cords stay in the pink and their throats clear and resonant, and may they talk and talk and talk until the FEPC is laid away to rest until another election year.

Perhaps, and we are thinking wistfully and wishfully, 1950's filibuster may bring death to this bit of hypocrisy.

Preserving the American Way of Life

EXTENSION OF REMARKS
OF
HON. RUSSELL B. LONG
OF LOUISIANA
IN THE SENATE OF THE UNITED STATES
Thursday, May 25 (legislative day of Wednesday, March 29), 1950

Mr. LONG. Mr. President, I ask unanimous consent to include in the Appendix of the CONGRESSIONAL RECORD an address delivered recently before the Nicholson Post, No. 38, of the American Legion, Baton Rouge, La., by Chief Justice John B. Fournet, of the Louisiana supreme court.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I believe I speak for all of the members of this post who are veterans of the First World War when I say that the thought we had uppermost in our minds when we were mustered out of service and returned to civilian life was that we had had a share in crushing for all time the threat to democracy and free men that had reared its ugly head under Prussian militarism. We returned to our homes, to our jobs, and to our studies determined that we would band together as a group to insure that this threat would remain forever crushed. You younger veterans can attest to the fact that this evil did not remain crushed but, instead, again ran rampant throughout the world. You also returned victorious from the battlefield to take up the broken strands of your lives secure in the belief that this time, surely, the world had been made safe for democracy and that this time, surely, the sacrifices you and your fathers had made would not be in vain. Today, however, through the medium of a cold war that becomes increasingly hot daily, not only you but all veterans, all Americans, and all free nations find themselves again

faced with the same challenge that has vexed the human family throughout all recorded history—the challenge of growing tyranny.

We ask ourselves: "Why?" "Why?" "Why?" In what way have we "fumbled the ball"? Have the horrors engendered by these two terrible wars we have fought in the first half of the twentieth century taught us nothing? As Gen. Omar Bradley has so aptly put it, "The world has achieved brilliance without wisdom, power without conscience. Ours is a world of nuclear giants and ethical infants. We know more about war than we know about peace; more about killing than we know about living."

I believe that with the usual hindsight given to most Monday-morning quarterbacks, we all now realize our first and our biggest mistake was to hold our fire, withdraw our weapons, and, under deliberately provoked pressure applied by parents on Congressmen facing reelection, bring our fighting men home before we had won the peace. In doing these things we fell right into the hands of a people who were but waiting to turn their cannons in our direction and aim them at our retreating backs. We thought we had a friend; we found we had an enemy. We thought we had an ally; we found we had been alined with a dictatorial and tyrannical opportunist. While we naively extended our hand in friendship, an arm and hand holding a hammer and sickle was encircling our homeland. We learned the hard way that no amount of polite talk, no amount of cautious behavior, will earn for us the friendship and good will of a totalitarian nation that can understand no reason but force and that thinks nothing of starving a whole city to gain a political advantage.

The evil of communism is not a stagnant evil. It is a living and a moving thing, insidiously but surely invading every phase of our life. We find it in the Paul Robesons of our entertainment world; in the MARCANTONIO's of our Congressional Halls, in the Harry Bridgeses of our labor and economic movement, and in the O. John Rogges and Alger Hisses of our governmental departments. The American Legion deserves everlasting credit and the thanks of a grateful America for its unrelenting effort to ferret out these insidious and subversive influences and expose them for what they are.

The Legion's work in this respect is not new. In the fight against communism it has long played a dominant role. Well aware of the chaos that followed in the wake of the world conquest sought by the Prussian military and by the hate-spreading Nazis, the Legion was immediately sensitive to the threat to democracy and to America itself that was being engendered by the false philosophies and the false propaganda of the Communists. These ideologies, wearing different uniforms and shouting different slogans, were seeking a world conquest of an even more devastating nature than their predecessors—the conquest of the minds of free men and the paralleling enslavement of their bodies. Since that time the Legion's allegiance to the cause of educating Americans to the privileges and responsibilities of citizenship and the cause of making America strong—secure against aggression from without and against subversion from within—has been unswerving. The very recent All-American Conference held in New York under the sponsorship of the American Legion is but an example of its effort to build a strong and a loyal America.

Firm in the belief that the final battle in the cold war will be won or lost in the minds of men, the Legion has charted a course that calls not only for guarding our American heritage, but also for proving to the world that democracy is a real, live, and progressive thing. This is as it should be. While the Legion is placing a great deal of emphasis upon Americanism, Americanism, in the final analysis, means more than a mere negative resistance to Communism. It means a positive faith in democratic ideals and procedures. The Legion believes all true Americans have an abiding faith in the democratic way of life. It seeks but to be the instrument that stimulates our citizens and prods our Government to the end that America will be fully prepared to meet aggression from any quarter, without or within. It wants to keep America always American. I believe the American Legion, more than any other force at work in the country today, possesses the ability to do just that.

The task of steering a true American course through the succession of emergencies that are indicated for the years immediately ahead will not be an easy one. As I remarked earlier, we have had to learn the hard way that we can never live in freedom and peace while we are faced with a preponderantly hostile and undemocratic people whose enmity we have incurred for no other reason than that we persist in living as free men. Brig. Gen. Frank Howley in his current book entitled "Berlin Command," tells us in plain, everyday language that we can all understand just why it is impossible for a free people to live in harmony in one city with those who advocate a communistic dictatorship. If this is true at the local level, how much more so is it true on a national and an international level.

Are you, as Americans, doing everything you can to assist in your Legion's fight for liberty, or are you, through a sense of indifference, surrendering to this new type of enslavement? At this halfway mark in the twentieth century, it behooves each and every one of us to take personal inventory of ourselves so that we may determine what we can best do to insure that these foreign ideologies become a diminishing instead of an increasing threat to our freedom. This is essentially what Theodore Roosevelt, Jr., and Sgt. William Patterson did when, during their convalescence at a base hospital in Paris in 1918, they dreamed of an organization of veterans that became the American Legion.

An organization of veterans is not a new thing. Undoubtedly every war since the beginning of time has produced a group anxious to preserve after the end of hostilities the comradeship born on the battlefield. But the men who founded the American Legion envisioned a goal that transcended the mere spirit of good fellowship among members of the armed forces. Theirs was a vision of the vital part such an organization could play in building a strong America, in maintaining the peace, and in preserving the dignity and freedom of man. By combining their feeling of comradeship with their love of country, their desire for peace, and their determination to fight ever and always for the principles of true democracy, these founders set a seal upon our organization of veterans that distinguishes it from all others. During the intervening years the high aims and ideals of the founders have flowered into a powerful and potent instrument for good in an insecure and chaotic world. With your unstinted support, repledged in commemoration of the thirtieth anniversary of the founding of your post, it will continue to stand as one of the dominant guardians of America's destiny.

In conclusion, let me say to those of you who have been members of Nicholson Post, No. 38, for 30 years that your acts and deeds of service merit the admiration of a grateful community and its people. The goal that is uppermost in the mind and heart of every legionnaire and that is the fervent prayer of every true and loyal American is the maintenance of the peace without any detraction from the dignity and freedom of man. This can be accomplished by keeping America strong and thus insuring her safety and preserving inviolate our democratic way of life. Under the guiding hand of your leadership, that may well be emulated by your younger buddies, this goal can be brought to fruition, and we can hope for everlasting peace on earth and good will among men.

Biggest Story

EXTENSION OF REMARKS
OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 25, 1950

Mrs. ST. GEORGE. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include the thirty-first article by Mr. Frank C. Waldrop on the infiltration of communism in our country:

BIGGEST STORY

(By Frank C. Waldrop)

Few men have ever openly challenged the will of Joseph Stalin and lived. Even fewer have ever told the story under oath and cross-examination.

Thus, in this and the next few days' items, I am dealing with material of rare historic quality, as I review the testimony of not one but two such men.

Whoever wants to examine the full record can find it in the hearings of the House Committee on Un-American Activities in volumes 7 to 11, inclusive, taken between September and December 1939.

Benjamin Gitlow and Jay Lovestone were the two above-mentioned. And they came before the committee armed with documents and records to support their testimony.

I happen to know a little of the background of maneuverings that caused them to appear after having declined several times before to open up their grim book of experience.

On August 23, 1939, there was signed in Moscow the deal between Hitler and Stalin that pulled the trigger for war.

That amazing contract provided that neither party would attack the other or join in a war, if either were attacked by a third power. Each promised not to join any group of powers "which is directly or indirectly aimed at the other party."

Now it is a matter of open, public record that Mr. Roosevelt's Communist friends in the United States of America, had been hammering at him for years to break the neutrality laws enacted by Congress from 1934 on.

And it is also a matter of open, public record that he began to follow their lead with the notorious "quarantine the aggressor" speech at Chicago, Ill., October 8, 1937. He was totally committed by 1939.

Thus, once Roosevelt was committed for war and with him England and France, Stalin pulled his ever-dependable double-cross. He was all set to grab off the countries that would be broken up by the wars of others when he, too, was attacked by his partner, Hitler.

It was in the moment of the world's shock at Stalin's spectacular abandonment of Roosevelt for Hitler, that the House Committee on Un-American Activities persuaded Gitlow and Lovestone to talk.

And they did so in the hope that the United States of America would at last understand Stalin and keep away from him, thereafter.

But the tragic record shows that Stalin knew his man. The Roosevelt who had fallen for his promises in 1933 and who had let the Communists run through the United

States Government thereafter, was the same Roosevelt at Yalta. So Stalin was still able, after all, to grab off the broken nations.

And so now we turn to our historic witnesses who in 1939 tried to make the country hear what Roosevelt would not.

Gitlow, the first witness, told how, at the age of 18, he became a Socialist and from then fell by stages into communism.

He was the first Communist in the United States of America to be imprisoned, so far as the records show, having been arrested in New York City in 1919, by a State legislative investigating committee.

"I was in prison for approximately 3 years and pardoned by Governor Smith in 1925, I believe," he testified.

"I had been, a part of that time, out of prison pending appeal—and in 1922, during my freedom from prison and after I was pardoned, I was always active in the Communist movement and always held one of the leading positions in that movement.

"I was always a member of the central executive committee; was a member of the secretariat; ran for public office for the party, important public offices. Held important offices in the trade-union and other activities of the organization and was highly publicized by the Communist Party press.

"My first trip to Moscow was in the year 1927. I was called to Moscow following the death of Ruthenberg, who was general secretary of the party, by a cable which was sent to the American party insisting that I come to Moscow.

"I was practically the only important party leader who had not been in Moscow. The cable which was sent to the American party instructed them that under all circumstances I was to proceed to Moscow, by Nicholas Bukharin, who was chairman of the Communist International.

"From that date on I held the highest positions in the Communist International organization. I served on its executive committee. I was a member of its presidium, its leading ruling body, and I was also a member of the executive committee of the Red International of the Trade Union, the international trade-union organization of the Communist International.

"In other words, I have served the Communist movement as a top leader and not as a rank-and-filer from the very first inception of the movement."

Thus you can see that in Gitlow we have a witness who had been in the very heart of the Communist conspiracy from its start. He should know, if anybody does, how it works.

H. R. 6217—Why Penalize the Spanish War Veteran Because Somebody Didn't Keep Records in 1898?

EXTENSION OF REMARKS

OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 25, 1950

Mr. O'HARA of Illinois. Mr. Speaker, I am informed that it is the expectation that H. R. 6217 will come before us on the consent calendar on June 5. I hope that no voice of objection will be raised and that the House speedily will pass H. R. 6217 that it may be considered in the other body and, I hope, enacted into law before we adjourn. I wish to impress upon my colleagues the urgency of this proposed legislation. Some of the aged veterans whom it would benefit will not be here if we wait for the Eighty-second Congress to do what now we have the opportunity of doing.

To the younger veterans of World War I and World War II let me explain that in the Spanish-American War there were practically no hospital records. There was much sickness, both overseas and in the camps in this country. This was due in part to the miserable and poisonous food, which later resulted in a national scandal, and in part to lack of proper medication and sanitation and even of clothing suitable to hot climates. I might furnish some idea of the conditions that prevailed by referring to my own experience. The infantry regiment with which I served in the siege of Santiago in Cuba was in action on July 1, 1898—the hottest day I, who had spent several years of boyhood in Central America, can remember—wearing an issue of heavy winter clothing. During our weeks in Cuba the beef issued us was putrid and had to be thrown away, and we subsisted on hardtack soaked in the grease of "sour belly." A month after the capitulation of Santiago on July 17, 1898, the situation as regards the health of our invading troops was so bad that in my own company but two of us were able to report for duty. It was "Teddy" Roosevelt's "round robin," for which under the laws of war he might have been court-martialed, that finally got the grievously ill remnants of the army that stormed Santiago back to Camp Wikoff at Montauk, Long Island. Of the trip from Santiago to Montauk, and the conditions on the transport, I quote from an article by Charles Johnson Post in the American Legion magazine of July 1938:

For 5 days we had been packed in on the *Grand Duchesse*. Five men to a stateroom, no hospital, sick and well lying thickly about the decks; fighting at the distilled-water butts twice a day, with the well men winning first place and the sick left to take the hot water as it came from the condenser after the one cake of ice had melted, and then hoard it in a sour tin cup in the shade of an August sun until it was tepid enough to drink. There was no water to wash a mess kit, cooking bits of bacon over candles in your stateroom with delirious men whimpering in the bunk beside you—it was better than the hardtack and salt-beef slum of the travel ration. And all of us copiously and unashamedly lousy. One man died in the former second-class washroom and his body, yellow with fever, lay there from morning to late afternoon while we stepped over it and the swinging door bumped its head with each new entrant. Another was picked from his bunk, cold and dead, with his squad bunkie lying unconscious beside him and the stateroom foul with dysentery. Each morning Gus Piton and Jimmy Lowe lifted a squad mate in a blanket and tied him to the ship's rail in a kind of hammock, and all day he lay there motionless, his eyes glassy and half open, with pus drooling from his emaciated lips. Down with typhoid, malaria, yellow jack, tropical fevers, and all varieties of intestinal breakdowns, we shuffled weakly from port to starboard to get into the shade as the sun swung from east to west. * * * There were no medicines—it was our regimental surgeon who told me so—not a pill of bismuth, only a few of compound cathartic and only a little quinine.

Conditions were much the same on the transport, the *Harvard*, on which I returned. Perhaps a half dozen of us were well enough to be about, and we spent our time nursing as best we could the hundreds who were painfully, dangerously ill, and some of whom died and were buried at sea. At Mantauk Point the fever at long last caught up with me, and for 3 months at my home in St. Joseph, Mich., I was in bed, with the doctor giving no hope to my parents. My pup-tent mated, Charley Loeffler, ill in the same manner, died, as did others of Company I. I have never quite recovered from that illness.

Yet there is no way by which I could establish officially these facts. There were no records. There was none in the case of Charley Loeffler, of the many others who died at home from illness contracted while in service, of most of those who died before reaching home.

What was true in the case of those in overseas service was equally true with those who served in the fever-infested camps in the United States. It would be difficult for the younger veterans to visualize the conditions of food, clothing, medication, sanitation, and hospitalization that were faced by the armed services in 1898. That was over a half century ago. That was really in the horse-and-buggy era. The point is that records just were not being kept.

The purpose of H. R. 6217, in a nutshell, is to keep a veteran of the Spanish-American War when he is now past 70 and grievously ill from being denied a hospital bed for the one reason that in 1898 someone did not keep books. That is all there is to H. R. 6217. It will not affect many veterans, and I am afraid it will not be many years before it will not affect any.

I hope and pray that no voice in this House will be raised in objection when this bill comes up on June 5.

I am including in my remarks excerpts from an editorial in the National Tribune of May 18, 1950:

NOW FOLLOW THROUGH

We wish it were possible to name in this comment those members of the Committee on Veterans' Affairs who voted last Wednesday to report favorably to the House of Representatives the bill, supported by Spanish War veterans, which may grant to them certain medical and hospital privileges they do not now enjoy. We would like particularly to call the roll of those who made the parliamentary moves by which Congressmen may now have the privilege of righting a wrong that has prevailed for more than 50 years through no particular fault of any individual, but the committee business was conducted in executive session, behind closed doors, so we cannot hand out those well-deserved bouquets. However, we understand that the final vote was unanimous, and we take this first opportunity to voice a fervent thanks on behalf of all surviving veterans of the campaigns of 1898–1902 to those members of the committee who did such a grand thing on May 10.

This measure, H. R. 6217, has not had an easy road to travel because there are those of hesitating mind and a bent for economy who have feared such legislation would create a precedent for the many thousands of younger veterans of later wars. Their fears are groundless because there is no parallel in history, yet both the House and Senate must

vote on the proposition and it would be well, therefore, to review the facts so that they may be understood clearly by both Congressmen and the beneficiaries themselves. Perhaps it would be well, also, for interested persons at the Veterans' Administration to refresh their memories because, although the VA has not directly opposed the bill, there has been some viewing with alarm.

H. R. 6217 would duck around veterans' regulations and give some special consideration to this group of servicemen whose ages range from 70 years through 100 and who average in age 74 years. It would for purposes alone of out-patient treatment—and, incidentally, for hospitalization when necessary—assume that they suffer from service-incurred disabilities. On the surface, that would appear to be a far-fetched presumption, but it is nothing of the sort because in most instances that is the actual fact. The men are service-connected. They suffer from disablements that actually go back to war days, but they are powerless to prove it only for the reason that in those times—48 to 52 years ago—there were no such things as official hospital and treatment records. They have no place to which to turn in an effort to show the inception of physical troubles and an unfortunate discrimination therefore arises that cannot be overcome.

Under present VA procedure, hospitalization is accorded by the Government in an order of preference. A veteran with a proved service-connected disability has first choice to a bed for the treatment of that disability. Next come peacetime veterans with conditions attributed to service in uniform, and then follow service-connected war veterans with other disabilities, and war veterans for any condition that is emergent in character. The latter are in that 27,000 line-up of applicants, who can have a bed only when available, and the Spanish War group, with the exception of about 700 of them, are so classed to the last man. Whenever a man is seventy-odd years of age, he is an emergency case. He should get some kind of a break, but he cannot because of the current shortage of hospital beds and staff, so, when he applies, he is usually denied help. He cannot afford the local hospital prices where he lives, so he is sent home to die. The medical director at the VA called such a statement "hogwash" the other day, but we have lists of cases that give the lie to the intemperate statements of the medical boss, and we are prepared to use them. That list is composed principally from the Spanish War class.

Fifty years ago these men, who would benefit by H. R. 6217, created a precedent of their own and one that is unusual in this day and age. They volunteered to a man to go away to war that cost little as such things go and that netted a dollars-and-cents return to their country high in the billions. It was the first war for humanity, was fought 'round the world under conditions that could never prevail today, and actually resulted in making ours the leading nation on earth. There was little in the way of medical care for participants who served on their nerve alone. Succumbing to diseases of the times, hardly a man was left unscarred among the 460,000 who donned the uniform. Each was given his pills, painted with iodine, and marked duty, or, if temperatures rose to far over 100°, he was packed in ice and hoped for the best. The result was eventually weakened hearts, damaged kidneys, and rotted guts. A few managed to prove later that they were sick, only because some partial records were kept on the backs of old envelopes or other scraps of paper. A few came back with lost legs or arms, and bolo scars, so they also proved a degree of service connection, but by far the most of them just came home as good soldiers do, picked up where they left off, and called it a day. Now their troubles, aggravated by age, have caught up with them, and only the Congress can give them the relief they need.

It isn't so hard to understand, when one knows about it. This bill, H. R. 6217, just straddles the years and gives a few thousand old men the just consideration that they require and which is especially essential now in this period of bed scarcity. It permits at the taxpayers' expense the bottle of medicine that will do them the most good or allows to them such other medical and hospital care as circumstances warrant without forcing the old boys to get down on their knees to beg for it. Too old to travel distances to hospitals, it brings the services to them.

This legislation has traveled a rocky road. A somewhat similar bill to grant hospital privileges on the presumption of service connection for disabilities was favored by the committee in the Eightieth Congress, but came out too late for final enactment. It was taken up twice by the Veterans' Committee during the last session, but was voted down due to that foolish fear that it might result in similar requests by younger veterans, most of whom among the disabled have medical records as complete as modern science and specialized warfare can make available. But now the committee has given unanimous consent to a somewhat modified measure the enactment of which will be a boon to these most elderly of our war veterans. Indeed, they are grateful, but the bill is not yet law.

United States-Canadian Relations

EXTENSION OF REMARKS
OF
HON. VIRGIL M. CHAPMAN
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES

Thursday, May 25 (legislative day of Wednesday, March 29), 1950

Mr. CHAPMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able, informative, and interesting article written by former Senator A. O. Stanley, of Kentucky, now the distinguished Chairman, United States Section, International Joint Commission, entitled "Three Thousand Miles and Never a Quarrel," which appeared in the June 1950 issue of the Rotarian, a magazine published monthly by the great organization, Rotary International.

Senator Stanley, after 12 years of brilliant service in the House of Representatives, was elected Governor of Kentucky, and his constructive administration as war Governor during World War I constitutes one of the brightest chapters in all of the glamorous history of Kentucky. His fellow citizens then elected him to the Senate. In this body he was recognized as an assiduous student, an erudite scholar, a courageous statesman, a skillful parliamentarian, a brilliant debater, a superb master of English prose, and an unsurpassed orator.

As Chairman of the United States Section of the International Joint Commission, Senator Stanley has striven industriously, diligently, and constantly in the performance of the important duties of his official position, devoting his splendid talents unstintingly to the attainment of the laudable and devoutly hoped for objective of peace, friendship, and good neighborliness between the United States and Canada.

This article from Senator Stanley's pen ought to be read by citizens of the United States and also by our friends and neighbors north of the border.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THREE THOUSAND MILES AND NEVER A QUARREL—THE CENTURY OF PEACE ON THE UNITED STATES-CANADIAN BORDER DIDN'T JUST HAPPEN; MEN MADE IT

(By A. O. Stanley, Chairman, United States Section, International Joint Commission)

Battleships poised for action at the mouth of the Columbia River; a United States Senator calling for 30,000 to 40,000 rifles beyond the Rocky Mountains; the British Premier declaring in Parliament that "England knows her rights and dares to maintain them"; and a United States presidential campaign won on the slogan "54–40 or fight"—that was the situation which preceded settlement of one border dispute between the United States and Canada about 100 years ago.

The Northwest boundary controversy finally was settled by a compromise treaty. But the Oregon question was only one of many border disputes which strained relations between the United States and Canada from the Revolutionary War until less than 40 years ago.

Today friendliness and harmony between the two great North American neighbors are taken for granted. It is generally assumed to be a natural outgrowth of the similarity of language, customs, and laws of the two countries.

History disproves that assumption. Until 1912, when the International Joint Commission was formed, interminable disputes accompanied every effort to establish the approximately 3,000 miles of boundary extending from Passamaquoddy Bay to the Strait of Juan de Fuca. On more than one occasion border controversy brought the two countries to the verge of armed conflict.

The background of hostility and distrust dates back to the period when the American Colonies broke with England. At the outbreak of the Revolution, numerous and powerful minorities resisted any resort to arms or separation from the mother country. And at the end of the war an army of exiles, estimated at more than 100,000, sailed for Nova Scotia and New Brunswick, or swept across Lake Huron and the Niagara River to people the uninhabited wilds of Ontario. They included many of the clergy of the established church, great landed proprietors of New York and Pennsylvania, and rich merchants of the seaboard cities.

With them they carried bitter memories of 8 years of savage civil warfare. They passed on to their children and their children's children stories of confiscation and exile, keeping alive a feeling of resentment and hostility toward the United States.

Sir Robert Falconer, president of the University of Toronto, in his recent work, The United States as a Neighbor, says: "A common substratum of loyalism underlies the English-speaking population of Ontario and the Maritime Provinces. * * * It may perhaps be not too much to say that the loyalists have been the most influential element in the history of these provinces * * * and until today the traditions of loyalism so pervade sections of eastern Canada that in some measure they determine the attitude of the country to the United States."

For a century an atmosphere of suspicion pervaded our international relations and literally hung like the Sword of Damocles over the borderland.

It was not until 1817 that the Rush-Bagot Convention provided for disarmament of the Great Lakes, and the boundary between Maine, New Brunswick, and Quebec set by the Treaty of Versailles in 1783 gave rise, because of its ambiguity, to a dispute 50 years later in which both sides were prepared to hold parts of the questioned territory by force of arms. The boundary finally was determined, after lengthy negotiations, by the Webster-Ashburton Treaty, which was disappointing to both sides.

And as late as 1903 a controversy over the Alaskan boundary provoked discord. In that dispute Mr. Hay induced the Senate to consent to a treaty providing for "six impartial jurists of repute" to consider judicially the questions involved. The Dominion of Canada named two representatives and the Home Government one—Lord Alvertone, chief justice of England. Elihu Root and Senators Lodge and Turner represented the United States. A 4-to-2 decision was rendered, Lord Alvertone voting with the Americans.

A strong protest arose in Canada. It was alleged that the decision was neither diplomatic nor judicial; that the British were cultivating the friendship of the United States—in this case at the expense of Canadian national interest.

Sir Wilfred Laurier, the Canadian statesman of his day most friendly to the United States, expressed the attitude of his countrymen at the time when he told the Canadian Parliament:

"I have often regretted—and never more than on the present occasion—that we are living beside a great neighbor who I believe I can say without being unfriendly to them are very grasping in their national actions, and who are determined on every occasion to get the best of any agreement which they make."

Following the Alaskan boundary dispute, it became more and more obvious that not only the prosperity and happiness of both countries but the peace and security of the world might depend in a greater or lesser degree upon the maintenance of a more friendly feeling between the two countries and in securing, if humanly possible, closer and more cordial relations.

Both Governments were looking for a more flexible and more direct means by which to settle boundary disputes. That delicate and difficult task was assigned to the two men who, in all the world, probably were best qualified to discharge it—the then United States Secretary of State, Elihu Root, whom Theodore Roosevelt declared was the wisest man he ever knew; and James Bryce, British Ambassador to the United States, and dean of the diplomatic corps.

From their efforts came the Boundary Waters Treaty, which set forth as its objective: "To prevent disputes regarding the use of boundary waters, and to settle all questions involving the rights, obligations, or interests of either nation in relation to the other or to the inhabitants of the other along their common frontier, and to make provision for the adjustment and settlement of all such questions."

The treaty provided for the establishment and maintenance of an International Joint Commission of six members to carry out that objective. Three members are appointed by the United States and three by Canada.

A commission without precedent in the history of international relations, this unique body is clothed with many of the attributes of a court of international justice. It has varied and plenary powers—administrative, investigative, arbitral, and judicial. In fact, it has some form of jurisdiction over all "matters of difference involving the rights, obligations, or interests of the United States or of the Dominion of Canada either in relation to each other or their respective inhabitants."

Few courts, national or international, have ever been called upon to exercise jurisdiction over a wider domain, a greater number of inhabitants, or more vast interests. And no such court from the days of Henry of Navarre to this day has been so phenomenally successful as the modest International Joint Commission.

At its start, in 1912, the Commission had brought before it many boundary questions of long standing, and on February 23, 1915, Senator Jones, of Washington said on the floor of the Senate:

"During the first 3 years of its existence, it adjusted more disputes than had previously been settled through diplomatic channels or by arbitration since the American Revolution."

In later years the two statesmen who set up plans for the Commission viewed its results with satisfaction.

Lord Bryce declared that "the creating of the International Joint Commission was one of the best things done in our time for peace and goodwill between the British Empire and the United States."

And in 1935 Mr. Root described the Commission's work as "a signal illustration of the true way to preserve peace by disposing of controversies at the beginning, before they have ceased to be personal and nations have become excited and resentful about them."

There is a general impression that the International Joint Commission functions only upon the request of the State Department of the United States or the Dominion of Canada and then acts only and simply as a fact-finding body, the validity of whose recommendations and conclusions is entirely dependent upon the subsequent approval of the two Governments.

That is true only in certain phases of the Commission's work and applies only to one of the 14 articles prescribing the duties, jurisdiction, and procedure of the body. Besides investigative powers, its duties are both judicial and administrative.

For instance, under its judicial functions, the two Governments have vested in the Commission an absolute and final determination as to the propriety of raising or lowering levels of boundary waters and waters crossing the boundary. Their findings in such matters as construction of dams for navigation or power purposes, the opening of irrigation ditches or any other obstruction, or diversion of international waters affecting such levels or flow are final and conclusive.

The enormous increase in the use and development of hydroelectric power has multiplied the problems arising before the Commission over 2,000 miles of lake and river front because the terms of the 1909 treaty confer on it the task of authorizing, supervising, and apportioning the use of all boundary waters for irrigation and power purposes.

Yet, despite the ever-increasing demands of both countries for the use of boundary waters and the necessarily conflicting claims of the nationals of each, which have raised a great number of questions of great delicacy and vast importance, only once in nearly 40 years of operation have the members had occasion to deliver a divided opinion. A disposition to come to a unanimous conclusion and to prevent even the appearance of discord among the Commissioners has had the most salutary effect upon both Nations.

Besides its effect on the member countries, it is infinitely gratifying to the members of this Commission to realize that this modest but efficient body has merited and received the commendation of discerning critics throughout the world.

The late Governor Osborne of Michigan, in his recent work, Conquest of a Continent, gives this picture of world-wide recognition of the Commission's value through the years:

"The example of the United States and Canada in their successful solution of embarrassing and at times irritating international problems may well be commended to other nations. At the Lausanne Conference in 1923, Lord Curzon spoke of the International Joint Commission as a possible model for the adjustment of differences at the Dardenelles. In a series of lectures at Cambridge University of Toronto, the International Joint Commission was made the subject of an address. The Prime Minister of Canada, W. L. Mackenzie King, has been instrumental in bringing it before statesmen of the League of Nations in Geneva. At the dedication of the Thousand Islands Bridge in 1938, the Canadian Premier built his address about the International Joint Commission and the Rush-Bagot agreement as important bridges of international friendship and understanding, and monuments of international cooperation and good will.

"Aristide Briand, late Premier and Foreign Minister of France, on more than one occasion expressed the desire and hope that a similar commission might be created to deal with questions along the frontier between France and Germany. At the meeting of the Institute of Pacific Relations in Shanghai one of the delegates spoke of the Commission as an example of what might be accomplished between Japan and Soviet Russia in dealing with the vexed problem of the boundary between Siberia and Manchukuo."

The civilized nations of the earth are more and more impressed with the fact that the indescribable destructiveness and horror of modern warfare necessitates the substitution of some other method of adjusting international differences. One of the greatest achievements of the international joint commission is the part it has played in drawing closer and closer together two powerful and friendly nations alike in fundamental institutions, social conditions, and spiritual aspirations.

And never before in nearly 40 years of service to both nations has the commission been called upon to consider matters of such magnitude as those now on its agenda.

Among applications and references now before the commission are:

A pollution reference covering the boundary waters at Sault Ste. Marie, the St. Clair River, Lake St. Clair, the Detroit River, and the Niagara River, which is one of the pioneer efforts for correction and prevention of pollution. Measures expected to be recommended by the commission for accomplishment by various agencies of the two governments will form the basis for legislative action by the two countries and will lead to many millions of dollars' worth of pollution-abatement activity.

The Columbia River reference calls for a comprehensive investigation of the water resources of the Columbia River Basin to determine if development of the water resources for the purposes of navigation, flood control, irrigation, power development, and other purposes is feasible and in the interests of the two governments. The reference calls for recommendations by the commission as to the divisions of costs of such work between the two countries and the extent of indemnification in either country for damages which may result from the works. This investigation is of far-reaching significance and will effect development costing several billions of dollars extending over several decades into the future.

Similar to the Columbia River reference are those of Waterton-Belly and the Souris-Red River references, while the Passamaquoddy reference calls for a preliminary investigation of the cost of making a complete survey of the proposed Passamaquoddy Tidal Power Development.

Public-works projects now or recently before the Commission, including those mentioned above along with Similkameen Dam, Libby Dam, and the proposed Passamaquoddy Project, would involve an expenditure of more than $2,000,000,000.

There is a reference before the Commission calling for investigation of air pollution from industries and vessels along the international section in the vicinity of Detroit, Mich., and Windsor, Ont., with recommendations as to remedial measures.

These and similar matters now before the Commission give an indication of the scope and character of its work today.

The Commission itself derives considerable satisfaction from noting the growing faith and confidence of both countries in its even-handed justice, bearing out the statement of former Canadian Premier Mackenzie King that in this "International Court" the Governments of the United States and Canada have "established a set of general principles, and an international tribunal entrusted with the high task of applying these principles to specific questions arising from time to time between the two countries with a fair assurance that they would be determined with something of the finality and certainty which the domestic courts in each country achieve in their sphere."

Enlisting Public Opinion in the Fight Against Crime

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Thursday, May 25 (legislative day of Wednesday, March 29), 1950

Mr. KEFAUVER. Mr. President, if we are to have better respect for the laws of the country and more efficient law enforcement, it is, of course, necessary that public opinion be enlisted in the fight against crime.

The special Senate committee investigating interstate crime is, of course, aware that investigations and enactment of legislation is not going to prevent the operation of large-scale organized criminal activity unless the public really wants it prevented.

In 1934, Joseph B. Keenan, a prominent lawyer of Washington, who was at that time Assistant Attorney General of the United States, delivered a noteworthy address to the American Bar Association at Milwaukee. The ideas set forth by Mr. Keenan and the remedies suggested by him are equally applicable at the present time. In order that the Members of Congress and the public may have the benefit of his thoughts, I ask unanimous consent that his speech be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ENLISTING PUBLIC OPINION IN THE FIGHT AGAINST CRIME

(Joseph B. Keenan, Assistant Attorney General of the United States)

Crime has been designated by one writer as the great sewer of society. Not a pleasant subject, certainly, to receive emphasis as a feature topic of the national bar program. And, yet, because of its very stench and misery and sordidness, it is a subject which must receive the careful study of American lawyers and American laity.

So long as the problems of crime and its repression are left to those small groups that come most closely in touch with it—the social workers, policemen, prosecutors, judges, and prison wardens—and so long as the great body of citizenry remains indifferent, hostile, or ignorant, we can look for little improvement.

I would not be misunderstood as to the part which the public must take in this cause. There have been some who have urged that the primary obligations relating to the operation of the machinery of law enforcement should be referred back and placed squarely upon the public. This would be a convenient escape for those officials charged with law enforcement. But there can be no such shift of responsibility. The law enforcement machine, after it has been selected, assembled, and committed to the care of enforcement officials, must be lubricated, operated, and kept in working order by them. Occasionally a slight repair must be made, but that is a task which a mechanic must perform. On the other hand, the nature and texture of the fabric which such a machine produces is a matter of primary public concern. Whether the machine shop shall be scrapped and a completely modern one installed is again a problem which may be referred back to the public. But the functions and responsibilities of the two groups are distinct and should be kept distinct.

Some weeks ago an unarmed English bobby was covering his regular beat when he had occasion to arrest a law violator. The suspect resisted arrest, and in making his escape shot the policeman. The common occurrence of a routine arrest was suddenly transformed into an incident of national and even world-wide importance. The wound was superficial it is true, but to an Englishman that shot represented a challenge to law and order which could not pass unheeded. It was as though 40,000,000 shots had been fired at 40,000,000 separate Englishmen. Aroused citizens joined with the police in a gigantic man hunt whose only counterpart in this country was the search 70 years ago for John Wilkes Booth. The offender was surrounded and killed himself rather than face his infuriated pursuers.

Here in the United States another drama was being enacted. A young farm boy who had served 5 years in a reformatory and 3 years in a State penitentiary set out on a career of bank robbing. He was returned to the penitentiary. On October 12, 1933, in collusion with friends on the outside, he made his way to freedom over the dead body of a sheriff. After three raids on police stations and a bank robbery, the farm boy was responsible for the death of another policeman. When trapped in one of the Western States some months later with an arsenal of death-dealing weapons, he was returned—not as a cowardly killer, not as a ruthless criminal, not as one who had coldly stood over the prone body of a law-enforcement officer, and, with a machine gun, pumped a shower of lead into the helpless official. Rather, he was greated with the smile of the sheriff, the encircling arm of the prosecutor, and the morbid, grinning, curious stares of the crowd.

Strange as it may seem, he broke away from this reception committee some weeks later, and within the course of 5 months took a revolting toll in human lives and property. One of the men who fell before the guns of the bandit's gang was Carter Baum of the Department of Justice, taken in the prime of life.

When a person gets close up to the tragedy and cruelty involved in the career of this criminal it is beyond his power to comprehend what actually happened in a Washington theater before the killer was captured. When Dillinger's picture was thrown upon the screen the audience broke into applause.

Applause, mind you, for a coward and killer—applause for a man who had snuffed out the lives of husbands and fathers without the blinking of an eye—applause for one of the most loathsome creatures in the annals of crime.

And at just about that time the suspect who had the temerity to defy a British bobby was taking his own life rather than suffer the inevitable punishment and disgrace resulting from his act.

In further contrast to the activities of British subjects in supporting their police, we find certain members of the medical profession treating known gangsters for serious wounds during the period of pursuit, and performing operations with a view of concealing fugitives' identity.

How are we to account for this striking contrast? Perhaps it is to be explained by the century-old traditions, the pride of nationality, and the pride of race which so characterizes the British people.

But we simply cannot rest back, while the years roll by, with the hope that eventually a tradition will develop—a national pride emerge. The problem calls for action now. We are afflicted with an inertia, which has been the best weapon of the criminal. So long as he can expect a cheer instead of a jeer, applause instead of denunciation, he will ply his trade and rely, at the day of reckoning, for support from a worshipful public. The problem of molding a public opinion which will demand that crime be stamped out is perhaps the most fundamental problem before us.

What is the state of American public opinion and American standards today? Can we judge it by the quality of the offerings of the American press, stage, screen, and radio—institutions which have a marked influence on public opinion? Certainly, it must be recognized the moving-picture companies, for example, are in a business, and that they will do everything to keep that business on the black side of the ledger. If, as they have indirectly asserted, it is true that to produce pictures which appeal to people of culture and refinement would run their business into red ink, and if it is true that the greatest returns are from the pictures which have a primary appeal to those whose tastes are on a lower level, then perhaps, we should admit that the people are getting what they ask for, and that current offerings not merely shape—but actually represent American taste and American public opinion.

If that be true (and, of course, there is still room for debate in this field as to which came first, the chicken or the egg; I leave that question open) then American public opinion, on the issue of law enforcement, must be challenged, modified, and finally harnessed for constructive results.

Convenient as it might be to generalize concerning public opinion and crime, it is nevertheless dangerous to do so. The attitude of mind varies with the individual. On the other hand, I think it is helpful to group attitudes of mind. The public opinion may then be better analyzed and consequently better understood, and if it be destructive, rendered constructive.

The first group is made up of those persons who are simply indifferent to the whole problem. I suppose there are many reasons for indifference. It seems obvious, for instance, that an individual who has been blessed with a sheltered existence which does not bring him in contact with crime and its repression would quite naturally be indifferent to crime problems. Human nature is such that interest is more easily captivated when the evil strikes close home—or at least when it is known that it is striking close home. If every property owner could be made to see that crime concerns him just as vitally as taxes, and that, in fact, a good share of his taxes are going toward the payment of the crime bill, there would be no need to awaken him from his sleep with an appeal to his citizenship.

I feel sure that the indifference of some people is a direct result of that first reaction which any unsavory subject produces. Crime is essentially a disagreeable subject. There are so many more pleasant things to which one may devote his thoughts. Another reason for indifference grows out of a false sense of security and a childlike conception of the nature of crime. It is occasionally evidenced in the naive assumption that, when the excitement of a reform administration in a city or State has subsided, when new legislation has been passed, or when the local police chief has made a score or more of transfers within his department, somehow the community overnight becomes safe for the law-abiding, and crime is no longer a problem.

There is a second group of the public whose attitude is disconcerting. I refer to those persons who for one reason or another glorify crime and the criminals who commit it—those to whom a greater appeal has been made by the dramatic qualities of crime commission than the dramatic qualities of crime repression. Some of our agencies of public intelligence are partly responsible for the attitude. A few years ago the president of one of the large news services issued an order to all writers for the service which read in part as follows:

"The cowardly silence maintained by an arrested crook who fears underworld vengeance is neither brave, heroic, nor noble.

"When astute criminal lawyers arrange interviews with real or faked maudlin mothers of machine-gun murderers, in order to arouse public sympathy for outlaws, the story is only half told unless the reader is reminded of the brutal facts of the murder.

"Moron murderers who display animal stolidity cannot truly be said to have 'perfect control over their nerves of iron.'

"If the gunman's woman does not happen to be a girl of notoriously loose morals, this exception does not make her a society girl. If brutal companionship and the intimidation of her gunmen friends close her mouth to the authorities, underworld intimidation does not make her a romantic heroine, faithful to death.

"There is nothing mysterious or occult about the workings of the underworld to an experienced reporter. Only fiction-writers put a glamour of mystery about the sordidness, avarice, brutality, and cowardice of the underworld. Fiction-writers do not belong on press association staffs.

"Please test your crime stories by the following rules: Does the story cast such romance and glamour about the criminal that it will influence 16-year-old boys and girls to follow in the footsteps of the gunman, gangster, thug, or crook?"

I honestly believe that one flippant remark by a comedian on a radio program or in a daily newspaper column can do more to shape the public attitude on problems of law enforcement than all the learned treatises on civics and sociology. It is a tremendous power—and it should be directed in a proper channel. Too often it has been used, unintentionally and thoughtlessly I am sure, to create sympathy for the underserving, to glorify lawlessness, and to ridicule those sworn to uphold the law.

The attitude of the third group, and I believe it to be an extremely small one, may be characterized as one of hostility to any use of coercion by the Government which tends to restrict personal freedom. When, however, it is considered that most of our population is made up of descendants of men and women who resisted Old World controls—dissenters, in other words—it is surprising that we are as amenable to law as we are.

A fourth division of the public which must be reached includes those persons who, being unfamiliar with the many-sided problem of crime, are prone to offer the one solution—the one sure cure, the one panacea. It is a remarkably interesting fact that in the fields of the so-called exact sciences, such as mathematics, chemistry, and physics, an uninformed layman rarely ventures an opinion, but that in the field of the social sciences any bootblack will speak with the conviction which only years of study and training would justify. Many letters come daily to the Department of Justice, each containing some cure for the evil. And many authors of these letters will dispose of crime causes with a single word foreign-born, or unemployment, or insanity, or slums, or liquor, or firearms. Obviously, before this group can be enlisted in any worth while program, there must be an intensive effort made to impress upon its members that no one explanation will suffice, and that no one simple remedy will prove to be a cure.

There is a fifth group of the public—the group which lends cheer to those persons who must lead in any movement for the prevention or repression of crime. I have faith that in this group are to be found most of our citizenry. It is composed of those who are aroused against lawlessness, who are ready and anxious to help, who insist that they be given a part in the fight against crime. They have come to law enforcement officials with offers of assistance. I regret to say that we have not even begun to utilize the energies of this group. The militant attitude of the individual citizen is just as essential to successful law enforcement as is the militant attitude of the officials charged with such enforcement.

A well qualified writer who has recently made a study of British police methods makes a significant observation that the greatest ally of British policemanship is British citizenship. A community never secures effective law enforcement unless it not only wants it but demands it. As we come to the close of the year, in this association—a year which has been devoted to the emphasis of criminal law and its administration—it is essential that we think concerning the methods by which the problems of law enforcement may be brought forcibly to the minds of not only lawyers, but the lay citizen without whose cooperation we cannot function. It would be nothing short of tragic if, with this session, the American Bar Association ceased its emphasis upon the subject of the administration of criminal justice.

As the first step in the formulation of an aroused public opinion against crime, I should like to see the great agencies which communicate intelligence, such as the press, the stage, the screen, and the radio, apply to their offerings this three-fold test: (1) Does this offering tend to glorify crime and make heroes of those who commit it? (2) Does the offering hinder law enforcement, such as by giving to a fugitive information as to the progress of the search for him? (3) If the offering is critical of law-enforcement officials, is it fair and balanced, giving credit where credit is due and placing blame where blame honestly deserves to be placed, or is it so phrased as to cause persons to ridicule law enforcement generally?

As the second step in the formulation of an enlightened public opinion emphasis should be placed upon the study of crime, its cause and prevention, in the schools and colleges of the country. The insignificant place allotted in the curriculum to the subject of crime is far out of proportion either to the space devoted to the subject in news organs or to the vast toll in life and property represented in the cost bill of crime. It is probably safe to assert that if the proportions were reversed the result would be strikingly beneficial.

A lack of information in the field of the administration of criminal justice is one of the basic reasons for most of the public's indifference and the misdirection of its energies. This field must receive in educational institutions the share of expert study to which it is entitled before we can hope to have a public opinion which can be classed as enlightened.

No neat trick will bring about the enlightenment of public opinion. On the contrary, it is going to be necessary for each individual to revive a few of those old-fashioned civic virtues before results will be apparent.

The citizen who righteously asserts that he does not want a corrupt administration in his city but who, nevertheless, returns to office, men from whom nothing better can be expected, must be reminded that the power to vote has never been taken from him.

The citizen who castigates a jury which acquits a notorious criminal but who, when summoned for jury service, claims an exemption, must be reminded that both the privilege to serve and the duty to serve upon a jury has never been abolished.

The citizen who happens upon the scene of a crime but who, in order to avoid publicity and the bother of a court appearance, does not volunteer information but makes a hasty departure, must be reminded that criminals are only convicted upon information such as he possesses, and that such information must be produced through the medium of witnesses at a criminal trial.

These are fundamental obligations of citizenship, so fundamental that to enumerate them is to become trite. At the same time they are obligations which if not assumed will render law enforcement increasingly ineffective.

Every civic and service organization in this country which boasts of a program for human betterment will do well to make the subject of crime and its control a topic for major emphasis. Every bar association should broaden the scope of its criminal law or procedure section so as to permit emphasis upon all phases of the administration of criminal justice. Every school must assume some responsibility for acquainting its students with the complexity and enormity of the crime problem. Every organ of public information must consecrate its offering to the building of a more wholesome public opinion on the subject. Every citizen must reexamine the so-called civic obligations, assume them, and, casting aside flippancy and indifference, resolve to make American citizenship the ally of American law enforcement.

The citizens of our country have never failed to render effective service demonstrating their sincere patriotism in any attempt to overthrow our Government in time of war. The hardy pioneers who courageously built up our country would never think of affording succor or relief, sympathy or support to those who were attacking their homestead and threatening or attempting to massacre, members of their families. Even so today there is needed the same support of governmental authority. I am confident that to bring this about we need only a fuller and clearer realization of the problem to enlist the needed public support.

The World-Wide Communist Conspiracy

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 24, 1950

Mr. PHILBIN. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include a speech

I delivered recently at Americanism Night exercises conducted by the Hudson, Mass., Lodge of Elks.

I also delivered these remarks in substance in a speech I made at the recent Knights of Columbus communion breakfast at Leominster, Mass.

I am greatly honored and highly privileged to join tonight in this great manifestation of American patriotism and loyalty to the Nation. The Elks of Hudson are to be heartily congratulated for arranging this magnificent meeting. It is but another instance of long faithful service rendered to the country by this great pro-American organization.

For some time past I have been profoundly disturbed by the manifestations here and abroad by the world-wide Communist conspiracy. Day by day it is becoming increasingly apparent that powerful forces are working for the destruction of American democracy and freedom throughout the world. Evidences of Communist conspiracy are widespread and most impressive. The extent to which Communists have made headway in gaining vital objectives is truly alarming. Americans can no longer afford to be indifferent or apathetic toward this growing menace to the security and well-being of the Nation. The time has come for every true citizen to rally to the support of free institutions to declare undying allegiance to our Constitution and to move actively, vigorously, and energetically to protect and defend the principles upon which this Government is founded.

The question of communism is directly connected with enduring peace in this world. That the Kremlin is in a very strong position territorially and militarily no one can deny. It is rich in resources and manpower. It has embraced widespread territories. This great world power has accomplished these results principally in three ways: 1, diplomatic concessions; 2, aggression; and 3, infiltration. At the moment the latter seems by far the most effective—and Trojan horses stand in many countries preparing to seize the first opportunity to conquer and subjugate in the name of the great totalitarian slave state which is world communism.

This situation is getting worse, not better. Wide areas of the Asiatic Continent are already involved and others are slated for involvement.

What is our Nation doing about it? Well, to begin with, we have been blocked on the diplomatic front so far as the Soviets and its puppets are concerned. It is impossible to bargain or reach agreement with nations which refuse to sit at the council table in a spirit of good faith and sincerity of purpose. That is why not only our own Nation but the United Nations organization has not been able to arrive at understandings with the Soviets concerning a wide variety of questions such as universal disarmament, international control of atomic power, territorial arrangements based on democratic principles, liberation of suppressed peoples, the ending of world-wide propaganda and conspiracy and many other questions upon which enduring world peace must essentially rest. So we have not been able, acting by ourselves alone or through the United Nations, to treat successfully with the Soviets in usual diplomatic manner.

This has made it necessary for us in the name of self-defense and security to try to organize the democratic world to check the spread of communism and mobilize cooperative forces which will be ready to resist aggression if it should come. The ECA, the Atlantic Pact, and the military-assistance program are parts of this plan. Unquestionably ECA has been effectual to a marked degree in reviving the languishing economies of democratic-minded European nations, alleviating privation and hunger, providing employment, stabilizing economic and social conditions and thus neutralizing the spread of Communist ideas and infiltration. However, there are still many spotty places in this picture and the situation is not satisfactory in that it must be clear that this Nation cannot indefinitely maintain and support so many nations and so many peoples at the expense of the American taxpayer and by the dangerous expedient of overburdening the American economic system much less extend this type of relief and assistance to even more remote parts of the world that have come under the pall if imminent Communist domination.

Moreover, the military-assistance program also contains some obvious inconsistencies.

We are told on the one hand, and I personally believe it, that jet planes, guided missiles and scientifically devised modern weapons have outmoded conventional types of military equipment, strategy and tactics, etc. We are told on the other hand that furnishing certain arms and equipment to the democratic nations will be helpful in the event of war. Most military authorities will agree that should war start the Soviets could move across the face of Europe to the channel ports within a matter of 20 or 30 days and in 60 days consolidate strong positions throughout all of Europe. If this is so, there would be real danger that the equipment and supplies we delivered might be taken by the Soviets and even be used against us and our allies. In addition, the situation in the Far East would be exceedingly difficult.

Consequently, with these things in mind we have proceeded to build up the strongest peacetime armed force in the history of the Nation. Let there be no doubt about it, we have a mighty and well-balanced war machine which embraces on land, sea, and in the air the most powerful and awful of modern weapons. I cannot go into the details of this vast organization. It is enough to state that it is up-to-date, well coordinated, ably led and ready for instantaneous action.

I hope and pray we will never have to use it but, if war is to be avoided, there is little time to lose. We should and must move on a broad front in a vigorous, sincerely-motivated all-embracing peace offensive. We must try to mobilize the spiritual, the moral, the civilized instincts of our own people and of peoples everywhere, not in the spirit of uplift or bravado, but with a real, genuine determined effort through affirmative, straightforward, and strong-worded declarations of policy, urging peace and offering peace to the Soviets and the whole world, posing the questions of universal disarmament, atomic power control, and all the other many questions that will have to be met and solved to clear the atmosphere for discussion and settlement of these grave issues.

In this quest to prevent war, our statesmanship should be wise and patient but also and above all firm, unyielding and uncompromising on matters of principle because the outcome will inevitably affect for good or evil not only our democratic ways of life but the very existence of freedom in the world. The destiny of many as a free being under God is at stake.

There can be no further delay in meeting these issues. Every month, every day, every hour is strengthening the potential enemy, enabling him to consolidate his resources, to implement new weapons of horror which he has secured through duplicity and treachery. If we wait to resolve these questions, the time will come when we may rue the day. Acting now with earnestness, sincerity and courage involves certain risks to be sure but these risks are far less than those involved in waiting for the enemy fully to prepare and savagely to strike out of a clear sky in devilish ways and with incredible means and with such force and effect that our own great Nation in one fell swoop might well be paralyzed and disabled from defending itself against those who propose to enslave us.

We can permit no divisions to beset us at home during these crucial days. A thoroughly united people we must have, a thoroughly determined people we must have, if we would avoid espionage and sabotage at a time when the internal security of the Nation will be paramount. And clearly we can tolerate no subversion either outside or inside the framework of the Government. If there are Reds in the Government let us fearlessly expose them and drive them out and let us do that job without conducting witch hunts or smearing expeditions against anyone. Peace will not come until we have made it abundantly clear that we are willing and able to insist upon justice for ourselves and other free peoples.

Fight Cancer—Help Science Help You

EXTENSION OF REMARKS

OF

HON. CHRISTOPHER C. McGRATH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 25, 1950

Mr. McGRATH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following from the New York Journal-American:

FIGHT CANCER—HELP SCIENCE HELP YOU

By Harry H. Schlacht

Oh, heavenly Father, help us to respond to this appeal in a manner that will deserve Thy blessings.

Conquer cancer. It is the prayer of humanity. It is the cause of the American Cancer Society.

It is our great problem. It is our great cause.

It is as holy as the Master's command to heal the sick.

What a stirring challenge. What a splendid opportunity for service. What an inspiration to enlist in the war against this horrible malady.

Cancer is the cruelest killer. It is the foe of mankind. It is the common foe.

This is our common fight.

Cancer does not wait for the convenience of man. It cannot be dismissed with the comment "It cannot happen to me."

It strikes all ages. It strikes rich and poor alike.

The ACS is on the march to conquer cancer. Cancer can be counted out. It can be done through the ACS.

ACS is in the forefront of the fight. It is lifting the curtain of hope to millions. It is encouraging research on all fronts. It is directing a finish fight against this enemy of humanity.

We must protect ourselves. We must protect our loved ones.

Let us not say this fight is impossible. It is not only possible, it is being done by the ACS.

There is every reason to believe that with proper financial support we shall yet find something like sulfa or penicillin that will destroy the enemy of man.

This problem is no more impossible than the atomic bomb. This enemy is more destructive than any foe we faced on any battlefield.

Hear, America, the plea of Elmer H. Bobst, leader of the American Cancer Society crusade: "Won't you join that ever-growing list of Americans who have thrown themselves into this work? If you do, I am sure God will bless you."

Every minute of the day and night millions of prayers are pouring forth from agonized souls—for relief. By heeding cries of suffering, it is within your power to become the true servants of the Lord.

Let's go—America! Let us all rally to the ACS cause. It is our cause. It is our fight.

Its success depends on us. Its success is as good as we make it.

Let us help science help you.

Let us give to conquer cancer. Let us win the fight.

International Refugee Organization

EXTENSION OF REMARKS

OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, May 25 (legislative day of Wednesday, March 29), 1950

Mr. LEHMAN. Mr. President, I ask unanimous consent of the Senate to have printed in the Appendix of the CONGRESSIONAL RECORD a speech made by Mr. J. Donald Kingsley, Director-General of IRO. This speech was made over Station WNEW, New York, on May 21, 1950.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

"I SPEAK FOR PEACE"

The refugee is just as explosive—and even more dangerous, in many ways—than the atomic or the hydrogen bomb. As long as we have peace the bombs are reasonably safe. But peace depends in part upon our ability to solve the refugee problem, and therefore every man, woman, and child has an immediate and vital stake in it. Yet, of all the tremendous issues which confront us, this is one of the most difficult problems to visualize, to understand with clarity, to solve with assurance. But we must try.

Americans are most familiar with the problem in terms of the DP. The United States already has accepted as immigrants under the Displaced Persons Act well over 160,000 DP's. Many of you have them as neighbors. Some few have turned out badly, and you read lurid accounts of their shortcomings in the letters to the editors column. But most of them—almost all of them, in fact—have become good, hard-working, self-supporting, and productive citizens.

I, too, am chiefly concerned with the DP's, as Director General of the International Refugee Organization. The DP's are the people displaced from their home countries either during the war or in its immediate aftermath. Originally they included all the people Hitler brought from the four corners of Europe to work as slave labor in Germany. They included the inmates of concentration camps. They included the anti-Communist refugees from eastern Europe who fled before the advancing Red armies to find asylum in the west. There were 8,000,000 of them when the war ended.

With the help of UNRRA and the Allied armies, most of them returned to the homes they came from. But by the summer of 1947 more than a million remained, mostly in Germany and Austria. Most of these came from eastern Europe, from countries taken over by the Communists, and they refused to return. Most of them had suffered under nazism, hated all that Hitler stood for, and prayed for a chance to emigrate to some free, democratic country in the west.

The only practical solution for most of these people was to transfer them to new homes in countries willing to accept them. That is the job IRO was established to do.

It has been, and still is, a tremendous task. IRO is supported by only 18 of the 59 members of the United Nations. Neither the Soviet Union nor any of its satellites has ever taken part in the work of IRO or contributed to it. They have constantly opposed it. Yet in spite of this small membership, IRO is by far the largest of all United Nations agencies—almost three times as large as the United Nations itself and all of the other specialized agencies combined. To accomplish our task, we have maintained as many as a thousand camps scattered throughout western Europe and the Middle and Far East. That number is now reduced to about 300. We have organized and maintained the largest civilian shipping fleet ever operated in peacetime. We have transported overseas more than 700,000 people. Meanwhile, we have housed and fed them, looked after their health, educated their children, taught them new languages and trades.

Now we have about 300,000 left in our camps, and many more outside who look to us for help in finding new homes, or for legal and political protection in a world where refugees often find the cards stacked against them.

We must do all we can for these people within the next 12 months, because IRO will go out of existence at the end of March 1951. Above all, we must find homes in democratic countries for all we possibly can—for those who will not or cannot return to their homes in the east and have fear for the future in Germany and Austria. They—the last of the DP's—deserve first priority. It was they who suffered first, longest, and most severely under the lash of totalitarian inhumanity. They should have priority, also, because they are the most bitterly resented minority in Germany, and if left there will constitute a fuse which might well explode the most dangerous bomb in the world—the refugee bomb.

The refugee bomb is not a technical invention that you can store away in a vault and use or not use at will. But it is just as real, just as explosive; and far less controllable. Moreover, it might well be capable, if it once gets out of hand, of setting off all the others. It is this problem—the refugee bomb and how to control it—which is so vitally important and, at the same time, so difficult to visualize.

In addition to the DP's cared for by IRO, there are now approximately 12,000,000 refugees in Germany alone. About eight and a half million of these are in western Germany—more than 14 percent of the normal population of the American, British, and French zones. More are swarming across the border into the western zones every day, adding to problems of housing, feeding, and employment that are already staggering. Most of these people were uprooted from their homes in eastern Europe and forcibly expelled to Germany, with nothing more than the goods they could carry on their backs. In the western zones, they live, for the most part, in camps maintained by the Government, in conditions of indescribable squalor. Some of them are outright Nazis or Nazi sympathizers, who gave Hitler all the help they could. They deserve to suffer. Some are both anti-Nazi and anti-Communist. Some few, undoubtedly, are spies and agitators. Some, like the children, are just plain nonpolitical. But all of them are resented by the Germans—not as bitterly as the DP's, who are living reminders of German atrocities, but simply as unwanted strangers feeding and living on German soil. And all of them are a constant threat to the peace of western Europe, and therefore of the world, for they are a steady drain on the economy and a focal point of unrest.

Similar explosive concentrations of refugees have been built up since the war in other parts of the world. There still are some 375,000 in Greece, 900,000 in Palestine, 13,000,000 or 14,000,000 in India, more than half a million in Burma, not to mention the uncounted millions in China. The total is somewhere between 30,000,000 and 60,000,000.

The refugees are not only a human and an economic problem. They have become a political weapon as well—a formidable and expanding time bomb. It is a weapon which cannot be used by democratic countries, but which must be understood, recognized for what it is, and neutralized.

Even the wealthy west cannot care for all these millions and give them services and transport on the scale we provide for the DP's through IRO. But we must first pull the fuse of the bomb, by completing the work in which IRO is still engaged. In this, Americans can help directly by providing sponsorships for DP's through the United States Displaced Persons Commission.

This, I repeat, must be our first priority. I dread to think of what will happen in Germany if any large numbers of the displaced are left there when the IRO goes out of existence early next spring. Already, German newspapers are beating the drums against them—against these people who suffered for so long at their hands. Already, discrimination against DP's on the part of local courts and minor German officials has become a serious problem. Those who are left behind next year will find life hard indeed, and the more there are of them, the greater the danger of a fearsome new outburst of hate and vengeance. The fires of arrogance, of pride, of hatred, and intolerance, which were fanned for so long by the Nazis in the hearts of a whole generation, are not dead. And try as they might, with the best of good will responsible German leaders cannot damp them completely. In the name of peace, as well as in the name of humanity, we must find new homes in new lands for as many as we possibly can in the time remaining. In this, with your help, we can succeed.

But even then, our task will not be finished.

Then through continued international action, we must find effective means by which all the rights of man, including political asylum, the right of movement and the right of work, can be assured to legitimate refugees. We must develop effective means of preventing the exploitation of refugees by nations callous enough to use them as political pawns and weapons of cold warfare. And we must organize machinery to facilitate the international movement of workers, whether manual laborers, skilled craftsmen, or specialists, so as to avoid the colossal waste of skills as well as the threat to peace which results from great concentrations of stagnant manpower.

All this can be done, either by the whole world in cooperation or by the west alone. And we must do it, for our own sakes and for the sake of peace.

Civil Rights

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, May 19, 1950

Mr. SHAFER. Mr. Speaker, in these times there appears to be much confusion and a complete misunderstanding of the forces which have operated

to prevent any real action on civil-rights legislation in this session of the Eighty-first Congress. In the public prints, Democrats blame Republicans and Republicans blame Democrats for the failure of Congress to act. Because of this, I believe that a brief summary of civil-rights legislative history, at this time, may clear the air and place the responsibility where it belongs.

I believe that all will agree with me when I say that the thirteenth amendment to the Constitution of the United States is the basis of all civil rights. It was this amendment, made possible solely by the Republican Party—the party of Abraham Lincoln—which overthrew human slavery in this country of ours. The Democratic Party—the party of President Truman — opposed this amendment to the last man. Yet if the Democratic Party had accepted the thirteenth amendment, the acceptance would have ended, for all time, the controversy over the status of free men.

If the Democratic Party had accepted the thirteenth amendment, there would have been no necessity for the fourteenth and fifteenth amendments. The thirteenth amendment overthrew the institution of human slavery; the fourteenth amendment made our colored citizens actually citizens of the Republic; and the fifteenth amendment to the Constitution guaranteed the right of every citizen to vote, regardless of race, color, or previous condition of servitude. But the Democratic Party—the party of President Truman—accepted none of these amendments; indeed, fought them with utmost bitterness.

All fundamental rights now enjoyed by our colored people were given them by the Republican Party, whether the right to education, the right to work, to individual human dignity, or to protection of the ballot. Because in some sections of the country, under a Democratic one-party system, the thirteenth, fourteenth, and fifteenth amendments to the Constitution have continued to be nullified by legislative subterfuge and evasion, we now have with us, even today, the need for further action to guarantee the civil rights already explicit in the Constitution.

The first civil-rights bill introduced in Congress was the work of Lyman Trumbull, Republican Senator from Illinois, and one of the great lawmakers of that period. He introduced the bill in 1866. It provided that—

> There shall be no discrimination in civil rights or immunities among the inhabitants of any State or Territory.

As the debate on this measure proceeded, Senator Reverdy Johnson, of Maryland, now a Democrat where a few years earlier he had been a Whig, urged that the word "inhabitant" be changed to "citizen." Thereupon followed the first consideration of suffrage for the newly freed Negroes. The word was changed, as Senator Johnson had urged.

The civil-rights bill was passed, and promptly vetoed by the President. Whereupon the Republican Congress voted to override the veto by a heavy majority. But the civil-rights legislation proved impotent against opposition in Democratic Southern States. Thereafter Thaddeus Stevens, parliamentary wizard, speaking for the Republican Party, put the civil-rights measure into the form of the fourteenth amendment to the Constitution.

As with the fourteenth amendment, which made our colored people actual citizens, the fifteenth amendment was urged upon the country by Republican President Ulysses S. Grant, who was Abraham Lincoln's great Civil War general. The fifteenth amendment, as I have said, guaranteed suffrage to all, regardless of race, color, or previous condition of servitude. So it was, that Republicans gave the colored people of the United States that measure of civil rights they now have, and thus made possible the great strides the Negro race has made in the United States over the past three generations.

From beginning to end the Democratic Party—the party of President Truman—fought the civil-rights legislation and fought the civil-rights amendments to the Constitution. The Republican Party, led by such political giants as Lincoln, Grant, Trumbull, Fessenden, Stevens, and Sumner, led the fight for civil rights and won.

That civil rights have been stultified in more recent years can be laid to nothing but the refusal of Democrats to recognize the validity of the thirteenth, fourteenth, and fifteenth amendments to the Constitution.

In the light of this great Republican tradition of equal rights for all men under the Constitution, can there be any real question as to the responsibility for inaction by the present Fair Deal Democrat majority in Congress on the civil-rights bills?

Address by Hon. Burnet R. Maybank, of South Carolina, at Annual Meeting of Surgeons of the Southern Railway

EXTENSION OF REMARKS

OF

HON. BURNET R. MAYBANK

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Friday, May 26 (legislative day of Wednesday, March 29), 1950

Mr. MAYBANK. Mr. President, it was my privilege last night to address the annual meeting of the Surgeons of the Southern Railway at the Statler Hotel. I ask unanimous consent that my remarks on that occasion be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is always a pleasure for me to be among a group of doctors. Associations with medical men bring back many fond memories. I think it was my boyhood admiration for both my father and my grandfather, who were doctors, that led me to study and graduate in pre-medicine at the College of Charleston just prior to the First World War. A tour of duty in the Navy postponed my entry into medical school, and by the time I got back, it didn't seem practical to continue or even begin over as the case may have been. Otherwise, I might well have found myself seated among you tonight listening to some other Senator.

Professional men such as you seldom attend convention meetings and lectures for the purpose of having an outsider talk to you about the problems with which you are most familiar. You are afforded other opportunities to discuss your everyday experiences with learned men of science. I, therefore, would not presume for 1 minute to infringe on your hospitality in such a manner.

We do have, however, a number of common interests over which we may meet satisfactorily and to our mutual benefit.

There is not one of us who is not vitally concerned with the state of our Union and the condition of our economy generally. During the early days of each new session of Congress it is customary for the President to address a joint meeting of the Senate and the House on the state of the Union. In this address we are advised of the general condition of the country, both domestically and internationally. This is simply a report to the Nation with certain recommendations upon which the Congress is urged to act. This leads me to the first of two conditions I intend to discuss with you tonight.

The most prominent universal interest among our people at this time with relation to our domestic affairs is the state of the budget. There is mounting interest and concern over the high cost of Government as compared to the incoming revenue.

It is easy and popular to attack expenditures. It is not quite so easy to meet the day-to-day demands upon the Federal Treasury with a workable alternate plan.

The Congress is being constantly assailed and pressured to cut expenses on the one hand and to initiate new and greater spending programs on the other. This latter, I find, is not particularly hard to resist. However, a quick glance over the spending program to which this Government is committed will immediately reveal the difficulty we face in cutting the major appropriations.

Those who suggest cutting expenditures can readily name one or more appropriations which could be cut. These recommendations, when analyzed and boiled down, amount to nothing more than—"He can get along on less money, but I will need more."

In order that you may be better acquainted with the problem, I am going to give you a brief résumé of proposed budget expenditures for next year.

In the fiscal year 1951 the cost of past wars and of preserving national security will account for 71 percent of the Federal expenditures. In that one statement, gentlemen, you find yourselves face to face with a cold reality when you realize that 71 cents out of every tax dollar is used to pay for past wars and as insurance against future wars. How much, I ask, can we afford to trifle with our national security?

To go a step farther, this 71 percent, in terms of dollars, amounts to $13,300,000,000 for national defense, $6,100,000,000 for veterans, $4,700,000,000 for international affairs, and $5,600,000,000 for interest on the national debt.

The direct budget costs of World War II amounted to nearly $350,000,000,000. Approximately 60 percent of this amount was financed by borrowing. Interest on the debt, therefore, in accordance with the figure I just gave you, has become a heavy fixed charge in the budget each year.

The $6,100,000,000 for veterans will provide services and benefits for 19,000,000 exservicemen, including medical care, pensions, and readjustment benefits under the GI bill.

After cutting these four large slices from the budget pie, there is a little more than a quarter wedge remaining. To be more exact, 29 percent, or about $12,500,000,000, remain for all other expenditures of the Government.

Compare, if you will, the large amount of money expended annually on national defense and international security with that remaining portion which may be applied to our Nation's domestic welfare. This 29 percent must be distributed over programs including the development and conservation of national resources, promotion of health, housing, education, and economic security, assistance to transportation and the flow of trade and commerce, and many other governmental services. Out of this 29 percent the largest item is for atomic energy and stockpiling of strategic materials which, of course, is a direct war expenditure.

The small slice of the pie—the 29 percent—must be spread over many general programs.

1. SOCIAL WELFARE, HEALTH, AND SECURITY

More than half of all expenditures under this heading in 1951 will be grants to States to help them provide public assistance to the aged, to the blind and to dependent children. At the present time more than 4,000,000 persons are receiving this public assistance compared with 2,700,000 drawing benefits from the old-age and survivors insurance trust fund. This fund presently totals about $12,000,000,000, most of which is paid by the beneficiaries. The 1951 benefits under the present law will total about $800,000,000.

The Public Health Service, another recipient under this general program, gives both financial and technical help to State and local governments for many health activities. From your own experience, you know that these include such services as control of communicable diseases, hospital construction, and mental health. It also sponsors research programs into the causes and cures of such diseases as cancer, arthritis, and tuberculosis.

From this same budget of approximately $2,700,000,000 must come expenditures for crime control and correction. This includes the costs of the Federal Bureau of Investigation, the Secret Service, narcotics control, the work of the United States district attorneys and marshals, and Federal prisons.

2. HOUSING AND COMMUNITY DEVELOPMENT

In the field of housing, your Federal Government assists in furnishing credit to home builders, home buyers, mortgage lenders, and local communities.

Gentlemen, I urge you to take note of the fact that I use the word "assists" advisedly. While the Federal Government does make some few direct loans, its principal role is insuring or guaranteeing private loans and purchasing mortgages from private holders.

If you have any doubts about the Government's role in housing, I ask you to check the true figures on financing methods for last year. Of the record number of homes constructed in this country in 1949, more than 51 percent of all new private housing construction was financed with mortgages insured by the Federal Housing Administration.

The Home Owners' Loan Corporation will have an excess of receipts over expenditures of $134,000,000 in 1951. By the end of 1951 all of the more than 1,000,000 loans made to home owners during the depression will have been repaid or sold.

3. AGRICULTURE

You have heard much of price supports. Of course, I opposed price supports on perishable goods. The Government has lost considerable money on this part of the program, and it is to be liquidated. In the meantime, the price supports on the main agricultural products—cotton, wheat, tobacco, and peanuts—have shown a profit to the Government, and the loans have practically all been repaid. In cotton alone the Government made $75,000,000 last year. There have also been substantial profits on other Government loans on major commodities.

4. TRANSPORTATION AND COMMUNICATION

To help assure adequate transportation and communication industries, the Federal Government furnishes many facilities and services. It regulates economic and safety aspects of these industries, and, in some cases, assists in their development through direct or indirect subsidies. A system of grants-in-aid to States assures our country of a basic system of national highways.

Our Coast Guard operates lighthouses and other navigation aids. It maintains search and rescue facilities. It engages in law enforcement related to maritime activities.

Since 1939 airline traffic has increased by over 800 percent, and private flying has increased in similar degree. This growth has required a corresponding expansion in the program of the Civil Aeronautics Administration.

Our national security demands that our merchant marine be maintained at cost on an equal basis with lower foreign costs.

Two hundred and twenty-five million dollars will be used for shipbuilding and ship-operating subsidies in order to meet the minimum requirements estimated for national safety.

At present postal rates, it is estimated that postal operations will suffer a deficit of $555,000,000 in the next fiscal year. This is because of an enormous loss by the Post Office Department in carrying second-, third-, and fourth-class mail. The taxpayer is really subsidizing the distribution of newspapers, periodicals, magazines, catalogs, and circular mail. On second-class mail and on circular mail which goes at the minimum rate of 1 cent there has been no increase in rates for over half a century. On the other hand, the railroads and other carriers have been faced with changing conditions. They have had to raise the salaries of their employees and generally increase their overhead. Also, the costs of equipment and maintenance, plus the costs of handling the mail, have increased manyfold. The railroads, of course, are not making any money in these operations, even though the taxpayers are paying the subsidies to carry this class of mail. This is likewise equally true of the airlines where the operating costs of many of the lines to carry passengers and freight to all corners of the world are subsidized.

Now you have had in a general way a brief look at the many services and benefits demanded of our Government. I hope you will keep these various programs in mind as we turn now, for just a few minutes, to the second part of my discussion.

It is a popular pastime among certain static-minded individuals and groups to indiscriminately label every forward move by the Government as socialistic.

In a recent radio interview, Vice President Barkley recalled that he was labeled a Socialist back in 1912 for advocating Federal aid to road building. As you well know, such a program has been the law of the land since the Wilson administration. I have no personal knowledge of any advocates of States' rights refusing Federal grants for road-building programs.

I told you in the beginning that I did not intend to discuss with you any of the professional problems of your daily lives. However, there is one item in which you are vitally interested and which would, if it came to pass, have a direct influence on you professionally. I refer, of course, to the fear and apprehension over any proposed program of so-called socialized medicine.

Let me state to you categorically, here and now, that I shall fight with every weapon at my command any effort to establish socialized medicine or socialized anything else—including FEPC.

We have the same objectives, you and I. We work and strive to promote the health of the people of America. We can best promote the health of our people by preserving and building and strengthening the traditional American free practice of medicine.

We do not need to tinker with strange and untried devices to bring health to our people. We have at hand the tried and tested practices of American medicine—the fruitful products of our free American way of life that have brought to our people the highest quality of medical care to be found anywhere in the world.

We must continue to preserve the freedom of the individual doctor. We must preserve the incentives of our free medical system—the incentives for individual effort, initiative, and resourcefulness—the incentives to give the best that we have.

These incentives are not merely material rewards. They are the satisfactions that come from a job well done, that flow from the personal relationship between the doctor and his patient. We must never destroy the American doctor's unique place of trust and confidence. The present system of medical care has been too valuable, too effective, and too useful to be abandoned.

It is deep in these principles that men such as you, my father, my grandfather, and the doctors before them have laid the cornerstone of American medicine.

But let me warn you, doctors, we cannot preserve the free practice of medicine by simply denouncing socialized medicine or by a stand-pat opposition to socialized medicine. We can best preserve our free-enterprise system in the field of medicine by offering a still better solution to the Nation's medical problems than any socialized program might offer. We must go forward with affirmative, constructive medical programs that will meet the health needs of the great rank and file of the American people—programs in which, I am proud to say, the American Medical Association is making rapid advances.

Now, let me issue a warning—a word of caution. If you remember nothing else that I say here tonight, I beg of you to carry this thought back to your home, your community, and to your office.

I do not know, and I am confident that you cannot name, one instance in which the Government has voluntarily invaded the ranks of private enterprise. There is not a field into which the Federal Government has been injected except where private enterprise was either unable or unwilling to render a necessary service. I will support that statement from the information which I have already given you with respect to next year's budget expenditures.

In 1951, as I told you earlier, almost a billion and a half dollars in grants to States will help them to provide public assistance to the aged, to dependent children, and to the blind.

From that same program nearly a half-billion dollars will go to the Public Health Service.

Ninety-nine million dollars will support our efforts at control and correction of crime.

Is this socialization?

Does any State decline these grants because the program interferes with their State's rights?

I have never in my entire political life voted for the expenditure of Federal funds to States without the State having control of the distribution of the money and having the programs run by the State officials who are closer to the people and who can better realize their needs.

What about the 80 cities which will request loans from the Federal Government

during 1951 to assist them in attacking city slums? The Federal Government has nothing whatever to do with initiating this community development. The need must be ascertained and the request must be made by the city or its recognized housing authority.

I have already told you that more than 51 percent of the new private-housing construction in this country last year was financed with mortgages insured by the FHA. Let me tell you that this program has not only been grabbed up by private lending institutions—its continuation has been demanded.

It is, indeed, a strange paradox to sit at the table in the Banking and Currency Committee and listen to witnesses berate, condemn, and roundly damn the Congress for interfering with private builders and lenders—even though the Government, except in rare instances such as a few war-housing projects, has not built, does not own, and does not operate a single dwelling unit. Even though built under a Government-insured program, the cement, the lumber, the nails, and the fixtures were bought from private sources by private builders and contractors. The money was borrowed from private lending institutions. Except in municipally owned, low-cost rental units, the operation of every dwelling has been privately administered.

Is this socialization of an industry?

I say it is nothing more than the constitutional functions of a union of sovereign States in discharging its responsibilities to the people who live, work, and fight for its continued free existence.

I could cite for you instance after instance in which the Federal Government has carried its load in a mighty effort to preserve, continue, and extend these basic rights.

I hope you recognize by now that I am not talking to you primarily as doctors. I am talking to you as citizens—leading and influential citizens—in the communities which make our States and, in turn, our Union.

On the other hand, I have cited some of these examples to you because you are doctors. Doctors across the Nation seem to be united in their stand, even as you and I, in opposition to any proposal to socialize your own honorable and respected profession, or any other profession, for that matter.

I urge you, my friends, to think long and carefully. Consider what I have said. You have many friends. You have influence.

Over all the Nation a vast effort for health is being put forth by individuals and private institutions, by the States and their communities, and by the Federal Government. We must push ahead with these efforts. There is so much yet to be done.

Diseases of the heart and arteries cause one out of every three deaths in the United States and disable 8,000,000 Americans every year. The terrible death toll of cancer is rising steadily year after year. Mental sickness affects more people than any other illness.

The very progress of our civilization brings new hazards to health. We are only hours by plane from the fevers of the tropic jungle, less than 2 days away from the sleeping sickness of equatorial Africa, less than 3 days from cholera and bubonic plague. The ramparts that you, the doctors, must watch are as essential to our strength and security as the military ramparts we guard.

All that we know about the human body, all that we know about nutrition and preventive medicine, all the wondrous drugs and chemicals, the medical and surgical equipment we have—these are only the sinews and the tools of medicine. The doctor is the mind, the spirit, the genius of medicine.

Our hopes rest finally upon you. Yours is the challenge. I know that you shall meet that challenge.

Is Competition Worth Saving?—Monopoly and Competition

EXTENSION OF REMARKS

OF

HON. CHASE GOING WOODHOUSE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 24, 1950

Mrs. WOODHOUSE. Mr. Speaker, under leave to extend my remarks in the RECORD, I insert herewith a speech delivered by Mr. Joseph E. Sheehy, of Groton, Conn., Chairman of the Planning Council of the Federal Trade Commission before a workshop on economic education sponsored by the Baltimore City Public Schools on Wednesday, May 10, 1950:

IS COMPETITION WORTH SAVING?—MONOPOLY AND COMPETITION

In my comments this evening I shall be expressing my personal views and shall not be speaking for or expressing the official views of the Federal Trade Commission.

* * * If there is one certainty in the maze of legal and economic problems presented in this field, it is that in our country everyone professes opposition to monopoly. Difficulties arise when we seek to define monopoly, to segregate those practices which tend toward its creation and to determine just what this thing is that we are opposing.

When a single company dominates an industry, the problem of definition is greatly simplified. The Aluminum Co. of America presents an outstanding example in this field. The evidence in the antitrust suit against that company showed that during the 5-year period from 1934 to 1938 it produced on an average more than 90 percent of the virgin aluminum ingot available for sale in the United States. The court held that under the circumstances of that case this was a monopolizing of interstate commerce within the meaning of the statute. * * * The court was considering not only the percentage of control but the use that was made of it. One such use was the limiting of imports under a system of quotas and royalties. Another was the "squeeze" put on independent sheet manufacturers by holding the ingot price unfairly high and setting the aluminum sheet price so low that the independents were unable to operate at a profit.

Another phase of the Aluminum Co. decision that is particularly pertinent concerns the consideration given by the court to the philosophy underlying our laws against monopoly. A substantial volume of evidence was introduced in the lower court in an effort to establish that the Aluminum Co. had not used its position to extort excessive profits. In fact there was a finding that over a period of a half century, the profits upon the capital invested, after payment of income taxes, had been only about 10 percent. With regard to this phase of the defense, the appellate court stated in part as follows:

"Having proved that Alcoa had a monopoly of the domestic-ingot market, the plaintiff had gone far enough; if it was an excuse, that Alcoa had not abused its power, it lay upon Alcoa to prove that it had not. But the whole issue is irrelevant anyway, for it is no excuse for monopolizing a market that the monopoly has not been used to extract from the consumer more than a fair profit. The act has wider purposes. Indeed, even though we disregarded all but economic considerations, it would by no means follow that such concentration of producing power is to be desired, when it has not been used extortionately. Many people believe that possession of unchallenged economic power deadens initiative, discourages thrift and depresses energy; that immunity from competition is a narcotic, and rivalry is a stimulant to industrial progress; that the spur of constant stress is necessary to counteract an inevitable disposition to let well enough alone. * * * In any event the mere fact that a producer, having command of the domestic market, has not been able to make more than a fair profit, is no evidence that a fair profit could not have been made at lower prices. (*United States* v. *Corn Products Refining Co.*, supra, 1014, 1015 (234 Fed. Rept. 964).) True, it might have been thought adequate to condemn only those monopolies which could not show that they had exercised the highest possible ingenuity, had adopted every possible economy, had anticipated every conceivable improvement, stimulated every possible demand. No doubt that would be one way of dealing with the matter, although it would imply constant scrutiny and constant supervision, such as courts are unable to provide. Be that as it may, that was not the way that Congress chose; it did not condone good trusts and condemn bad ones; it forbade all. Moreover, in so doing it was not necessarily actuated by economic motives alone. It is possible, because of its indirect social or moral effect, to prefer a system of small producers, each dependent for his success upon his own skill and character, to one in which the great mass of those engaged must accept the direction of a few. These considerations, which we have suggested only as possible purposes of the act, we think the decisions prove to have been in fact its purposes." (148 Fed. (2d) 416.)

Sometimes I fear we are inclined to consider monopoly as occurring only in connection with the type of single company domination illustrated by the Aluminum case. * * * Whatever the cause, there has been reluctance even in some of the courts to discover monopoly in the absence of such domination by a single company or a very limited number of companies.

* * * * *

The Federal Trade Commission's case against the Cement Institute and its members presents an excellent example of the multiple-company type of monopoly. In that case there were in addition to the Cement Institute and its officers and agents about 80 cement-producing companies operating about 150 mills. Ten of those companies controlled more than half of the mills, and there were substantial corporate affiliations among many of the others. There was, however, ample productive capacity and an adequate number of independent producers to have furnished substantial competition had they elected to compete. The record in that case showed that there was a belief general throughout the industry that the standardized nature of cement made price competition unsuited to the needs of the industry. This attitude was summed up by an official of one of the companies. Commenting on the claims being made in the industry that the pricing system in use was necessary to preserve free competition, he characterized them as sheer bunk and hypocrisy. He went on to state: "The truth is, of course—and there can be no serious, respectable discussion of our case unless this is acknowledged—that ours is an industry above all others that cannot stand free competition, that must systematically restrain competition or be ruined." * * *

The court found that this type of thinking in the cement industry had promoted concerted activities to devise means and measures to do away with competition and that out of these activities there had come the multiple, delivered-price, basing-point system. The evidence showed that it was a handy instrument to bring about the elimination of any competition. Through its use over a period of several years with but rare

exceptions, cement was offered for sale in every given locality at identical prices and terms by all producers. During that period thousands of secret, sealed bids were received by public agencies which corresponded in price down to a fractional part of a penny. It was not unusual to find prices identical to the ten-thousandth of a cent. Even during the depression of the 1930's, price competition appeared infrequently, and when it did, corrective or punitive action was taken promptly to bring the recalcitrant producer back into line.

The Supreme Court made mention of the fact that a rather high degree of concentration of productive capacity in the cement industry made concerted action far less difficult than it would otherwise have been. This whole question of concentration in industry is tied in closely with the monopoly problem. It is not possible of course, to state at what point concentration becomes inconsistent with competition in any given industry. It is always possible for a few large concerns to control a substantial portion of an industry's production and at the same time compete vigorously among themselves. It is equally possible, however, in such situations for these dominant concerns to so control an industry as to eliminate competition. Without attempting to determine in any particular industry the degree of concentration that may be considered destructive of competition, it is obvious that in those industries where the trend is toward greater and greater concentration of productive facilities, it is quite likely to be accompanied by a trend away from the harsher competitive practices.

In a report on the concentration of productive facilities, 1947, made by the Federal Trade Commission, it was shown that concentration varied greatly among different industries. One of the tabulations in that report depicted the degrees of concentration, measured on the basis of capital assets, among the three largest companies in each of several industrial groups. In aluminum three companies controlled 100 percent of the capital assets; in tin cans and other tinware, 95 percent; in copper smelting and refining, 88 percent. Three companies controlled 77 percent of the cigarette-producing capacity; 72 percent of distilled liquors; 71 percent of the plumbing equipment and supplies; and 70 percent of rubber tires and tubes. In each of 13 major industries the control of the three largest companies was in excess of 64 percent. In still another group the six largest companies controlled in excess of 60 percent. This does not mean that competition has disappeared from those industries, nor that business is conducted in them in an unfair manner. It does mean that the possibilities for restricting competition are more readily available than in the industries where the ownership of productive capacity is more widely distributed. Furthermore, it means that a trend toward a higher degree of concentration in those industries should be carefully noted by the agencies responsible for the maintenance of our competitive system. * * *

These comments concerning concentration should not be misconstrued as an attack upon bigness in industry as such. Despite the charges we sometimes hear, the enforcement agencies of Government are not attempting to put steel making back in the blacksmith's shop or return the kitten to the cracker barrel in the corner grocery store. In our complex economy big business in many lines of endeavor is essential. However, entirely aside from the legal and economic considerations involved in concentration there are other values at stake. As we have seen in the aluminum case, the Court recognized that preference might be shown for a system of small producers rather than a few large ones because of the indirect social or moral effect resulting from such a system where each is dependent for his success upon his own skill and character.

The kind of concentration that facilitates the adoption of trade restraining practices such as those that the court found in the cement industry must be restrained before it reaches the monopolistic stage or it must be regulated by the State after it has become too late to do otherwise. This latter situation is one which I presume none of us would care to see come about. It would mean the abandonment of our effort to maintain a competitive system and the substitution for it of the public-utility concept. This would place the Government in the position of regulating prices and quality in an effort to give the protection no longer made available by the competitive system. As we all know, this has been tried out in varying forms in several of the European countries. None has achieved the degree of success that would prompt us to imitate that example here. Regardless of the weaknesses apparent in our competitive system, its preservation is essential if we are to continue to enjoy the fruits of an abundant economy as freemen.

There is always a fascination about contemplating a well-ordered existence. In our everyday lives we feel that if we could just get someone to do the worrying for us—to take the multitude of little problems off our shoulders, everything would be fine. So in the economic field, when we encounter depressions and business cycles, people invariably begin to wonder why this thing can't be planned better so as to produce and distribute an abundance for all. We begin to think in terms of Government planning or at least some form of over-all Government regulation. We have seen it function with varying degrees of success in our public utilities and we begin to wonder why it couldn't be extended to cover other fields of business endeavor. Such regulation, of course, substitutes for competition an elaborate system of administration with the complicated rate hearing processes and other methods used for the establishment of prices. The efforts made during periods of national emergency to apply anything approaching these methods to the general business field have fallen somewhat short of complete success to say the least, and yet if competition is removed as a means of protecting buyer and seller, there will remain only some such form of governmental control to furnish that protection.

The competitive system with its constant reaching for new markets increases production and maintains high levels of employment. Here again I am not contending that the situation in this regard is perfect. The records in our cases show that restriction of production is not an unusual means of attempting to maintain prices, but it does not follow that if we were to succeed in eliminating this and all other artificial restraints, that full production might be maintained and unemployment eliminated. These are inherent weaknesses in our system, if you will. The remedy, however, is to continue our efforts to overcome them within the framework of our competitive system rather than to permit groups to exercise their monopolistic power by unlawfully restricting production, fixing or enhancing prices, or otherwise restraining trade.

Another form of restriction is the curtailment of industrial progress. The results of activities in this field may not be so readily apparent as in price fixing, for example, but the long-range effect may be fully as disastrous. The practice may take many different forms in those industries where competition has been restricted. Possibly a new product is kept from the market for a period of time in order to avoid disruption in existing production facilities. Another method is the pooling of patents or the deliberate shelving of a patent so as to keep a new or improved product from the market. If the competitive system is to function, the field must be kept open for the introduction of new ideas and new products as rapidly as they are developed and as promptly as men are willing to risk capital in their promotion. The patentee, of course, is granted definite monopolistic rights for a specific period of years to make, use, or vend the patented product. * * *

* * * * *

In the realm of moral values the need for preservation of our competitive system is of major importance. One of the outstanding characteristics of the American way of life is the belief that anyone with ability, initiative, and determination may achieve any goal he sets for himself. It is my firm conviction that this belief on the part of our young men and women entering the employment market each year has contributed more than any single factor to the success of this Nation. There is no other country and no other economic system which offers the reward of success so freely to those who are willing to make the fight for it. If monopoly power is permitted to be concentrated in the hands of a few and the opportunities for building up individual success restricted accordingly, this spirit will pass out of our economic picture. * * *

No discussion of the competitive system should fail to acknowledge that it is harsh. There can be no guaranty that each who embarks on that sea will be successful. For just as the rewards are for the efficient and competent, so the penalties fall heavily upon those lacking these qualities. Competition to be effective must be constantly weeding out the inefficient and those ill-equipped to make their contribution to the system. This type of selection, however, is far different from the arbitrary selection made by monopolistic groups as to who may or may not engage in a particular industry or in some phase of that industry, such as was done, for example, in the glass case, to which I referred previously. There likewise can be little question that with all its harshness it is much fairer to the individual than any system by which officials of government are given the power of life or death over industrial endeavor.

The universal danger in any monopolistic situation is the ease with which illegal activities may be introduced into the plan and the fact that in most instances the ultimate scheme is the result of gradual growth at some times scarcely perceptible on an over-all basis even to those participating in it. This, of course, does not apply to deliberate acquisitions of competitors for the purpose of eliminating competition or other acts of a similar direct nature. In such cases the purpose is obvious and the effects sought to be achieved equally well known. In the average multiple-company monopoly group, however, a start is seldom made by representatives of all companies sitting down and fixing prices or agreeing to liquidate certain competitors. Initially the objectives may be to eliminate trade practices which are in fact bad for the industry and consumers alike. Success in this regard, however, frequently encourages additional activities until the cumulative effect results in an unlawful restriction upon competition.

If I seem to be placing undue stress upon price fixing, please do not get the impression that it is the only adverse effect flowing from the exercise of monopoly power. It is clear, however, that price being of major importance in determining the success or failure of business, its control is always present in the thinking of those who achieve monopoly power, and it is a rare case indeed where such power having been achieved is not used to affect price. In this connection I should like to stress that it is not necessary for a monopoly group to agree upon a fixed

ultimate price in order to violate the law in this regard. The Supreme Court in the Socony-Vacuum Oil Co. case in 1940 had this to say on the subject:

"Any combination which tampers with price structures is engaged in an unlawful activity. Even though the members of the price-fixing group were in no position to control the market, to the extent that they raised, lowered, or stabilized prices they would be directly interfering with the free play of market forces. The act places all such schemes beyond the pale and protects that vital part of our economy against any degree of interference. Congress has not left with us the determination of whether or not particular price-fixing schemes are wise or unwise, healthy or destructive. * * *"

* * * * *

In the Temporary National Economic Committee Monograph No. 21 the section on trade associations as a means of monopolizing the market has subheadings which deal with cost accounting, statistical activities, price reporting systems, standardization, credit bureaus, and patent pools. Under these subheadings cases are referred to in which each of these classes of activities was used as a device to restrain trade. * * * * * * Those who participate in a plan are the only ones who really know what its purpose is or in what way it is to be carried out. If it is actually injuring others, there seldom is doubt in their minds as to this point. Moreover, those who develop a program of lawful, constructive activities are in the most favorable position to prevent it from becoming combined with illegal activities. The responsibility properly rests on them to avoid the illegal purpose and not upon the Government to forbid practices absolutely, even though they are sometimes innocent, or to condemn practices absolutely, even though they are sometimes the instruments of an unlawful scheme. The law enforcement agencies constantly encounter cases in which there is documentary evidence of an intent to violate the law and to cloak the violation with innocent activities or with a profession of ignorance about the proper interpretation of the law and about the consequences of the illegal acts.

* * * * *

The struggle between competition and monopoly is as old as commerce itself. * * * Our theory of opposition to combinations in restraint of trade comes to us through the English common law, but it has been developed very differently in this country. In England the principal concern was to see to it that the Government did not grant exclusive privileges to preferred groups. The fact that those groups adopted restrictive practices was not considered offensive. * * * Perhaps the difference in viewpoint between the European and American systems can best be summed up in the statement that the former is primarily an alternative to state control while in this country it is an alternative to private monopoly built upon combination and conspiracy.

Nowhere else in the world will we find the emphasis upon competition as an essential element in a free-enterprise system. * * * When monopolistic groups of any kind seek to substitute with combination, collusion, or conspiracy the corrective forces of a free, competitive market, they are performing a distinct disservice to their own industry and to the economy as a whole.

Competition is a harsh, demanding task master. It is human nature to rebel against it. * * * We have further found that monopoly in private industry leads to abuses which force government control. I trust that none of us will ever see conditions in this country reach the point where our Government will be obliged to operate the industrial machine in order to protect its people. The alternative in my opinion is a sane, rigorous enforcement of our antitrust laws which will insure a fair opportunity to buyer and seller alike. The choice in the final analysis, it seems to me, is not between monopoly and competition but between private enterprise and Government control and operation.

Tolerance

EXTENSION OF REMARKS
OF
HON. WILLIAM BENTON
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES

Friday, May 26 (legislative day of Wednesday, March 29), 1950

Mr. BENTON. Mr. President, I ask unanimous consent to insert in the CONGRESSIONAL RECORD a letter from Stephen Schneck, age 17, of the Cheshire Academy, of Cheshire, Conn. This moving and original letter was the prize winner in a radio contest I conducted for Connecticut high-school students. I asked them to write me their thoughts on the subject of tolerance, coincident with the Senate debate on the FEPC bill. This letter is one of scores of remarkable letters which I received and which showed the deep interest of our young people in the problems involved in racial and religious discrimination. A number of the letters I received pointed out that young people instinctively welcome all people as friends, and that intolerance is only instilled into their hearts by their elders. I think there is a worth-while lesson in that thought for those in Congress who have opposed the President's civil-rights program, and I commend the letter to their attention.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

My name is Stephen Schneck; I'm 17 and a student at Cheshire Academy.

After reading those 13 words, just what do you know about me?

Can you say that I'm dishonest, miserly, a loud-mouth? In my mind there is no one foolish enough to make these assumptions on the basis of the information I have given you.

Now let me add four more words: I am a Jew.

Many will feel now that I have given enough data to certify to all these qualities—and more.

When you read the next few lines, please understand that I am not making a plea. Nor am I making an assumption. I am stating a fact.

My race is not—any more than are Negroes, Protestants, Catholics, or Chinamen—cast from the same die.

Some men are good, some men are bad, some are a mixture of both. Notice, I say men, not races.

Whether he worships Christ, Jehovah, Buddha, or a stone, he is first a man. He breathes like you, reproduces like you, and if you beat him hard enough he will die, just like you would.

Throw him into the sun for a few thousand years and he turns black. Keep him in the shade and he's pale. Still and all, he's a member of the species known as homo sapiens, of the vertebrate class and the primate order. Can you get away from that?

Don't ever say, "He's the wrong sort of person," or hate a man because he dips his fingers into water before he prays, wears a skull cap, or is your darker brother. There are no sorts, types, or breeds. There is only the individual.

Mr. Senator, please tell your friends that when they're judged He won't take us by categories. It'll be alphabetically—with Abraham first and Zacapopolis last. Smith and Cohn and Jackson will be standing together. And when their names are read off they'd better have a better excuse than "I was a white man."

The Lord God, I'm afraid, is going to look down and answer, "So what?"

If we're going to be judged as we've judged others, then a great many people are going to get the book thrown at them.

The gates of heaven are going to open a lot faster to him who can shout, "I was a good man."

The Fog Deepens as Truman Heads West

EXTENSION OF REMARKS
OF
HON. OWEN BREWSTER
OF MAINE
IN THE SENATE OF THE UNITED STATES

Friday, May 26 (legislative day of Wednesday, March 29), 1950

Mr. BREWSTER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Fog Deepens as Truman Heads West," published in the Louisville (Ky.) Courier-Journal of May 15, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE FOG DEEPENS AS TRUMAN HEADS WEST

If the American people have just now a sense of groping in a fog, it is not hard to see why this is so. A kind of unreality settles upon the events which take over the headlines. It is as if the President and Congress were moving in separate worlds, concerning themselves with problems that have no relation to one another—with ideas, indeed, that seem touched with futility even as they are stated.

The Senate occupies itself with a time-wasting ritual, a debate over the FEPC bill which already is frozen in a filibuster and which nobody may doubt is headed to the inevitable end of a stalemate. Mr. Truman is off smiling over birthday cakes, talking of the Teapot Dome of another generation, the technicalities of atomic research and the starving Chinese. After much pious clamor for economy, the lower House completed an appropriations bill after haggling whether to increase or decrease it a half to a billion dollars. (The decrease won.)

One wonders where are the assurances that the people have a right to expect—if not assurances of solutions sought, at least assurances of an effort to find solutions. The President's jaunty confidence and genial visitations at the whistle stops are hardly enough. Nor is his glibness in snatching great issues out of the bag, holding up each one briefly to the public view, either comforting or educational.

A major statement on foreign policy, for example, seems almost casual, a single item in a road-show repertoire. In a brief stop at Laramie, Wyo. (1940 population 33,651), there is what might have been a major treatment of the Far East situation, of the vast, chaotic problems of circumventing communism in China, India and Indonesia.

Instantly it merges into a discussion of Republican iniquities of the Harding era, of greed and special privilege, the National Science Foundation and the atomic project

on the Snake River. Pocatello, Idaho (1940 population 18,133), becomes the setting for a declaration, almost incidental, of the broadening program for atomic energy development.

It is far from certain that the President could do anything with any effect to bring order to the chaos that threatens in the railroad strike. But that it is a grave, immediate danger, that the influences and responsibility for order fall first upon him—and now perhaps only upon him—gives a great propaganda advantage to his political opposition, shouting now for him to hurry back and put his hand to it.

But he will not be hurried, of course. The trip is charted. The stops must be made and the confident smile must be bestowed pending the turn back eastward and the all-important stop at the Democratic Party's massive carnival at Chicago next Monday. Meanwhile this same party pulls and tugs against itself in Washington, its factions divided on an issue of civil rights, divided and irreconcilable. Here are unreality and confusion confounded: the leader promising all "if the right kind of government is kept at Washington," the elements of that government drawing farther apart in incompatibility. It is a strange season for the Truman travels.

Continuation of Rent Control

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Friday, May 26 (legislative day of Wednesday, March 29), 1950

Mr. LEHMAN. Mr. President, there have lately appeared editorials in a number of very influential newspapers favoring the continuation of rent control. These editorials favor rent control neither as strict nor for as long a period as I, myself, favor it. But a great many of these newspapers have previously been in opposition to any extension of rent control. Hence, I believe these editorials are highly significant. I ask unanimous consent of the Senate to insert in the RECORD at this point an editorial from the May 20 edition of the Washington Post and an editorial from the May 22 edition of the Philadelphia Inquirer.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Washington Post of May 20, 1950]

RENT CONTROL

By delaying action on rent control legislation Congress has greatly strengthened the case for its extension. For the present Federal rent control law expires June 30, and some form of local control is still needed in many parts of the country. Local control can only be obtained, in the absence of Federal rent control, by calling special sessions of State legislatures to act on proposals to substitute State systems of control. By the time the fate of Federal rent control is decided, it will be too late for the States to take the necessary steps to protect communities where acute housing shortages still exist from excessive increases in rentals.

Of course, the States should have been prepared to assume responsibility for rent regulation in anticipation of the abolition of Federal control. The Washington Post stated last February, housing shortages have become a local problem that should be the responsibility of State and local governments rather than the Federal Government. Unfortunately most of the States have fallen down on the job—no doubt in the belief that the Federal system of controls would be extended. For only New York and Wisconsin have substituted State rent control for Federal control. Four States, however, have entirely removed controls by action of their legislatures and in two other States all controls have been lifted either by local option or by the Federal Housing Expediter.

As a result of this deplorable inaction immediate abolition of Federal rent control would creat serious hardship in many decontrolled areas in which housing vacancies were far below what it considered a normal average. In Chicago, Detroit, Boston, and Pittsburgh, to take only a few examples, the rental vacancy rate is only a half of 1 percent or less. In other words, there is practically no vacant accommodations available for tenants. Other large industrial cities are in similar plight.

In these circumstances we conclude that the rent-control bill just approved by the House Banking and Currency Committee meets the needs of a critical transition period by affording protection against rent gouging to those communities that would be left defenseless by the immediate abolition of Federal rent control. This bill would extend control for another year, but only in those cities and other localities that voted to retain it. If they failed to take affirmative action, either by local referendum or legislative action, controls would be removed at the end of 1950. In addition, the authority of city governments to remove local controls at any time would be retained, while whole States could be decontrolled by their legislatures as under the existing law.

Legislation of this kind would emphasize the local nature of the problem of rent control and in effect serve as a warning to States and municipalities that the end of Federal rent control is in sight. They would be given time to prepare for its abolishment and meanwhile they would be compelled to decide whether they wanted and needed such control for another full year.

[From the Philadelphia Inquirer of May 22, 1950]

LOW-COST HOUSING STILL SCARCE: KEEP RENT CURBS

One compelling reason for continuing Federal rent controls, due to expire next June 30 unless Congress acts in the meantime, is the fact that the shortage in low-bracket housing for sale or rent has not been overcome by the postwar building boom.

This fact, emphasized once more by I. Herman Stern and Charles Melchiorre, members of the city housing rent commission, ought to prod Congress into prompt action on the legislation extending rent controls which was approved last week by the House Banking and Currency Committee.

It is unfortunately true that in some instances rent controls have worked hardships on landlords. Costs of renovations and repairs have gone up, and if they cannot be covered by modest increases in rents, owners of rental space suffer.

But it is equally true that the new housing being constructed is usually far beyond the means of a large segment of the population. While it tends to reduce the strain of the housing shortage, it offers little hope for those who simply cannot pay the high rents or high sales prices involved.

Most of the cases coming before the rent commission in the past 2 years had little to do with upper-bracket rents. They concerned tenants living in dwellings in the $15 to $50 monthly range, according to Stern and Melchiorre.

It is for these people that rent control is a necessity. They cannot pay the $70 to $90 monthly rents customary in newly built housing, and public housing accommodations, presumably with lower charges, will not be generally available for some time.

The rent bill reported by the House committee is milder than the present one. It contains provisions for cases where the landlords are undergoing severe hardships, and it makes it easier for any locality to get rid of controls whenever the voters or the local authorities deem them no longer necessary.

That time has come in many communities. It hasn't yet arrived in Philadelphia, especially for the low-bracket income families which can barely pay their present rents. Congress should protect these families in Philadelphia and other places by extending the modified rent-control law.

Congress Opened Barn Door—"Horse" Was Stolen While American Boys Fought, Died—War Contracts Report Reveals Shocking Crookedness by Businessmen, Some in Uniform

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 25, 1950

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article that appeared in the national weekly newspaper Labor, as follows:

CONGRESS OPENED BARN DOOR—"HORSE" WAS STOLEN WHILE AMERICAN BOYS FOUGHT, DIED—WAR CONTRACTS REPORT REVEALS SHOCKING CROOKEDNESS BY BUSINESSMEN, SOME IN UNIFORM

Congress left the barn door wide open, so the horse was stolen. Now nobody can do much about it, but Congress should learn the lesson and never leave the barn door open again.

That's the moral of a scorching report sent to the Senate and House this week by Lindsay C. Warren. As Comptroller General, he heads the General Accounting Office and is "watchdog" over the money appropriated by Congress and spent by the executive branches of the Government.

Warren was an influential Member of the House before he became "watchdog," and is highly respected on Capitol Hill, but back in 1944 Congress opened the barn door despite his earnest and repeated protests.

PUT ON UNIFORM

American boys were fighting and dying on the battle fronts. The Army, Navy, and other Government agencies were signing war contracts by the billions of dollars. Often the signing was done by big-business men who had temporarily put on uniforms. Uncle Sam had no time to check up on details. The war had to be won in a hurry.

In the midst of that situation, big-business spokesmen in Congress popped up with a bill which directed the Army, Navy, and other agencies to settle and pay their war contracts without any independent audit by the watchdog of Congress or by anyone else.

As Labor reported at the time, Warren almost got down on his knees pleading against passage of the bill. He pointed out

that an independent audit, before final settlement of any war contract, was vitally necessary to protect Uncle Sam and the taxpayers against frauds and improper payments.

TELLS RESULTS

Nevertheless, the big-business lobby was strong enough to put through the bill, containing provisions which limited the watchdog to a hasty search for the horse after it was stolen. Warren's report now tells some of the results.

The Army, Navy, and other agencies have settled a total of 323,933 contracts, practically all of those made during the war, the report says. Of these, the General Accounting Office has been able to investigate only 26,566, or about 1 of each 12, and only after final payments were made.

Even this small sampling revealed excessive or fraudulent payments in 1,233 settlements, or more than 1 our of 7 of those examined, with a loss to the Government exceeding $25,000,000.

Warren said he would hesitate to hazard a guess as to the full extent of fraud or overpayments.

He gave Congress numerous actual and shocking examples of the frauds and crookedness perpetrated by war contractors. He pointed out that not a single case was discovered in which the contractor got less money than was honestly due him. It was always Uncle Sam who got gypped.

Most war contractors, Government officers, and employees made a glorious record in the war, Warren said. It is unfortunate that their accomplishments—in support of the boys who fought and gave their lives—should be clouded by the shadows of men of low character, including some in uniform, who took advantage of the opportunity afforded them by Congress, and feathered their nests.

Can Our Freedom Be Preserved?

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Friday, May 26 (legislative day of Wednesday, March 29), 1950

Mr. MUNDT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Mr. George N. Craig, national commander of the American Legion, at Chicago, Ill., on May 16, 1950. I make the request not only because Commander Craig comes out forcefully in favor of the Mundt-Ferguson-Nixon bill, but because it is also a great speech, in general, dealing with the subject of patriotism.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

CAN OUR FREEDOM BE PRESERVED?

Tonight I am happy to extend to your association 4,000,000 congratulations upon the occasion of your silver anniversary, for that represents the membership of the American Legion and the American Legion Auxiliary.

We of the Legion know how you feel about socialism, the cunning consort of communism, and your fraternity know how we feel.

It is good to know that 85 percent of your membership are veterans of one or both of the late world wars. You and we are comrades, fighting side by side against "comrats" that are trying to gnaw their way into the very foundations of America.

The American Legion is absolutely in accord with your declaration that if we value our health and if we value our liberty, we must agree that compulsory health insurance—political medicine—is bad medicine for America.

If some of the crackpots should have their way—God forbid—socializing this and socializing that—they eventually would communize America.

They tell us in honeyed words that more concentrated Government control of everything will do something for us. They don't tell us what it would do to us.

Not only would they create a socialized state, but there well might follow a hypochondriac and neurotic state.

Since 1943, national conventions of the American Legion have gone on record as opposing socialized medicine and compulsory health insurance.

We stand on common ground, fighting a common enemy: socialism, the advance guard of communism.

On the great American highway we have approached an intersection, at which is a bold warning sign: "No left turn." And too many of our people are mentally indulging in the old wisecrack that they don't believe in signs.

Our Nation today is surely in need of unification of thought and purpose, unification of all its people in a firm determination to banish the enemy within our midst.

While above our heads, like the sword of Damocles, hangs the threat of atomic destruction, right under our very feet the termites of communism, with their allies the weevils of socialism, are biting their way into our schools, into our sacred institutions, into the governing bodies of our communities, our States, and now even into some of the highest departments of our National Government.

It is the honest opinion of many Americans that our Department of State fairly reeks with deceit, depravity, and double-talk; that it is a veritable snake pit in which powderpuff diplomats are playing at a game of demimond diplomacy.

HIDE THE FACTS—SEEK THE PEOPLE

It's a new national pastime: hide and seek; hide the facts, then seek confidence of the people.

The American public has indicated increasing concern, and rightly so, over the whole question of loyalty in our Department of State. Why has not the public the same confidence in those directing our foreign policy, upon which the security and the very life of our Republic depends, that it has in the FBI and in our Armed Forces?

A naval commander losing a ship, or an army officer ignorantly leading his troops into disaster would undoubtedly have his career jeopardized, if not terminated. A Secretary of State, however, who is in charge of our first line of defense, and who loses whole areas of the world through mistakes of judgment, is not even open to official criticism, much less replaced by a more competent person. Instead, he is given the task of attempting to salvage the very situation he helped to produce.

Our military high command does not trust even a handful of troops or the smallest Naval unit to anyone but a trained and qualified officer who, normally in peacetime, attains his rank and even extremely limited responsibility only after 4 years at West Point and Annapolis or comparable experience and training.

However, in our State Department today there are many top-level officials, reputed to be experts but who, on the record, are shown to be totally devoid of any significant training or experience. Here are two State Department aides considered incompetent, to say the least:

Walter M. Kitschnig, a native Austrian, was hired by the State Department at the start of World War II. He couldn't go into military service because he was classified as an enemy alien. United States citizenship was granted him hurriedly. Today he heads the Department's entire cultural relations policy with respect to foreign countries at an annual salary of $10,000.

Then there is Haldore Hanson. This 37-year-old, $10,000-a-year man has no military record and no background of industrial, financial, labor, or economic experience. Yet he is in charge of planning the disbursement of billions of dollars to backward economic areas.

There are many other such cases.

What American businessmen would consider for one moment the operation of any department of his business along the lines that some of the most responsible departments of our Government are being run today? The time has come when we must be as practical and just as hard-headed in our international affairs as we are in our private business dealings.

Our diplomats should be hand-picked at an early age, so that their training for specific assignments would make them specialists in those particular posts. They could then hold their own with the diplomatic representatives of other nations instead of being amateur society bridge players at the international poker table, where the stakes are high, for they would have been selected and trained for their jobs, not floundering through important missions and endangering the very life of their country because their posts were plums picked in the overrun orchard of politics or because of financial or other backing.

The American Legion has had introduced in Congress a bill to create a National Academy for Training in Diplomacy.

Communist eradication in governmental office should never be treated as a political pawn. There should be no political pride in discovery, either by Democrats or Republicans. Only a common and mutual desire on the part of both parties can render that public service which all citizens are justly entitled to expect from their Representatives.

American principles and the desire to preserve them rise far above party politics. Those who use politics either to cloak or prevent such discovery do an irreparable disservice to their Nation.

The time is past when our people can treat lightly any further foreign-born ideologies. To combat them we need a positive Americanism. The time has come when we must get tough.

Here in Chicago over the past week-end was held the second All-American Conference in which delegates from leading patriotic, religious, civic, and other organizations, representing more than 80,000,000 citizens of the United States, gathered in a great united effort to stop the Red tide that is creeping over our land.

From long and sometimes bitter experience, we of the American Legion have learned how cunningly the Commies contrive their plans. True, the ranks of the Communists are interspersed with criminals, cranks, and crackpots, but they have a plan.

Events of the past weeks have afforded us ample evidence of the ramifications involved in pressing charges against those in our Government's highest offices who palpably are enemies of the American way, and the immediate resignation of whom should be demanded by the American people.

The difficulty of proving that a State Department official, or a former State Department official, is or was in fact a Soviet spy was proven in the Alger Hiss case. An extraordinary chain of favorable circumstances and accidents was required to convict one

man after two jury trials of having "committed perjury in connection with Soviet espionage." If Alger Hiss had not made the mistake of challenging Whittaker Chambers to repeat his charge publicly so that he (Hiss) could sue for libel, it is doubtful that Chambers ever would have produced the now famous pumpkin papers.

HISSES IN THE STATE DEPARTMENT

Evidence is that there still are Hisses among the snakes crawling through the high grass of our State Department.

Incidentally, it required too many years to convict the Communist Harry Bridges, whose trial and deportation as an enemy alien the American Legion has been urging upon our Government since 1938.

The entire festering Amerasia case should be reopened. They have been vague promises that it will, and we are hopeful. Two individuals admitted that they stole classified State Department documents, and they were fined in a United States court. Four others, one of them still a top-level State Department official in a critical post—John Stewart Service—were involved in the same case. Upon recommendation of a representative of the Department of Justice, no charges were pressed against these four. Why? Our people have a right to know who was responsible. We have the right to demand that all the disgraceful circumstances surrounding those recommendations be brought out into the open.

Former Ambassadors Joseph Grew and William C. Bullitt should be asked to tell their stories to the Congress. As Under Secretary of State, Grew was largely responsible for the arrests in the Amerasia case. Then he was relieved of his post, and succeeded by Dean Acheson.

All Americans, regardless of political beliefs, must stand together in the common defense, and the approach must transcend even so-called bipartisanship and be divorced as completely from politics as can be made possible in a democracy. Unfortunately the present investigation before the Tydings committee is filled with bickerings, mostly along party lines. There are charges and countercharges of hit-and-run propagandist from one side and operation whitewash from the other.

When charges were first made of communism in our Department of State, Secretary of State Acheson himself should have demanded an immediate investigation. He, of all people, should have been most eager to learn the truth. If there is communism in the State Department, the public is entitled to know it. If there is no communism in the Department, the public should know that.

The public does not understand yet who recommended and who hired Alger Hiss, Julian Wadleigh, John Stewart Service, and others, including the 91 homosexuals whom John Peurifoy recently admitted had been dismissed from the State Department.

The Department of State presently employs more than 7,000 persons. Competent authorities are of the opinion that at least half of them serve no useful purpose and that many of their jobs were invented and are purely synthetic and unnecessary, and should be eliminated in the cause of security, economy, and efficiency. The Department should be returned to its constitutional function * * * that of studying and devising American foreign policy.

And, for what significance it may have, permit me to inject here the statement that the present Secretary of State, Dean Acheson, was Vice Chairman of the Hoover Commission, whose report contained no recommendations for economy with respect to the State Department. Why?

The very life and security of this Nation depends upon the State Department, and the Chinese catastrophe and our increasing worries over the Soviet Union tend to high light this question more and more. Neither political vituperations nor facetious wisecracks will satisfy the American public as the final solution or the answer to the question: What is wrong with our State Department? They want the unvarnished facts, and they are entitled to them. A restoration of confidence demands it.

When the people know the facts they will demand the riddance from every governmental office of all disloyal subversives, perverts, incompetents, and cocktail strategists.

It is now apparent to the American people that our Department of State is a centipede for putting its foot in it.

MUNDT-FERGUSON-NIXON BILL SHOULD BE ENACTED

In combating Communist influence here, a step in the right direction would be passage of the Mundt-Ferguson-Nixon bill now before Congress. This bill would require the Communist Party (1) to register and identify itself, (2) to list its front organizations, (3) label its literature and broadcasts, and (4) make fiscal reports to the Government, much as both the Democratic and Republican Parties are required to do under the clean politics act. Moreover, it denies Communists the privilege of working for the Federal Government under penalty of law, and denies them the right to get Federal passports to travel abroad. This bill was approved by the Senate Judiciary Committee by a vote of 12 to 1 and now is before both House and Senate. Your letters and telegrams to your Senators and Representatives might be an effective means to get this bill passed by Congress.

This is, quite appropriately, National Defense Week, which will culminate in demonstrations here and throughout our land on Saturday. And, it comes when the American people are being more and more confused by conflicting appraisals of the world situation.

At a news conference the other day (and I quote from the Associated Press) our President said he doesn't feel the cold war is close to turning into a shooting war with Russia. In fact, he said, he thinks the international situation is much better now than it was in 1946, the previous low point in American-Russian relations. Mr. Truman said the Nation's defense budget will be smaller for the 1951–52 fiscal year, and he is not alarmed in any sense of the word.

At the same time, the United Nations Secretary-General, Trygve Lie, while en route to Moscow on a peace mission, said things have not been so bad since 1945.

Secretary of Defense Louis A. Johnson, after a year's effort to economize in defense spending, has asked Congress for an additional $350,000,000 for defense, most of it for the purchase of planes. He based the reversal of his stand on a number of alarming elements in the world situation. But, he did not recommend universal military training, which he always has espoused. Why?

President Truman himself has rightly asked for universal military training year after year since he has been in office. How then can the Secretary of Defense so ignore the wishes of his Commander in Chief?

Secretary Johnson's request for more defense money followed on the heels of an expression of concern by General Eisenhower over some defense cuts.

About the same time Gen. Omar Bradley, Chairman of the Joint Chiefs of Staff, asked the House Armed Services Committee to extend the military draft 2 years because, he said, "cold war developments have become worse in the last 5 months."

In Indianapolis last week, Kenneth C. Royall, last Secretary of War and the first Secretary of the Army, got back into circulation by saying he thought there would be no shooting war for about 8 or 9 years and that the United States is (and I quote) "as well prepared as we ought to be," the next war, he said, "won't be won with the weapons we have on hand; it will be won with weapons not yet created."

On the other hand, W. Stuart Symington, shortly before he was moved upstairs from the post of Secretary of the Air Force to the position of Chairman of the National Security Resources Board, delivered this warning:

"Today Russia has an air force whose strength is the largest in the world, and growing relatively larger month by month. Russia is steadily increasing the strength of its long-range strategic bombing force, a type of plane it did not have in World War II. The Communists do not need long-range strategic bombers in order to conquer Eurasia. Should we not ask ourselves therefore, why are they being built?"

In the light of such conflicting opinions by our leaders, it is little wonder that fear mists are clouding many minds.

We of the American Legion are not prophets of fear, but neither are we exponents of smug complacency. And, we admit that right now we are seeing red, too much red for the good of the American people, and certainly too much of it in the sacred precincts of our Department of State, which too many of our citizens believe has the hammer and sickle tattooed all over it.

Communism, with socialism its accessory before the fact, is devoid of morality, devoid of spiritual belief, devoid of culture or common decency. Verily, it is not only a fifth column, it is a filth column.

Socialism is a will-o'-the-wisp. When you follow it you sink into the bog of despotism before you know it. Socialism is like the camel's nose in the Arab's tent.

The members of your fine association, and all good American business and professional men, not only have the right to make a living, but the right to make that living worth while. We cannot permit "pink" planners to infringe upon our copyright on life, liberty, and the pursuit of happiness. We cannot be fugitives from faith, our faith in our God and faith in our country.

Our Nation was built through hard work and perseverance. It stands foremost among all the nations of the world because of that spirit. We ned a revival of the old American principles of hard work, thrift, and self-reliance as an antidote against socialism and communism in the United States.

We must have a plan. We must pay for it with confidence, with labor, with dollars, and with sense.

We must accomplish it.

In the words of a great American editor, "Let us maintain the Americanism which makes us free, and the freedom that makes us American."

Foreign Study With American College Credit

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 24 (legislative day of Wednesday, March 29), 1950

Mr. HUMPHREY. Mr. President, there is a great deal of interest in foreign travel as an educational medium evidenced by the American people. I am particularly proud of the fact that the American Federation of Teachers is one of those organizations playing a

most constructive role in developing a sound appreciation for international cooperation. The American Federation of Teachers has cooperated with the Institute of World Studies and with teacher organizations all over the world in conducting resident study centers in which our teachers may become acquainted with the rich traditions, culture and heritage, as well as with the great social and economic problems, of foreign countries.

In cooperation with the Netherlands Teacher Federation, such an institute was held last summer at the University of Amsterdam. I ask unanimous consent to place in the Appendix of the RECORD a brief report by one of the teachers who attended that institute. In my opinion the report more than justifies the high regard in which we in America hold our friends in the Netherlands.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

[From the American Teacher of April 1950]

FOREIGN STUDY WITH AMERICAN COLLEGE CREDIT

(By Roxie Lodge, president, East Cleveland Federation of Teachers, Local 719)

For those who want a delightful summer vacation—inspiring, gay, yet challenging and educational, I can suggest nothing better than the Institute of World Studies in Amsterdam, Netherlands. A selected group of teachers from the United States studied there last summer and earned graduate credit. This was the seventh annual session of the Institute of World Studies. It held its 1949 session at the University of Amsterdam, July 10–30, in cooperation with Syracuse University. Dr. Donald Bishop, of Syracuse University, was the American director, and Mr. William Hooykaas, representing the NOV, the Dutch Teachers Federation, was the Dutch coordinator.

The Institute was originally a part of the World Federation of Education Associations, but is now chartered as a nonprofit organization to help teachers study in other countries under the most favorable conditions. Its educational policies board includes America's top-flight authorities in the field of international education: Robert Ulich, chairman, Graduate School of Education, Harvard University; Donald Bishop, Syracuse University; Selma M. Borchardt, Washington College of Law; George S. Counts, Teachers College, Columbia University; Roy Deferrari, Catholic University of America; Uel Lamkin, State Teachers College, Maryville, Mo.; Kendric Marshall, Division of International Educational Relations, United States Office of Education; Ruth McMurray, UNESCO, Relations, Department of State; Albert Prince, Connecticut State Board of Education; Carson Ryan, University of North Carolina; Henry Lester Smith, Indiana State Department of Education.

The group of Americans attending the Amsterdam Institute last summer included teachers from Colorado, Iowa, Ohio, New York, North Carolina, Georgia, Illinois, Florida, and Texas.

The purpose of the institute is to help teachers learn something about the people and country in which they are traveling, to make informed, appreciative tourists of all who go, and to enable Americans to study abroad for credit or for audit. For us who went to Holland, the objective was accomplished through the university lectures and the planned tours of cities and excursions throughout the country. We had brilliant lectures from eminent scholars; and we had much more. We were accepted guests of the people, and the Dutch were warm and kind friends. Institute members had ample opportunity to observe the people of Holland at work and at home. We shared their rich cultural and historical background. We learned to respect these people deeply. Sturdy, trustworthy, courageous, they showed us a gayer side, too.

The first Sunday evening in Amsterdam, we were guests of the Dutch Teachers Union at the American Hotel. A delightful program of folk dancing and folk music gave us a taste of what we were to enjoy during the entire term. Even our study trips were made happy for us. On our first day of school, with Mr. Hooykaas in the lead, we wended our way over the cobble-stoned streets, alongside canals, to the university. Here we were received and welcomed by the president of the university. We met our three English-speaking Dutch professors, who were to lecture and accompany us on our excursions in Holland.

There was Dr. H. A. Enno Van Gelder, who taught us some of the history of Holland. He made it live for us. But it wasn't only a lecture course in a classroom; we visited the places where history was made—and is still being made. Our first excursion in connection with his class was a trip by motor launch through the main canals of Amsterdam, down the Amstel River to the harbor with its shipbuilding industry. We were particularly impressed by the speed with which the Dutch had rehabilitated their harbors, which were scenes of havoc and destruction during the war.

That same day we were guests of the city officials at a tea in the town hall. The burgomaster of Amsterdam gave us a most cordial welcome to his city and to all Holland. We felt we were wanted, wanted as Americans, wanted as students of European social history. It was thrilling.

In this gay and serious tempo the summer school opened. So the pace was set. So the pace was maintained, day after day. We visited the old churches of Amsterdam and the cathedral at Delft. Delft blue, Delft china took on a new meaning from that day on.

The Queen's Old Palace, the Court of Justice, the "Little Church in the Loft" where catholicism was practiced during the Reformation, and Riik's Museum were just a few of the famous buildings visited under excellent guidance. In the Riik's Museum we saw and we felt the greatness of the paintings of the great Dutch artists. The cultural history and the social history of the people were stressed.

On another tour, we were taken to the ruins of Charlemagne's castle on the Rhine. Then we went to another medieval castle, and to the famous Hertogenbosch Cathedral. Each ancient monument has its story, and these stories were told us colorfully and with a dash of humor and a zest which only a native could add. We shared their modern history, too. We were taken also to the battlefields at Arnhem and Nijmegen. We saw the ruins at Wageningen where the Germans signed the peace treaty. Our Dutch hosts showed remarkable restraint. They are a great people.

Dr. J. Zijlestra lectured on the economics of Holland and the benefits of the Marshall plan to its recovery program. We saw the Marshall plan in action. We were impressed with the use the Dutch had made of the United States help in rebuilding their economy.

We visited the diamond centers in Amsterdam and saw good craftsmen at work—good union craftsmen. And oh, we saw and enjoyed the famous cheese market at Alkmaar. The splash of color at the flower market at Aalsmeer intrigued us. The fishing fleets of Vollendam, the Island of Marken, where the traditional Dutch costumes are still worn, gave what the orthodox sightseer wants.

But we combined sightseeing and study. We spent a morning at the International Airport, the home of the Dutch airline KLM. Here we saw in some detail how the Dutch have repaired the damage done by the Germans to the airfield.

We visited the Phillips Manufacturing Co. at Eindhoven, a subsidiary of General Electric Co., United States of America, where we were guests of the company at a luncheon followed by a tour of the plant. Phillips was the largest industry visited. There we saw radios being assembled, plastic cabinets and insulators being manufactured. The place held by labor unions in a national economy—a place of dignity and power, and the matter-of-fact acceptance of their roles in promoting the national welfare, made us appreciate the social maturity of the nation and we wished that we might have had a period in which to interrogate labor leaders.

A school similar to General Motors apprentice schools in our country is a part of the Pihillips vocational educational program. Young Dutch and Belgian boys of promising ability are accepted for training in this school. A comparison with a similar school in our country would be significant.

Our third professor, Dr. B. H. M. Vlekke, lectured on "International Relations." The Hague, the seat of the International Court of Justice, gave us a laboratory approach to international cooperation. But our Dutch hosts dared no more. Dr. Vlekke devoted several lectures to the Indonesian question and frankly and freely indicated that Dutch citizens were in full sympathy with the Indonesians. The present government's response to the will of the Dutch people would, he felt, lead to the early recognition of the Indonesian Republic—with the help of the present Dutch government. Now, his prophecy has come true.

The teachers of Amsterdam were surprised to find elementary, secondary, and college teachers in our institute studying and working together, all accepted by each group on an equal basis. The inherited traditional snobbishness of Dutch secondary teachers toward the primary teachers is sure to be overcome by the increase in power and prestige of the elementary teacher. Possibly we American teachers have contributed to the spreading in Europe of an appreciation of the single-salary schedule and the recognition of the equal worth of all qualified teachers in every part of the system.

The strict academic standards of the Dutch schools, the ever-growing social consciousness of the teachers and the school officials, the passionate zeal of the Dutch teachers for world democracy impressed us greatly.

One example of the social program of the Dutch teacher is that, aided by a government subsidy, they sponsor a summer camp for school children of Amsterdam and Rotterdam. A teacher takes her class to this country camp for 2 or 3 weeks. Here the child gets physical, social, and moral training in an atmosphere which stresses the spiritual values of a free people. Several teachers and their classes are at the camp at one time. The camp is for both public and church school children. The nation as a whole benefits.

Before and after the institute we took advantage of our free time in Europe. We traveled in a number of countries. To those who wanted them the institute gave cards of introduction to UNESCO House in Paris and to other educational centers. Tours through England, Belgium, Switzerland, Italy, and France were planned by the institute, and optional with the members.

Even if one could not take these optional trips to other countries, there are volumes one could write about each day spent at the institute. The institute gave us the happiest, most profitable credit-earning summer school imaginable. We'd all like to go back.

Messengers of Reconciliation

EXTENSION OF REMARKS
OF
HON. WILLIAM BENTON
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Friday, May 26 (legislative day of Wednesday, March 29), 1950

Mr. BENTON. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a sermon by the Reverend Galen E. Russell, of the Southport Congregational Church, of Southport, Conn., which is my home community.

I am indebted to Mr. Russell for many ideas in this sermon, but I call the particular attention of the Senate to his quotation from the Screwtape letters, the quotation of the Devil when he said, "It is when the church lets her banners fly that all hell trembles." This, it seems to me, is the moral for Congress today. How do we let our banners fly?

There being no objection, the sermon was ordered to be printed in the RECORD, as follows:

MESSENGERS OF RECONCILIATION

(A sermon by Galen E. Russell)

Text: "God was in Christ reconciling the world to himself, not counting their trespasses against them, and entrusting to us the message of reconciliation." (2 Corinthians 5: 19, revised version.)

I. INTRODUCTION

Last Thursday was Ascension Day. In Lloyd Douglas's book, The Robe, there is a beautiful and simple account of the disciple Bartholomew's experience of the Ascension.

Bartholomew says to his friend: "One morning we were asked to a meeting, shortly after sunrise on a hill. We know the place, for we had often spent the day there with Jesus. Knowing it was dangerous to go as a company, we went singly. When we were about halfway up the hill suddenly someone exclaimed, 'Look; there He is.' I looked up, and there he was wearing His white robe. The sunshine made it appear dazzling. He was standing on a big white rock waiting.

"The crowd bowed their heads and waited, and after a while there was a murmur of voices. We looked up, and he was gone."

"Where do you think he went?" asked one huskily. "I don't know, my friend, but I only know He is alive. I am always expecting to see Him. Sometimes I feel aware of Him, as if He were close by; it helps to keep me honest. I am not tempted to cheat anyone, lie or hurt anyone, when, for all you know, He is close by."

Christ is close by this morning. He is not bound like Prometheus and compelled to watch His loved ones in silent agony. Christ is released from time. He is alive, and God through Him is calling on us to be messengers of reconciliation. What a message. What an ambassadorship. To reconcile the contending forces in our lives, in our homes, in our congregation, and in the world. We are called upon to do just this. Christ shows us the way.

We can take an illustration from nature. Day and night the recurrence of hot and cold air—meeting each other in conflict takes place somewhere above this earth. When the conditions are right the conflict of these air currents causes a precipitation which we call rain. (I am not now talking about the rain makers. Some one said this week that they had gone too far; that they had no business to be monkeying with the Lord's work.) I am now talking about the forces of nature. Rain waters the earth for the service of man. In like manner, the conflict between good and evil as we see it dramatized before our eyes has been raining refreshment on the souls of men year after year, and age after age. We can truly sing with the poet, "The one eternal God, whom earth and heaven adore, for thus it was, is now, and shall be ever more."

II. PERSONAL MINISTRY OF RECONCILIATION

We have been given a ministry of reconciliation. How much do we use it? Is our difficulty a lack of faith, or a lack of technique? Do we find it easier to be mad at some one than to love him? Is this anger, at least the continuation of it, the work of the Devil, or the work of God? As disciples of Christ we are called upon to witness for love, truth, and kindness. As Bartholomew said "Now I feel that Christ is near. Now I do not want to lie, or hurt anyone." Family squabbles need to be reconciled. Church divisions need to be healed. Unity and harmony need to be resolved in the formula, "Agree to differ but resolve to love." The Christian way is to walk together, respecting each other, and trusting each other. This can happen when we are committed to the way.

Is this way difficult? Yes, Christ never said it would be easy. He did say that we could live victoriously. He did say He would help—"Lo I am with you always, even to the end of the world."

There is a story in C. S. Lewis Screwtape Letters, which I understand was told in this pulpit before my arrival as pastor and teacher. The Devil had his agent Screwtape on earth seeking to win converts. Screwtape reports that one of their hopefuls has just recently joined a Christian Church. He was quite concerned.

"Never mind," said the Devil. "Don't let it bother you. Just follow him. Go to church with him. Keep his mind on little things—the squeak in the deacon's shoes, the cut of the minister's hair, the hat of the minister's wife. Just keep his mind on little things and we will win. It is when the church lets her banners fly that all hell trembles."

Are we concentrating on the little things and forgetting the big and central issues? Is it our lack of vision that causes so much trouble in the world? Is there a need for reconciliation between individuals? There is a crying need for a reconciliation in Congress.

In the Senate we behold the spectacle of time, money, and energy being thrown away by one Senator MCCARTHY with his irresponsible charges. Committees of investigation are appointed to investigate those things which have been investigated two or three times before. Someone has said that Senator MCCARTHY is the Communists' best friend. At least this can be said without equivocation. He is using Communist tactics and is holding up good and constructive legislation.

I have been deeply impressed lately to note one of the most creative and far-reaching ideas to come out of the Senate Chamber. I refer to the nonpartisan bill in the Senate—a bill sponsored by both Republicans and Democrats—called the Marshall plan of ideas. This creative plan was outlined in a speech by our Senator from Southport, Senator WILLIAM BENTON, early in March. It is creative in its own right. It is dramatic in the manner it lifts our thoughts above the confusion of low politics and charts a course into the future. In the field of politics this Marshall plan of ideas points the way toward a splendid ministry of reconciliation. An explanatory word is in order.

Senator BENTON says, and he speaks from experience in the State Department, that the Communists are more efficient in telling lies about us to the rest of the world than we are in telling the truth about ourselves. With the use of radio day after day and night after night the propaganda line is the same. The propaganda line revolves around five themes. They are the same every day. First, the United States is headed for a cataclysmic clash. Second, the rulers of the United States are warmongers and Fascists. Third, in the United States the rich are getting richer, and the poor are getting poorer. Furthermore, the poor are showing an increasing sympathy for the Soviet Union. Fourth, America talks about freedom, but their statements are contradicted by racial and religious discrimination. Fifth, our character is bad. We are culturally barbarous, money-mad, and lawless. Do you recognize yourself in this description? Do you feel it is fair, or in any degree honest? Does your sense of injustice become keen to realize that these lies about the United States are spread throughout the world via the radio? Do the people of the Near East believe these stories? Many of them do. Why wouldn't they believe in them, in the absence of any other information?

To be sure, we don't pretend to be perfect. We have our problems. We do, however, say that democracy arrives at a greater degree of justice than the other forms of government.

With a knowledge of these evil forces, what do you propose to do about them? With a frank recognition that you can't kill ideas with bullets, no matter how many you shoot, what is the constructive solution? Senator BENTON has proposed an answer. His plan is headed in the right direction. The plan has six steps. First, a steadily increasing pressure on behalf of world-wide information. "Ye shall know the truth, and the truth shall make you free." Secondly, a speeding up of the work of UNESCO—the United Nations Scientific and Cultural Organization. The work of this Organization should be expanded so that it can make its rightful contribution for peace. Thirdly, an expanded program of foreign student exchange and movie films, showing the truth about America. Fifth, convening of a conference of non-Communist nations now, to create a better understanding. Sixth, the encouragement of a nongovernmental agency to guide American citizens in sharing their cultural and their scientific information with other countries. God has given us a ministry of reconciliation.

As an illustration of the soundness of this plan Senator BENTON cites the experience of last year. The ECA, under its technical-assistance program, brought 600 people from European industry and agriculture last year to study our methods. Two among the 600 were influential Italian labor leaders. When these two had seen American labor-management relations at first hand, when they had seen that our workers share in the benefits of increased productivity, and from the use of labor-saving machinery, when they had seen that competition is not without its economic value to our workers, they went back to Italy, pulled 700,000 workers out of the big Communist-dominated general trade union and launched an independent one. Mr. Hoffman, of the ECA, vouches for this story.

Just yesterday a letter came to our family from China. It was written by Miss Helen Smith, who visited our Women's Guild a few years ago. I wish to read you a few sentences from this letter: "We hear that some groups are wiping China off the map. We want to ask if Christians can wipe their brothers and their sisters off the map? We feel that if the world is to be held together at all, it must be held by Christians, and boy—we need a little cement these days. The future for us missionaries grows a little more dubious, but that is beside the point. We feel that the biggest concern is for our fellow Christians here. They are facing terrific odds, and we simply cannot let them down."

These words from Miss Helen Smith, of Foochow, China, are instructive. Here is Senator BENTON, with his colleagues, offering a constructive program in the field of politics, and Nero fiddles while Rome burns. You and I can do something about it. We can write our Senators and express our opinions as American Christians.

On the other hand, the political program cannot and does not pretend to take the place of a Christian missionary program. Are we going to let the Helen Smiths and our fellow Chinese Christians down in the hour of trial? In the words of Professor Scott, of the Chinese University, Chinese Christians have an unprecedented opportunity to witness before Communists for the Christian way of life. God moves in a mysterious way His wonders to perform. Granted that the Communist program is treacherous. Granted that there is personal danger for those of the Christian faith to remain in China. Do we not need to admire those who say they are going to remain? Should we not uphold their hands in prayer, and support them out of our funds? The divine commission given to the disciples on the first ascension day was "Go ye into all the world, and preach the gospel." Preaching the gospel means sustaining those who do preach it with something to keep body and soul together.

God was in Christ, reconciling the world to Himself, not counting their trespasses against them, and entrusting us with the ministry of reconciliation. May we be faithful to that trust.

Extension of the Draft Law

EXTENSION OF REMARKS
OF
HON. MILLARD E. TYDINGS
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Friday, May 26 (legislative day of Wednesday, March 29), 1950

Mr. TYDINGS. Mr. President, I ask unanimous consent to have printed in the RECORD two editorials advocating the extension for 2 years of the Selective Service Act. One editorial is from the New York Times of May 26, 1950, and is entitled "A Reassuring Vote." The other editorial is from the Washington Post of May 26, 1950, and is entitled "Sense On the Draft."

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the New York Times of May 26, 1950]

A REASSURING VOTE

We welcome the emphatic majority by which the House of Representatives has voted to extend Selective Service for 2 years. The tally was 216 to 11. Seldom does so important a measure come so near to achieving unanimous approval.

The bill provides for continued registration and classification until June 1952 of young men between the ages of 18 and 26. Actual induction into the Armed Forces would wait upon further Congressional approval. But the machinery of the indispensable Selective Service System is kept intact; a guaranty is provided for adequate manpower in case of need, and the American people, and our democratic allies abroad, now know that we have insured ourselves in this important respect against the risks of a sudden emergency.

The bill now goes to the Senate. It must be acted upon before June 24 if there is to be no interruption of the present system. We look forward confidently to prompt and favorable action.

[From the Washington Post of May 26, 1950]

SENSE ON THE DRAFT

In voting to extend the draft for another 2 years, the House has faced the realities of the cold war. Significantly, the 216–11 vote reflected none of the indecision and illusion that very nearly paralyzed this country in the summer of 1941. In that respect the House determination is an important gain. The draft may never be used; the armed forces are now able to fill their quotas without resorting to conscription and under the House bill actual conscription cannot take place unless Congress declares a national emergency. But the continuation of draft machinery and the registration and classification of young men when they turn 19 can help save valuable time should an emergency arise. On this point, the new term "Manpower Registration Act" (instead of Selective Service Act) more accurately describes what is intended. Aside from the insurance that the retention of such legislation will provide, it will be a symbol to this country's allies in Europe and Asia, and a warning to the Russians, of America's intention not to abandon its commitments or to slip back again into military weakness. We hope the Senate will promptly follow suit.

The Man in the Middle

EXTENSION OF REMARKS
OF
HON. JOHN J. WILLIAMS
OF DELAWARE
IN THE SENATE OF THE UNITED STATES
Friday, May 26 (legislative day of Wednesday, March 29), 1950

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Man in the Middle," published in the Baltimore News-Post of May 15, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE MAN IN THE MIDDLE

President Truman's farm-policy speech in Lincoln, Nebr., the first of nine scheduled political talks on his current campaign tour, seemed to assume that the American people, including the farmers, are very simple folk.

The President spoke specifically in behalf of the so-called Brannan farm plan, which he quite frankly described as having two main objects.

One of these objects is to assure farmers of high prices for their products.

The other object is to make the same products available to consumers at low prices.

In order to do this, under the Brannan plan, the Government would make up the difference between what the consumer paid and the farmer received—out of taxes, of course.

The very unhappy man in the middle of this picture, obviously, is the taxpayer.

But since both farmers and consumers are also taxpayers, it is not hard to understand that the high prices to one group and the low prices to the other are largely illusory.

What does it profit the farmer to get an excessive price for his products if taxes take the major part of it?

What does it profit the consumer to pay a relatively small part of his income for the necessities of life if the tax collector seizes the greater part?

In actual fact, since the farmers and consumers would pay the bulk of the excessive and exorbitant taxes to give high prices to the one and low prices to the other under the Brannan plan, they themselves would be the composite man in the middle.

President Truman did not explain or even mention these aspects of the Brannan plan in his Lincoln speech.

In fact, in accordance with his past campaign methods and with his personal political philosophy, he refrained from telling the farmers the truth about the Brannan plan, well knowing that it would not be good politics to do so.

And he very obviously takes it for granted that they are not smart enough to figure out the truth for themselves.

Actually, there are even greater objections to the Brannan plan than its excessive cost from the viewpoint of the farmers.

Aside from the fact that they would have to pay the high prices to themselves out of their own pockets, the farmers would have to qualify for the dubious benefits of the Brannan plan in another and particularly odious way.

Only by submitting to a program of crop and acreage control—specifically, by sacrificing the right to decide for themselves what and how much to grow—could the farmers ever have even the illusion of high prices paid out of taxes.

That is the essence and the substance of the Brannan plan, the oldest political fraud in the world—that of promising something for nothing in return for votes, and of wiping out the major portion of the earnings and savings of people after the votes are won.

The Press and the CVA

EXTENSION OF REMARKS
OF
HON. HUGH B. MITCHELL
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 6, 1950

Mr. MITCHELL. Mr. Speaker, much is written inquiring as to the reasons for the current loss of prestige suffered by the Nation's press. It is not difficult to detect a number of reasons, the most basic of which is the fact that the press no longer keeps ahead or even abreast of public opinion.

Four times, in 12 years, the press stridently opposed the election of Franklin D. Roosevelt to the highest office of the land. Only a few months ago, the press attempted to defeat President Harry S. Truman through the use of ridicule.

On important issues of the day, the press is more and more frequently found in a negative position. This is certainly the case with the proposed Columbia Valley Administration.

Not all newspapers or periodicals are to be so considered, however. The Oregon Democrat, edited by Monroe Sweetland, has been given national attention several times during the past year for its excellent reporting and fair and impartial editorializing. The following article by Richard L. Neuberger, from the March edition of the Oregon Democrat demonstrates why this publication has been so honored, and points out fairly

and clearly how the Nation's press stands on this important issue.

THE PRESS AND THE CVA

(By Richard L. Neuberger)

(The Oregon Democrat herewith reproduces a most significant analysis of Northwest journalism. It is reprinted in part, with special permission of the Nieman Foundation for Journalism at Harvard University. The Nieman Foundation each year brings the outstanding young newspapermen of America to Harvard for a year's academic training. The foundation is endowed by the will of the late Lucius Nieman, publisher of the illustrious Milwaukee Journal. Richard L. Neuberger, well-known Oregon writer and legislator, undertook at the request of the Nieman Foundation a survey of the press's attitude regarding President Truman's proposed Columbia Valley Administration. Neuberger found that, while very few daily papers within the Northwest support CVA, nevertheless CVA is advocated and backed by some of the leading newspapers of our time, including the great New York Times, the Scripps-Howard chain, the crusading Pulitzer Post-Dispatch and other outstanding mediums of American public opinion. Readers of the Oregon Democrat will be interested in the following portions of Mr. Neuberger's detailed analysis, which appeared in full in vol. IV, No. 1, of Nieman Reports, printed by the Harvard Press.)

In the majesty of a cathedral-like grove of Douglas firs, I covered the recent dedication of the Gifford Pinchot National Forest for the New York Times. To prepare myself for the event, I read the great forester's autobiography, Breaking New Ground. The night before the dedicatory ceremony, in a little mountain lodge in the Cascades, I had reached the chapter telling of Theodore Roosevelt's efforts to set aside the last upland solitudes of the West in Government reserves.

PINCHOT'S FIGHT

Pinchot described how opposition to the proposal centered in the very region where the trees stood. The Oregon Legislature begged Congress not to turn over the woods to "hands unknown and untried and recommended only by theoretical learning." Pinchot added hopefully that "eastern Congressmen believed in forestry as a general proposition and were perfectly willing to protect western forests against the depredations of western men."

My wife long since had gone to sleep but I read on, fascinated. Hadn't I been through this somewhere before? In the distance a creek trilled over a rocky riffle. Always Pinchot and Teddy encountered their angriest hostility from the area whose magnificent timber they wanted to protect. And at last the thread of the tale unraveled. "In the long run," wrote Pinchot, "it was the votes of eastern Senators and Representatives that saved the national forests of the West."

LIKE CVA

"Why," I said to no one in particular, "it's exactly like CVA."

And so, sadly, it is.

Early in 1949 President Truman proposed a regional authority patterned after TVA for the vast basin of the Columbia River. The new agency would conserve soil, generate water power, provide irrigation, improve navigation and check floods. Immediately, CVA was smote hip and thigh as "communism," "dictatorship," and "tyranny." This assault has been led by the Republican Party, substantially financed by the utility companies and, unfortunately, carried on to a considerable extent by the press of the Northwest.

This partition described by Gifford Pinchot is being repeated.

NORTHWEST NEWSPAPERS ANTI-CVA

With merely a few exceptions, the newspapers of the Columbia Basin are solidly alined against CVA. Yet many of the outstanding dailies outside the Northwest regard CVA with high hopes and undiluted praise.

Some documentation is in order. Among the large metropolitan newspapers of the Columbia Basin, only the Oregonian of Portland is not determinedly opposed to CVA. It has taken no definite position on the issue, other than to decline specific indorsement of the President's bill but to add that "some sort of over-all regional agency" is apparently necessary. With this neutral exception, the area's larger publications can detect only evil in CVA.

Four small dailies favor CVA. They are the Wenatchee (Wash.) World, the Pendleton (Oreg.) East Oregonian, the Hood River (Oreg.) Sun, and the Lewiston (Idaho) Tribune. Combined circulation of these adherents of CVA totals 35,454.

Once the granite confines of the Columbia's watershed are left behind, however, there is no difficulty in finding impressive circulation figures committed to CVA.

GREAT JOURNALS BACK CVA

The New York Times, the Washington Post, the Washington Star, the Scripps-Howard papers, the St. Louis Post-Dispatch, the Chicago Sun-Times, the Louisville Courier-Journal—these and many other dailies of notable reputation have indorsed CVA without equivocation. Indeed, the Oregonian has commented on the phenomenon:

"The trend is support of CVA by such influential and nationally known publications as the New York Times and general opposition from editors of newspapers within this region."

Preponderantly, the press of the Northwest regards CVA as the ultimate in "statism" and radicalism. Yet the imaginations of Edgar Rice Burroughs and Jules Verne would not be long enough to consider radical the Eastern newspapers which have gone all-out for CVA. For example, the Star of Washington, D. C., and the Scripps-Howard papers are staunchly Republican and heavily conservative.

The Star has editorialized that "the weight of logic and common sense seems to be on the side of President Truman's proposal for the creation of a CVA to unify Federal activities connected with the development and conservation of resources in the Pacific Northwest."

TRUMAN "SOUND" ON CVA

No less fulsome has been the approval of the Scripps-Howard Washington Daily News: "President Truman has made an excellent case for creation of a CVA. * * * Among United States rivers, the Columbia ranks second only to the Mississippi in the volume of water carried to the sea. Congress should give earnest consideration to the President's plan for its better development."

Consider, by contrast, a sample of opinion from inside the Northwest. The Capital-Journal of Salem, Oreg., looks upon CVA as "a three-man dictatorship," and Boise (Idaho) Stateman is even less complimentary. It calls CVA "an unjustified intrusion upon the affairs of the region. * * * an abandonment of the rights of self-government."

Ordinarily the press of a hinterland region would be proud to unite in the company of such papers as the New York Times, the Post-Dispatch, and the Washington Post. What excuse is given for this regional disconformance?

ALIBI FALLACIOUS

The excuse, at best, is a shabby one.

Numerous Northwest dailies claim that papers in New York, St. Louis, and Washington are friendly to CVA because they themselves would not have to live under it. The implication is that the country's leading newspapers are so cavalier as to suggest for fellow Americans elsewhere in the Nation an undesirable form of government, merely because it would be beyond the circulation scope of those papers.

The charge is untrue.

The Missouri scours the city limits of St. Louis, and the Post-Dispatch has led the fight for a Missouri Valley Authority. The Chattanooga (Tenn.) Times, substantially owned by the New York Times, has supported the TVA, which operates throughout that paper's realm. All the Chicago and New York dailies endorsing CVA have been consistently for the somewhat parallel St. Lawrence seaway.

WHY A BIASED PRESS?

Why, then, is the press of the Northwest hostile to CVA while leading papers outside the region favor the President's proposal?

I believe we must go back to Pinchot's era for the answer. Opposition to the setting aside of the national forests came principally from the great lumber barons, who wanted to convert these fastnesses of fir and pine into profitable ships' decking and into two by fours. The influence of these men within the Northwest was great. Their minions filled the commercial organizations and the boards of trade. Their lobbyists were omnipresent in legislative halls. These currents rippled out into editorial offices. Pressures closed on Northwest Senators and Congressmen.

BETTER PERSPECTIVE AWAY FROM LOBBYISTS

But the power of the lumber barons diminished with each passing mile from the Northwest. Unquestionably, the timber magnates convinced some sincere editors and politicians that the fate of the sawmills and the destiny of the region were one and the same. If the forest reserves were snatched from ax and saw, how could the Northwest prosper?

Outside the Northwest, editors and politicians were able to afford the luxury of a somewhat longer perspective. If the uplands were laid bare, what of erosion and floods? Where would the drinking supply of Seattle and Portland come from? Could salmon spawn in creeks choked with logging slash? What of recreation? People could not pitch camp in a charnel house of stumps and dead branches.

And so Pinchot, first chief forester in America's history, wrote: "The conservation bill was attacked by Members of Congress from the West, who were directly concerned, and supported by Members from the East, who were not. In the fight for the national forests we were to see much more of that same partition."

POWER TRUSTS LEADS ANTIS

Today, the basic, underlying opposition to the CVA emanates from the power companies of the Northwest. A clause in the President's bill would give the new agency the right to buy out utilities operating in the Columbia Basin. Obviously, the bill is not attacked from this exposed salient. Public ownership of power is far from unpopular, as witness municipal plants in such communities as Seattle, Tacoma, Cleveland, and Sacramento.

The main assault stems from the alleged fact that CVA would take away the people's liberties. A pamphlet financed by the utilities warns that Russia has a CVA. This concern for liberty on the part of the power companies is regarded with wry faces by

residents familiar with the supineness of these companies to the Ku Klux Klan in the 1920's, when that unholy organization had sufficient strength in Oregon to secure passage at the polls of a bill closing Catholic schools.[1]

No elaborate brochures then were issued urging the populace to act "lest our form of government be changed."

PHONY DEVELOPMENT FRONT

The organization ostensibly leading the opposition to CVA is known as the Pacific Northwest Development Association. It sends gaudy 48-page booklets through the mails by the tens of thousands, heralding the material as "proof that we don't need the CVA dictatorship here." No effort has been made in the press to analyze Development Association sources of financing, although one can guess at considerable interest if, let us say, brochures of equal extravagance and anonymity flooded the region with an attack on utility companies.

Congressman HUGH B. MITCHELL, of Seattle, contends that from 1945 until 1948 four power and light corporations paid to the Development Association $18,610. "The tabulation is partial," he adds, "because all companies have not filed detailed reports for all years."

A memorial endorsing CVA was introduced in the Oregon Legislature. It was overwhelmed 19 to 10 in the senate and that was the end of it. But what chance did it ever have? One utility company spent $5,000 lobbying at the session, a sum only $1,000 short of the annual legislative pay of all 30 State senators.

GOVERNOR M'KAY'S BLUFF CITED

Utility money can hire advertising agencies, skilled writers, and printed material by the bale. Speakers on salaries and expense accounts appear before every civic organization. Conversely, debates are discouraged. Why give both sides? Governor McKay, of Oregon, who came out against CVA the first day Mr. Truman proposed it, said sanctimoniously he might favor CVA if the people were allowed to ballot on the idea.

I suggested a special session of the legislature to conduct a referendum in Oregon on CVA and promised, as a member of the senate, to cooperate with the Governor in framing a fair statement for the ballot. The reaction of a number of newspapers was to charge me with trying to put our Governor on the spot.

YOUNG REPUBLICANS CORRUPTED

The Hood River Sun, published by a founder of the Young Republican Clubs of Oregon, has declared: "It is unfortunate that a power company or any other special interests should move in on a political party and force its beliefs on a group such as the Young Republicans."

A climate is created against CVA. This conservatism, in the words of William Allen White, "goes thrilling down the line." It becomes fashionable in many circles to oppose CVA. Editors often move in these circles. The Republican Party has made antagonism to CVA so much a touchstone in the Columbia Basin that even Senator WAYNE MORSE, of Oregon, a liberal who has hailed TVA in the most enthusiastic terms, has felt it politically advisable to denounce TVA's blood brother, CVA, as "a strait-jacket for the Pacific Northwest."

E. B. MacNaughton, 69, president of the Oregonian Publishing Co., has come out for CVA. "Business interests once voiced bitter opposition to Grand Coulee and Bonneville Dams," he said. "But if Roosevelt had not given Bonneville and activated Grand Coulee, where would we be today?" MacNaughton, chairman of the board of one of the richest banks in the region, confesses that some erstwhile business associates are icily cool because of his views on CVA.

EDITORIAL VENALITY DOUBTED

Some adherents of CVA, no less guilty of overstatement than the adversaries of the project, have accused various editors of venality. I doubt this, although I always have felt regional self-interest required support of CVA. It is my opinion that the editors who think CVA would destroy personal liberty are as mistakenly sincere as those editors of long ago who feared establishment of the forest reserves would destroy the Northwest economically.

OUTSIDE HELP NEEDED

The tragedy to me, as a westerner born and bred, is that our majestic region again must be saved from itself. Our fellow citizens in the East, the Middle West, and the South must rescue us from our own subservience to local vested interests. Bernard De Voto of Boston did not exaggerate when he wrote in Harper's under the title of "The West Against Itself."

I look at the water in the tumbler at the dinner table. It is clear, cold, and pure. It foamed off the ramparts of the Mount Hood National Forest. As I write these words, thousands of men, women, and children are skiing in the national forests of the West. Next summer many times this number will swim in blue lakes and camp beneath cavernous evergreens. But what if the Nation almost half a century ago had listened not to the young forester with the handlebar mustache but to the political, civic, and journalistic leaders of the Northwest?

Where would the Northwest be today? I think of the devastation where the ax has cut clear. I recall how the lumber industry has moved inexorably southward from the British Columbia border nearly to the California line, as the stately trees have gone to satisfy the hunger of saber-toothed power saws. What would have happened to the uplands of Mount Hood and Mount St. Helens and Eagle Cap, if Teddy's forester had not lined up faithful allies on the other side of the continent?

NORTHWEST PLUNGING INTO CRISIS

Today the Northwest faces a different kind of emergency, but an emergency nevertheless. Although it contains as a region 42 percent of the Nation's potential hydroelectricity, it also is the part of the country with the most critical power shortage. Population has soared nearly one-half since 1940, and many of the newcomers are going on unemployment rolls. The rate of joblessness in the Northwest is three times the national average.

Yet the bulk of the region's press cries out that CVA will bring dictatorship and tyranny. People who were silent when religious schools faced compulsory closure now fear that public development of the Columbia River may threaten individual freedom. This is the circulation line-up in the Northwest:

Pro-CVA	35,454
Neutral	224,000
Anti-CVA	990,000

Of course, the eastern press and politicians may save us from ourselves. I am no seventh son of a seventh son, so I merely can ponder and not predict. But half a century from now, when many hearts of men have been sifted before the judgment seat, I wonder what some Gifford Pinchot of the future will write about the great fight against the CVA?

[1] Happily declared unconstitutional by the United States Supreme Court. *Pierce et al., v. Society of Sisters*, 268 U. S. 510 (1924).—R. L. N.

The New Idolatry: State Worship

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Friday, May 26 (legislative day of Wednesday, March 29), 1950

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a sermon delivered last Sunday by Dr. Harrison Ray Anderson, of the Fourth Presbyterian Church, of Chicago, Ill. The sermon is entitled "The New Idolatry: State Worship."

There being no objection, the sermon was ordered to be printed in the RECORD, as follows:

The theme: The New Idolatry: State worship.

The text: "Before Him all the nations are as nothing; to Him they are but empty and inane, then whom can you compare with God? What can you put beside Him?" Isaiah 40: 17, 18 (Moffatt).

Here is this prophet of old, Isaiah, wrestling with the problems of his day and seeking to call his people away from idols and to the living God. He takes them behind the scenes; shows them an idol; where it comes from; how it is fashioned of metal or wood by a mere man, and how it will fail. Surely it is of such a ridiculous nature that men will not set it up in place of God nor give to it—this hideous thing—the worship which God alone is worthy of.

But the author of the text is aware of a greater idolatry than that of a wooden image. It is the worship of and trust in the nations of his day as over and against their devotion to the living God. God is the eternal One, Creator of stars and of men. Before Him nations are as a drop in a bucket. He bringeth princes to nothing. As for men, they appear as they actually do from a plane—as grasshoppers. Nations are made up of these human, fallible, finite creatures. Can you compare such creatures or their creations with God? Can you put over and against God something made up of men?

Yet this is our problem today. The modern power state has come to be for multitudes of people an idol—something to which they give that which God alone is worthy of. The ever-growing state is not ultimately an economic issue or a political issue. If it were merely this, it would not be in this pulpit this morning. It is a moral and spiritual issue. Dr. Emil Brunner, of Switzerland, one of the best of the living theologians, sees state worship as the modern challenge to God. Dr. Albert Schweitzer says, "The great conflict of our times is personality versus collectivism." I was surprised to find the German Christians at the Amsterdam conference more alarmed about state worship than almost any other group there. They had seen it work out in the German Socialist state, which had promised them so much and had ended by taking over their souls and minds and bodies, except for those, like Martin Niemoeller, who stood up as Christians suffered and died. I quote from a recent letter read in the church pulpits of Berlin and East Germany, signed by Bishop Dibelius and other German Christian leaders:

"Our Lord Jesus Christ states: 'The truth will make you free.' This truth is no other than Himself, the crucified and resurrected; He is our consolation and our strength. We proclaim Him to all men even in the great

needs of our time. More than ever we see ourselves today surrounded by depressed and disturbed consciences. Without ceasing there come to the church headquarters, to the pastors and other church elders, the calls of members of the congregation. They say, 'Help us, we are being required to say what we cannot say in truth. We are being forced to participate in actions in which we in good conscience cannot take part. We must agree in decisions which we canont approve. We stand in constant danger of losing freedom, office, and bread if we refuse to participate.'"

Why are we so intrigued by the worship of the state? Why do we so readily surrender the blood-bought rights of freemen? Have we not seen the promises of the German socialist state fail? Do we not have before us this tale of horror in Russia of a great people who fell for a high ideal and wound up behind an iron door? Prisons have iron doors. Then why, with these and other examples before us, is state idolatry a threat in the America of Washington and Jefferson and Lincoln and Wilson? It is a threat because of the deception with which unthinking people are handled. They are told they will be given something free, and so they come and exchange their free manhood for the manna from Washington. They are given back some of that which was theirs, but they do not get back their souls. Why else is state idolatry possible? Because a great company of Americans have abandoned the God who made them free. They are secularist men and women without God. They cannot stand to be without God. They cannot bear the burden of a world like this alone. They cannot because they do not bow down to God. So they turn to the state and say, "Be my father; be my mother; care for me." The idol hears and winks, and says, "Brother, I will care for you, and how—for your votes."

There is a place for the state, a great place, but it's not first. Some of us here have been hurt for our country, and we love her. Therefore, we speak. Nor is one word of what I am saying a dodge from social justice or a plea for the status quo. There are living conditions and inequalities in this Nation and in our world that need righting. This can be done, and should be done, without erecting in one central power-loving government the worst injustice of all. Thomas Jefferson and Woodrow Wilson can speak. Our social justice will not be achieved that way. It will only be promised as cheese to the mouse. We will nibble and get caught. We will become mice—not men.

If you do not think there is a living, spiritual issue in what I am trying to say, look at the interest with which all things political are treated today. Each hour of the day the radios tell of politics until many of us eat Washington three times a day. The daily press and the columnists carry on with things political. Commentators scream about it and mold opinion and pressure Congress in a shocking way. When the politician realizes that he is slipping and becoming a mere man, then the build-up boys come along. I call your attention to the advertisement appearing in the Chicago papers yesterday. "For the biggest Sunday in your life see and hear Vice President ALBEN W. BARKLEY." So the politicians give us our biggest Sunday. My Bible says God gave us the Sabbath, and told us to keep it holy. Jesus Christ, whose day this is, rose on this day, and the Holy Spirit came to the church on this day—but the biggest Sunday of your life is today, say the promoters of the State show. A carload of Hollywood beauties are produced, and even Hopalong Cassidy will probably have to yell "yippee" on a white horse near a White House in Washington. The interest might lag. In other words, the minds and interests and waking thoughts of men become State-controlled and man-centered. Christians know that this place belongs to God. "Except the Lord build the house, they labor in vain."

Now all this stimulated interest takes more than interest; it takes capital. The show costs money. The Capitol is well named, only we must change the spelling. People brought their gifts of old to the idol and lavishly decorated the mute thing. Some blessing would follow. So, to support the modern power state billions must be gathered by every conceivable tax. In the 156 years of America, from 1784 to 1940, the Government of the United States spent $179,000,000,000. In the 4 years from 1946 to 1949, inclusive, which were the first full 4 years after the close of the war, the United States Government spent $191,000,000,000. You see, it costs to worship the state. And with all, there is not enough to balance the budget, but widow Jones must balance hers. There is not enough to cut the debt, but farmer Brown must cut his. And this is not all. Schemes which no man can estimate are not only advocated, but promoted, at the people's expense, for billions of additional spending and millions of added state jobs. And a great American people who have been taught to work and earn and pay their bills and save, have bought bonds with a promised increase, only to find after 10 years that the $75 they put into the bond is worth in purchasing power about $60, and not the $100 they thought they were promised. Tomorrow they will buy more, and they should. But what a commentary on statesmanship to penalize thrift and to betray those who save. President Roosevelt was reported to have told the late bishop of Washington that if he wanted money for his cathedral he had better get it soon. Just so. How much do you give to your Government in taxes and how much to God and His Kingdom? It's primarily God's money and your money—not the state's. Caesar has his claim, but God's claims are first.

But the worst feature of the modern power state, which absorbs our interest and takes our money, is neither of these. It is its power. Men grow afraid to be men in such a state. They are afraid all over the world to stand up and speak out. I debated long about preaching this sermon. Would it bring trouble to this flock? Then I thought of John Knox. I heard him say, "I am in the place where conscience bids me speak the truth. The truth therefore I speak. Impugn it, whoso lists." But I am a clergyman surrounded by a session, and while pastors and priests are victims abroad, so far they are not here. Businessmen are afraid, and laboring men are afraid. Do you talk back to the state when it can raise your income tax and in a dozen other ways penalize you? They are afraid of two things. First, they are afraid of what the state will do to them. For the first time in my life I believe that American men are afraid of their Government. That's something to ponder. The idol is doing its work. The living God sets men free from fear because they trust God.

But the real fear is not for some personal danger or cost. Let the gangsters blast us. If we die, it is glory; and if we live, it is grace. What men are afraid of is what the lust for power is doing to the men who run the state. They see humble, finite men become masters. They see their lust for power go to any length, for some few men must run the state. The idol must have his attendants, and the attendants are jealous. They see sound principles of finance thrown overboard. They see men and women lose their willingness to work hard and save, and instead see people expect the state to care for them. William Law, the mystic, who wrote A Serious Call to a Devout and Holy Life, and who so influenced John Wesley and Alexander Whyte, was made the treasurer of a fund which he dispensed to the people of Kingscliffe, the English town in which he lived. What was the result? He raised up a flock of dependent loafers. So today men who once expected to support the state now expect the state to support them.

And they see more. They see leaders become careless with the truth. They see politicians involved with gamblers and gangsters. They do not like to see that influence in Washington. It is bad enough in Chicago. They know of the drinking in Washington and they remember the drunkenness of tragic Yalta. They remember a man named Harding and his administration and his trip west. The Republican Party has not even yet recovered from that. They remember that power corrupts, and they see it at work. It adds up to this: that Government, which is to be a servant, has become a master, and men are afraid as they were afraid in Germany in 1936.

To be more specific, some of you may rember that I acted as a chaplain at the convention that nominated Mr. Truman Vice President. He was a humble man that day, with a terrible burden about to come upon him. I stood by his side and prayed for him and for the Nation, and I liked him. I have prayed from this pulpit for him ever since. As the man who prayed for him years ago, I counsel the President to quit playing with truth. The earnest people of America have too great a respect for the office of President, and they are getting weary of being kidded. President Truman would be welcome in any American city or town, either on a political trip or a nonpolitical trip, but why call this last journey and this Chicago week end anything other than what it is. The conscience of the Christian people of this Nation is being offended these days in a dozen other more serious ways. When the state becomes a god, morals seem to go. John Buchan—Lord Tweedsmuir—the late Governor General of Canada, wrote: "My fear was not barbarism, which is civilization submerged or not yet born, but decivilization, which is civilization gone rotten." Just so.

Let us see once more that God alone is God. Let the nations know themselves to be but men. Let us remember that "righteousness exalteth a nation; but sin is a reproach to any people." "For Thine is the Kingdom and the power and the glory forever. Amen."

Record of John S. Service

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES

Friday, May 26 (legislative day of Wednesday, March 29), 1950

Mr. BRIDGES. Mr. President, I ask unanimous consent to have inserted in the Appendix of the CONGRESSIONAL RECORD a speech which was broadcast by Mr. Henry J. Taylor on the record of John S. Service. This speech is in connection with the investigation now being conducted by the Senate Subcommittee on Foreign Relations on subversive activities in our Government today and the Amerasia case, which is one of dark, black spots in the history of the United States. In this connection Mr. Taylor's broadcast is particularly interesting.

There being no objection, the broadcast was ordered to be printed in the RECORD, as follows:

RECORD ON JOHN S. SERVICE

The same forces for protection which closed in around the then unknown Alger

Hiss are now closing in around John S. Service. All of which makes me leery. For I love this country as you do. But it is being eaten out from within.

STATE DEPARTMENT OFFICIALS BLEED

Just as Secretary of State Acheson promptly bled for Alger Hiss, so the Deputy Under Secretary of State now promptly takes it upon himself to announce—and I quote—that the sympathy and good wishes of the entire State Department go out to John Stewart Service.

Why all his big stir of defense, this bleeding, because John Stewart Service is to be questioned? Who is he?

Let me give you some first-hand facts I obtained from a man Service worked for—the United States wartime Ambassador to China, Patrick J. Hurley. I verified and confirmed these facts over the week end, with Mr. Hurley himself.

I first met Alger Hiss at the Dumbarton Oaks international conferences some months before I ever heard of John S. Service. This was in 1944.

CHUNGKING DOUBLE-CROSS

When I did encounter this man Service I was in China. There, toward the end of the war, I was with Ambassador Hurley at Chungking.

Hurley told me then that State Department officials in his own American Embassy staff—and he named them—were, in his opinion, double-crossing him with Stalin's stooges, the Chinese Communists. He said they were trying to put American policy into the Communist camp.

I can see him now, pacing the floor of his Chungking house, a worried and frustrated patriot. Behind the closed door he named these men to me, one by one.

Among others, he named John S. Service. Now remember, this was in 1945. That was nearly five long and fateful years ago—fateful for the security of your land and mine, our homes, our future, our very lives.

ELEVEN COME HOME

Shortly after I left him, Hurley ordered back to Washington from China 11 Embassy officials who, in his opinion, were so cosy with the Communists that he pulled them out. John S. Service was included in this group.

This is what Hurley said about them, publicly, in the New York World-Telegram, on November 28, 1945: "Most of them have continued to side with the Communist-armed party and, at times, with the Communist imperialist bloc, against American policy."

But Mr. Hurley, as you recall, was smeared at once by all the political forces of protection. He was given a cold shoulder by highest State Department authorities, including Mr. Dean Acheson. Then came the famous saying, "It's all a red herring."

Yet you see how truthfully and courageously Ambassador Hurley spoke—albeit how thanklessly. For today's whole outcome was foreseen and foretold by Hurley and others five long years ago. But nothing was done to save us.

THE ROYAL WELCOME

As for the men Hurley threw out, what happened to them when they got back to the State Department in Washington? Let's be exact about this.

John D. Davies, 1 of the 11, was appointed to the top planning board of the State Department, which is the "brain trust" for American foreign policy. Davies was given the job of calling the American signals about China—and at the top-policy level. He was then sent to our Embassy in Russia along with Horace H. Smith, whom Hurley also threw out.

Arthur Ringwalt, also sent back by Hurley on suspicion of procommunism, was made Acting Chief of the China Division in Washington.

Who were appointed assistant chiefs? Two more of the very same 11 men Hurley threw out in the same bunch, Edward E. Rice and Fulton Freeman.

You have seen what has happened to us in China since then—as well as in Moscow and throughout the world. Yet we talk now about "total diplomacy" in the hands of the same leaders.

Stalin must be laughing at us. "Total diplomacy"? Whose diplomacy is it we have—his or ours?

Now we come to John S. Service. Here are the facts. Please listen carefully, if you fear America's position in a next war.

First, Ambassador Hurley told me that John Service had already been relieved of his duties once in China, and sent home, by supreme commander Lt. Gen. Albert C. Wedemeyer, another fine American. Nevertheless, State Department officials in Washington sent John Service back to China, through another channel, to the Communist area of Yunnan—bypassing Wedemeyer, and without the knowledge or consent of Ambassador Hurley.

THE WHITE HOUSE INTERVENES

Ambassador Hurley told me that, when he discovered this, he went to the White House and protested to President Roosevelt. Remember, all this is news. He produced letters John Service and others had written, reflecting their views. May I say that the Senate and the American people should read those letters and reports now, while the bleeding is on.

President Roosevelt authorized Hurley to send such characters home. So Service was sent home for a second time.

When Service reached America, he was arrested by the FBI. He wasn't just questioned by the FBI. He was arrested by the FBI, as Mr. J. Edgar Hoover would verify to you. For J. Edgar Hoover is not afraid of anybody. That's what makes him a great American.

THE WHITEWASH TREATMENT

Service was brought before a grand jury, but he was let off—although the claim is made that his FBI record was never fully presented to the grand jury by Government attorneys. A State Department whitewash quickly followed.

Then what happened?

Was Service detached from policy decisions? Well, hardly. After all this, Service was assigned to Japan to tell General MacArthur, of all people, how to negotiate with Russia. General MacArthur reportedly rejected Service.

But Service showed up in Japan anyway, on some kind of authority from the State Department. Then, after Mr. Acheson became Secretary of State, Service was actually boosted even higher.

Today we have John S. Service on the way to high official duties in India, a critical place in our problem of communism.

WHO IS HOLDING THE UMBRELLA

The question arises: What mysterious power has protected his record? After five long years since the charges of 1945, and after 13 months of latest so-called study, the loyalty review board of the Civil Service Commission now states that it does not feel it can give John S. Service "loyalty clearance."

He is asked to come home for the purpose of giving personal answers—no more than that at this stage. But why have the FBI record on John S. Service, and the China and Moscow background, and his FBI arrest been treated by protectors as if they didn't exist?

Certainly something has gone frightfully, tragically, terribly wrong with our security measures, even if our own officials will not admit it. For it has already been shown in court that we do have traitors working in our Government.

Blindness to the Communist strategy has already cost us Asia. It can cost us the world. It can cost us the United States. It can be a question of life and death to our Nation in the event of a surprise war—unless we wake up and insist that America's safety is more important than anybody's refusal to let the chips fall where they may—and there is no time to lose.

Salvage: New Hope for the Insane

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Friday, May 26 (legislative day of Wednesday, March 29), 1950

Mr. HILL. Mr. President, I have before me an article entitled "Salvage: New Hope for the Insane," by Harry Henderson, appearing in the May 20 issue of Collier's magazine. I have submitted this article to the Public Printer, and I am informed that the cost of printing it in the CONGRESSIONAL RECORD will be $184.50, inasmuch as it is estimated that the article will require 2¼ pages. Despite that, Mr. President, I ask unanimous consent that the article may be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SALVAGE: NEW HOPE FOR THE INSANE

(By Harry Henderson)

She is a pretty, clean-cut girl who laughs easily, loves tweed skirts, works hard and likes a boy who works for the gas company in her suburban New York home town. Yet only a few months ago, classified as a schizophrenic, she was alternately moping in the wardroom of a mental hospital or screaming invitations to her funeral. And her experience, a horror tale until recently, points to significant and hopeful psychiatric advances: the development of physiological treatments for severe mental disorders.

Her recovery, for instance, was brought about the use of histamine, which until now has been considered of little therapeutic value. The development of histamine therapy and other recent experiments have stirred the hope that insanity can be prevented, perhaps cured by drugs and chemicals.

What makes her story particularly significant is that she suffered from schizophrenia, the most dreaded and most baffling of all mental illness. Schizophrenia's victims, who occupy more than one half of the beds in our mental institutions, in most cases progressively become worse, living more and more in the unreal fantasies of their disturbed minds and less and less in the real world. This process of psychotic deterioration is one which medical science has been virtually unable to arrest. Aside from surgery, only two forms of therapy—electric convulsive shock and insulin subcoma shock—are widely used in checking this disturbance of the brain function. They have, however, proved effective only part of the time. Moreover, many cases are unsuited for shock treatment so other measures must be sought.

Therefore a world-wide effort is being made to discover the physical causes of mental disease and to find new, helpful drugs. One of the greatest fields of study centers

about the relationship of the endocrine glands, such as adrenal, thyroid, gonadal, to mental illness. Surprisingly, it was Freud the pioneer detector of the psychic causes of mental disturbances, who indicated that work in the endocrine glands would reveal the physical causes of some forms of mental disease. In the summer of 1927, Freud told Dr. Johan H. W. van Ophuijsen, the well-known psychoanalyst, "I am sure that within the near future all those disorders which we treat with psychoanalysis will be cured by endocrine treatment."

While various groups of doctors have been trying to unravel the relationship of each of the numerous endocrine glands to mental disease, some of the most recent and extensive research efforts point to histamine as a promising worker in the psychoses. Histamine is not a drug but an easily synthesized body substance derived from the amino acid, histidine. It is found in every tissue in the body, with concentrations in the lungs and white blood cells, and is one of the protein-building blocks of the body.

Sporadic efforts to use histamine have been going on for years. The first attempts failed. But in 1938, Dr. Wallace Marshall and Dr. J. S. Tarwater, working at the University of Alabama Medical College in Tuscaloosa, found histamine injections improved the 35 psychotic patients on whom they tried it. That same year, in England, Dr. Horace Hill, medical superintendent of a British mental home, reported that combined histamine and insulin injections improved over half the schizophrenics he treated. In 1940, Drs. Robert W. Robb, Benjamin Kovitz, and David Rapport injected a group of long-hospitalized schizophrenics with histamine and noted slight improvements. Last year Dr. E. O. Niver, of Eau Claire, Wis., found histamine helpful in relaxing patients.

A group of doctors working at the Creedmoor State Hospital at Queens Village, N. Y., recently announced the results of the longest, most extensive experiments with histamine ever made. In 5 years they developed a histamine treatment which doubled the number of patients who could be released. It particularly benefited schizophrenics, and in treating neurotics with histamine, they found that in states of acute anxiety and tension, it gave immediate relief.

In the journal of Clinical Psychopathology they advanced the controversial theory that some forms of insanity are physical diseases resulting from the unbalanced output of the tiny endocrine glands. In their medical language it is caused by a "disruption of the cerebral metabolism due possibly to a disturbed pituitary-adrenal-gonadal relationship."

HISTAMINE FOR SCHIZOPHRENIC CASES

They use histamine and other agents, such as the sex hormones, to achieve a balance in the relationship of the output of the endocrine glands. In another series of papers in the Journal of Nervous and Mental Disease they described how they had used histamine to arrest the relentless psychotic processes which cause the brain of the schizophrenic to deteriorate.

These doctors—three of whom are brothers—are Drs. Arthur, Mortimer, and Raymond Sackler, and the psychiatrist, Dr. van Ophuijsen. Working with them were Dr. Co Tui, renowned for his work on peptic ulcers, and Dr. Harry A. LaBurt, senior director of the Creedmoor Hospital.

However controversial the Sackler-Van Ophuijsen theory of insanity, there is little question that they have opened up a broad avenue leading toward more successful rehabilitation of the mentally disturbed. In addition to many neurotics, more than 300 schizophrenics have undergone their histamine therapy. Not all improved, but the percentage who did reveals that histamine is a valuable addition to what psychiatrists call their "armentarium"—their arsenal of weapons against mental disease.

Histamine is no cure-all. It works best on certain schizophrenic types. It does not help psychotics suffering from cerebral arteriorclerosis. It helps some manic depressives and involutional psychotics. When patients who did not respond to histamine alone had electric-shock treatments added to their therapy, many who had not been helped by histamine did respond; some did not. One great advantage in histamine therapy is that while patients come out of electric-shock convulsions in a state of great confusion and suffer temporary memory defects, those responding to histamine do not.

Among those who have encouraged the Sackler-Van Ophuijsen work is Dr. Frederick MacCurdy, former commissioner of the New York State Department of Mental Hygiene. To carry on their work the Sackler-Van Ophuijsen group has been assigned a large building, to be called the Creedmoor Institute for Psychobiologic Studies, on the Creedmoor State Hospital grounds, where the medical men will specialize in clinical research in histamine, steroid, and insulin therapy.

The most successful use of histamine has been in the treatment of schizophrenics who have so long been regarded as virtually incurable. Typical of those who have been helped by histamine is the 23-year-old woman described in the opening paragraph, a catatonic schizophrenic. Here is her story, based on actual case records, interviews, recordings of fantasies and hallucinations and medical research.

We shall call her Marion Enders; besides her name other identifying details have been fictionized. Doctors warn that everyone, to some extent, has at some time suffered some of the symptoms of the schizophrenic and that you should not, upon reading such material as follows, either identify yourself with the patient or attempt to diagnose any personality difficulties of your friends or children.

Marion Enders was born to a well-known couple residing in a well-to-do New York suburb. They already had two boys and were especially delighted over the birth of a daughter. Both parents had college educations and her father had inherited a small but solidly established business. She developed rapidly as a baby, talking and walking at an earlier age than other children in the neighborhood. "She's a perfect baby," her mother was fond of saying.

A CHILD UNMOVED BY DEATH

When Marion was 4 years old, her paternal grandmother, to whom she was especially attached, died. Her mother, comforting her husband during his grief, noticed that Marion was not upset by the death. When it came time for her to go to school, she took the necessary separation from her home and mother quite easily and her mother was proud of the fact that she did not cry when left in the strange schoolroom, as other children did. She made a few friends in the class almost immediately and seemed to enjoy school. She was sensitive, especially if her father or brothers yelled at her, but not easily upset. Her worst trait was stubbornness, which her mother often said showed she was just like her father.

Occasionally she had a temper tantrum or a fit of stubbornness, but on the whole she was a quiet, extremely well-behaved child. When she was 11, her mother noticed that, unlike her boisterous brothers who were active members of groups outside the home, Marion spent most of her time alone. She had no particular girl friends or confidante.

The following year, when other girls in her class began flirting with boys and dressing to attract their attention, Marion did not. Instead of primping, she grew sloppy. In school a teacher complained that Marion did not pay attention to the work. She daydreamed and dawdled over her meals, seldom brushed her hair, and was likely to come out with odd and startling bits of information at the dinner table, items she had picked up during her incessant reading. She frequently overslept and was late for school.

One of her teachers, noticing that Marion did not mix with other pupils, never joining in group play, called Marion's mother and suggested she seek psychiatric help.

CRACKPOT TEACHERS BLAMED

Alarmed and needlessly feeling guilty, her mother took up the problem with her husband that night. He pooh-poohed the warning, vehemently denouncing those crackpot teachers. He said, "All she is suffering from is plain ole growin' pains." But he was disturbed when he discovered Marion talking to herself and noticed that she sometimes had difficulty in recognizing him. He said nothing to her mother, though, about his secret worries. Thus passed what doctors later said was an ideal time for psychiatric diagnosis and treatment. When Marion was 15, her menses finally began. In the following months she seemed to undergo distinct change for the better. Her school marks improved and she regained her position on the honor roll. Neat and clean, she spent hours brushing her hair before a mirror. But she continued her aloof detachment from group activities and took no interest in boys; her brother took her to her junior and senior proms. Under her picture in her high-school year book, the inscription read: "The girl we'd like to get to know."

After high school she took a brief course at a secretarial school, refusing—out of stubborness, her family said—to go to college. At the secretarial school she won top honors and immediately after graduation she got a job as a secretary in a branch plant of a nationally known company. Pretty, well dressed, efficient, she was advanced rapidly by hard-working executives who found that she was discreet, could be given major responsibilities and handle ticklish problems with tact. She did not mix with the other girls, and won the reputation for being mature beyond her years.

During her early days at the office her family found her bright and cheerful. But once she had reached the top, she became noticeably more irritable. Her brothers were away at college and because she often worked late, she had little to do with her parents. Almost her only pleasure was going to the movies alone. One young man phoned her occasionally. When her mother commented on this, Marion snapped that he meant nothing to her. The next time he called she refused to see him.

She was often critical of her father because he sometimes prowled about the house in his underwear. "You look so disgusting," she said. She also criticized his habit of taking his shoes off downstairs. On one occasion she complained that he had been smoking his pipe in her room. He had not, but nothing would convince her of that. She spent more and more of her time alone, and when her father once jokingly said something about her getting married she flew from the table and afterward always insisted on eating alone. To her mother she complained that the girls in the office talked about her and were jealous of her job as secretary to the boss.

At about this time, Marion's irritability began to carry over into her working hours. She would snap at the other girls when they questioned her about the office work. When one of the girls got married, she churlishly refused an invitation to her shower. She began to show up late for work. She complained to her boss that the other girls were spreading wild stories about her.

Gradually she displayed less interest in being neat. She dawdled at her work and

would make errors. In typing a letter one day she wrote, "I do wish—" leaving out a most important "not." Her boss caught the mistake and reprimanded her. She snapped back angrily, denying the error, shouting he didn't know what he was talking about, and then burst into tears. Afterward he noticed that she often sat daydreaming at her typewriter and that she seemed sad.

Sometimes she would enter his office and sit down, saying he had rung for her. When he said he hadn't, she seemed bewildered. One week end her boss was to go on an important trip, for which she was to prepare a number of briefs. She completely forgot them and he was forced to go without them. A week later she did not show up for work.

Meanwhile at home she had developed insomnia, often going the entire night without sleep. During one of these sieges of insomnia she took up the making of colored pictures, using a lipstick at first and then an old childhood paintbox. She left her room in a mess and often went unwashed. Her paintings, which absorbed more and more of her attention, were bizarre night scenes, heavy with blacks and purples, picturing tombstones and skeletons and other symbols of death.

One morning she went downstairs all dressed up and told her mother, "I'm ready to go to Aunt Mabel's."

Her mother said, "But Marion, Aunt Mabel has been dead for 6 years."

A SUDDEN OUTBURST OF ANGER

"You just told me to get ready to go to Aunt Mabel's," she cried in a rage. When her mother denied it, Marion hurled her purse at her, ran upstairs, and locked herself in her room. She refused to come out despite her mother's entreaties. That evening, when her father returned, they persuaded Marion to open her door. When they entered the messy room, Marion threw herself on the bed, complaining of pains in the abdomen. They called the family physician. He was busy with another case and could not see the girl immediately. Because of the parents' fear that Marion had appendicitis, he suggested that they take her to a general hospital.

At the hospital she became hysterical in the examination room, began to scream and to fight with the doctors and nurses. One of the doctors, after taking her blood count and observing her lack of fever or any other appendicitis symptoms, questioned the mother about Marion's general behavior. He recommended that she be removed to a psychiatric hospital, gave her a stiff sedative, and had her placed in restraint in case she awoke and started fighting again.

Her parents were stunned. They could not accept the doctor's recommendation. They believed she was "just upset." But after their family doctor had concurred with the hospital doctor, they agreed to her transfer to a psychiatric hospital. When they visited her there she made mistakes in recognition, talked in a low monotone, seemed dazed, and would break off sentences in the middle. Usually the sentences made no sense.

When her parents next visited her, she attacked them physically, badly clawing her mother. Left alone, she was quiet, unseeing. In the wardroom she would stand by herself and if anyone approached her, she would move off into the corner, sometimes crouching. She would hold her arms rigidly in an unnatural position for hours.

ABSURD ANSWERS TO QUESTIONS

Though unresponsive much of the time, she would sometimes answer questions with absurdities. Once asked her name by the doctor, she said, "See, he's looking into my eyes, he is falling in love with me." Then she sighed sadly. "I am dead. My ears are clogged up. I have no blood. My face is gone, my legs are dead. I have no blood."

Occasionally she would respond to her name, but she was usually uncooperative and sometimes resisted the nurses. "I have no name," she once said. "Call me mice, cat, dog. I have no husband. I'm all alone in this world. Ladies and gentlemen, you are all invited to my funeral. I am dying because my blood is poison and everyone is crying over me, looking at the mess and the way it is made."

But mainly, her responses to questions were incoherent mumbles.

When the doctors first recommended electric convulsive therapy, the father said "No." After the assault episode, however, he agreed to it. During the next 3 weeks she received a course of electric shock treatments and showed signs of improvement. She was able to visit quietly with her family and was more cooperative. She took some interest in her personal hygiene. But she refused to take any occupational therapy, had difficulty in remembering anything about coming to the hospital, and begged constantly for permission to go home.

When her family visited her, she would endlessly entreat them to take her home. They were overjoyed by the progress she had made.

After a while she was allowed to go home. She lived quietly and occupied herself with small tasks about the house. The family was very happy to have her home and when she broke off sentences or looked around bewildered, they waited patiently for her to resume. However, after 3 months, she became markedly more confused and absentminded. Her insomnia returned. One night her mother, hearing her moving about, got up and went to her room. She found Marion sitting on her bed with a strange, dreamy look on her face. When her mother asked how she felt, she smiled beatifically and said, "Last night I married God."

Her parents returned her to the hospital the next day. During the trip she frequently grimaced grotesquely and addressed her father and mother by strange names. As they approached the hospital she became mute. When the doctors saw her she was in a kind of stupor. Then, during her examination, she became so violent that she had to be placed in restraint. Her father, still worried about electric shock treatments, asked if there were any other form of therapy which would help her. Told of histamine injections but warned that they were purely experimental, he asked that they be tried on Marion.

The next day Marion had a glazed, unseeking look in her eyes. She did not respond to questioning. Nor was there any response during her first histamine injection.

A histamine injection causes swift dilation of the vessels of the brain and skin of the upper body. All the patient feels is a metallic taste in the mouth and a flushing of the face and neck, followed occasionally by a mild headache or nasal congestion. It also greatly increases the amount of hydrochloric acid in the stomach. Before the injection the patients are checked for allergies, ulcers, and hardening of the arteries. The only physical observations made during the injections are those of pulse, blood pressure, and breathing.

A small initial dosage of histamine is gradually increased until the top amount that can be tolerated is found. The Sacklers and Van Ophuijsen have found that psychotics can take large amounts of histamine while psychoneurotics can take very little of it. The patient is given two injections a day, the second following the disappearance of symptoms created by the first shot. For 3 days, during each of which she received two histamine injections, Marion remained mute, moving her arms in an unnatural fashion. On the third day her face lost its stupefied look and showed anger. A second later she laughed. Asked why, she said, "I don't know. The peppermint cup. I don't know. I don't like anything."

The following day, during the injections, she said, "To hell with him. Keep away from me." She started singing, "And not for just an hour, not for just a month," and then said, "I'll kill these, you, too. Revenge will be sweet. Whoever comes, I chose death. You'll never get a word out of me, and if you do, you'll wish you didn't. Whisky, poisons why. She's a rat. I hope she dies on the ocean. I drowned in the ocean. I am ready for the casket. She stinks on ice, oatmeal, potatoes. I have chosen death. That will make an end of it. On account of one or two dollars. Black hair, black eyes, and tweezers, coffee with milk, oatmeal, potatoes, hamburgers, and snakes. Death is nearer than you think. I don't believe in anything, I don't believe in oatmeal. Get out of my life. I'll kill you the first chance I get. Teeth or tongue, an eye for an eye and a toothless time. Don't look at me in that tone. Comb, shoes, one sheet, one mattress, and never will you say simple puss to me. Rather death. That's what I invented and a harmonica to kill you in your face and cake. I was only a mouth, teeth, and tongue."

This response, typical of the schizophrenic in that little of it made sense, was nonetheless a step ahead. The following day her appetite increased. She also looked more alert and called out suddenly, "Please, Doctor, may I have a glass of water?" Then a silly expression returned, but disappeared when she was asked who she was. "Marion," she replied. Asked where she was, she said, "Hospital." She knew the month and year. Asked why she was in the hospital, she said, "Because I came here."

SHE HEARD THE VOICE OF GOD

For 3 days after that she was mute and uncooperative, never responding, but following injections of histamine on the tenth day, she appeared restless, somewhat cooperative. She answered questions but was easily distracted by outside noises. Asked if she heard voices, she said, "Yes, I did—a long time ago."

Whose voice? "God's voice—I was Mary and Joseph."

Man's voice or woman's? "A baby's voice."

What did it say? "I don't know. It kind of stared."

See a vision? "Yes—in the sky." She then broke into a silly laugh.

Why laugh? "Because I kiss you, I don't know."

Any vision today? "No."

When did you see a vision? "A long time ago."

Can you save the world? "I thought so."

Do you think so now? "Yes," in a very faint voice.

After that session she was more responsive and more cooperative, her contact with reality steadily improving. She no longer had to be spoon-fed, but took care of herself and helped around the ward. She begged for a key so she could come and go as she pleased. She wanted to be trusted.

During the next injection period she described the physical effects of the histamine. "My heart is beating faster. I feel like I'm blushing, very warm and funny." She smiled absently, saying, "It seems very strange," and then covered her eyes. Asked why she covered her eyes, she replied, "I'm not sure. I don't know why. It's not funny. I wonder what I'll be like tomorrow."

The following day she reported. "My pulse seems to be going faster than yesterday. Warm from the waist up." After a while she complained of a slight headache and the flush became intensified, but she said, "I feel as if I have more control over what I will say and do. I don't think I shall cover my eyes any more." Asked if she

wanted to cover her eyes, she said, "Now?—no." A few minutes later she bantered with the doctor. "It's so ridiculous," she said. "Look," and she mocked her old habit of covering her eyes. "It's ridiculous. People's souls become so scientific."

AWARE OF HER RETURNING EGO

During the next injection period she said she felt warmer than ever. Asked what she was thinking of, she said, "I think my ego is returning. I thought it had withered away. I thought it had gone forever. Sometimes I thought I might turn into a babbling child the next minute." When she smiled, she was asked why. "I was thinking of a mountain I once went to. We had a picnic on it and you could see the entire valley for miles." She also reported an improvement in her ability to concentrate. "I can take care of things better, and generally I feel less depressed and more at ease. Things don't look as bleak."

In the days that followed she improved steadily. One day she volunteered what she meant by being depressed—being completely withdrawn and not caring, not doing anything, feeling dead. "There is something," she said, "more secure about being depressed than about not being depressed. I am afraid of not being depressed."

Shortly after this, she was allowed to go home but the histamine injections were continued on an out-patient basis. She now took care of her room at home and was more friendly with the family. She got a part-time job and began going to evening art classes. At times she would report sudden seizures of anxiety. "Things are sometimes very frightening in every way," she said. "I can't be specific. But it always happens when there are people around. I become very restless. I had to leave art class last night. I couldn't concentrate." But her "depression" continued to diminish and her family noticed that she now spoke more directly and expressed herself more forcibly.

She reported last month that she can concentrate much better, is looking for a full-time job. She has become quite friendly with a group of fellow art students, sometimes eats supper with them before class.

DANCING—AND A YOUNG MAN

Her family reports she is much easier to live with. She went with some members of her art class to a folk-dancing center one night and learned to square-dance. She now goes dancing once a week and at the dance one night she met a young man from the gas company who took a special interest in her. Though she still has a tendency to look away from strangers upon meeting them, she thinks she can overcome that. She says she is learning to laugh at herself and get into the spirit of things. She now invites her parents to her room and on her father's birthday she bought him a pipe.

She continues to receive an occasional series of histamine injections. Although she now seems to be making a very good adjustment to the real world, this does not mean histamine has completely cured Marion of her schizophrenia. She can, however, look forward to leading a happier and more nearly normal life. She will need histamine in much the same way that the diabetic needs insulin. Had her symptoms been recognized earlier, her stay in the hospital would have been shorter and her recovery more nearly complete. The treatment will help prevent further psychotic scarring of brain tissue, but it cannot undo damage already done.

The recovery of Marion through histamine therapy holds new hope for thousands of victims of mental disorders and their families. Histamine promises to become one of our most valuable weapons in checking mental disease. Because it is cheap and easily administered it can cut our vast outlay for mental institutions, many of whose patients could be treated on an out-patient basis.

Apart from the help it can give longsuffering patients, its great importance to psychiatry lies in the discovery that histamine is one of the keys to the long-locked secret, physical causes of mental disease. But its miracles, as in Marion's case, depend on early diagnosis and treatment.

The Peril in the Ruhr

EXTENSION OF REMARKS

OF

HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 25, 1950

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article by Dr. Jean Pajus. Dr. Pajus, a graduate of the University of Dijon, formerly taught international economic and political relations at the University of California, at Berkeley, and during the war he was adviser on economic warfare to the Foreign Economic Administration in Washington. Later he served as adviser in Germany to the United States Treasury Mission and the Division of Investigation of Cartels and External Assets of the United States Military Government. He is now an economic consultant in New York City.

The article follows:

[From the New Republic of May 29, 1950]

THE PERIL IN THE RUHR

(By Jean Pajus)

The dramatic proposal of French Foreign Minister Robert Schuman to pool the coal and steel interests of France and Germany, in the interests of peace and recovery, is in fact a move to establish a Franco-German combine which, in the long run, will mostly benefit Germany. Under the Schuman plan the German, French, and Rhine-basin coal and steel interests would fix markets, production, prices, abolish customs duties, and equalize wages and social-security benefits.

In defense of the plan it can be said that if it banished France's fear of German aggression it would be a contribution to the peace of western Europe. It would enable the French to obtain coal on equal terms with the Germans. And it would equalize the social-security benefits of French and German workers.

In practice, the Schuman plan would mean the revival of the prewar international-cartel system under government aegis.

The French plan is not an answer to security from German aggression. It is not the kind of economic integration repeatedly demanded of ECA Administrator Paul Hoffman and the United States. It would not mean the internationalization of the Rhine. The real victors in Europe, if the French plan is adopted, will be the steel and coal barons of the Ruhr. The political gain of Germany's change in status would be more than offset by the elimination of all present safeguards against the rebuilding of the Ruhr potential, which the plan would put under the control of those interests which stood behind the Kaiser and Hitler.

Although Schuman's plan came as a surprise, negotiations looking toward it have been going on for more than a year. Early in November 1949 Chancellor Adenauer, the widely heralded champion of free enterprise, sent a message to his neighbors urging them to establish an international steel cartel embracing the Ruhr, France, Luxemburg, and the Saar.

These negotiations recall grimly the era just after World War I. France's dead were scarcely buried when Louis Leucheur, the late French Minister of Reconstruction, began bargaining with the Germans to form an international cartel. The reasons that prompted the French to shake hands with the former enemy were given by a prominent French senator and industrialist, Gaston Japy, who said frankly that an effort must be made to solve the metallurgical crisis by making "an association with our enemies, authors of many murders and so much ruin in our country." Then, as now, the Germans were quite willing; they had already laid plans to circumvent the Treaty of Versailles. These Germans consisted of a small group of industrialists deriving their power from the ownership of coal mines, steel works, and chemical plants in the Ruhr. Their purpose was to avoid the economic consequences of defeat and to regain their industrial power in preparation for a second bid for world domination.

The current French-German negotiations would seem to indicate that nothing has changed since those days. Note the coincidence; the Frenchman Japy proposed a French-German cartel agreement in 1923—4 years after World War I; Chancellor Adenauer made a similar proposal 4 years after World War II. Twenty-seven years ago Europe faced a crisis in the metallurgical industry and needed "consolidation." A few years after World War II Europe is faced with the problem of "economic integration."

After World War I the French complained bitterly that the Germans were in a position, despite the tremendous losses sustained under the Treaty of Versailles, to control the French iron and steel industries by withholding coal. Another complaint was that the Germans were in a position to manipulate the price of French pig iron. However, despite these complaints, there was an interdependence between Lorraine and the Ruhr, involving the dominant groups on both sides of the Rhine. Both sides saw eye to eye on labor policy and social legislation, and participated in each other's national armament programs. The industrialists of both countries were members of the same cartels and directors of jointly owned enterprises.

The basic conditions have not changed in the past 30 years. Neither have the leaders of the heavy industries in France, Belgium, Luxemburg, and the Saar, despite the tremendous damage their countries have suffered. If the present plans materialize, the world will witness the spectacle of the former members of the international cartel joining hands again. The Schwedes and the Maulicks on the one hand, the Schneider-Creusot on the other, will try to integrate Europe economically.

The German efforts to seek out their former cartel friends began soon after VE-day. In May 1945, the ashes in Düsseldorf were still smoldering, and German industrialists, bewildered, did not know whether they had any friends left. They soon found out. Walter Rohland, a trusted Nazi industrialist who had been appointed in 1943 to head the Vereinigte Stahlwerke, told the story in a letter to a friend in which he described a visit of the United States Strategic Bombing Survey immediately after the liberation of Düsseldorf:

"The United States Strategic Bombing Survey, after 10 days, left feeling very satisfied, and also with the Englishmen Hannan and Temple, everything developed perfectly. In both cases mutual friends in the United States and England respectively formed a good bridge."

Strengthened by this foreign solicitude, the German industrialists began their campaign to renew their former cartel connections.

Walter Schwede, the German representative of the Luxemburg International Steel Cartel, tells of it in a letter dated June 9, 1945, addressed to his former boss, Ernst Poensgen, the father of the International Steel Cartel:

"I learned from Rohland, who as you know visited you in Kitzbühl, that you had intended to come to Düsseldorf in order to use the weight of the authoritative position you hold with the international cartels and especially with the English group."

That was the turning point for the German industrialists. Poensgen, of course, came back to power (he died last year). The rest of his friends also came back—Wilhelm Zangen, to head the Mannesmann Trust; Rohland, who has been right-hand man for Albert Speer, Hitler's minister in charge of armaments and production, to the Vereinigte Stahlwerke; Günter Sohl, also of Vereinigte Stahlwerke, and Schwede.

Hugo Stinnes won his fight with the British and has been active behind the scenes. Hermann Reusch has emerged with enhanced prestige from his battles with the labor unions. Gunther Henle, of Klockner, is a power in the board of trustees and, with Robert von Pferdmenges, has been defending the interests of the cartels in the German Ministry of Economics.

A few must be singled out. In October, 1946, Heinrich Dinkelbach, the financial brains of the biggest German steel combine, was appointed supermanager of the Rhine industry by the British authorities. He was a heavy contributor to the Nazi Party.

Today, Dinkelbach is the head of the 12 German trustees appointed under law 75 (November 10, 1948) to control the Ruhr industries. Ostensibly this prohibits excessive concentration of economic power. Under it the Ruhr industry is managed by corporations, supervised by German trustees who exercise, with few exceptions, the normal duties of ownership pending a final settlement of the ownership question. Yet a close analysis of this law shows that applying it literally will result in a great concentration of industrial power in the Ruhr in the hands of a single powerful group, the very same forces which backed Hitler in his adventures. Indeed these trustees can create an even greater concentration of industrial power than existed under Hitler.

(A new regulation was made public by the Allied High Commission, May 17, superseding law 75. While paying lip service to the principle of decartelization, it left the question of the ultimate ownership of Ruhr industries to the West German Government.)

German labor has expressed apprehension about the efforts by influential sources to prevent the liquidation of the Ruhr cartels.

Following the promulgation of law 75, a combined steel control board was appointed to supervise the activities of Dinkelbach and his group. The Allied members of this control board—Ronald Clark, of the United States Steel Corp.; W. Harris Burland, of Britain; and Albert Bureau, of France—are supposed to control the Ruhr industry. Actually, however, they have done little or nothing.

A similar situation obtains in coal. On December 16, 1947, Heinrich Kost was appointed to the position of general manager of the German coal board. He had been a prominent member of the Nazi Party years before Hitler came to power in 1933. The vital significance of Kost's position is apparent. By virtue of his position, he can and does control western Europe's economy, since it depends on an adequate supply of coal. Modern west European blast furnaces need metallurgical coke, which only the Germans can supply.

Overshadowing Dinkelbach and Kost is the figure of Hermann Abs, whose official post is chairman of the Reconstruction Loan Corporation, the purpose of which is to rebuild the economy of Germany. Under the Nazi regime, Abs was the head of the foreign department of the Deutsche Bank, which played a key role in looting invaded European countries. He was on the board of directors of some of the most important industrial and financial organizations in Germany and in the Nazi-occupied countries; he held more than 40 directorships in major German corporations. The role played by Abs' bank in the German economy was described (p. 79) in the report on the Deutsche Bank issued by the office of military government.

The Deutsche Bank voted the largest blocks of shares of the giant companies of Germany, some of them the largest in the world. It voted 38 percent of the total stock voted in I. G. Farben, the largest chemical combine in the world; 19 percent in Vereinigte Stahlwerke, the largest iron and steel concern in Europe; 28 percent in AEG; well over 20 percent in Siemens Halske, the second largest electrical cartel in Germany, and sizable blocks in the Rhenish Westphalian Electrical Works, one of the largest public-utility trusts.

Abs played an important role behind the scenes during the meeting of the foreign ministers in Paris in November 1949.

This conference was called by Bevin to discuss the German problem, particularly the German demands that dismantling of surplus plants be stopped. Adenauer won. Emboldened by his success, he made a special plea on behalf of Germany's biggest steel combine, 19 percent of which is controlled by Abs' bank. Recalling that the Vereinigte Stahlwerke was established with more than $100,000,000 of American money—incidentally never repaid—Adenauer demanded that the United States make a new loan of 225,000,000 marks, while Belgium, France, and Luxemburg lend 75,000,000 marks to this combine. The latter sum was to come indirectly from the United States, too. To carry out this plan, Abs came to the United States in November 1949. Thanks to the vigilance of Senator GUY M. GILLETTE (Democrat, Iowa), he failed in his efforts and left the United States on December 7, 1949.

Germany badly needs foreign-capital investments, recent attempts to raise capital for investment purposes having been unsuccessful. The only source is the funds made available through the Marshall plan. Abs can decide where the counterpart funds should go, and it is a safe guess that the big corporations will be the beneficiaries of our bounty. The latest figures provided by ECA show the following appropriations earmarked for 1950–51; Britain, approximately $900,000,000; Germany, approximately $724,000,000, and France, approximately $670,000,000.

Abs knows that all western Europe faces an economic depression and is caught in a political dilemma. The situation was summed up by France's former Prime Minister Paul Reynaud, on March 31, 1950: "Europe must unite for defense. * * * The Atlantic forces should include German troops. * * * Germany must be admitted to the Council of Europe. * * * The British must become part of the union because without them, Germany, with her economic strength, would dominate the union."

From the German point of view one of the most serious obstacles to the proposed economic union has been the International Ruhr Authority, promulgated by the three Allied powers on September 28, 1948, its avowed purpose being to control the German war potential. Abs and the German Ruhr magnates have always been opposed to it because, so long as it existed, the Germans were in no position to bargain effectively with their neighbors. They did everything possible to render it ineffective, and they have succeeded. On January 24, 1950, Thomas Dehler, Minister of Justice in the Bonn cabinet, gleefully pronounced it hollowed out and outstripped. The Authority, heralded as one of the most important events since VE day, has been perhaps the greatest hoax perpetrated upon the democratic world which sincerely believed that the German war potential must and could be controlled.

Thanks to the machinations of Abs and his friends, the Authority never functioned and never even concerned itself with developments in the Ruhr. It is a matter of record that it was never given adequate funds or personnel. The reason for this failure is not hard to find. Its main purpose was to reassure France against new German aggression. The French now seem to feel there is no longer any need to fear Germany, since the latter has been invited to become a member of the council of Europe. The British seem to agree with this thesis too. On March 21, the Daily Mail wrote:

"The Ruhr Authority, which was slated to become the Allied instrument of control of German industry, has become superfluous."

In this connection, Michael Hoffman, in his dispatch from Geneva to the New York Times (November 20, 1949), reported the following significant development: "The latest and most important moves has been made by German and French steel interests that have been having discussions with the knowledge—and some high French sources say the approval and even the sponsorship—of André François-Poncet, French High Commissioner in Germany."

The ground work for the establishment of the steel cartel had been prepared early last year by Abs' friend, Herman Reusch, of the Gütehoffnungshütte. On February 23, 1949, Joseph Alsop reported from Berlin that Reusch was warmly received in the highest French circles because he came to make a deal. The deal was to offer the French heavy industry—the Comité des Forges—a 30-percent stock interest in the Ruhr. "The Ruhr industry would then be established with no nonsense about socialization, and the new Franco-German joint ownership in the Ruhr would be accepted as a substitute for the internationalization the French talk so much about," Alsop wrote. Wilhelm Zangen, of the Mannesmann Tube Cartel, made a similar proposition to the French last summer. And in fact during the past year numerous meetings have been held by the representatives of the western European steel industries for the purpose of concluding a cartel agreement.

One of the main obstacles, it appears, has been the British attitude. The British Iron and Steel Federation has had ample experience with the prewar international steel cartel; it was invited to join as a charter member but declined because of the traditional British policy of free trade. Eight years later the federation became a member; but it was then too late to check Germany's domination of the European steel industry.

Can the British afford to make the same mistake again? The answer depends on whether Britain can continue to produce steel more cheaply than its competitors, and on whether the prospective members can agree on production quotas. Aspects of this problem were discussed in the Statistical Bulletin of the British Iron and Steel Federation, on the even of the British elections last February.

According to the Bulletin, Europe will consume 58,000,000 tons of steel in 1953. The members of the Organization for European Economic Cooperation are slated to produce sixty-eight to seventy million tons, or a surplus of ten to twelve million tons. Markets must be found for this surplus. The Bulletin points out, however, that the figures quoted were based on calculations made by ECA in Geneva before the devaluation of the pound. Since then, devaluation has given the British steel producers some comparative advantage over their competitors. Britain now produces at lower cost than any of the European countries, and Germany is a close second. How long will

Britain maintain this advantage? After discussing the postwar increase in steel production as compared to 1937, the Bulletin makes a significant recommendation: "In order to avoid a sudden contraction of demand it is necessary to coordinate the efforts to increase consumption. * * * To accomplish this purpose it is essential that investments and steel-production programs be coordinated."

Thus it is clear that the British steelmasters agree in principle that a cartel agreement is necessary; and there is no doubt about the French, Belgian, and German attitudes. The only question is how to reconcile the various conflicting interests.

Can Germany be brought into this economic agreement while the other members are protected from German domination? Judging from Germany's past practices, the future is full of risk.

The history of the first international steel cartel of 1926 justifies forebodings. The cartel agreement covered the production for both domestic and export markets and provided a system of deposits and fines to compel adherence. To cover administrative costs there was a basic charge of $1 for every ton of crude steel produced. If a country exceeded its quota, it paid a penalty of $4 per ton. If a country failed to reach its quota, it received compensation of $2 per ton.

Since Germany was anxious to establish the cartel, it deliberately asked for a smaller quota than it was entitled to, and this bait was eagerly seized by France, Belgium, and Luxemburg. One year later these countries discovered why Germany had asked for a small quota. During the first year of its existence, the Germans paid $10,381,000, or 95 percent of the total fines imposed upon the overproducing cartel members. They had seized the initiative, and they kept it until World War II.

Various meetings have been held in Paris, London, and Brussels. The stumbling block has been Dinkelbach's demand to raise the level of steel production to 16,000,000 tons.

Can the British agree to this? They are afraid to grant the Germans parity in steel production, and would like to prevent this as long as possible. This is why the Allied Commission told Adenauer on March 30 that the 11,100,000-ton ceiling would not be raised. The British did not think they could afford to pay the price at present. But considering the tremendous concessions the Germans have been able to extract during the past 12 months, there is little doubt that in the long run they will win out. Therefore, Schuman's proposal, which was greeted enthusiastically by the Ruhr industrialists, satisfies the German demands.

Even should the Germans fail to obtain an immediate revision of their level of industry, they can afford to wait; in the long run, their economic strength is in their favor, because the German industrial economy is by all odds the mightiest in Europe. Their steel capacity today—more than 20,000,000 tons—is higher than that of Britain. This capacity was not materially reduced through reparations, which in any case practically came to a halt last November. The huge industrial potential Germany built up before and during the war is still substantially intact and will be improved with Marshall-plan money. The dye industry is larger than that of the United States; the prewar nitrogen capacity is largely intact; the coal-tar industry is larger than it was in 1947. The synthetic-fiber industry is still there, not to mention the I. G. Farben combine. The machine-tool inventory is the second largest in the world.

The French are now evidently convinced that they can become strong enough to offset Germany's economic power in an integrated Europe. But consider what happened to the French after the formation of the first cartel. In 1936 Germany's production of crude steel was only 2.5 percent greater than that of France. In 1938 production by one German steel combine alone—Dinkelbach's Vereinigte Stahlwerke—was greater than the combined production of all the French steel mills.

So long as we live in two worlds instead of one, the economic and political integration of western Europe is essential. So, too, is Germany's admission to the council of Europe. But an integration based on recartelization cannot solve the economic problems of western Europe, nor can it provide the necessary safeguards against Germany's economic expansion.

The Schuman plan would fall short in both respects. It contains no answer to the ever-growing surplus of steel production in western Europe which in 1953, according to Economic Committee for Europe estimates, will amount to 12,000,00 tons more than can be consumed. Paradoxically, the Schuman proposal would help the Russians since the only available market for this surplus would lie behind the iron curtain. Contrary to French claims, the probable result, under the plan, would be the elimination of the safeguards against German aggression such as the International Ruhr Authority and the level of industry ceiling.

The Germans have already made arrogant demands to be given a free hand to sell their goods to the iron curtain countries. (As a matter of fact, they have been selling large quantities of steel to the eastern bloc for some time—contrary to the dictates of our cold-war policy.) No doubt the next step will be to demand the right to rearm, which will be bolstered by the arguments, that (1) rearmament is essential to the defense of western Europe; and (2) greater production will assist in solving the growing unemployment problem. Since it is extremely difficult to believe that Russia will remain indifferent to the rearmament of the Ruhr, the situation is extremely dangerous and may even make war inevitable.

The most important questions that arise are: Will the people of Europe benefit from this deal? What voice will labor have in the planning, distribution, and pricing of products? How can this scheme succeed without a thorough overhaul of all western European tariff barriers or without the abolition of currency controls? How can it work without a payments-union plan? Will the decartelization program in Germany be the victim?

What is really needed to bring about a true integration of western Europe is a true internationalization of the Rhine Basin. There is a solution, and the means to implement it are available: decartelize Germany as provided for under law 56 and ordinance 78 of cur occupation statutes; revitalize the International Ruhr Authority, established December 28, 1948; change the Schuman idea—which is actually another Franco-German cartel—into a real attempt at international control of the Rhine Basin; give to the UN, and especially the ECE, which has had ample experience in international economics, the responsibility for guiding the project. Or else it will be, as the French themselves say, "Plus ça change, plus c'est la même chose."

The Island of Manhattan: A Bit of Earth

EXTENSION OF REMARKS

OF

HON. LOUIS B. HELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 11, 1950

Mr. HELLER. Mr. Speaker, Peter H. Brandt, Esq., is an attorney in New York City, specializing in real-estate law. His reputation as a lawyer's lawyer in realty litigation is well known throughout the State. Recently while browsing through some old papers he came upon an interesting article written in 1890 by one Felix Oldboy, which he reprinted and sent to his friends. I was fortunate enough to receive a copy.

The treatise is most interesting, especially, as Mr. Brandt points out, since it translates the real-estate situation in 1890 to current conditions noting that the tentative assessed valuation of the Borough of Manhattan for the tax year 1949–50 of ordinary real estate was fixed at $7,228,635,125, which was the land purchased by Peter Minuit for $24; while the tentative assessed valuation for the same year for the entire city of New York was fixed at $15,942,389,350. I found this article most interesting, and commend it to the reading of my colleagues:

THE ISLAND OF MANHATTAN: A BIT OF EARTH

When Peter Minuit, Lord Director General of the Colony of New Netherlands, bought the island of Manhattan from its aboriginal owners for 60 guilders, or $24, he was satisfied that he had driven an excellent bargain. The place of sale was the rocky point of land since known as the Battery, and the time was a May morning in the year 1626, when the primeval forest, that then shut in the waters of the bay and the little clearing on which the settlers had erected a score of huts, was decked in its most beautiful garb. The brusque, energetic, gray-haired Dutch Governor cared less for the beauties of nature than for pelts and furs, and the eyes of the red men found nothing within their horizon half so attractive as the beads, buttons, and hatchets which they received in place of money in exchange for their lands. Guileless children of the forest as they seemed, however, these red representatives of the Manhattoes and Wickquaskeeks proved to be as wily as they were warlike. They reserved to themselves the right to hunt for game in the woods of the birch-bark country, the section of the island now known as Inwood; and it took two wars and a massacre which depopulated the Bowery farms and the little hamlet of Haarlem to persuade the Dutch magistrates to recognize their claims in equity and buy them off at a considerable advance on their original figures.

Governor Minuit, though a devout believer in the future of New Netherlands, made a better bargain than he ever dreamed, when he invested $24 in the purchase of the island of Manhattan for the Dutch West India Co. Sixty years later, in 1686, when Cornelis Steenwyck, burgomaster of New Amsterdam and mayor of New York, died, the house in which he had lived, a double stone mansion on the present southeast corner of Whitehall and Bridge Streets, was inventoried at £700, and the rest of his real estate in proportion. It would have surpassed the wildest imagination of those worthy men, if they could have looked forward to our times and have seen the assessed valuation of the real estate on this island of 11,000 Dutch morgens, of 22,000 English acres, set down officially for 1890 at $1,353,893,473, and the first ward, which comprises all of the little city that the Dutch burgomasters knew, assessed at $84,844,538. Even those figures do not tell the entire truth, startling though they are. The market value of the property is fully one-third more than the assessed valuation, and the bit of earth which is bounded by the North and East Rivers, Spuyten Duyvil Creek and the Harlem, is today worth, as men phrase it, more than $2,000,000,000,000.

There is comparatively little of the soil of Manhattan left untouched by the hand

of improvement. Yet in spite of the march of bricks and mortar over green fields that have been blotted out, hills that have been leveled and babbling brooks that have been killed, the land has not lost its beauty. The roar of traffic, the din of whistling trains, the dust raised by multitudes afoot, have not abated the natural loveliness of its situation or dimmed the superb setting of its surroundings. As I grew up I learned to think this the garden spot of all the earth. I used to think that if God did not look upon this island of Manhattan when He "saw everything that He had made, and behold, it was very good," He might have done so. Geologists say that the trap rock under our streets and homes is the oldest part of terrestrial creation, and that it made its appearance above the face of the waters enveloping the globe thousands of eons before Adam walked under the trees of Eden. The old navigators who first sailed into the bays and rivers of the New World were a reverent race of men, and something of the spirit of which I speak must have prompted Henry Hudson when, standing on the prow of his adventurous little galliot, the *Half Moon*, then at anchor in Harlem Cove, he looked up through the valley of the Spuyten Duyvil and out upon the emerald meadows fringed with wooded heights that have been yesterday, and will be again tomorrow, the center of a specu'ation and strife in real estate as momentous as was the Battle of Harlem Plains on the same territory; for he wrote, in his report to the directors of the West India Co., not only that "the land was of the finest kind for tillage," but that it was "as beautiful as the foot of man ever trod upon."

Someday New York will remember the good words and great deeds of the man who uncovered to the world the site of an imperial city and who spoke prophetically of her coming grandeur and will erect a shaft to the honor of Henry Hudson. Three pictures in his life are presented to me as I write, and they are in keeping with the vein of poetry and romance which crops up through the log of the rough, courageous sailor. We see him on a Sunday morning, in the summer of 1607, in the church of St. Ethelburge, Bishopsgate Street, London, kneeling reverently with his crew at the altar railing to receive the sacrament and a blessing at the hands of God's minister before starting on a voyage to Asia by way of the North Pole. Two years later, in 1609, he is sailing under a September sun past the beautiful hills of the Neversink, through the Narrows, and into the bay, until on the 11th of that month he anchored in full view of the Island of Manhattan, filled with wonder at the marvels of "the great river" which, little as he dreamed it, was to bear his name. A year has passed, and we see the heroic navigator beating about the vast inland sea now known as Hudson's Bay in an English ship manned by a crew of adventurers who rose in mutiny against their heroic commander, and the mists of night fall around him as he drifts away in the little boat into which he has been thrust, to be seen of man no more forever. Heart of oak, he paid for the romance and poetry of his nature with his life.

In 1826, two centuries subsequent to the treaty of Governor Minuit, the total assessed value of real estate in the city of New York was $64,806,050; in 1836 it had risen to $233,732,303; in 1846, it had decreased to $181,480,534; in 1856, it had reached the large sum of $340,972,098, and now, after a generation has passed, it has become almost quadrupled. There are those who object to dry statistics, and say there is no poetry in figures. I maintain that the man who says there is no romance in the vagaries of arithmetic does not know what he is talking about. Is there no poetry in the statistics of Thermopylae, whose 300 men kept 300,000 at bay until the homes of Sparta were safe? Is there no romance in the record of the three score minute men of Lexington who, in defiance of the rules of arithmetic, stood up against 12 times their number and emphasized with the bullet their protest against British tyranny? So, running through the dry statistics of annual assessments just quoted, there is a suggestion to gray-haired men of business who are still among us of a wild speculation in Harlem real estate which created millionaires of a day to make them paupers on the morrow. In 1836 Anthony J. Bleecker, renowned among the men of his day for his wit, scholarship, and magnificent manhood, without mention of whom none would dare touch the theme of Manhattan real estate, sold lots in the far outlying village of Harlem for $1,000 each, which 2 years later, were sold for $9 each, over and above encumbrances, enriching only the lawyers as they passed rapidly from hand to hand.

The dry record of these transactions is indeed the romance of the Island of Manhattan. Clothed in flesh and blood it will quiver with animated life and speak the story of the men and women whose homes, like their bodies, are now dust. When Anthony L. Bleecker, grandfather of Anthony J. Bleecker, whom so many survivors remember so well, was in business in this city more than a century ago, he lived on Queen Street, over his store, and far out of town he had a farm which reached from the Bowery to Minetta Brook, hard by the present Sixth Avenue. Its value was a trifle, but it was a pleasant spot for the recreation of his 13 children, 9 stalwart sons and 4 daughters, and to their graves they carried pleasant remembrance of the pink and white apple blossoms in the old orchard. When it was first proposed to lay out the present Bleecker Street through the farm the children objected, and one of the daughters insisted as a compromise that a 50-foot road would be sufficient, instead of a 60-foot street that was projected. If the old farm had remained in the family, they would have been able to lead the 400 in wealth as well as blood, but what was a man to do with 13 children, and how could he have dreamed of the treasure hidden in those 36 acres. His descendants have seen the merest fragment of those acres—a bit of earth—the lot at the southwest corner of Bleecker Street and Broadway, sold 9 years ago for $185,000.

Some estates, like those of the Stuyvesant, Rhinelander, Lenox, Astor, and Goelet families remain largely intact, but the lands that went by the name of De Lancey, Bayard, Bleecker, Herring, De Peyster, Warren and Hamilton have passed into the hands of strangers and lost their inherited distinction. As a boy I remember when Union Square was considered far uptown and fashion lingered in Bond and Bleeker Streets and about Washington Square, loath to obey the command of that inevitable policeman, time, and "move on." Indeed, my earliest remembrance is of the days when the neighborhood of St. John's Park was considered the most aristocratic of localities, and there was not a family living in one of the plain but stately houses which faced that lovely oasis, whose members did not pride themselves on the blueness of their blood. Above Union Square stretched a delightful region of farm houses and fertile fields, country villas and green paddocks, bits of woodland, wastes of common lands, rocky gorges, silvery brooks, and ponds famous for perch and sunfish. Nestling down by the East River on one side, and along the Bloomingdale Road on the other, were country seats which were famous for their cheer and hospitality, and visits made beneath their roofs were like trips to fairyland. Often as I am whirled on the elevated trains through miles of streets that have taken the place of the rustic lanes and dusty highways that I once knew, I find myself trying to imagine where a house long since familiar to me used to stand, or a wooded knoll was located, and I turn to see only an aged and solitary tree standing desolate on a brand-new sidewalk, the last relic of the vanished homestead. Even the graveyards have disappeared and a newly imported citizen, lessee of a still newer saloon, draws beer on the spot where the family vault was dug and the ancestral bones were deposited with solemn pomp.

A French savant formulated the law that, in estimating real-estate values, prices must be gaged by the number of persons passing a given locality. The accuracy of this axiom has been tested and proved by the experience of London, Paris, and Berlin. Applying the same rule to New York, which finds it physically impossible to expand except in the direction of Albany and the sky, hemmed in as it is by rivers and a bay, it is evident that fabulous figures must be reached in the near future for property lying below the post office. Indeed, in no other city in the world has real estate in small and exceptional lots reached as high a figure as in New York. The highest price ever paid for real estate on the island of Manhattan was given in 1882 for a bit of earth—only 508 feet—at the southwest corner of Broad and Wall Streets. The large sum of $330.70 per foot was paid for this little plot, but it was purchased to square the adjoining property and the price may therefore be considered exceptional. On the 14th of March 1890, the property at 149 Broadway, corner of Liberty Street, 3,006.6 square feet, was sold for $544,500, or $181.12 per foot. No. 7 Wall Street brought $157.37 per foot in 1882. The Equitable Life Insurance Co. paid $155.75 a foot for the property at the northeast corner of Pine Street and Broadway, and in 1887, the Niagara Fire Insurance Co. paid at the rate of $141.10 per square foot for the property No. 137 Broadway. There is no doubt that the region covered by these figures is destined to contain a larger business population than any equal area of ground on earth, and the multiplication of vast office buildings is at once the proof and effect of the costliness of real estate in this section. London has plenty of room in which to spread and the best property there commands but $63 per square foot, with no rapid increase. In New York, on the other hand, real estate is a living and immediate issue and its care and guardianship demand the most engrossing, capable, and concentrated business management.

It is curious and interesting to watch the advance in values on Wall Street, from the time when, in 1682 John Pound, laborer, bought a lot 23 by 60 feet for about $25 (the price named was 300 guilders in wampum), to the purchase in 1773 of three lots on the north side between Nassau and William Streets, by Samuel Verplanck, for $1,350, thence to the sale in 1816 of the old City Hall lots (adjoining the Verplanck residence) for an average of $8,000 each, and so down to the purchase of No. 12 Wall Street, in 1882, by John Jacob Astor, for $300,000. Remembering the City Hotel in its maturity, I find it interesting to see it assessed on the tax roll of 1815 at $90,000 and to wonder what old Ezra Weeks would think of the valuation now put upon the Boreel Building. At that time, No. 149 Broadway was owned by Nathaniel Smith, perfumer, and assessed at $13,000, to be sold in 1890 for $544,500. Governor Dongan owned the block bounded by the present Park Row, Beekman, Nassau and Ann Streets, and being thriftily inclined, he laid it out in a garden and for half a century or more it was a pleasure resort. The first lot sold was in 1773, when Andrew Hopper purchased the premises now known as No. 1 Park Row, where he kept store for many years. He paid $1,640 for the lot, and in 1796 he was taxed on a valuation of $4,000 for the property. Fifty times that sum would not buy it today. Like all other estates,

when once disintegrated, the Dongan property passed into a number of hands, and this process probably in the end proved to be of the greatest good to the greatest number.

The city of New York went into a somewhat extensive real-estate speculation 30 years ago and purchased more than a square mile of territory in the heart of the Island of Manhattan, embracing a desolate region known as the Wilderness, a variety of swamps, miserable specimens of Shantytown, any number of rocks, and several ponds fed by springs and equipped with sunfish and minnows, to which it afterward added the wild, rocky defile known as McGowman's Pass, which had historic interest as the scene of a desperate skirmish during the War for Independence. Many prudent men shook their heads sagely and ventured their reputations as prophets that the city would not grow up to Fifty-ninth Street in half a century and that its population would have no use for Central Park until the twentieth century had dawned. If they could read of the park commissioners' voting to run railways across this somewhat artificial "dream of landscape loveliness," it might make their dust rub uneasily against the restraining sod. The city, in 1853 and 1859, spent nearly $7,000,000 for the eight hundred-and-odd acres in Central Park, and in 1871 the land was appraised by a special commission at something over seventy millions. The first tract, taken under the act of 1853, cost about $7,800 an acre. For the second tract, extending from One Hundred and Sixth to One Hundred and Tenth Streets, which could have been purchased for $4,000 an acre, the city was compelled to pay $20,000 per acre. It proved an excellent investment, for, in spite of the enormous outlay needed to prepare it for public use, the increased taxes not only paid the interest on the bonds but wiped out the principal as well and left the city with a balance of $15,000,000 in its favor.

An era of speculation followed the enactment of the law creating Central Park. The tract bounded by Fifth and Madison Avenues and Seventy-eighth and Seventy-ninth Streets, which in 1852 was sold for $3,000, brought $40,000 at a sale in 1857. Twelve years later Mr. William H. Vanderbilt offered $1,250,000 for this plot, but his offer was refused. When the city came to purchase the 120 acres of rocky ledge and ribbons of land that made up the area of Morningside and Riverside Parks, it was compelled to pay at the rate of $60,000 per acre for land it should have had the foresight to acquire at one-tenth of that sum. But foresight is a gift which few possess, while hindsight is the boast of every prosy fiend of the buttonhole who shouts into his neighbor's ear "I told you so."

When, in 1811, Gouverneur Morris, Simeon De Witt, and John Rutherford, commissioners appointed by act of the legislature for laying out streets and roads in the city of New York, made their report to Mayor De Witt Clinton, they appended some "remarks" which seem odd to the present generation of city folk. They said: "To some it may be a matter of surprise that the whole island has not been laid out as a city. To others it may be a subject of merriment that the commissioners have provided space for a greater population than is collected at any spot this side of China. They have in this respect been governed by the shape of the ground. It is not improbable that considerable numbers may be collected at Harlem before the high hills to the southward of it shall be built upon as a city; and it is improbable that (for centuries to come) the grounds north of Harlem Flat will be covered with houses." Then they added this quaint apology with a moral: "To have come short of the extent laid out (One Hundred and Fifty-fifth Street) might, therefore, have defeated just expectations; and to have gone further might have furnished materials to the pernicious spirit of speculation." Those were wise men in their generation, and De Witt Clinton, father of the Erie Canal, was the most far-sighted statesman of his age, yet they have placed on record their belief that centuries would pass before the growing city would leap across the Harlem River and begin the erection of a new city on the broad acres that then made up the homestead and estate of one of their own number, Gouverneur Morris.

I did not start out to write the story of real estate in the island of Manhattan, but merely to point a moral from the investment made by the first Dutch Governor, and the earliest and most extensive purchase of land at the junction of the two great rivers. The money which "His High Mightiness the Lord Director General" paid for the entire area of the island would not now purchase space for a grave within its limits. Yet in spite of the rapid rise in values, the real estate of the island and the city is more generally distributed than ever before, and held by fewer individuals, corporations, and families. This is a decided advantage to the community, for it not only adds to the number of those who have a permanent stake in the general peace and prosperity, but it swells the volume of business through frequent transfers, continual rebuilding, and speculative changes in land. To own and hold a single lot of real estate in the city of New York is also apt to add several inches to the stature of the average man.

A few years ago I sat under a spreading apple tree in the dooryard in front of a low rambling stone house that was built in the last century up in Westchester County, and talked with the owner, a hale old farmer of 87 winters, white as to his hair, but with cheeks like a crab apple. He told me that his grandfather had built the house, on land which had been purchased from the Indians, and that he himself had set out the apple tree 60 summers before, to make a shade for his young bride, when she came out there to do her washing. The girl wife had grown wrinkled and bent and then had died, but the tree still was flourishing and the grass that had scarcely bent to her young feet had outlived her in age. A wealthy neighbor wanted to purchase half a dozen acres of wood and swamp land which he owned apart from his farm, and had offered a generous price for it. The old man asked my advice, as a matter of courtesy, but he had evidently made up his mind, for he did not wait a reply. He shook his head and continued after this fashion: "I donno. It's a big price and mebbe it would be safe in the bank. But I like the land. It's always there. It's been there these 87 years, right before my eyes, while the money comes and goes, and I don't know where it is. The land can't run away, and I guess I'd better stick to it as long as it will stick to me."

Why Was Low-Rent Housing Rejected?

EXTENSION OF REMARKS
OF
HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 9, 1950

Mr. NORBLAD. Mr. Speaker, it is interesting to note that the Federal Government under the provisions of the Low Rent Housing Act, offered a number of units to both the cities of Portland and Astoria, Oreg.

In both cases the city council placed the question of acceptance of this housing before the voters in the recent election.

Despite the fact that the city of Portland has a preponderant Democratic registration the voters rejected this housing by about 10,000 votes. The city of Astoria has a number of very heavy labor Democratic precincts and there it was rejected in every single precinct.

The following editorial by Mr. Fred Andrus in the Astorian Budget may throw some light on the outcome of this vote:

[From the Astorian Budget of May 23, 1950]

WHY WAS LOW-RENT HOUSING REJECTED?

How does one interpret the adverse vote in Astoria, and in Portland, too, against the adoption of the federally financed low-rent housing program?

Did the voters oppose low-rent housing as an invasion by the Federal Government into a new field, a step toward greater paternalism? Were the voters actually rejecting Santa Claus?

Or were they fearful that low-rent housing would cost them something in the way of local expenses for streets, sewers, and other necessary accompaniments to the housing projects?

We suspect it was a combination of both factors.

The average taxpayer hates to vote new burdens upon himself. This has been exemplified in Astoria, as in other communities, by rejection of new taxes on which the people vote directly. It was exemplified on a State basis at the 1948 elections when people voted for a new pension plan, but voted down the money to pay for it.

There is probably a more widespread dislike on the part of people to vote for things that cost them money than Congress realizes when it passes bills, such as the new housing act, which involves new Federal expenses.

The people would probably vote down a lot of expensive welfare legislation passed by Congress if the people had a chance to vote directly.

People could see where the low-rent housing plan might cost them something in local taxes, as in addition to the money the program costs the Federal taxpayers, and they voted against it for those reasons.

Some of them also undoubtedly voted against it because they don't consider the Federal Government should get into the paternalistic business of providing houses to the communities.

It might be well for Congressmen and Senators, when under pressure from this group or that for this or that expensive new project or paternalism, to consider the large silent mass of taxpayers who are fearful of the mounting burden of governmental costs.

The city or State government is close enough to hear something of the murmur from the taxpayers; but Washington, D. C., is too far from the grass roots. The murmur is unheard there.

City Council of Chicago and Civic, Labor, and Church Groups Demand Extension of Rent Control

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 24, 1950

Mr. O'HARA of Illinois. Mr. Speaker, on a number of previous occasions I have sought to alert the House to the grave situation that we would face in

the city of Chicago were rent control abruptly to end on June 30 of this year.

The plain fact is that partly because of the high cost of construction in our area it has been impossible to furnish new housing within the reach of thousands of our Chicago families. The result is that there is in Chicago a continuing housing shortage which has been little, if any, eased off. The end of rent control in June of this year would immediately be followed by demands for rent increases impossible for our people to meet.

I am extending my remarks to include a resolution passed by the City Council of Chicago and a letter from Leo A. Lerner, chairman of the Citizens Committee for Rent Control, enclosing the resolution adopted by affiliated organizations, also a letter from Dr. Jacob J. Weinstein, rabbi of KAM Temple.

The resolution of the City Council of Chicago follows:

CONTINUATION OF FEDERAL RENT CONTROL

Whereas on May 9, 1950, Mayor Martin H. Kennelly addressed a telegram to the Honorable BRENT SPENCE, chairman of the House Committee on Banking and Currency, as follows:

"The Honorable BRENT SPENCE,
"Chairman, Committee on Banking and Currency, House Office Building, Washington, D. C.:

"As mayor of Chicago I would like to present my views concerning the question of continuation of Federal rent control which is now being considered by your committee.

"In Chicago at present there is less than one-half of 1 percent vacancy in housing units except those renting for $100 a month or more. This affects more than 95 percent of Chicago's rental families.

"It is obvious and certainly should need little argument that removal of rent controls at this time and in such a market, would result in severe hardship to a large segment of this community.

"There have been practically no housing units built in the moderate rental classification during the past 10 years. So renting families will have no choice if controls are lifted. Of course, not all owners are unscrupulous, but there are some who would take advantage of such a situation, and this would result in severe hardship to many of our citizens.

"It would be less than fair if I did not at the same time point out to you the financial difficulties under which many small property owners have been operating during the past few years. Statistics show that many thousands of small property owners have not been able to secure equitable adjustments in the rentals of their housing units. This should be corrected.

"Large property owners, through their accountants and lawyers have obtained the adjustments to which they were entitled by law. But of the small property owners in the two- and three-apartment-building class, many are still receiving the same rental which they received in 1942.

"So, in urging continuation of Federal rent control I would also like to urge that the legislation adopted and its administration as well should take into consideration the equities on both sides of the question.

"MARTIN H. KENNELLY,
"Mayor."

Whereas the House Committee on Banking and Currency has approved a bill to continue rent controls to June 30, 1951, where such continuance is deemed necessary by the local authorities or the electorate: Now, therefore, be it

Resolved, That the City Council of the City of Chicago concurs in the views expressed by the mayor in the aforesaid telegram of May 9, 1950, to the chairman of the House Committee on Banking and Currency; and be it further

Resolved, That copies of this resolution be immediately forwarded by air mail to the President of the United States and Members of Congress from Illinois.

The letter from Mr. Lerner with resolution adopted by the labor, civic, and religious organizations affiliated with the Citizens Committee for Rent Control follows:

CITIZENS COMMITTEE FOR RENT CONTROL,
Chicago, Ill., May 24, 1950.

DEAR CONGRESSMAN: The Citizens Committee for Rent Control is composed of labor, religious, and civic organizations who are gravely concerned with the crisis facing Chicago if rent controls are removed. The problem of housing in this city is well known to you. Chicago lags far behind other cities in the construction of both private and public dwellings. There is less than one-half of 1 percent vacancy in housing units renting under $100 a month. Chief Justice Edward Scheffler, of the Chicago Municipal Court, which handles most eviction cases, warned that if controls are ended "there will be mass protests and perhaps some violence." In this great underhoused city with thousands of families doubled up, and other thousands existing in substandard housing, the abolition of controls would bring skyrocketing rents to those very persons who can least afford to pay.

The Democratic delegation from Chicago is to be congratulated on the excellent fight they are making. This committee would like to be of service to you. If there are any facts or figures needed from this area please call upon us.

Be assured that the great majority of persons in Chicago—the tenants—are behind you in this crisis. We enclose the resolution adopted by the affiliated organizations. We urge our representatives to take this expression to the floor of Congress as a statement from the leaders of this city as to the true need of Federal protection for Chicago citizens.

Sincerely,

LEO A. LERNER.

RESOLUTION FOR RENT CONTROL

We, the undersigned persons and organizations, gravely concerned about our own welfare and that of our fellow citizens, urge the Congress of the United States to enact promptly an act to extend rent control under Federal authority.

We urge that the act include these provisions:

1. Effective controls over rents to be paid.
2. Effective controls over evictions.
3. Authority for the National Administrator of Rents to control or recontrol areas.
4. Adequate provisions for administration and enforcement of all provisions.

We believe that Federal rent controls should be extended after June 30, 1950, since the facts that caused Congress to enact the 1949 act still prevail in most rent-controlled areas.

The letter from Dr. Weinstein follows:

MAY 24, 1950.

Congressman BARRATT O'HARA,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN: I strongly urge you to keep fighting for the Spence bill for rent control.

I am close to the pulse of many families in this neighborhood, and I am certain that there will be great injustice and intense hardship should controls be removed. I know how strong the pressures are for their removal. I believe, however, that you will win the enduring gratitude of the overwhelming majority of your constituents if you keep up the fight.

As ever,

Sincerely,

JACOB J. WEINSTEIN,
Rabbi, KAM Temple.

Which Will Be More Dangerous and Costly to the United States: To Help the Chinese Hold Formosa or To Lose Formosa?

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 25, 1950

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following pertinent article from Time of May 22, 1950. For 5 years the United States has vacillated from one defeat to another in the dealings with its avowed enemy, Chinese communism. There is not much more time left:

CHINA

INVASION SEASON

May, June, July, and August are the best months for an invasion of Formosa. During the rest of the year weather conditions, including typhoons, protect the island. This summer, then, may bring an event to which the United States has already officially resigned itself—the Communist conquest of Formosa. When the Reds attack, there will undoubtedly be a great clatter in the United States, a sudden recognition that Formosa's fall may touch off a chain of reactions throughout Asia and change basically the United States position in the cold war.

Big strategic decisions, such as the one to abandon Formosa, are the responsibility of the President of the United States. To advise him on these matters, the President has the Joint Chiefs of Staff and the National Security Council composed of the Vice President, Secretaries of State and Defense, and the Chairman of the National Security Resources Board. Last year when the Communists had conquered all of the Chinese mainland, the Joint Chiefs of Staff decided that the United States should not help the Chinese Government hold Formosa. Later, persuaded by the views of General MacArthur, the Joint Chiefs reversed themselves, decided that the United States should at least send a military mission to advise the Chinese Nationalists.

Secretary of State Dean Acheson objected to this position and the matter was put on the agenda of a National Security Council meeting December 29, 1949. Gen. Omar Bradley stated the case for holding Formosa. He made a bad job of it. Acheson dominated the meeting with a few well-chosen questions. Example: Were the armed forces ready and willing to commit the necessary forces to hold Formosa?

Representatives of the Armed Forces answered that they were not willing to commit major portions of United States strength to the island. Nobody asked the pertinent question: Would it cost the United States more in terms of commitment of armed strength to hold Formosa or to lose Formosa? The discussion degenerated into fuzzy agreement with Acheson that nothing could or should be done. When Truman looked

around the room for dissenters to the Acheson view, he did not hear any, although several of the officials went away muttering that the wrong policy had been adopted.

In Washington today, responsible people will agree on the following points: (1) The United States could hold Formosa; (2) the Chinese Nationalists cannot hold Formosa without United States help; (3) the fall of Formosa will make much less difficult the Communist conquest of Indochina and the Philippines; (4) a Communist Formosa may call for a 20 to 40 percent increase of United States strength in the Pacific; (5) this increase will cost a great deal more than the cost of holding Formosa.

In spite of the implications of these five propositions, there is no serious move in Washington to reverse the December Formosa decision. Any effort to revive the issue gets lost in the old argument about whether the United States can cooperate with Chiang Kai-shek. Chiang said last week that he would be willing to see General MacArthur assume responsibility for the integrity of Formosa. If the United States through MacArthur did assume responsibility, such questions as Chiang's personality would recede into proper perspective. Formosa could then be weighed in terms of future peril to the free world rather than in terms of past United States and Chinese mistakes. So weighed, Formosa could and would be defended.

BACKS TO THE WALL

As chief of Time's Shanghai Bureau from 1945 to 1948, William Gray watched the disintegration of Nationalist China at first hand, came home doubtful that the Nationalists would ever be able to wage effective war against the Chinese Communists. Recently Gray, now a Life editor, visited Formosa, Nationalist China's last outpost. His cabled report:

Formosa represents the greatest irony in Asia today. Here, in its last refuge, Chiang Kai-shek's Government has shed the chaos and despair of the mainland, and, at least temporarily, appears to be leading an almost serene and even well-managed existence. Nobody expects that this favorable state of affairs can last indefinitely, but for the present it must be regarded as a major phenomenon in the struggle for Asia. This rich, green, formerly Japanese-ruled island is a spot of unaccustomed order. The Nationalist Government has pulled itself into presentable shape.

Chiang's Government has come to a working peace with Formosa's people, so well that about 4,500 young Formosans are willingly training to help fight the Communists when the expected invasion attempt comes, probably this summer.

No beggars

A young United States diplomat in Formosa's capital of Taipei remarked the other day: "This is a situation that China has not seen in years." It is a situation in which trains run on time, the island countryside is peaceful, the currency is gold backed and for months has been stable. There are no ragged refugees or beggars on the streets, no agitators inflaming the students, no discernible great abuses of economic power of large-scale corruption.

The prime minister, gray, smiling little General Chen Cheng, claims with evident pleasure that "in the whole of Asia, Formosa is perhaps the most stable and prosperous area." It is at least equally important, as the island's Princeton-educated Governor K. C. Wu points out, that Formosa "is the only place in the Far East that has no serious Communist menace from within."

The exact strength of Nationalist troops on Formosa is a military secret, but including some 60,000 to 80,000 troops who arrived last week after the abandonment of Hainan Island, the island's defensive force probably numbers around 400,000. There is some indication that this force, like the latest government on Formosa, is a better force than the dispirited armies that lost the mainland. The recent abandonment of Hainan Island, the Nationalists point out, was a tactical decision taken 2 months before by Generalissimo Chiang and his staff.

The evacuation of Hainan, it was observed, came off without the mass defections to the Communists which had marked similar Nationalist retreats during the campaign on the mainland. At a south Formosan port where Hainan evacuees were disembarking, I asked a wounded young captain: "Could you have defeated the Communists on Hainan if you had not been ordered to withdraw?" "Without question," he snapped back. His answer was probably a fair indication of the spirit of Hainan's five defending armies.

What do the Nationalists now ask of the United States? First of all, further economic aid: a $30,000,000 currency stabilization fund, which would release their own gold for economic development, and another $20,000,000 worth of economic assistance up to June 30, when the present ECA program ends. After that, Governor Wu has a simple formula: $10,000,000 a month in American economic aid until Formosa can get on its feet.

But the Nationalists on Formosa are also renewing their hope of military aid. Chiang Kai-shek's formula: "The United States should match the forms of aid given to the Communists by Soviet Russia. We do not expect more than what the Soviet is giving." This would imply everything up to jet planes manned by American pilots, since the Russians now provide them for the Chinese Communists.

No denial

What about this durable and much-debated personality, the Generalissimo, now that he has taken back the presidency? Chiang has done nothing at all to revive himself as a hero; if he is a reviving force, it is because the Communists, Chinese and Russian, have made him so.

Chiang neither ducks the sorry facts of his government's failures on the mainland nor denies that much past aid was dissipated in those disasters. Chiang suggests a military ECA, in effect an effort similar to that directed by United States Lt. Gen. James A. Van Fleet in Greece. Who would direct such an undertaking in Formosa? The Generalissimo would consider it "reasonable" for General MacArthur, as Supreme Commander for the Allied Powers, to assume responsibility for Formosa's integrity pending the signing of a Japanese peace treaty. But Chiang insists that there be no infringements of China's sovereignty or administrative integrity. Such a move, of course, would take the Nationalists off the hook, and place a United States guaranty on the retention of Formosa.

No doubt

It seems clear that the defenders of Formosa, fighting a 5,000,000-man army drawn from the cheap and endless manpower of China's mainland, are almost hopelessly doomed by sheer numbers if the Reds are ready to waste Chinese lives freely, as no doubt they are. Further, remembering the past, I think it is still easy to wonder whether or not the Nationalist high command seriously wants to stage a last-ditch fight to save Formosa.

But I am impressed by the earnestness of younger men far beneath the stature of Chiang—Chinese who still seem to want to save their people from communism. They are the men who cannot escape; they have no place else to go. They include the troops trained by VMI-educated Gen. Sun Li-jen with United States Army methods, and they include United States trained Navy men whose destroyer escorts are running out of 3-inch shells. Somewhere along the ragged route of failure the United States rightly or wrongly assumed a moral obligation to these younger Chinese. The look of a hungry friend is in their eyes now.

The moral question of America's right to supply arms in a civil war seems to have vanished when the Russians moved in wholesale on the other side. The Russians are now supplying the Chinese Red army not only with jet planes and Soviet advisers but with highly modern artillery and other weapons.

In this situation, as long as there are anti-Communist forces on Formosa who say they want to resist, the morality of renewed United States aid is hard to challenge.

Is This Also a Truman Red Herring?

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 24, 1950

Mr. REED of New York. Mr. Speaker, I am inserting an editorial from the New York Herald Tribune, published under date of May 26, 1950, entitled "The Hidden Treason":

THE HIDDEN TREASON

The small, stocky figure of Harry Gold, propelled suddenly from a colorless anonymity into world notoriety, is a portent of a deeply disturbing kind. There was nothing about Mr. Gold to distinguish him from hundreds of thousands of other Americans in minor technical or professional jobs. Of comparatively recent immigrant stock, in modest circumstances, with a good mind which had made excellent use of the great educational opportunities offered to all in this country, he was a hospital biochemist living in a quiet obscurity and apparently absorbed in his work. To find him at all the Federal Bureau of Investigation had to dredge painstakingly through a list of some 1,200 names. But once found, he has been arrested, charged with being the intermediary in the Soviet espionage system through whom the British Dr. Klaus Fuchs passed to the Kremlin the most precious and the most elaborately guarded secrets in history.

It is his utter obscurity, his completely protective coloration, which is frightening. His own family and associates never remotely suspected, they declare, that he had any Communist leanings or connections. He received his science degree from a Catholic university. He was not a rebel or a fighter, he was not a victim of persecution, there was nothing to mark him as even a possible member of the vast Communist conspiracy against our western civilization. Yet if the FBI is to be believed, that conspiracy somehow managed to reach out, to pluck him from the countless thousands of his fellows and convert him into a singularly dangerous agent for the subversion of the society whose privileges he so quietly enjoyed.

Proof, of course, remains to be established. But whatever the judgment as to Mr. Gold himself, no one can doubt—certainly not after the Canadian cases, the Fuchs case, the Hiss case, the many other similar evidences of recent years—that this is the insidious way in which Soviet Russian conspiracy, infiltration, and treason operate in our society. The lengths to which the FBI had to go to

make this arrest are instructive, and disturbing, in themselves. We are often accused of an anti-Communist hysteria, and the excesses of McCarthyism give too much ground for the charge. But there is a reason behind even the excesses, and before the portentous figure of the obscure Mr. Gold, no one can deny that it exists.

Railroad Retirement Benefits Should Be Increased

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 25, 1950

Mr. BROOKS. Mr. Speaker, a number of months ago I introduced H. R. 7063, which is a bill to increase the amount of money being paid retired railroad men under the terms of the Federal statute covering railroad retirement benefits. I have felt for a long time—and said so publicly—that retirement payments to these men are much too low. They should be increased.

Retirement benefits generally have been increased throughout the United States over a period of years. Only the other day, General Motors entered into a 5-year contract with its hundreds of thousands of employees, under the terms of which it was agreed that retirement benefits paid by the company, when supplemented by general welfare retirement payments, should be in the sum of not less than $100 per month. This contract marks a new landmark in the payment of retirement benefits to the working people of America. It is a goal at which we aim.

In many instances noncontributing retirement programs furnish real competition to the contributing railroad retirement program. To my mind, the employee who makes heavy contributions over a period of his active life should have this fact calculated in his retirement payments. In other words, where a person over a period of years actually puts a part of his salary into a fund for the purpose of later producing benefits, this fact should be recognized in the size of the returns which come to him in his old age. I do not believe the retirement systems throughout the Nation go far enough to adequately recognize this principle.

My bill provides that retirement benefits shall be increased by 25 percent. In the light of the increased living costs, I think this addition to present retirement benefits is in order. An annuitant receiving $100 per month now is decidedly in a worse condition than he was in 1935, receiving the same amount of money. House rent, groceries, clothing, and incidentals have all increased enormously in price. Railroad retirement benefits have not increased in anything like the same percentage. The railroad man looking forward to a life of comfort and rest after a long run of active duty on the great railroads of this country is met by disappointment. He is entitled to more consideration.

It has been said that the Reserve Fund is not of sufficient size to stand additional benefits. There are, of course, serious differences of opinion as to this matter. The fund, however, has withstood withdrawals at a time when they were much heavier upon the fund, considering the amount of money coming into the fund, than at the present time. I am reasonably satisfied that additional benefits can be given without seriously jeopardizing the solvency of the fund. Even though this were not the case, I would say that Congress might look into the matter of whether or not a contribution might be made to the fund to equalize the amount which is paid by Congress into noncontributing pensions.

This is a serious matter, and one which should call for the attention and consideration at an early date of those interested in railroading. Our elder railroad people should not be allowed to perish before some adequate increase in pension is worked out for them.

The European Situation

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 25, 1950

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article on the necessity of admitting Germany to the Council of Europe if western defense is to be more than an illusory slogan. The article is by the brilliant French journalist Bertrand de Jouvenel and appears in the European supplement to Human Events. Since it was written the realistic proposal by Foreign Minister Schuman for merging French and German steel and coal industries has given the brightest ray of hope for Europe in many a decade.

THE EUROPEAN SITUATION

WESTERN DEFENSE?—NOTHING

(By Bertrand de Jouvenel)

PARIS, April 1950.—Many a time in this correspondence I have dwelt upon the increasing peace of mind of the Europeans under the Marshall plan. A sense of recovery, of return to normalcy has relieved European anxiety, and induced individuals, feeling solid ground, to form and pursue their private plans. However, this new-found confidence has come from hugging daily reality and abstaining from looking too far to the future. The gloominess which alone prevails in Britain perhaps is due to the fact that only the English, so my wife bluntly says, retain the sense of responsibility of a sovereign nation.

Thus hugging the ground, European opinion remains extremely indifferent to cold-war news. Whatever the news, all that matters is that it should remain a cold war. There is the same incredulity about its turning into a real war that was so rudely shattered in May 1940. A slight tremor shook the upper reaches of European opinion after the Privateer disaster. A number of people slowly grasped that the shooting had started, and they glimpsed the possibility that the Soviet mountain might start slipping down upon us.

Such a thought, as soon as conceived, is dismissed as unbearable, for no one believes that some 15 western divisions could do anything to stop Russian lava. Not only are they far too weak but further they are strung along this long ribbon of shore which constitutes western Europe so that common defense merely means, with the one exception of England which stands behind, that each national army stands on its strip of shore, giving and receiving no help to and from its neighbor. In order that the national armies should really help each other the lands would have to stand in depth facing Russia, as if Italians fought with Yugoslavs on Yugoslav ground, and French with Germans on German ground. But, as is well known, neither Yugoslavia nor Germany is part of the combined forces.

It would, I think, be well worth while to take a poll of European opinion on western defense. I think one would find that the people don't want to think about it and, if pressed, do not believe in it.

CONTROLLED SCHIZOPHRENIA

What of the higher ups? What of the western European policy makers? Controlled schizophrenia is good mumbo-jumbo I learned from Dr. Fuchs. If I have rightly understood him, the formula provides a perfect description of top western European thinking. Our rulers are capable of keeping perfectly separate their thinking about Russia and behavior springing therefrom, and their thinking about Germany and behavior springing therefrom.

When they think about Germany, they are obsessed by the regime under which this Nation lived from 1933 onward and by the evil it wrought in Europe from 1940 to 1945. They are haunted by the will to draw its teeth. For instance, in the French zone alone, 84,000 tons of ammunition have been destroyed, 16,000 blockhouses, 6,000 kilometers of underground telephones, and 13 underground factories. Fifty thousand ex-officers are under obligation to report weekly. Every precaution is taken to preclude rearmament of Germany, and to break the officer spirit (though, come to think of it, the officers were the only ones to try anything against Hitler).

When, on the other hand, our policy makers think about Russia they desperately cast about for means of increasing security from its present level which is precisely nil. Were they suddenly offered a Ruritania standing between Russia and themselves, a land of proven military prowess and under a sympathetic Christian Democrat government, they would welcome it with open arms into their alliance and association. But this Ruritania is called western Germany. And that is enough to change our policy-makers' mood from "come in" to "keep down." This, as everyone indeed knows, stultifies all talk of western defense.

THE ARGUMENT ABOUT GERMANY

If you ask a western European policy maker why Western Germany is to be kept down, you will probably produce an outpouring of emotional arguments: "Have you no memory? Don't you remember what they did in Europe from 1940 to 1945?" The leading feeling you will ascertain is that it would be morally wrong to let Germany return too fast to a normal status. It is then for us a moral duty, as my friend Raymond Aron puts it with brilliant humor, "to lose time."

The idea of returning Germany to a normal status over a period of years proceeds from the wrong-headed identification of a

nation with an individual offender. This policy was pursued once after the First World War and worked out very badly. At the outset, under the shock of defeat, those Germans came forward who were most attuned to the western spirit and they had to bear the full brunt of our severity. I remember as a child seeing the German plenipotentiaries shut up at the Hotel des Reservoirs at Versailles—these were our friends in Germany and we burdened them in German eyes with the humiliation they, and not the imperialists, were made to bear. Over the years the treatment of Germany improved while her governments worsened. German warmongers could point to the fact that those Germans most inclined toward the Allies, an Erzberger, a Rathenau, had got the worst deal. Finally our feelings were completely relaxed when Hitler came in, and he, of all people, got the benefit of our having worked off our nerves on Stresemanns and Brünings. This he offered to the German Nation as a proof that his high-handed policy was the effective one.

This time we have seen to it ourselves that the best Germans from our point of view should be in the saddle. Is it reasonable to humiliate precisely the men of our choice and to identify in the popular mind their tenure of office with the maximum unequality of treatment, so that again, others coming after them and far less our friends will get a better deal? This procedure is obviously absurd. How much wiser the behavior of the Allies in 1814. They saw that if they installed in France a government sympathetic to their view of European order, they would give it a deep and firm foundation by making it plain that France got a far better treaty than she was entitled to out of consideration for her new government.

But the procedure we follow is not only unwise, it is, further, unjust. A nation is not in fact an individual who should do time before it can be paroled. We cannot have it both ways and in seeking out those we held guilty of inhuman actions we in fact admitted this obvious truth that a nation is a collection of people. It is not moral, it is highly immoral to punish those who have suffered under the Nazi regime. Take the case of Walter Eucken who died recently, an example of intellectual resistance under nazism. After he had endured all this, he had to end his life treated as a vanquished foe. One may say that this atonement for others is highly Christian—yes, if self-chosen, but then it should not stop at the borders of Germany and we should all do penance for the sins of our erring brethren. It would indeed be a grand sight if all the rulers visited Hitler's death place to meditate on the crime of pride.

A DIRECTORATE OF DEFENSE

It is your correspondent's opinion that Germany should be admitted into the Council of Europe on equal terms and that real powers should be granted to a civilian directorate of European defense. The nations should be taxed a certain percentage of their national budgets in favor of this directorate of defense which would dispose of these resources in favor of a European army, while national armies would be restricted to police and colonial forces. I fear the manna of American treasure falling on the several national armies, which may then touch up the regimental colors of yore. This is not common defense, but waste of money. What you want as defense directorate is not a clutter of generals, each imbedded in his national military tradition and a servant of his own government, but first-rate statesmen, like Churchill most obviously. Let such men build up European defense; they would build up European unity as a by-product. Let them be elected by their national constituencies. These ideas may seem of excessive simplicity. But we shall not advance toward European unity until we have decided to give a certain body of Europeans a distinct mandate and real powers to achieve its objects.

PATRIOTISM AND THE SOVIETS

A friend has just come to me, hot from reading an American commentator's remark that French patriotism provides a powerful counterfoil to Communist action, and he urges me to explain how far this view is opposed to the truth. Indeed, French popular patriotism is now the most solid weapon of the Soviets in their policy toward France and western union. Yes, French patriotism balked the Communists in their efforts to grip the masses until the fateful day in 1935 when Laval, visiting Stalin in Moscow, gained from him a concession which he deemed a great victory and which turned out a most fatal gift to France: the admission that the French workers should concern themselves with national defense. Within 24 hours, with miraculous dexterity, the Communist Humanité ceased insulting the army and ventured into praise of our military heroes; Joan of Arc, whose memory had heretofore been mocked, was suddenly honored as "that most glorious daughter of the people." And Red cells vied in procession around her statue with the traditional salutes of Catholic school children.

This right-about turn was immensely effective. The Frenchman cherishes national glory and was lashed into a fury by Communist guile. He lapped up the patriotic language which was used without shame by the Communist leaders, and indeed probably with sincere relish. This was 15 years ago. During all that time the Communists have been steeped in patriotism, with the sole exception of the 2 years during which the Hitler-Stalin alliance was in vigor. And during that time they had little opportunity for public utterances, having been silenced first by Daladier and subsequently by the Vichy government, which turned out very much to their advantage. After the German attack on Russia they, of course, returned to patriotism. Thus during all but 2 years of a period of 15, and these 2 a time of silence, the French Communists have spoken the language of patriotism. All those who have risen in the party during this period—that is, practically all those who are now active (it is a party of extremely young organizers)—have heard no other language.

And my personal opinion is that this language is spoken from the heart. The Communists feel far happier, as well as immensely more successful, now that they identify themselves with the past glories of France, than they did while they derided them, a practice which only pleases a small minority of debunking intellectuals. They have established firmly in their minds that they were the main heroes of the resistance, and indeed their present political enemies complacently adopted this thesis in the years 1944 to 1946; M. Mauriac then calling upon them in the Figaro, the building of which they now stone, that as they had done most, so should they—and so on.

But, will you say, if the French Communists are genuine patriots, how come that they oppose the building up of national defense? I will answer with another query: Do you call them bad patriots, those who served the British Government rather than the Vichy government? To the Communists today the real friend of France is Russia, and our Government is alining us in a coalition against our national interest. They use the whole vocabulary of resistance: The Government collaborates with the present imperialist power, and in the true interest of France this destructive subservience is to be patriotically opposed. Will people believe that? Well, quite a number of announced patriots believed during the occupation that the resistance had to be hunted down; that, surely, was much harder to believe.

The Communists find themselves today in an exceedingly strong position toward the tenets of traditional popular patriotism. They oppose the Indochina war, but so did Clemenceau. Popular patriotism has never been interested in overseas territories. The obsession of popular patriotism since 1870, when the greatest military nation of Europe was so humiliatingly defeated by Prussia single-handed, has always been Germany. Is it toward Germany that our Government takes precautions? Nay; it is against Russia, who "saved us" in 1914 and again in 1944. "Aw! Forget the Americans and the British. It is thanks to the Russians that the Germans were groggy." Thus, the Communists. And they say, "Beware, the German will come back." Who thinks of the German, the hereditary enemy? We do. Yet tomorrow your treachercus Government, true heir of Vichy, is going to rearm the Germans, spearhead of a coalition against Russia and some time master of Europe after all. Can we call that a weak case? And is it still arguable that French patriotism is a shield against communism? Nay; it is a handle, thanks to which the Communists can turn the nation against governmental policy and hold back the necessary inclusion of Germany in western Europe.

Popular patriotism is an unwieldy passion. It will run steadily against an ancient foe, regardless of new dangers and new necessities. As early as the eighteenth century, when it was far less violent a passion, France was shaken by Choiseul's swing from the traditional alliance with Prussia to the alliance with the three-century-old foe, Austria, and many historians regard it as a major cause of the French Revolution. In our time, calling to patriotism for European federation against the Soviet threat is almost in vain. It is the Communists who can successfully appeal to patriotism. Their opponents must invoke love of individual liberty and point out that such liberty can be maintained only in a new political structure.

THE KING OF THE BELGIANS

Belgium, that exemplary country of Europe, ever quoted as a model of industriousness and liberalism, is tied up in a pretty mess. According to the principles of monarchy, Leopold is her king. This status has been put to the democratic test and he got 58 percent of the votes; far more than did Mr. Truman in 1948, or Mr. Attlee in 1945. And the power wielded by Mr. Truman is immeasurably greater. Then a cry was started according to which a king cannot be the king of a mere majority. This was asserted, for instance, by an admirable English paper which upholds the memory of William of Orange. Would he in 1689 have obtained 58 percent of the votes? One doubts it. Belgian politicians of the Socialist and Liberal Parties have developed on this occasion quite remarkable theories on the limitless right of minorities. If their utterances are collected it shall be seen that the majority principle is entirely denied, an interesting departure.

The root of the matter, of course, lies deep. King Leopold's fight to regain his throne may be regarded as part of a great struggle raging all through formerly occupied countries. At the liberation, those who had held positions of responsibility, however they had got them, had done things which those without responsibilities had not done. There were reasons to sweep them aside, often rightly and often wrongly. Thus the great openings, the great carpet-bagging era. Now in a stabler situation a come-back is staged by those who regard its success as necessary to clear their honor. And the greatest of the "come-backers" is King Leopold who is watched with the keenest interest by those in other countries who find themselves in a somewhat similar position.

American Farming Era

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 25, 1950

Mr. BROOKS. Mr. Speaker, I have recently had a chance to go over some of the farm lands in Louisiana, the condition of which I have been familiar with for many years. On this trip, I visited some of the farms which I had seen in the low period of the depression in 1932 and 1933. I had a chance to compare these farms now with the condition in which I saw them at the early period. I was amazed at the vast change that has occurred.

In 1932 to 1936, farms in Webster, Claiborne, Bossier, Red River, De Soto, Bienville, and Caddo Parishes were being used for the growing of cotton. These same farms are still used for this purpose although there is at present a greater diversity in farming. In the 1932–36 period a great many of these farms were classified as submarginal farms, and I heard many of our people refer to the fact that the farms had lost their value as a means of earning a livelihood for our people. They were, so these people stated, so rundown, depleted, and eroded as to be unprofitable for use in sustaining families.

The years have brought a vast change in the condition of these same farms. Last year, which was one of our best cotton years, I was told that these farms in the hill section produced an amazing amount of cotton. In the period of 1932–36, the hill farmer, on many of these farms, required from 5 to 7 acres to produce a 500-pound bale of cotton. Some of them did not produce that much cotton. Last year, these farmers, so I was told, produced from a bale to a bale and a fourth per acre of cotton. Some farmers did even better than this in the hills.

On the bottom farms which in the 1932–36 period produced a bale of cotton to an acre, last year they produced two bales or better to the acre.

I attended meetings of our cotton farmers last fall and I was amazed at the cotton production stories being told. At one of these meetings, I can recall that I publicly referred to some of the stories of cotton production as being so fabulous as to border on the type of what we call fish stories. Whether these tales reported by some of our farmers with reference to two to two and a half bales per acre are correct makes little difference. The important thing is that our per-acre production of cotton is now at an all-time high.

It was in this area, Mr. Speaker, that in the 1932–36 period the United States Government chose to establish what is known as land-utilization projects. These projects were located in areas surrounded by land so poor as to be classified as submarginal land. The farmers said it was not worth cultivating in many instances. The land-utilization projects were built on land which was considered too poor for cultivation. It is in these general areas to which I now have reference in this statement.

Just as important as the increased production of cotton is the increase in the grade of the cotton produced on these farms. In the 1932–36 period cotton being produced from the so-called submarginal hill lands in Louisiana was of a rather low grade of seven-eighths-inch staple. By dint of repeated efforts by experimentation and by much toil, the staple length of the cotton has been increased to 1-inch, to 1 1/16-inch, and even 1 1/8-inch fiber. Now, on this hill land, much of which, as I have said, was considered submarginal in the thirties, the grade has improved and the length of the staple has been increased. As a result of this, naturally, the price of the cotton crop has improved and our farmers are benefiting vastly from improved methods and increased harvest.

One will naturally ask what has brought about such a vast change in the cotton lands in Louisiana; what has improved the appearance of the countryside, the condition of the farm houses, and the aspect and attitude of our farmers, especially the hill farmers. It has been due in large measure to the Federal soil-conservation program, combined with the program of maintaining reasonable farm prices. In the early period the soil-conservation program began by trying to bring order out of chaos in the farm area. This program was begun as an educational one and gradually expanded from a few farms until it covered practically every farm on the countryside. The program is now accepted as a fundamental part of farming operations.

By beginning with education and the proper use of land, by the elimination of gullies, land wash, and erosion, by building terraces, and by the institution generally of good farming practices, the value and utility of our farms has gradually been brought out. Land which when I came to Congress was made unsightly by gullies and erosion is now vastly improved in its appearance. Farmers who were bankrupt, faced the future with discouragement and helplessness, now insist on raising the fertility of the soil by use of fertilizers. They are now demanding better homes, electrification of them and their barns, and the use of modern machinery. These same farmers are now facing the future with confidence and full of plans for improvement on their farms and the advancement of their families. In the countryside which in 1933–36 was devoid of beauty, we now see little flower gardens, rows of shade trees, and pretty little houses dotting the countryside.

To my mind, the amazing part of this picture is the fact that all of these changes have occurred within the short space of time since I began to serve this area in the Congress of the United States. Had I been told that so much could have been done in such a short time when I first came to Congress, I would have seriously doubted the truthfulness of such an assertion. And yet, I am a part of all of that program. I have supported every part, parcel, and portion of the soil-conservation program. I have bent every effort and energy of my congressional life in working to improve the lot of our farmers. In my first campaign for Congress, I witnessed countless cases of hard-working, honest hill farmers of north Louisiana, with wives and children, who finished the year with less than $25 to $50 profits from a whole season's effort. I resolved that the desperate financial plight of our farmers should be my first consideration in Congress.

As I review the years, I too feel that we from farming sections can look forward with considerably more confidence in the future than we can with pleasure view the struggles of the past. Benighted, misguided, and depression farming programs have given way to well-directed and well-balanced soil conservation programs of the present. We see to a remarkable extent the advantages of this great program at the present time. We reap the advantages of this great program; but in a larger sense, it is our children and their children who will reap the magnificent benefits of a well-directed conservation farm program; and they in time will rise up to thank those foresighted individuals in authority, interested in improvement of farm life, who have made possible the new day for our farmers in the United States.

Public Power in Michigan

REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Friday, May 19, 1950

Mr. RANKIN. Mr. Speaker, it was most amusing, as well as amazing, to hear the distinguished gentleman from Michigan [Mr. DONDERO] arise here in the House the other day and denounce public power as communistic, or socialistic.

The power business is a public business. Electricity has become a necessity of our modern life. It must be handled by a monopoly, and any monopoly of a necessity of life is a public business. Besides, the water power of the Nation already belongs to the Federal Government. That was decided by the Supreme Court of the United States in both the Ashwander case and the Appalachian Power case.

Suppose the private-power interests had as complete a monopoly of the electrical industry as the telephone companies have of the telephone business; just think what a burden the users of electricity would have to bear.

I pay more for a telephone in my apartment here in Washington—if I never pick up the receiver—than I pay for both gas and electricity in that apartment. Two years ago I put a telephone in my office in Tupelo, Miss., and it cost me more—if I never picked up the

receiver—than I paid for both gas and electricity in my home there.

If the American people paid as much in proportion for electricity as they now have to pay for telephones, in some places, they would do well to have one light in each house, and the chances are that the farmers would be in the dark from Maine to California.

Yet we find some people who want to turn the water power of the Nation over to this sprawling monopoly known as the Power Trust, so they can plunder the American people with rates all out of proportion, and limited only by the consumer's ability to pay.

The attempts now being made by private power interests to prevent the building of public power lines to supply power to municipally owned systems and farmers' cooperatives and force the Government to turn the power over to the Power Trust at these dams which the Government has constructed on our navigable streams and their tributaries is a repetition of their old scheme by which they tried to get their hands on the power generated on the Tennessee River by the TVA, and also along the Columbia River, and other navigable streams and their tributaries.

If they had succeeded, we would have had no yardstick to show the American people what electricity is really worth, and we would all be paying the enormous overcharges now imposed upon the people of Michigan—outside of those municipalities such as Lansing and Kalamazoo that own and operate their own power systems.

This is the battle of the century.

The greatest wealth this country has, outside of the soil from which we live, is the water power in our navigable streams and their tributaries, in which there are 394,000,000,000 kilowatt hours of hydroelectric power going to waste every year. If it were developed and firmed-up to the peak of the average year, we could not only electrify this country from one side to the other, but we could heat every house from Maine to Mexico with electric energy—the purest, finest, cleanest heat in the world.

SANTEE-COOPER

But the private power interests are trying to destroy these yardsticks, such as that of the TVA, and the Bonneville Administration. They are now making a terrific drive to get their hands on the power generated at the Santee-Cooper hydroelectric power project in South Carolina, for the purpose of blocking the efforts now being made to get that electricity to the farmers of that State at rates they can afford to pay.

I am familiar with the Santee-Cooper project. I went all the way to South Carolina, and addressed a joint session of the legislature in favor of that great development, when the bill for its creation was being considered, and was being fought by these same private power interests that are now trying to get their hands on that power, in order to monopolize it and deny its benefits to the farmers, and other consumers in South Carolina. They want to destroy the Santee-Cooper yardstick, just as they have attempted to destroy the TVA yardstick, the Bonneville administration yardstick, and other yardsticks of public-power systems, in order to impose exorbitant rates on the people who use electricity, and who have the right to get it at rates based upon the cost of generation, transmission, and distribution.

This Santee-Cooper project will be worth hundreds of millions of dollars to the people of South Carolina during this generation, if the State will just maintain it as a public-power system, keep the hands of private interests off of it, hold the rates down to the lowest possible level commensurate with sound investment, and use it as a yardstick to show the people of South Carolina, as well as the surrounding States, what electricity is really worth.

Now let's get back to the State of Michigan, and see what public power is doing for the people of that State, and what it would do if all the people of Michigan could enjoy its benefits.

The city of Lansing, the capital of Michigan, has one of the finest public power systems in the country, and has had for 56 years. I wonder if that is considered socialism or communism in Michigan.

The city of Lansing generates and distributes electricity to the people of a city of more than 90,000 population. The people of Lansing get their power through this public power system far below the rates charged by the private power companies in the State of Michigan.

That public power system is valued at more than $18,000,000, and has long since paid for itself. The city does not owe a dime on it. The power furnished free to the city, together with the taxes paid by this municipal system, I dare say, exceed the taxes paid by any private power company in any city of its size in that State.

It has no water in its stock, and is not controlled by a useless holding company.

Then there is the city of Kalamazoo, another leading city in the State of Michigan, with a population around 60,000. Kalamazoo has its own public power system, and has had for 35 years, on which it does not owe a dime.

I wonder if the people of Kalamazoo think it is communistic or socialistic for that city to own and operate its own electric light and power system, which pays, I dare say, more taxes, or more money in lieu of taxes, than is paid by the power companies in the average city of its size in Michigan. It has no water in its stock, and is not obligated to any holding company.

There is Bay City, Mich., another thriving city of about 50,000 population, which has its own public power system, and has had for 53 years, against which it does not owe a dime. Its cash contributions and taxes paid into the city treasury, I dare say, exceed the taxes paid by private power companies in any city of its size.

I am sure the people of Bay City do not regard public power as communistic or socialistic. It is not obligated to the power trust through any holding company and has no water in its stock.

I could name you a large number of other cities in the State of Michigan that have public power systems, and have had for years and years, such as Allegan, Cold Water, Norway, Niles, Marquette, Wakefield, Travers City, Zeeland, Wyandotte, Sturgis, South Haven, St. Louis, Holland, Gladstone, Escanaba, Grand Haven—and a large number of other towns, cities, and municipalities in the State of Michigan that own and operate their own generating and distribution systems, and have for years and years. They have no water in the stocks of their power systems, and do not have to pay tributes to any holding companies. Therefore they can supply their people with electricity at reasonable rates.

Let me remind the gentleman from Michigan that his State is just across the line from Ontario, Canada. If all the people of Michigan had received their electricity at the same rate they did in Ontario in 1949, they would have saved more than $117,000,000 on their light and power bills.

If the people of Michigan had received their electricity at the Tacoma, Wash., rates, they would have saved more than $133,000,000 last year. And remember that the Tacoma, Wash., light and power system pays into the city more taxes, or more money in lieu of taxes, than is paid by the power companies in the average city of its size in Michigan, or any other State.

And I might add that if the people of Michigan had got their power at the TVA rates paid by the people in my own district, they would have saved more than $119,000,000 on their light and power bills during the year 1949.

We are not trying to nationalize the power industry, as the gentleman from Michigan has charged; but we do not propose to build these great dams on our navigable streams and their tributaries, and then shut off the towns, cities, municipalities, and cooperative power associations, and turn the energy generated over to the Power Trust.

As I said, the power business is a public business. The water power of the Nation already belongs to the Federal Government. There is enough of it going to waste to electrify this country from one side to the other, and probably heat every home in America. That water power should be developed and supplied to the people of the Nation at rates based on the cost of generation, transmission, and distribution, and not turned over to the private power monopoly to wring the lifeblood from the American people by such exorbitant rates as they now impose on the people of Michigan—outside of those cities where they now have public power systems.

Instead of denouncing public power as socialistic or communistic, let us face the facts and follow the example set by the city of Lansing, Mich., as well as by the TVA, the Bonneville Administration, and other public power agencies and municipally owned systems throughout the country, and get cheap electricity to every home, including every farm home, and every business establishment in America.

That will do more to enrich our country and bring happiness and prosperity to the American people in every section

of the Nation than anything else that could possibly be done now or hereafter.

It will not only make our people prosperous and contented, but will place our country far out in front as the outstanding leader among the nations of the earth in the onward march of modern progress.

Appeasement

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 31, 1950

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Boston Post of May 25, 1950:

APPEASEMENT

All signs now point to the probability that Russia is about to win another victory over the majority members of the United Nations on the question of admitting Communist China to the organization and ousting Nationalist China from the seat she has been occupying.

Yesterday the British Government came out formally for the admission of Red China to the United Nations. France has indicated it will not stand in the way of such action. The United States will not vote in favor of the admission of Red China, but it will abide by any majority decision on the question. Thus it appears that Russia by browbeating all the other nations, by walking out of every meeting in which Nationalist China was represented, and by boycotting all essential activities of the United Nations has brought the other countries to terms. The action about to be taken on China is, under these conditions, nothing but surrender to Russia. It is base appeasement of the Munich brand and though it may appear to settle some problems temporarily it can, in the long run, produce nothing but harm. The democratic nations of the earth never seem to learn much from experience, no matter how bitter.

Memorial Day Address at Gettysburg, Pa., by the Honorable John W. Bricker, of Ohio

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 31 (legislative day of Wednesday, March 29), 1950

Mr. MARTIN. Mr. President, yesterday, at the historic national cemetery at Gettysburg, there occurred the annual strewing of the flowers on the graves by school children. State Senator McPherson, of Pennsylvania, presided. I had the honor to attend, together with Maj. Gen. Charles I. Carpenter, Chief of Chaplains of the United States Air Force. The speech of the day was delivered by the junior Senator from Ohio [Mr. BRICKER]. In order that we may all have the opportunity of reading our colleague's able and eloquent address, I ask unanimous consent that it may be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SPEECH OF SENATOR JOHN W. BRICKER AT GETTYSBURG, PA., ON MEMORIAL DAY, MAY 30, 1950

We gather this afternoon under the same panoply of heaven where one of the fiercest battles of time was fought. Those who fell here lived to build, and died to save the finest way of life the world has known. The yearning to be free is as imperishable today as then. Man's right to govern himself is yet inalienable.

They fought on this field, one battle in the never ending conflict for human liberty and individual opportunity. In that age-old struggle first one side has forged ahead and then the other. At the Battle of Gettysburg, human rights took a long surge forward and the cause of human freedom began to seem secure. From this battlefield spread the feeling that the Union would live, that righteousness would yet prevail. The question there was, Would America remain a union? Today, Will the Union remain American?

During all history there has been in the affairs of men and nations a constant conflict between the power of offense, of destruction and aggression, against man's ability to defend himself in his person and in the enjoyment of his property.

The Battle of Gettysburg epitomized that conflict. In the first day the power of destruction and of the offensive seemed too much to withstand. But on the second and third days the power of defense and of renewed strength in a noble cause took command. From the days of the Roman phalanx to the *Monitor* and the iron-clad ships, the tanks, the battleships and submarines, poison gas, bacterial warfare, the atom bomb, each implement of destruction had made necessary new defenses. The implements of peace have been ever used as the instruments of war.

Science has moved from the first fire, through gun powder and dynamite, poisonous gas, nitroglycerin, to the fission of atoms and now the fusion of force into matter. All of these can be used for peace or war for good or evil. With them we can build or destroy. We now are living in one of those epochs of history when the powers of destruction have outrun our ability to defend ourselves. The end of all we love and cherish may come unless divine providence takes a new hold on the hearts and lives of mankind.

For a century and a half America has been satisfied to fight for the right to preserve her heritage but yet has never been bent on wielding power over other peoples. Ours has been a fortunate history. From war we have turned to the pursuits of peace and to building a mighty nation. Our hearts still yearn for peace. Ruthless aggression, pelf, power, and plunder have had no part in our national development.

Our people have been willing to work. They have worked and used the God-given resources which are at hand. The spirit of compassion has controlled our lives. Helpfulness for others has been part of the life of America. Compassion for others is a glorious saga of our achievements. We have given bountifully of our labor and our wealth that others might not suffer.

Our contribution in war has been the greatest of any nation, any time, anywhere. In the recent war we contributed 14,000,000 men and women to the battle. Our fleets fought upon the seven seas. Our airmen flew the skies wherever the enemy could be found. Our soldiers carried the brunt on every battlefield where the enemy set foot. Those who fought with us fought upon limited segments of the world-wide battlefield. We gave $50,000,000,000 of our substance to our cobelligerents. Our total cost of war was half a trillion dollars.

With only 150,000,000 people, with only one-sixth of the territory of the world, we were able to do all this.

Since the days of the war, once mighty nations that had been able to take care of their own, to win wars and to prosper, to encompass much of the world, with far more people and far more resources than we have ever enjoyed, have been suppliants at our door. The spirit of compassion still prevails in the hearts of the people of our country. They have responded. We have poured out now over thirty billions of dollars to the needy of the world that they might not be engrossed in the maelstrom of an all-engulfing, destructive, godless, ruthless philosophy of government. Why have we been able to do that? The answer to that question seems to be an illusive one, that the world does not yet grasp.

The natural resources are as great in other places, the fertility of the soil is just as good, the rains fall and the sun shines on other lands as they do on ours. Why have we then been able to do so much in the cause of righteousness and human liberty? Why are we the last bastion against an economic and political foe that is encompassing so many nations and subjecting so many people?

The only answer that can be found anywhere is that we have governed ourselves longer and better and been freer than any other people of any nation on earth today. That is the heritage of Gettysburg, of St. Mihiel, of the Global War in Europe and the Pacific. But more than that it is the heritage of 160 years of human liberty, individual opportunity, the ability and the willingness to work, to build, to achieve, and to live a good way of life.

The conflict to preserve this cherished heritage, not alone is world-wide today; it is being fought at the crossroads of America. Various segments of that line of conflict are being fought out in the city councils, in the State legislatures, and in the Congress of the United States. I do not believe that any nation or combination of nations has the power to defeat us from without, but that heritage can be lost at home.

Our Government is becoming daily more and more powerful. The greed for authority over others inspires many of our leaders at this very hour—all done, of course, in the name of helping humanity. Thus, did Hitler rise to power. By such powers did Mussolini enslave the people of Italy. And by such hypocritical claims accompanied by ruthless murder and purge has Stalin enslaved the Russians and other peoples of the world.

If we are to be tomorrow, the kind of country that the men of Gettysburg died believing America to be, dreamed that we should be, and yearned for us to be, we must keep America free and freedom loving, self-governed, strong, and determined to maintain the right.

Whenever you enhance the power of government, just to that degree do you suppress human liberty. The duty of this generation is to preserve the maximum of human freedom, consistent with orderly self-government.

Where are our dangers at home?

Government power can destroy us, neglect can destroy us. Everywhere today there is a demand for personal economic security. Those who lie here had no personal security. They fought for personal liberty. There can be no economic security without political liberty.

The creative genius and individual reliance of a free people have enabled us to win every war we have fought. That creative ability cannot be ordered by government, cannot be directed by bureaucratic

control, cannot be paid for with government dole or subsidy. If we are to adopt the methods of the power and police states that we have fought to suppress, it would be as though our country, after the war between the States and in memory of the fierceness of the Battle of Gettysburg, had adopted slavery as a national policy.

Those who founded our Nation, those who have fought for it and builded it have ever known the danger of the power of government, the power of concentrated wealth, the power of organized religion, the power of the masses and the power of purposeful and selfish minorities to destroy the inalienable rights of man.

This country was builded as a bulwark against aggression and power. It was builded as a bulwark against the power of concentrated wealth and economic power that all might have opportunity. The founders knew the danger and the human suffering that followed in the wake of religious bigotry and the religious war of old and sought to free men to worship God according to each individual conscience and desire.

They knew the power of organized minorities, ruthlessly led—so they builded this country as a bulwark against the power of the organized, selfish, willful, determined minorities. They, likewise, well realized that the majority can destroy the rights of the individuals and minorities, and they builded our system as a protection against the power of the majority, who sometimes are enflamed by passing passions. So, thus, the individual and the minority groups have rights inalienable as free people so long as the Constitution abides.

Above all, they knew and have known the power of organized government to destroy human liberty. So they builded this, our Government, as a bulwark against the power of government itself. With checks and balances, the sovereignty of the State and local governments respected, with the individual's place secure, the police state has been no part of our development.

The human heart and soul, with capacity for growth and development, for service and outreach toward man's concept of his God, are the most precious things in life. To protect them our Government was founded and must continue to live. What profit us, in the end, if we gain domination and control of the world, destroy our national enemies, and lose human liberty here at home.

The spiritual and moral virtues of America will be ours only so long as we are a free people. Faithfulness in this trust today in a mighty conflict the world around will mark us as worthy of a nobler tomorrow. Recreancy now in the cause of human liberty, for which Gettysburg was fought, would tarnish the glory of the achievement of the men of Gettysburg. May we upon this sacred soil renew our determination to keep burning brightly the torch of freedom against the day for which the Master lived. May peace on earth and good will be yet the lot of men and nations. Then we will have done just honor to the heroes beneath this sacred soil.

The Jefferson Papers

EXTENSION OF REMARKS

OF

HON. CHARLES R. HOWELL

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 31, 1950

Mr. HOWELL. Mr. Speaker, under permission to extend my remarks in the RECORD, I want to call the attention of the Congress to a remarkable historical event—the publication of the first volume of the Jefferson papers. The tremendous task of collecting, sorting, and editing the letters and papers of Thomas Jefferson is being carried on at Princeton University in the congressional district which I have the honor to represent. Last week the first of the 52 volumes which will make up the completed work was presented in an appropriate ceremony to the Library of Congress. A fine editorial discussing the Jefferson papers which was published in the May 17 issue of the Princeton Herald follows:

THE JEFFERSON PAPERS

The ceremony being held this afternoon in Washington to commemorate the publication of the first volume of the Jefferson papers marks a milestone in the history of an extraordinary undertaking. The copies which will be presented to President Truman, General Marshall, and Dr. Freeman by President Harold W. Dodds, represent a vast amount of research and the best in American scholarship, yet they are but the fifty-second part of the whole and for that reason are little more than an introduction and a symbol of what is to come.

Before the editors and the reseach staff conclude their labors, 18,000 letters written by Jefferson will have been printed in full and a further 25,000 letters written to Jefferson either in full or in summarized form.

The sheer size of these figures appears to convey the story without further elaboration yet in point of fact it tends to obscure it. For all of these letters did not simply fall into the hands of the editors, although the principal Jefferson collection has been the property of the United States since 1848. The search for Jefferson documents was, and is, being carried out far and wide, and, as an instance, one was discovered in the custody of the Otoe Indian Reservation.

Nor do the figures convey an indication of the size and type and quality of the editorial organization required to annotate them, the multitude of controls required to catalog them, the innumerable files, cross-references, microfilms, photostats, the whole paraphernalia behind the scenes which will not be seen or probably even envisaged by the ultimate public.

The ceremony in Washington, therefore, will be an introduction, but something more—a tribute to Princeton University and the University Press, and the New York Times, which made the publication possible through financing the project as a memorial to the late Adolph S. Ochs, president of the Times. And, in a special sense, it is a tribute to the editor in chief, Dr. Julian P. Boyd, and his assistants, Dr. Lyman H. Butterfield and Mrs. Samuel S. Bryan.

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 31, 1950

Mrs. ST. GEORGE. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include the thirty-second article by Mr. Frank C. Waldrop on the infiltration of communism in our country:

BIGGEST STORY

(By Frank C. Waldrop)

It was slightly more than 20 years ago that Communists in America discovered something Communists in Poland, Czechoslovakia, Rumania, China and other nations have been rediscovering since 1945.

This overpowering fact is that all Communists of the world outside Russia are mere Colonials after the manner of British subjects outside England, and that Stalin handles them as expendable chattels of empire just as the British used to handle Hindus, Egyptians, Polynesians, and other lesser breeds outside the law.

Whoever was reading in this space yesterday knows that I am at present introducing details on that feature of the Soviet regime by quoting the sworn testimony of one Benjamin Gitlow to the House Committee on Un-American Activities given in 1939.

Gitlow was one of the founders of communism in this country, a member of the top policy-making board in Moscow, the Communist International, and one of the very few to quarrel with Stalin and live.

The quarrel came about this way. The Communist Party in the United States held a national convention early in 1929 to elect a leadership. William Z. Foster, who is today the titular head of the party in this country, campaigned as Stalin's man.

Jay Lovestone, of whom more in this space shortly, was found to be in control of 90 percent of the delegates.

Whereupon there came from Moscow direct orders from Stalin that Foster must get the job regardless. Lovestone and others of his faction were directed to get entirely out of the party leadership and report to Moscow for assignment in other countries.

Finally, the delegates were told that two new men would come on from Moscow as United States representatives in the Communist International, to which the locals, as in other countries, were supposed on paper to send delegates of their own choice.

In the wrangle that followed, Lovestone and Gitlow, as head of the party in the United States, and party representative on the International, went to Moscow to fight the issue out.

There they got the big news. The International in fact was not superior to the Communist organization within the Soviet Union, nor the maker of its own policies. It was actually just a dummy of foreign fronts for the personal decisions of the head of the Russian organization, J. Stalin. Today, that seems obvious—yet Communists in Europe have found it out again and again in great surprise. The ghastly shock to those simpletons of 20 years ago can well be imagined.

Said Gitlow later:

"When the decision was finally made we fought against it and voted against it. Stalin was present at the meeting and delivered a number of speeches. He lost his usual composure and became enraged. * * *"

Gitlow said that as soon as the dummy meeting was over, he was confronted by Molotov, whom we all know so well for his performances at early meetings of the United Nations, and formally read out of office for the high crime of having crossed the boss.

Now here in Gitlow's own words, is the sum of the lesson that communism pounded into him the hardest way—a lesson that Alger Hiss, Klaus Fuchs, and who knows how many others, refused to learn: "I broke with the Communist philosophy completely, because the cornerstone of Communist philosophy is the dictatorship of the proletariat, and once you accept the position that the world can be improved only by the establishment of a rigorous dictatorial regime, ruled by a few men on the top, from that moment on I felt that all freedom, all liberty, was a thing of

the past, and the very objectives that you were after could not be obtained.

"And so I broke with the concept of the proletarian dictatorship and took the position that if we are improved the economic lot of man, if man is to enjoy more political liberties, if there are to take place worthwhile social changes, those changes must take place under conditions which will guarantee to the great mass of the people more liberty, not less liberty. * * *

"In Russia we have a dictatorial regime that enjoys more power than any other ruling government in the world, because Stalin and the small ruling clique around Stalin own and control and direct the economic life of Russia, the political life of Russia, the cultural life of Russia. In other words, what we have in Russia is a gigantic monopoly on the part of a ruling clique of all phases of Russian life."

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 31, 1950

Mrs. ST. GEORGE. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include the thirty-third article by Mr. Frank C. Waldrop on the infiltration of communism in our country:

BIGGEST STORY

(By Frank C. Waldrop)

What does the Communist conspiracy require of its cheap, expendable manpower in the United States of America? When an American becomes a Communist he may be ordered to do anything, from theft of atom bombs to blackmail of a high-school girl for her father's office files.

Here is just one example as told under oath by one who had himself been imprisoned as a Communist, had risen to the peak of party rank in this country and then had been contemptuously kicked downstairs by Stalin for the high crime of differing with the boss.

The following is a quotation from Benjamin Gitlow's testimony before the House Committee on Un-American Activities. It appears in volume II of the committee hearings on pages 4683–5, inclusive.

"In 1928 the Soviet Government was very hard-pressed for foreign currency, because whatever foreign currency it could lay its hands on it was storing or using in preparation for the 5-year plan. The 5-year plan was just about to begin.

"At the same time the Soviet Union was going through an internal economic crisis which also curtailed the income of foreign currency.

"Around that time the German Communist Party admitted to membership to the party one of the most expert engravers in Germany, a man who was so adept in engraving work that he could duplicate anything."

Gitlow said the Gay-Pay-OO (Soviet secret police) then set up a counterfeiting plant with this expert engraver in charge. He continues:

"But the Gay-Pay-OO was very anxious to counterfeit American currency. In 1928 Nick Dozenberg was assigned by the Gay-Pay-OO to find out the secrets of the serialization numbers of American currency bills. He once inquired of me whether I knew where such information could be obtained, but I did not know. I had no contacts whatsoever.

"After we were expelled from the party in 1929 it appears that Nick Dozenberg, acting for the Gay-Pay-OO, already had in his possession counterfeit American currency in the form of $100 bills, which were being exchanged in Cuba, in South America and in the United States proper. But the exchange was not going ahead as quickly as the Gay-Pay-OO desired. What they wanted was to make some contact to make the exchange on a large scale involving several million dollars."

Though expelled from the Communist Party, Dozenberg maintained contact with some other members who were also expelled, Gitlow said. One of these was a Dr. Valentin Burtan, of New York City, anxious for readmission to the conspiracy and ready to prove himself by any means. Says Gitlow:

"At that time, in 1933 or 1932, Burtan made the acquaintance, in a speak-easy, of a German ex-officer, an adventurous fellow, who was engaged in the job of shipping contraband munitions from the United States to Latin-American countries.

"Burtan picked up a good acquaintance with this individual and said that it would not be a bad idea; they would contact Amtorg (Russian trading agency in New York.—Editor) to arrange for the shipping of gas munitions, gas bombs, etc., from the United States to the Soviet Union because the Soviet Union was very much interested in that, and also some of the latest forms of machine guns being manufactured in this country.

"Through this German officer, the underworld in Chicago was contacted. They were first given a taste of how easy it was to pass the counterfeit money in Chicago, and then arrangements were made in Chicago to pass, I believe, around a million dollars in counterfeit money at one time.

"Burtan and this German were engaged in the job of getting the counterfeit money over to Chicago, closing the deal, and bringing the proceeds of the sale of the counterfeit money back to be turned over to the Gay-Pay-OO. The American authorities got wind of this situation. The German was arrested, and he confessed.

"Burtan was arrested later on, and the whole manipulation of this counterfeiting originated with the Gay-Pay-OO. The printing plant was never discovered because the printing plant was not in the United States. It was in Germany. The Gay-Pay-OO was never involved in this matter, though they were at the root of it.

"They were the real perpetrators of the crime, and the dupe who, out of idealistic purposes, out of the idea that he was doing something good, is serving a prison sentence for this crime."

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 31, 1950

Mrs. ST. GEORGE. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include the thirty-fourth article by Mr. Frank C. Waldrop on the infiltration of communism in our country:

BIGGEST STORY

(By Frank C. Waldrop)

If you're a Communist from America visiting in Moscow, pay attention to your caviar. As long as you get it fresh, unsalted, and black, you are safe.

But when the waiter brings you the gummy, red kind it's time you were already gone. Your life is in danger.

This is advice from one who knows, and you can find it in volume 11 of the hearings of the House Committee on Un-American Activities in the testimony of Jay Lovestone.

Lovestone was once head of your organization in this country—if you are a Communist. He made many trips to Moscow. He was an aristocrat of the conspiracy, one of the very earliest of the charter members. He knew Stalin, Trotsky, Bukharin, Litvinov, Molotov. In fact, as he put it:

"I might say that I have received or been subjected to the highest honors of the Communist Party in my time save one, and that is liquidation by a firing squad."

Long before the squalid episode of Earl Browder's rise to and fall from the top dishonors of communism in the United States of Amerca, Lovestone was one of the conspiracy's elder statesmen.

The things that happened to him in Moscow when they switched the caviar from high quality black to stinky red, have been repeated with Communists from every country.

Stalin, whom Lovestone once called his friend and leader, sooner or later always turns out to be what Lovestone calls him now, Herr Stalin.

In other words, Stalin is Hitler as Hitler was Stalin.

President Truman may think he is getting some place when he says that he likes old Joe Stalin. Mr. Roosevelt thought that he, too, was getting some place when he tried to butter up Stalin at Tehran and Yalta by poking fun at the helpless Churchill who swallowed the insults and picked up added money for the Socialist British Empire, to this day kept alive only on a United States pension.

But you—if you are a Communist—would profit more by listening to the story of Jay Lovestone, who went to Moscow in July of 1929 with 90 percent of the Communist organization in the United States back of him.

And what happened? Here is Lovestone's own story:

"First of all, we had a very violent conflict over the question of how the party's international should be run, managed, or led. We (the section from America) advocated what was known as party democracy, and Stalin and his puppets, while they did not outright reject it, did actually vitiate every concept of party democracy that we once thought had to be in the international.

"Secondly, we had a vigorous clash with the Russian Communist Party as to the type of leadership for the international organization as such—that is, in the Communist International.

"Our position was that the Communist International should have a collective and genuinely international leadership in which Russia could be first, but the first among equals. We were against a monopoly of leadership by the Russian Communist Party.

"In the third place, we differed with the Communist International, which, in actuality meant the Stalin-led Russian Communist Party, over a series of questions involving the American institution.

"For example, we were denounced as 'exceptionalists' and that was, by the way, a high crime in the church.

"That was because we had stressed that there were certain historical peculiarities and industrial conditions in the United States distinct from those in other lands.

"We denied their claim that in the United States there was as much radicalism or as

much radical labor movement as there was in a number of European countries.

"We differed with the Stalin leadership every time on the entire American economic and political trends. The position of Herr Stalin was that the American economic system was going to pieces.

"We said that the Communist Party was headed for a big job in creating a crisis of very grave consequence to capitalism in the United States; that it was far from finished and that the beast still had a lot of kick in it.

"For that, we were roundly denounced. The theory of Stalin was that the revolution was pretty much around the corner for the United States."

The above-mentioned conference in Moscow was in July-August of 1929, a year of portentous happenings in the United States of America.

What did Stalin know that caused him in the midsummer of 1929 to think revolution was soon to pop in the United States of America?

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 31, 1950

Mrs. ST. GEORGE. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include the thirty-fifth article by Mr. Frank C. Waldrop on the infiltration of communism in our country:

BIGGEST STORY

(By Frank C. Waldrop)

In the summer of 1929 there was a big pow-wow of world Communist field officers with Stalin at Moscow. The boss had decided the United States of America was soon to blow apart in revolution, and he wanted to get his team ready.

The above information comes from one Jay Lovestone, who was there on the job.

Lovestone went to Moscow in March of 1929 as head of the Communist conspiracy in the United States. He escaped by means he has never yet disclosed in full, kicked from all his offices, and lucky to be alive.

Why? Well, here are his own words, repeated from yesterday because they are so full of curious significance to Americans, reflecting on the course of history these 20 years past.

You can find the original of this in volume 11 of the hearings by the House Committee on Un-American Activities.

"The position of Herr Stalin was that the American economic system was going to pieces and that this was the last and final crisis for capitalism in the United States.

"We," the Communist delegates from the United States, "said that the Communist Party was headed for a big job, in creating a crisis of very grave consequence to capitalism in the United States; that the beast still had a lot of kick in it.

"For that we were roundly denounced. The theory of Stalin was that the revolution was pretty much around the corner in the United States."

Now, all this, remember, was going on in Moscow in the late spring and early summer of 1929, when the United States of America was still enjoying the prosperity that had come with the expansion of industry for 10 busy years preceding.

What was actually going on inside the strategic war command of communism that year?

The record shows that Communists all over the world had been doing their worst to corrupt finance everywhere.

It is established that they faked bond issues, currency, legal tender of all kinds in the Western World then, as they were to do again in China in the 1930's. They had spies planted in banks and treasuries, and their most able financial minds had the assignment to do anything anywhere they could, to shatter the structure of capitalistic business.

Suddenly in Europe banks began to crash.

Then, on October 26, 1929, the New York Stock Exchange was swept with a panic wave of selling. Some 16,000,000 shares changed hands that 1 day. Who bought, incidentally, that which was sold? It took 2 years for the market to settle back to a reasonable order of business and by that time value of securities traded on the exchange had dropped by an estimated $50,000,000,000.

Whose actions really tilted the market into that catastrophic collapse?

In the chaos and the panic of the moment men who might now be able to piece the story together leaped from windows, shot themselves, drank iodine, or just collapsed on a couch and willed themselves to die. Records were lost forever.

It was a desperate hour for America and for the world. It was also desperate for Stalin.

All around him was hatred. He could not help but see Moscow was still unsafe for czars, as of old. Indeed, his "dear Kirov," the military commander of the capital, received the bulletin in 1934 that started Stalin on the bloodiest purge of our age.

Nor would the factories run or the peasants behave. The Soviet bureaucracy was strangling itself. The military were shot through with dissent.

In the United States of America there were panic and idleness and loss of value. But in Russia there were famine and ferocious brutality and no value to lose. Stalin's regime was suffering worse than any other on earth as hard times hit the world.

What exact part did the Soviet plottings of 1929 play in the succeeding waves of disaster that rolled across the United States of America from 1930 onward?

Maybe the truth will come out some day, if civilization ever gets its hands on the secret archives of world communism now hidden deep in the Lenin library, in Moscow.

But one more important truth has stood up before the world as a shining mark.

In the generation since 1929 American capitalism has endured the most fantastic kind of beating at the hands of imbeciles, experimenters, irresponsibles, traitors, and crooks manipulating the power of government.

It has fought and financed and won the most tremendous and the least excusable war in all of human history.

The genius of American capitalism has even saved Stalin himself from the firing squad he so richly deserves and now is being burdened again to face him down all over the globe and save the reputations of politicians in America who have been, through their idiotic recklessness and worse, the prime source of American trouble.

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 31, 1950

Mrs. ST. GEORGE. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include the thirty-sixth article by Mr. Frank C. Waldrop on the infiltration of communism in our country:

BIGGEST STORY

(By Frank C. Waldrop)

We pause now for a word from J. Stalin on the coming revolution in the United States of America.

He is addressing a special commission of world Communist field agents in Moscow.

The date, May 6, 1919.

Listen to him as recorded on the official minutes:

"I think the moment is not far off when a revolutionary crisis will be unleashed in America; when that revolutionary crisis comes in the United States it will mark the beginning of the end of world capitalism.

"The Communist Party of the United States must be aimed to be able to meet that historic moment and to head the forthcoming class combats. Preparation is necessary for this, comrades, a preparation of all forces. For this the American party must be improved and cleansed."

And so the Communists of the United States of America, on the word of this man so far away in the ancient Kremlin fortress in Moscow, Russia, suffered a paroxysm of disgraces, expulsions and reorganizations.

Two factions in the United States branch of the Communist organization had gone to Moscow. William Z. Foster headed the minority, as Stalin's man. Jay Lovestone had control of the extreme majority which had warned Stalin against attempting revolution in the United States of America.

So violent was the conflict that followed Stalin not only broke Lovestone but also he rejected his own man, Foster, who had embarrassed him by not knocking off Lovestone ahead of the visible, public, screeching row in Moscow.

And so it was that he chose an obscure hay-shaker from Kansas to be the general secretary and titular big wheel of communism in the United States of America.

The said hay-shaker was one Earl Browder, of the most native American background and appearance.

In the years to follow, Browder was to become a barometer of unmatched accuracy for measuring Stalin's pressure on the United States of America, its President and its Government. We will hear much more of him.

Whoever has had the patience to follow this winding and wayward narrative thus far may remember that I began by saying that I stumbled upon communism in January of 1930 as a young reporter freshly arrived in New York City.

As I made my acquaintance with the Communists, they were just launching what they confidently believed would be the last climactic assault on the United States of America, with Browder in charge.

They actually believed a revolution was at hand.

Thus it was that in the period 1930–33 the Communists precipitated spectacles such as the bonus march on Washington. That horror, which so shocked the people of the United States, has long since been exposed for what it was—a sham inspired and guided by Stalin.

The evidence and the proof have accumulated in great detail in congressional hearings and the disclosures of apostate Communists unveiling facts behind the facts of the day.

The bonus march on Washington is symbolic of that whole desperate moment in our national history, but it is just one of the many such Communist manufactories designed to make a bad thing all the more hideous and menacing.

Whispering campaigns started runs on banks. The President of the United States

was assaulted in secret and openly, with libels and slanders unmatched before or since.

Franklin D. Roosevelt won the Presidential campaign of 1932 and early the next year went to Miami, Fla., for the usual preinaugural rest. There, on the night of February 15, 1933, as he appeared in Biscayne Park, one Joseph Zangara pulled a pistol.

A woman snatched at Zangara's arm as he opened fire.

Five people were hit by his fusillade, among them Anton Cermak, mayor of Chicago.

Zangara, on arrest, claimed that he was an anarchist—a cover that Communist assassins had been using for many years.

How many people know that in Yugoslavia, where the apostate Tito now holds his shaky throne, there was at that time a Communist college for assassins—men specially trained for Zangara's kind of work?

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 31, 1950

Mrs. ST. GEORGE. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include the thirty-seventh article by Mr. Frank C. Waldrop on the infiltration of communism in our country:

BIGGEST STORY
(By Frank C. Waldrop)

Stalin's ignorance and ineptitude at government, as distinguished from malicious destructiveness, was never better demonstrated than in the years 1930–39.

Of malicious destructiveness and intrigue we all know from the record that he is a master. And of his three greatest accomplishments in that field, all three were made at the expense of the American people.

One. He obtained diplomatic recognition from Mr. Roosevelt for his regime in 1933 just as it was on the verge of exploding.

Two. After the United States had been thoroughly trapped in European affairs by Mr. Roosevelt with Communist help, Stalin pulled the trigger for war in 1939 by signing a peace pact with Hitler.

Three. In 1945 at Yalta, he got Roosevelt's consent to his conquests, now so loudly denounced by the very factions in this country that were with him at the time in deed and in spirit.

It is necessary to remember these triumphs of Stalin's particular art, which is destructiveness, to see all the better his utter incompetency as a true public servant.

Remembering them, too, helps to appreciate the significance of his declaration in 1929 that revolution was at hand in America and the capitalistic world. This was before the market crash.

And how did things go in Russia as the well-advertised storms crashed in the United States of America? You don't hear so much about that in all the Communist-tainted literature of our time, but let's just review a few notable events.

Thereby we can better understand just why Stalin, by 1933, was eager to change the subject from revolution to procurement, with desperate urgency, of that point 1.

Stalin, you may recall, took charge of Russia in 1924 when the organizer of the first Soviet state, Lenin, went dead, much to the surprise of the choirs of Communist propagandists all over the world who had made him up to be not only Superman but also Indestructo.

He had some trouble getting started, but on October 1, 1928, Stalin proclaimed to the world the first of the big international campaigns that were by example to lead the world to fear, respect, and follow communism on the economic front.

On that date he announced the great Stalin 5-year plan, under which the Soviet Union was to industrialize and demonstrate the superiority of scientific socialism as contrasted with decadent capitalism.

The slogan of the day was "overtake and surpass America." And to goose the muzhiks into stepping lively, there was released a general wave of shootings for "inefficiency," coupled also with carefully tailored stories about the wonderful factories in America.

Indeed, Henry Ford became a sort of minor folk-hero for a brief spell and Americans generally were popularized as a clever set of monkeys but with no sense about government.

But that hardly lasted through the first frost. Americans, British, and German technicians and engineers who had been brought in found the situation impossible.

It is not correct, incidentally, to suggest that all Russians historically have been either flea-ridden farmers or crazy, cruel aristocrats with a few revolutionists on both sides.

As a matter of fact, in the ninteenth century Russia startled the world with the speed and vision of her progress in both science and industry.

You may laugh at the stories Moscow has been broadcasting about Russian inventions of everything from the wheel to the atom, but it's not all bunk.

If they had sense enough to put their propaganda on a basis of historical fact, instead of exaggerating in such a way as to make it seem they did it all alone and only last week by order of Stalin, they would have a case hard to refute.

Russia, when the works blew up in war and self-destruction, was actually on the way to an able, effective industry.

So when Stalin announced his great 5-year plan in 1928, he actually had a genuine historical foundation on which to base it.

True, most of the people who knew how to do the work were all dead and gone. And the plant itself was far out of date.

What little development there had been was a by-product of another of the many curious and still unclarified side deals that Germany and Russia have toyed with through the years.

At the end of the 1914–18 war, Lenin imported German generals to show him some trade secrets on running military machinery.

I will have some stories on the Red army, further along, that will show why he sent for the Germans and some consequences thereof.

He also imported German engineers at the same time, and it was they who had kept the Russian industrial machinery patched together until the time of the great 5-year plan.

James A. Farley—A Popular Choice

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 31, 1950

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorials from the Freeman's Journal, Cooperstown, N. Y., April 5, 1950, the Walton Reporter, Walton, N. Y., April 14, 1950, and the Catskill Daily Mail of April 15, 1950:

[From the Catskill (N. Y.) Daily Mail of April 15, 1950]

JIM FARLEY COULD WIN

Greene County friends of James A. Farley, and their number is legion, are viewing with interest the spontaneous gubernatorial boom which has been developing in his behalf the past few weeks. "Genial Jim" has been attending about the same number of dinners and other public events as in the past, but the welcome he has been getting everywhere around the State has just about amounted to an ovation. However, when he's questioned on his attitude toward making the race for the State's highest office, he's mum as the proverbial clam.

Both these facts are cited to substantiate the fact that the Farley boom is completely spontaneous, that Jim, the master politician, has done nothing whatsoever to inspire it. As a matter of fact, from where we sit, it seems pretty obvious that the former Postmaster General will not lift a finger in his own behalf unless or until the public demand has reached such proportions that his nomination without opposition is assured.

Farley is a fighter, but he is also a great believer in party harmony. He remembers that Thomas E. Dewey was first swept into the executive mansion at Albany after the Democratic Party split at Brooklyn over the candidacy of John J. Bennett, Jr. He knows, too, that as a leader in the fight for Bennett, he may risk the opposition of elements which opposed him at that time. It is our belief that those old wounds have healed, but it is also quite apparent to those who know him, that Jim Farley will require tangible proof before throwing his hat in the ring.

On the basis of the clamor in many upstate and Long Island counties for Farley's nomination, there is good reason to believe that he could defeat any possible combination of opponents at the party's State convention next summer. However, that is not enough. Without the support of all factions within the party, Farley won't be willing to make the race.

Nevertheless, we are thoroughly convinced that citizens throughout the State are waiting for the Democratic Party to offer James A. Farley for the governorship. There are many reasons.

First of all, he is a good businessman. He has proved that in a number of very important jobs, and we are confident that if he is sent to Albany, he would cut red tape, he would spend and save wisely and he would apply the rules of simple arithmetic in a manner the public could understand.

In the second place, he wouldn't evade issues, either as a candidate or as Governor. He would face every problem speedily and without pussyfooting, and once he had taken a position, there he would stand.

Finally, Jim Farley is a good politician. He once wrote that "when political organizations begin thinking about jobs and nothing else, when they forget that the public business should come first, they have begun their own death chant without realizing it. * * * The protest of the public is the best way to discipline an organization against that sort of thing."

That provides a pretty accurate idea of the kind of administration Jim Farley would offer.

So the State political picture boils down as follows:

Rank-and-file voters want Farley for governor.

The majority of party leaders want him, too.

Some of his old adversaries would like to head him off at the convention. However, these same leaders want to win, and a casual

perusal of the others who are being mentioned as possibilities should convince them nomination of Jim Farley offers the surest road to victory.

[From the Walton (N. Y.) Reporter of April 14, 1950]

A POPULAR CHOICE

Too often voters are faced with the choice of making a selection between two mediocre candidates. In such cases the voter will usually vote his party ticket without enthusiasm. He feels that his political leaders have been unwise in making the choice of candidates but that there is little he can do about the situation.

This is the year of a gubernatorial election. Gov. Thomas E. Dewey can have the Republican nomination if he desires it as he controls the Republican political machine in New York State. Regardless of whom the Republicans nominate the Democratic Party should seek to place in nomination a candidate who has outstanding qualifications—a man for whom all independent voters will feel no hesitation in voting. Such a man is James A. Farley.

Before Mr. Farley can go before the voters he must receive the nomination from the State Democratic convention. That convention has the opportunity to pave the way to certain victory at the polls. With Mr. Farley as a candidate there will be few voters who will have any doubt that Mr. Farley is a man fitted in every way, to serve them as chief executive of New York State.

[From the Freeman's Journal, Cooperstown, N. Y., of April 5, 1950]

JAMES A. FARLEY FOR GOVERNOR

On November 7 the people of the State of New York will go to the polls to name a new Governor, and the Freeman's Journal would like to go on record at this time in support of one of the great men of our time for this highly important office—James A. Farley.

Before Mr. Farley can go before the voters in November, it will be necessary for him to receive the nomination of his party at the State convention this summer. Opportunity is spreading its wings in favor of the Democrats in the State at this time, and their nomination of Mr. Farley will pave the way to certain victory in the fall.

The Freeman's Journal respectfully urges without any qualification or reservation the nomination of Mr. Farley, a man fitted in every way to serve New York State as its chief executive.

Memorial Day and Citizenship

EXTENSION OF REMARKS
OF
HON. NEIL J. LINEHAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 29, 1950

Mr. LINEHAN. Mr. Speaker, the Congress and the President have asked that this day, long sacred to the memory of departed heroes, be observed with thoughts and prayers for peace. Peace is the great question of our time. We realize now as never before that the making of peace, on which the Saviour bestowed his benediction, "Blessed are the peacemakers, for they shall be called the children of God," is not a simple thing. Peace is something that has to be made; it is not something into which the world can drift. It is not a negative thing, the mere absence of war; it calls for positive actions and attitudes. It is not a merely sentimental thing, accomplished by good intentions and pious resolutions. It is not a one-sided thing; it takes two to make a quarrel, they used to say; now we know that it also takes two to make a peace; peace cannot be achieved by any unilateral virtue or self-restraint. Most of all, it is clear as never before that peace may be a very costly thing—not so dramatically costly as war, perhaps, but nevertheless far from cheap.

The scene which surrounds us today is evidence of that cost. Here lie buried those whose lives have been given for their country in the past. Who can estimate the worth of these lives? What these young men might have meant to the world if they had lived? What their loss means in the unrecorded sorrow of parents and wives and sweethearts and children? The great treasure of any country is not its steel mills or its rolling prairies or its public buildings, but its young people. And here we commemorate citizens whose lives, for the most part, were sacrificed in early manhood before the story they could have told could be unrolled, or their contribution made to the family or the Nation which gave them birth.

All too readily, because these dead cannot speak to us, we accept the fruit of their sacrifice in an unthinking way. We have our existence here in this country. We have our freedoms. We can proceed to worship according to conscience, to speak according to our belief, to advance with life and liberty intact on our pursuit of happiness. We exercise these privileges every day of our lives. But that we have them is due to the fact that in the past these Americans have been willing to lay down their lives for us. Privilege is always preceded by sacrifice. Theirs has been the sacrifice. Ours now are the privileges.

We do right when we honor them, with our flowers, our songs, our parades, with everything which can be provided, at this most beautiful season of the year, to remind ourselves of our indebtedness. We must also honor them by making peace.

"The making of peace," as someone has said, "is a less spectacular feat than the waging of war, but in terms of effort, determination, and skill it calls for a similar outgoing of resources."

When the United States taxes itself and strains its economy, as it is doing today, to build up the welfare of hundreds of millions of stricken and unfortunate people in many parts of the world, so that they shall be better prepared in their minds to resist the insidious propaganda of communism, this is a part of the making of peace. When the United States ties itself into a mutual-defense pact with the nations of western Europe, as it is doing today, in order to enable the free world to resist aggression that is planned against them, that is also a measure of peace. When we pour money and men into the building up of our own Army and Navy and Air Force, so that we shall not again be caught flat-footed by an aggressor with ambitions for world domination, then again we are doing something to make peace. Aggressors of the type of Hitler, Mussolini, and Stalin do not start warfare against the strong; it is the weak who invite their attention.

These measures of which I speak are all great matters of public policy. They may seem, and sometimes are, a long way off from the ordinary citizen. But each of us has his own responsibility for the peace of the world, not only in supporting the Nation in these matters of high policy, but in the ordinary surroundings of civilian life. And here, too, we may take inspiration from those whom we commemorate here today. If these dead could speak to us, I am sure they would say something like this: "Be good citizens. Do not seek for yourselves, or your group, advantages which are at the same time disadvantages to the Nation or the world as a whole. Be ready, as we were, if necessary to give the last full measure of devotion to the common weal." Or, to quote the words of one of the greatest of all the American founding fathers, Thomas Jefferson:

Love your neighbor as yourself and your country more than yourself. Be just. Be true. Murmur not at the ways of Providence.

Such citizens are carrying on the traditions of the noble dead and are creative for the future of America and the peace of the world. That is a responsibility for all of us, which we will do well to recognize on this Memorial Day.

Recommendations of the Hoover Report

EXTENSION OF REMARKS
OF
HON. RALPH W. GWINN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 29, 1950

Mr. GWINN. Mr. Speaker, the crusade to throw the oppression of Government off the backs of the people is joined by the young people. They have exercised the ancient right of petition to Congress for relief. I present it herewith:

We, the senior students of the citizenship class of Bronxville (N. Y.) High School, in the interest of our future life investment and in accordance with our heritage of the right to petition, do ask that some action be taken to carry out the recommendations of the Hoover report. We have made a study of the Hoover report and feel that the loose fiscal policy of the administration has created, and unless immediate corrective measures are taken will continue to create, the deplorable waste of both money and efficiency in our Government. As our generation will inherit the iniquitous results of the extravagance now being allowed we feel compelled to petition action.

NATALIE MARSHALL,
PATRACIA STORCK,
CORNING S. PARKER,
DAVE ATWATER
(And 88 other members of the class).

This Changing World—L'Heureux Idea of Prayers for Peace Is Growing to Vast Proportions

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 31, 1950

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article by Constantine Brown, which appeared in the Washington Evening Star of May 30, 1950:

THIS CHANGING WORLD—L'HEUREUX IDEA OF PRAYERS FOR PEACE IS GROWING TO VAST PROPORTIONS

(By Constantine Brown)

When Herve J. L'Heureux, Chief of State Department, Visa Division, returns to a post in the Foreign Service in the summer of 1951 he will leave behind—barring the outbreak of another diastrous war—a live and growing movement dedicated to prayers for peace.

Since the Last Man's Club of the William H. Jutes Post No. 43 of the American Legion at Manchester, N. H., adopted the original prayers-for-peace resolution on October 28, 1948, the movement has grown to vast proportions, without the help of any national organization or of financial endowments beyond that which Mr. L'Heureux' own finances will bear.

The extent to which the movement has grown deserves recognition on this Memorial Day, when President Truman again has called on the American people to offer prayers for continued world peace—even if the benefits of that peace are negated by the constant threat of war.

SUMMARIZED IDEAS

Mr. L'Heureux summarized the idea of his movement in an address April 15 this year before the Department of Virginia, Catholic War Veterans, at Alexandria, Va.:

"I speak to you as a fellow veteran and a layman," he said. "I am not a preacher. I advocate no new dogma. My message is simple: Prayer, a minimum of 1 minute of prayer daily at noon by every man, woman, and child in the United States, each in his own way, each according to his own faith, to seek divine guidance and assistance in securing world peace."

The simplicity of this idea, its all-embracing character, had an immediate appeal. Since the first resolution by the Manchester Legion post the following had taken similar action by May 15, 1950: Five hundred and fifty-nine veterans' organizations (individual posts), 36 veterans' auxiliary groups, 12 service clubs, 83 fraternal societies, clubs, and sororities, 143 student groups, 22 alumnae groups, 45 church groups, 133 business firms and 13 groups of Federal employees.

Besides these the national organizations have joined the movement: The Elks, the Greek-American Progressive Association, the Order of Ahepa, the Society of American Legion Founders, Delta Theta Phi law fraternity, Jewish War Veterans, and the National Executive Committee of the American Legion.

AIMS AND PURPOSES

No more succinct statement of the movement's aims and purposes could be written than that delivered by Mr. L'Heureux before the Catholic War Veterans: "Those of us who initiated this movement were actuated by a conviction that each and every person, regardless of his station in life, or his religious belief, can assist materially, through daily prayer, in achieving the peace which all of us desire so ardently. It was thought that a pause in the midst of our daily work, at 12 o'clock noon, is an appropriate time to marshal the spiritual force of our Nation for peace, with the hope that such a custom might become universal in effect.

"The establishment of this practice generally would not only be a national acknowledgement of our dependency upon God, but it might also be a source of inspiration and encouragement to the masses of unfortunate people throughout the world who look to us for moral leadership, as well as for material aid.

"The prayers-for-peace movement is thoroughly patriotic, consistent with our basic philosophy of life and with the fundamental precepts upon which this country was founded. It is not pacifist in character. It is not a substitute for adequate armament, but an indispensable, spiritual component of adequate preparedness—in fact, a properly balanced preparedness.

"While our potential enemies are straining every effort in preparation for total war, and we in the United States are taking necessary precautions to meet the challenge, why not unite, simultaneously, at least in a national, if not a world-wide, mobilization, of daily prayers for divine assistance and return to good morals and true Christian principles, with the hope of dissipating the causes for another world conflict? There is hardly a person who believes in God who, whether he goes to church or not, does not turn to God for help in times of peril to himself or to a loved one. Since this be true why wait until the eleventh hour? Why not seek God's graces now, before it is too late?"

The Raw Material for Our Social Structure

EXTENSION OF REMARKS
OF
HON. HARRY J. DAVENPORT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 31, 1950

Mr. DAVENPORT. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include an address made by Admiral Ben Moreell, president of the Jones & Laughlin Steel Corp., to the annual conference of the National Council of Juvenile Court Judges, Pittsburgh, Pa., May 1, 1950:

THE RAW MATERIAL FOR OUR SOCIAL STRUCTURE

Chancelor Fitzgerald, Judge Schramm, members of the National Council of Juvenile Court Judges, ladies and gentlemen, it is an honor to address the judges who preside over one of the most important segments of our judicial system. It is referred to as a segment rather than court because, if my understanding of your processes is correct, the actual formal court proceedings are but a small part of the total work which is done in the name of the juvenile courts.

This does not imply that the juvenile court is regarded as an administrative agency solely. It is a most important part of our judicial system. In your journal of last September, the learned Dean Pound, a most eminent scholar of jurisprudence, makes this distinction quite clearly when he speaks of the juvenile court as individualizing with regard to principles rather than unguided personal feeling. He says, too, that the juvenile court is characteristically American in that it is part of an Anglo-American system of judicial rather than administrative institutions and so keeps within the bounds of constitutional authority while employing the individualized methods of judicial adaptation of remedy to result in view of the facts in particular cases, which is characteristic of Anglo-American equity. In laymen's words, this means that you are humanitarians who apply appropriate remedies to specific cases. But you are, at the same time, wise judges who act under and by a set of principles, thus differing from so-called administrative experts who function under the theory that they are free to pursue any course and to apply any remedy which will serve an end deemed by them to be desirable.

In considering an appropriate subject for this address, I am inevitably drawn to my favorite thesis, which is the guide and precept for my own conduct. It is this: that nothing is so important to this country, and to the world, as people—human beings—individuals. Machinery, equipment, processes, buildings, communications, transportation, distribution, sales, finance, research, raw materials, even the very moral and ethical principles by which we live, are without substance and value unless we have the people—the men and women—to make them function. And the raw materials of people are children.

We, in the steel industry, know that the things we produce or which others fabricate from our products are no better than the raw materials which are fed into the blast furnaces and open hearths. The iron ore, the coal, the limestone, the steel scrap, the alloy metals—all these come together to determine the quality and the character of the sheet, the wire, the bar, the tube, or the structural member which finally results from the rolling or drawing process. Steel can be ruined by improper processing, but even with the best of processing good end products can be produced only from good steel, and this only from good raw materials.

The raw materials for steel making are much like our children. A goodly part of these raw materials are fit for use just as they are extracted from the ground. They require no special treatment. They are subjected to the traditional processes of smelting, reduction, heating, rolling, and drawing, to make sound products.

But large quantities of our coal and iron ore, in their natural states, are not suitable for the making of steel because of contaminations acquired from their environments or otherwise. In the case of iron ore, we say it must be beneficiated. In the case of coal, it must be washed, screened, and separated to eliminate undesirable parts. Frequently we resort to extensive research to develop methods for improving these raw materials so they will be useful elements for the making of steel.

The parallel, I believe, is obvious. Our children constitute the raw material from which our social structure is built. Like the coal and iron ore, most were formed and developed in an environment such that they require no special treatment, no "beneficiation," to enable them to grow into useful citizens under the influence of our normal processes and institutions—our homes, schools, colleges, and churches.

But there are some who are not so fortunate. Their environment, or perhaps some hereditary trait, requires that they be beneficiated—that they be given special treatment which will fit them to take their proper places in society, to contribute usefully to the collectivity, and to enjoy the spiritual and material fruits of productive service. And, as in the case of raw materials for steelmaking, the required special treatment

is not the same in all cases. Careful and extended research may be needed before we can determine the treatment which will serve best. I am sure that this is much more difficult in the case of children than it is in the case of iron ore and coal, but the greater effort is fully justified by the greater importance of the issue.

Whether and to what extent we beneficiate our raw materials for steelmaking is largely a question of economics. The continuing discoveries of new, large deposits of high grade iron ore in various parts of the world eliminates the question of absolute necessity and reduces the problem to one of relative costs.

But whether we can build a strong social structure is infinitely more important than any question of economics or of the physical developments of our economy. For of what use are physical developments if we do not have the strong social structure to operate them. And the strength of our social structure is, in the aggregate, the summation of the strengths of the individuals who compose it.

Ours is a highly interdependent society. One can hardly take a significant action without material effect on the lives and welfare of many people. This very fact stresses the basic importance of developing the moral fiber of the individuals upon whom we must depend for the operation of our social machine. And you gentlemen here tonight carry a great burden of responsibility for the character of that development.

The value attached to the individual human being is the important distinction between our system of living and those of communism, socialism, and other forms of collectivist or regimented government. The supremacy of the individual and his liberty is the foundation stone upon which is based our concept of government as the servant of the people, not their master.

We have often lost sight of this fact. Our complex economy and the employment of large numbers of people in huge enterprises makes us think in terms of people in the mass—unions, shifts, gangs—and our quantity production induces the use of purely statistical terms, such as tons per man-hour, for units of measure. These impersonal usages serve to obscure the importance of the individual.

But when we carry this kind of thinking too far we get into trouble. Let us not overlook the importance of quantity production and distribution. That is the very essence of the great industrial and economic power which permits us to make and distribute goods at prices within the means of most of our people. It has enabled us to achieve victory in two great wars by smothering our enemies in a flood of industrial production. These results have been accomplished by means of huge aggregations of capital operated by large concentrations of human talent in the form of our modern corporations. Without them we would be vulnerable to the attacks of any avaricious aggressor.

But we must be alert to the danger which arises when these large organizations tend to become impersonal and to minimize the importance of individuals who, together, make the organization. We in industry are keenly aware of this danger. We are facing it with confidence in our ability to solve the problem. We are rapidly achieving a better understanding of how to live and work together and, as we learn more about human beings, we make faster progress toward the goal of complete social equity.

Not long ago my secretary told me a story which has great significance. He said he was discussing my periodic letters to our employees with some of our men. One of the foremen from the mill told him of an incident which had occurred the day before. It appears that the foreman, who was in charge of a labor gang, had found it necessary to speak very harshly to one of the laborers. When he had finished, the laborer, who had listened calmly and patiently, said, "You know you ought not to talk to me like that." The foreman asked, "Why not?" and the laborer replied, "Because Admiral Moreell says that I am an individual, I have dignity and I am important."

The Jones & Laughlin Steel Corp. has approximately 45,000 employees. If each one of them can achieve that belief, we will have made a great advance toward the solution of the basic problem of human relations.

As head of a great construction organization during the recent war, I was frequently faced with evidence of the tremendous latent power which inheres in the human spirit. We do not think of military organizations as taking cognizance of this power. Certainly the Prussian tradition of militarism does not recognize it. But I assure you that it was the individual spirit which make our Seabees exceed the standard of accomplishment implied by their self-adopted motto, "Can do."

Their great achievements in the face of what appeared to be insurmountable obstacles and hardships did not result from the well-planned orders of admirals and captains which were directed to men who acted as automatons. The officers provided the plans and the leadership, but the indomitable spirit of the individual men accomplished the tasks.

And that is why I believe that recognition of the importance of the individual can determine whether it shall be victory or defeat in war, spiritual and material advances or deterioration in peace.

It is significant that every nation, every civilization, which has turned away from the doctrine of the supremacy of human individuality has ended in disaster. You may ask why is it not proper that the most wise and intelligent amongst us should take charge and order our lives. There are many men and women with superior intellects. Should they not be given absolute power to arrange the lives of the others and thus produce the ultimate in efficiency and maximum good for all? It has been said that the democracies are at a tremendous disadvantage when pitted in war against the autocracies. The German and Japanese Armies appeared to be invincible. They and the civilian economies which supported them were the last word in absolute control by a few over the many. The odds were in their favor. But they did not win. They were frequently beaten by forces which were inferior in number and material equipment.

The reason is evident to any thinking person who has had the opportunity to observe the event at close hand. Absolute domination of the individual human spirit by other humans makes for moral and spiritual decay amongst both rulers and those who are ruled. Our men were endowed with independence and spirit, initiative and the moral character which goes with sound basic principles. I am sure that they did not reason this out for themselves, but there was an intuitive feeling that they were fighting for decency and fair play against immorality and enslavement.

Our men were born and reared in an atmosphere conducive to the development of their individual characters; where the only valid limitation on the right of the individual to improve his lot was that which was established by his own abilities.

In our commercial world we have many examples of what individual initiative and character have accomplished. Horatio Alger was popular because he recorded history, albeit under fictitious names. While our record is far from perfect and much remains to be done, this great country has made great advances both in material benefits and in the moral strength of its people by releasing the unlimited power of the human spirit.

It is important to note that every society which has belittled the importance of the individual and has attempted to treat humanity in the mass has also eventually belittled religious teachings and faith amongst its people. To me this is an inevitable sequence. The spirit of God does not reside in a group of people as such. The teachings of Christ invariably deal with the status of the individual. It is only the individual who can feel and live by religious faith.

I have dwelt at some length on this subject because I believe that the work of the juvenile court is so completely in accord with my thinking in respect to this matter of the strength of the human spirit. If even a small part of the children who need to be guided or reclaimed, or perhaps I should say beneficiated, fail to receive that help, we are suffering an irreparable loss to our social structure. We are discarding individuals at those stages of their lives when they can with the greatest ease be guided along the high road of achievement or, by neglect, be permitted to become a burden, or even a menace, to our society.

Let us not delude ourselves into thinking that all of the men and women who have done great deeds for our country have records which are spotless. I venture to say that many of us here tonight will recall a smudge or two which we would wish were not there. But that merely serves to spotlight the point I am making, that with expert and devoted treatment, human beings can be beneficiated to better serve their God, their country, and their fellow man.

I know that it is risky to attempt to advise experts in their own field, but I have the temerity to do so. From experience in working with adults, many of whom needed help, I have learned a lesson which may be applicable to your work with children. It is this: When a person does his own thinking and arrives at his own conclusion, the resolves which result from that thinking are more firm and more likely to stay with him. If we can concentrate on teaching people—children or adults—to think straight so that they can straighten out for themselves the angled skeins of their own lives, we are more likely to achieve success. That is the ultimate in individualism—that each one should decide for himself to do what is right with his own life, not because of material advantage to be gained or punishment to be avoided, but because it conforms to that high moral code which is the only key to the treasure house of unlimited spiritual power.

Yours is a high and noble obligation. You are working with the materials of which our Nation is built. Your devotion and competence will have significant influence on the strength and resilence of our social fabric and of our Nation.

May God give you the wisdom and courage to carry on.

Lie Should Be Given All Encouragement in Peace Mission—UN Head Undiscouraged by American Aloofness to Mediation Efforts

---

EXTENSION OF REMARKS

OF

HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 31, 1950

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article by David

Lawrence, which appeared in the Washington Evening Star of May 30, 1950:

LIE SHOULD BE GIVEN ALL ENCOURAGEMENT IN PEACE MISSION—UN HEAD UNDISCOURAGED BY AMERICAN ALOOFNESS TO MEDIATION EFFORTS

(By David Lawrence)

Trygve Lie (pronounced "Lee") came and talked and went away undiscouraged. He is apparently the only man who sees a possibility of bringing the cold war to an end, and he thinks it can be done if someone stays in the middle—and doesn't become the partisan of either side.

Again, as has so often happened in world history, an opportunity presents itself for governments to be mindful of the awful consequences of arrogance and stubbornness and to try to find a healing formula instead of resigning themselves to the ultimate business of "organized murder"—more euphemistically referred to as war.

Mr. Lie's mission to Washington is of transcendent importance. It cannot be dismissed as the journey of a meddler. What else was the United Nations created for but to furnish mediation machinery when rival powers seem unable to compose their differences through the ordinary channels of diplomacy?

TREATED WITH SCORN

It is most unfortunate that before Mr. Lie had conferred with Stalin, before he had visited London and Paris and talked with high officials everywhere, his errand was treated with scorn in dispatches reflecting official attitudes. Even before it was published that he would come to Washington to talk with President Truman and Secretary Acheson, the unofficial word was disseminated here that it wouldn't do any good.

The tragic fact is that this is characteristic of closed minds. It emphasizes a hazardous disregard of the risks of drifting from a cold war into a hot war. No high official, of course, thinks he is guilty of such indifference. Yet men in positions of responsibility often develop a kind of blind confidence in the rightness of their own judgment. They leave no room for doubt as to their own infallibility.

Trygve Lie didn't discuss with the press what he said in his intimate conversations with the President and the Secretary of State. But it is apparent that the American attitude of the moment is one of aloofness to any sort of mediation which does not start with some conspicuous act of reassurance from Moscow. There is such deep distrust about conferences themselves that they are considered superfluous. This is a dangerous state for the relations between major powers to reach and indicates more than ever the need for a bold intervention and some persistent effort to change rigid positions.

BARRIER CAN BE OVERCOME

The United States Government professes to be interested only in peace-making. It also fears that the word of the Russian government is meaningless in any pledge that would be given. Distressing as is this barrier, it is by no means insurmountable. Usually two parties to a dispute reach that particular point of mutual distrust and yet experience teaches that there are always ways to solve the unsolvable when there is a will to do some solving.

Basically, Trygve Lie can assure the American Government that Russia has a will to settle the cold war, and he can assure Russia that America has a similar desire. To get a formula for peace is not just to suggest a retreat or advance of one particular issue. The dispute, for example, over whether the Chinese Communist government shall be seated in the Security Council is not now and never has been the real issue in the United Nations. There are many more points of friction, and about all that the controversy over recognizing Communist China adds is just one more tangle in the skein of controversies which must be disentangled entirely before progress can be made.

Politically, it is risky at the moment for the Truman administration to agree to give the Chinese Communist government a seat in the Security Council, but it is even more risky politically to follow a course that can make the administration appear to be stumbling into war with Russia. The time to stop a war is long before the casualty lists start coming in and the cities of the United States begin to be bombed. Peace is a better political issue than any other.

Trygve Lie is the only man in the world who in this critical moment in the affairs of mankind can keep the doors open in Moscow and Washington. He can fly back and forth and submit proposals and counterproposals if desired. That was the spirit behind the creation of the United Nations itself. The world will be patient while Trygve Lie tries to bring some sense into the situation. It could be the most important mediation of all time, and hence Mr. Lie should be given every encouragement.

Back to America

EXTENSION OF REMARKS
OF
HON. HAROLD H. VELDE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 31, 1950

Mr. VELDE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Peoria Journal of May 24, 1950, entitled "Back to America":

BACK TO AMERICA

In a three-column-long editorial, reproduced in full-page advertisements in numerous major American newspapers, the Washington Post is appealing that something be done to start on what it calls the road back to America.

It declares that the rise of distrust in Washington, inspired mainly by the charges leveled against the State Department by Senator MCCARTHY, is endangering the future of America. The Post, while admitting the danger that exists in the operations of a Communist fifth column in this country, is fearful that the methods being used to rout out the disloyal are burning down the house of the American way of life in order to get at the rats in it.

The Post proposes, instead of the airing of charges and the leveling of accusations that reflect on innocent employees as well as the guilty, to form a Commission on National Security to survey the threats to our Government and to develop weapons and defenses against them.

Such a Commission may be able to accomplish much in the way of removing the terror that hangs over the heads of innocent people and in rooting out the agents of a foreign government that seeks our national downfall. Perhaps it should be named.

One thing, however, the Post, in its desire to put an end to what it calls witch hunting, overlooks. It shows no concern over how the subversive agents of Soviet Russia got into our Government and it vouchsafes no worry over the lack of interest being shown by the Truman administration in their existence there.

We can appoint commissions and soft pedal wild accusations but we will be making no start on the road back to Americanism until the leaders of our Government begin to concern themselves with getting rid of employees whose sympathies are suspicious. So far they haven't.

We hear a great deal of talk about the irresponsibility of the charges made by Senator MCCARTHY. Certainly his inability to produce evidence to back up his accusations is indication that he has been far from careful in the flinging of charges from within his cloak of senatorial immunity. But if we had had an administration that was on its guard against infiltration and that was determined that no advocates of foreign ideologies could arise there would have been no opportunity for a MCCARTHY to grab the spotlight.

We need to get back on the road to America all right but we can't do it until the administration gets back in the general vicinity of that road itself. Let's stop the shielding of people obviously in sympathy with communistic aspects of government and begin concentrating on true American ideals. Then, and only then, will we be on the American road.

Dalton-Lavallee American Legion Post, Easthampton, Mass., Donated Land and Building for New Home

EXTENSION OF REMARKS
OF
HON. FOSTER FURCOLO
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 31, 1950

Mr. FURCOLO. Mr. Speaker, I think the Members of Congress and everyone in the Nation should know of a very unusual act of generosity that recently occurred in Easthampton, Mass.

The Dalton-Lavallee American Legion Post had long wanted a home of its own. The wishes of its members finally became a reality when the officials of Stanley Home Products, Inc., donated land and a building to the post. The presentation ceremonies were held on May 28 in Easthampton. A splendid presentation speech was made by F. Stanley Beveridge, founder and president of the Stanley Home Products, Inc.

The new post home is one of the finest I have ever seen and I believe the donation was an extremely rare and fine display of generosity. It is the sort of inspirational and generous act that should be brought to the attention of the entire Nation, in my opinion.

The officials and employees of Stanley Home Products, Inc., have always taken a great interest in the post and have tried to help it in every possible way. They also wanted to honor one of their present employees, Alphonse A. Laudato, Jr., of Westfield, Mass., who was awarded the Distinguished Service Cross in World War II. One room in the post home has been named the Alphonse Laudato room in his honor.

The ceremonies also saw the dedication of a magnificent 30-foot flagpole in memory of Lt. Robert A. Richardson, an Easthampton boy who gave his life in World War II.

I know all the Members will want to join with me in extending best wishes to the post in its new home and also in congratulating all associated with the Stanley Home Products, Inc., for their act of generosity which should serve as an inspiration to all.

Verdict Without Trial

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 31, 1950

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial which appeared in the Washington Post of Tuesday, May 30, 1950:

VERDICT WITHOUT TRIAL

Secretary of Commerce Sawyer's attempted ouster of two employees under fire involves a principle of vital importance. It is with the principle alone, rather than with the personalities of the two cases, that this newspaper is concerned. We believe that men accused of disloyalty are entitled to a fair hearing under the procedures of the President's loyalty program devised to deal with just such accusations. The effect of Secretary Sawyer's attempt to dismiss rather than to suspend William W. Remington and Michael E. Lee while their cases are pending is to undermine the whole loyalty program, and indeed, to threaten it with entire collapse.

Mr. Sawyer says that his action "is in nowise intended to reflect in any way on the loyalty of either of these two men" but was taken, rather, "in the interest of good administration in the Department." This is simply glossing over a bad action. The action cannot fail to reflect on the loyalty of the men concerned, and, in the case of Mr. Remington, who has been called before a grand jury, it may have the most damaging results, for it amounts to nothing less than an assumption of guilt before there has even been an indictment. Mr. Sawyer well knows that grand juries are not impervious to the verdicts of Cabinet officers.

So far as "good administration in the Department" is concerned, this can scarcely be advanced by a yielding to pressure from Capitol Hill. Quite the contrary, as subsequent developments showed. Senator MALONE said on a television program Saturday that the Secretary of Commerce acted because he was afraid, if he did not act, his Department would be investigated. The following day, flushed with his success, Senator MALONE called for a "good, old-fashioned house cleaning in the Commerce Department." He asserted that the Secretary's action showed the need for investigation of everyone connected with the Lee and Remington cases and added, with the logic that seems to be the fashion in such matters, "This should prove they're all in it together." Thus the Secretary has abdicated his responsibility as administrator, and employees of the Commerce Department are now on notice that Senator MALONE is their boss.

This is the kind of intimidation we object to. The executive has now succumbed to it. It seems to be accepting any expression of no confidence in the Loyalty Review Board that comes along from any individual Senator. The Board was created by the President for a dual purpose: to protect the Government from untrustworthy employees and equally to protect loyal employees from unjust accusations. It cannot fulfill these functions if it is ignored by department heads, as Secretary Sawyer has ignored it, and if dismissal by denunciation is to be the rule.

The threatened breakdown points imperatively, we think, to the need for a commission on security—an impartial study by an unpartisan body of universally respected citizens to weigh the procedures for determining loyalty and to clarify the climate in which they are to operate. What Mr. Sawyer has done is to supply a telling argument for that commission, and the President by this time ought to realize it. Here is one of his own Cabinet members kicking in the teeth the procedure with which he says he is satisfied.

Address of Panamanian Ambassador Herbruger Before the Panama Canal Society of Washington, D. C.

EXTENSION OF REMARKS
OF
HON. CLARK W. THOMPSON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 31, 1950

Mr. THOMPSON. Mr. Speaker, the Panama Canal Society of Washington, D. C., at its annual banquet on May 27, 1950, honored the memory of one of the most illustrious of the builders of the Panama Canal, Harry Outen Cole, of West Virginia.

It was most fitting, therefore, that among the speakers on that occasion should be the distinguished Ambassador of Panama to the United States, Señor don Rodolfo F. Herbruger. His statement regarding the relations between the Governments of the United States and the Republic of Panama supplies a deeper insight into the political problems of the region which was the scene of Mr Cole's great contribution toward building the Pacific section of the Panama Canal.

As chairman of the Special Subcommittee on Panama Canal Tolls under House Resolution 44, Eighty-first Congress, I visited the Canal Zone in 1949, had the great privilege of addressing the National Assembly of the Republic of Panama, and of seeing the unique international relationship inherent in the operation, maintenance, and protection of the Panama Canal. It was indeed gratifying to observe the free relations which exist between the people of the Canal Zone and the Republic, separated only by an unpatrolled, invisible boundary line respected by all.

To make the views expressed by Ambassador Herbruger available to the Congress, I deem it appropriate that I should include in my remarks the full text of the Ambassador's statement:

Mr. President, members of the Panama Canal Society of Washington, ladies and gentlemen, it is with the greatest of pleasure that I have accepted your most kind invitation to attend the annual dinner of your organization.

The fact that the Honorable Maurice H. Thatcher, ex-Governor of the Canal Zone, is tonight's principal speaker makes this occasion the more memorable for me, due to the circumstance that the distinguished gentleman is from Kentucky, the State in which my father was born, and also because I consider Mr. Thatcher to be a real friend of Panama where his personality is remembered with a great deal of affection and where his name has been immortalized by the Thatcher Ferry and the Thatcher Highway.

As you all well know, the residents of the Canal Zone and the people of Panama live, for all practical purposes, next door to each other. The human contact between Americans and Panamanians is a daily routine, as is also the close working cooperation which for the sake of harmony has to be maintained between the official authorities in both jurisdictions.

However, because of the existence of that situation, it has been humanly impossible to avoid, at certain stages in the past, temporary strainings in the relations not only between the residents of the Canal Zone and Panama; but, also, on some occasions, between the official authorities of both areas. If some of the incidents which have occurred are sadly remembered today by good Panamanians and good Americans, maybe some comfort can be found in the fact that if an impartial observer would analyze the history of the relations between our two countries since 1903, he must arrive at the conclusion that, human nature being what it is, the number of such incidents do represent a minimum of what could be expected under the prevailing conditions.

Yet, notwithstanding those incidents, it seems to me that the daily contact which for years has now been going on between Americans and Panamanians has enabled both groups to acquire a better understanding of each other, and has thus created a more propitious climate for better relations in the future.

I am sure that today both sides do recognize and give due consideration to the fact that because of the political, social, and economic relationship and interdependence which exist between the two areas, it is not possible to solve our differences by the normal means and procedures which regulate the relations between neighboring countries. Arrangements and mutual concessions of a special nature must be agreed upon by both sides, in order to solve our problems on adequate, equitable, and permanent basis.

As the dimensions and proportions of objects vary according to the distance and angle from which they are seen, thus, in human relations, the axioms of political, social, and economic problems acquire new meanings which lead to new conclusions, when analyzed from different points of view.

Much of the misunderstandings which have occurred in the past can be attributed to a lack of willingness from both sides to exert any effort in order to try to understand the other side's point of view. May I frankly say that until very recently neither side has tried to be constructive or objective, and that both sides, when discussing mutual problems, have approached them under the sphere of its own point of view, taking only into consideration the protection of its own exclusive interests.

I am sure that most of you, who had worked in the Canal Zone, would approach today the problems which confront us in a very different way than you would have done, when you lived down there. I am confident that most of you, if appointed to a committee to study the matters which arise from the peculiar nature of the relations between the Canal Zone and Panama, would at the present time make a genuine effort to understand our point of view, and may I also state that it is the firm purpose of Panama's present administration to discuss our mutual problems with the same spirit.

The efforts of adaptation and comprehension which have been recently made by our two Governments in order to solve our differences are commendable and, so far, the results are promising.

However, if it is our sincere wish that this initial step toward objectiveness and constructiveness should become a stable and permanent policy, it will be necessary to rectify in the minds of the people on both sides the distortioned conception that still exists regarding the true nature and the real implications of the problems that we have to deal with.

Recognizing this necessity, every single official statement that has been made by His Excellency, the President of Panama, Dr. Arnulfo Arias, with reference to my country's relations with the United States of America, has indeed sought to create an atmosphere of confidence and better understanding and, on the other side the Honorable Edward G. Miller, Jr., Assistant Secretary of State for the Latin-American Republics, and His Excellency, Mr. Monnett B. Davis, United States Ambassador to Panama, have greatly contributed toward improving our relations, by statements made in press conferences.

It would be a shame if the promising results so far achieved during the past months should be wasted because of false propaganda based on misconceptions, or because of the pressure that groups on either side could apply on their respective Governments to protect petty interests.

Both Governments, therefore, must continue to take positive action in order to maintain and strengthen this policy, and all men of good will in the United States and Panama should do their utmost to help their respective governments in this task.

Because of their intimate knowledge of the political, social, and economic problems which exists between Panama and the Canal Zone, because of their ability to approach these problems today from a high-level point of view, and because of the connections that they have with different organizations in the Canal Zone, I know of no other group of people that could be of more help toward creating a better understanding between the residents of the two areas and could thereby contribute more to the solution of our differences, than the members of the Panama Canal Society.

For this reason I make a fervent appeal to all of you to work toward this end. Do remember that Theodore Roosevelt, when he visited my country, promised that all the new commercial opportunities that would be created by the construction of the Canal should revert to the people of Panama. Please keep also in mind that all the agreements that would be entered into by our respective governments, in that direction, will be mutually profitable; the economic benefits that will thus accrue to Panama will be shared by the citizens of the United States in general; and, particularly, because of their local connections, by the residents of the Canal Zone, since the Republic of Panama in its constitution has granted to United States citizens the very same economic privileges thereby granted to Panamanians.

I am confident that practical solutions to our economic differences, that could be of mutual benefit for the residents of both jurisdictions, can be found. It is only necessary for both sides to approach the problem with an open mind and a feeling of good will and understanding toward the other side's point of view.

I do wish to thank you once again for the privilege of being here tonight and to reiterate the sincere pledge of my Government to keep on taking positive action in order to strengthen the bonds of friendship between North Americans and Panamanians.

The Russians Back Down

EXTENSION OF REMARKS
OF
HON. HAROLD H. VELDE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 31, 1950

Mr. VELDE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Peoria Journal of May 24, 1950, entitled "The Russians Back Down":

THE RUSSIANS BACK DOWN

Once again it has been demonstrated that a display of strength and firm determination is enough to make Soviet Russia back down.

This time the Russians are changing their plans for a German Communist Youth invasion of west Berlin next Sunday because the Allied forces have announced in no uncertain terms that they are prepared to deal with any emergency that arises.

Had the west Berlin government appeared fearful and disorganized, the Russians would have gone ahead with the show of strength they had planned for Whitsuntide and the Allies would have suffered a damaging loss of prestige.

The same story has been repeated time and time again. Aggressor Russia inevitably has gone as far as she dared without provoking actual resistance on the part of the democratic nations. Whenever she has come face to face with what appeared to be active opposition, she has changed her plans or dropped them temporarily until a more propitious time arrived. So it was with her choking off of travel between the western zone of Germany and Berlin. The Berlin airlift cracked the blockade and forced the Russians to back down.

The forces of oppressors are usually equipped with two plans. If opposition arises, they retreat. When the forces of Adolf Hitler marched into Poland, they had orders to turn back if effective opposition arose against them. When none appeared, they went ahead with their seizure of that nation.

This inevitable reaction of the aggressors whenever the democracies demonstrate that they are prepared to stand up for their rights is what makes the preservation of an adequate defense force in the United States so imperative. If Russia thought she could get away with the occupation of Western Germany and the rest of Europe without arousing American armed opposition, she would go ahead. Indeed, she would have accomplished such an occupation a long time ago.

Our foreign policy has been a weak and deviating one. It has given ground more often than it has presented a firm front to Russian maneuvering. For a change, we stood our ground in Berlin and let the Russians know that we meant business. The result can be seen in their announcement that they will not invade west Berlin, despite the fact that they had already given wide publicity to that intent.

If our State Department is smart, it will base future policy toward Russia on the success of the plan followed in Berlin. Judging from past behavior, that may be too much to hope for, but the lesson should be clear.

Chip on the Shoulder—Chilly Reaction to Lie's Peace Mission Out of Keeping With United States Tradition

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 31, 1950

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article by Thomas L. Stokes, which appeared in the Washington Evening Star of May 30, 1950:

CHIP ON THE SHOULDER—CHILLY REACTION TO LIE'S PEACE MISSION OUT OF KEEPING WITH UNITED STATES TRADITION

(By Thomas L. Stokes)

The timid, stand-offish, chip-on-the-shoulder attitude of our Government in what approaches an international crisis is dramatized in our chilly official reaction to the current peace mission of Trygve Lie, United Nations General Secretary.

Mr. Lie has talked with Russian officials in his attempt to bring about some arrangement whereby Russia will return to full partnership in the UN so that agency can fulfill its function of settling disputed matters about the conference table as it was intended to do.

He recognizes it will take time and patience. There is no quick answer to the problems involved, including Russia's insistence on the seating of Communist China in place of Nationalist China in the Security Council. But his idea is to get the major nations, including United States and Russia, to talking again, negotiating again, in order to break the stalemate that has produced the tense and dread psychology of cold war.

EUROPE OPEN-MINDED

The UN's self-appointed emissary was well received after his Moscow visit by French and British officials who apparently see some possible bases of eventual adjustment. He returned to New York optimistic.

The open-minded attitude he found in Europe is a contrast to the negative, distrustful reaction at our State Department which was exemplified further by President Truman's refusal to discuss the Lie mission until he talks to Secretary of State Acheson on his return here and his brusque reply at his press conference that he did not know whether he would see Mr. Lie or not.

Undoubtedly he will in the near future. But the brush-off attitude is somehow not in keeping with our role and influence in the troubled world of today nor with our traditions as a great free democracy.

Nor do the attempts to discredit Mr. Lie by the whispers that he is pro-Russian.

It is sadly true that this new peace adventure comes in the midst of an emotional upheaval in this country, with the very atmosphere suffused with suspicions and fears generated by such things as Senator JOE MCCARTHY'S reckless attacks on the State Department, by the revelations of more atomic spies, by Russia's continued tactics of confusion abroad and here, by her childish and churlish walk-outs in the UN.

WILL SETTLE NOTHING

But it is also true that, with continued cold war, such things will only continue and multiply until the tension suddenly snaps on one side or the other, and then we will be right up against a hot war. Arming more and more heavily on each side will settle nothing and it is not likely, moreover, to scare either one of the two giants as each presumably hopes.

Each has got to give or there will be such an explosion as the world never saw before.

We have had two in this century since 1914. The world could hardly stand another.

A hundred and fifty years ago there was an explosion that rocked all Europe comparable—for those times and the world of that day—to those in our times, the era of revolution and the Napoleonic dictatorships and conquests. After that, the diplomats of that era sat down in the Congress of Vienna in 1815 and determined that it should not happen again and made adjustments that prevented another such general European catastrophe for a hundred years.

Nor did they have any general organization, only the will to keep the peace and brains ready to accomplish that purpose. We do have machinery in the UN. It will be tragic if we do not use it.

How Far Has America Moved Toward Socialism?

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, May 26 (legislative day of Wednesday, March 29), 1950
